*** *Sent postpaid upon receipt of price by the publishers,*

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.

JUST READY.

ENGLAND AS SHE SEEMS.
By an Arab Sheik. Being selections from the Notes of an Arab Hadji.
*** This little sketch, written by E. LESTER ARNOLD of the London *Daily Telegraph*, a son of Sir Edwin Arnold, will be found very amusing. The quiet and apparently unconscious satire is clever and not ill-natured, while the flowery Oriental style of diction is well sustained. 12mo, neat paper cover, 30c.

A new collection of Pen and Ink Sketches by the author of 'The Man Who Would Like to Marry,' etc. In oblong 4to, novel and effective binding, price, $1.50.

THAT SISTER-IN-LAW OF MINE. By HARRY PARKES A novelette humorously illustrated with twenty-seven sketches, many full-page, etc.

A new volume in THE CHANDOS CLASSICS. In dark blue cloth, white label, 12mo size, price, $1.00.

THE TATLER: Selected Essays. With an Introductory Essay and Notes by Alex. Charles Ewald, F.S.A.

New volumes in WARNE'S LONDON LIBRARY of original fiction.

A RUSTIC MAID. By Mrs. Alice Price, author of 'A Wilful Young Woman.' 12mo, neat paper cover, 25c.

ALL OR NOTHING, or Ruthven of Ruthven. By E. Everett Green, author of 'The Last of the Dacres,' etc. 12mo, neat paper cover, 25c.

BOOKS OF THE WEEK 19

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

When mailed in paper tubes, without creases, 50 cents per year extra.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 10

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding. — 15

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,800 copies. The Subscription List is always open to inspection.

***Copies of THE NATION may be procured in Paris of Brentano Bros., 17 Avenue de l'Opéra; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; and H. F. Gillig & Co., 449 Strand.

Scribner & Welford's

NEW BOOKS.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. Francis Hueffer. Two vols., large crown 8vo, cloth, $5.00.

This Correspondence gives us a deeper insight into the character and aspirations of Wagner than any other existing biography of the master. These letters take the same rank of importance in Music as those of Goethe and Schiller in Literature, and will be of permanent value.

Life in the Confederate Army.

Being the Observations and Experiences of an Alien in the South during the American Civil War. By William Watson. 12mo, cloth, $2.00.

GENERAL CONTENTS: The South Before the War—The Secession Movement—Life in the Confederate Army—In the South during the War.

Louise De Keroualle, Duchess of Portsmouth,

In the Court of Charles II.; or, How the Duke of Richmond Gained His Pension. Compiled from State Papers in the Archives of the French Foreign Office by H. Forneron. With a Preface by Mrs. G. M. Crawford of Paris. With six engraved Portraits of Court Beauties, from the Paintings at Hampton Court Palace. 8vo, cloth, extra, $3.50.

"An interesting record of a very strange and humiliating period in English history. Even now, when two centuries are past, one burns with anger and shame to read how the French King kept his diplomacy steadily at work to secure his aim."—*Pall Mall Gazette.*

Hazell's Annual Cyclopædia, 1888.

Containing 3,000 concise and explanatory articles on every topic of current political, social, and general interest referred to by the press and in daily conversation. Edited by E. D. Price, F.G.S., assisted by a large number of contributors, including some of the most eminent specialists of the day. The only Annual Book of General Reference absolutely revised and complete to the END of the year. Third year of issue. Crown 8vo, cloth, 640 pp., price, $1.50.

"Full and trustworthy."—*London Times.*

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

The Nation.

NEW YORK, THURSDAY, JULY 5, 1888.

The Week.

THE order establishing a new system of classification for the civil service in Washington marks another long step forward. Its effect is to bring within the operation of the reform system every person employed by the Government in Washington except the laborers and unskilled workmen at the bottom and those excepted by the rules at the top—practically, the whole body of subordinates. It is announced that a similar classification for the customs service and the postal service throughout the country is now being perfected by the Commission, and will soon be promulgated by the President. It is by such extensions as this that the progress of the reform, despite all drawbacks, is shown.

Within a week from the adjournment of the Chicago Convention every Republican organ in the country finds itself put upon the defensive, and called upon to answer a question the mere asking of which is a signal of distress. The keynote of the canvass is found in this opening sentence of an editorial article in the Boston *Journal*: "A *Journal* reader asks, 'What shall I say to people who criticise the free-whiskey plank in the Chicago platform?'" There are various ways of answering the question. One is to tell a lie, as the Boston *Journal* does, when it says: "Perhaps there is no better answer, on the whole, than to say that there is no such plank in the platform." But lying is of no use, for it will not do to stop with the mere assertion that there is no such plank—the editor must go on and try to show that he is right; and that is fatal. The *Journal*, for example, attempts to explain that probably the abolition of the tax on tobacco and upon alcohol used in the arts, and the policy of reckless extravagance to which the party is pledged, will use up the whole surplus; but, after all, it has to admit that, if it does not, the party is committed to "the entire repeal of internal taxes rather than the surrender of any part of our protective system."

There remains one other policy—bold, positive, aggressive. It is the policy of Col. Ingersoll, as laid down in his speech at the Republican ratification meeting in this city on Friday evening. No "defensive campaign" for Col. Ingersoll; no disingenuous attempt to deny that the free-whiskey plank is there; no weak effort to excuse it on the ground of finance; but eager, earnest, impassioned championship of free whiskey as the best possible way to promote the cause of temperance. For candor and courage combined no better answer to the question "What shall I say?" can be found than this answer by Col. Ingersoll:

"Mere liquor does not make drunkenness. The moral question of the whole thing is to have the burden of government rest as lightly as possible. Temperance walks hand in hand with liquor. I do not think that if the Mississippi River ran pure whiskey, and the banks were loaf sugar, and the flats grew mint, and the bushes were tea-spoons and tumblers, there would be one more drunken man than now. I am perfectly willing to have those who wear foreign velvets and drink Château Yquem pay the taxes, but I don't want to have the fellow who drinks the domestic article taxed one cent."

The "defensive campaign" upon which the Republicans have embarked is illustrated by the interview with Mr. Ernest H. Crosby, the high-license leader in the New York Legislature. When the "Paris message" appeared, Mr. Crosby heartily endorsed its argument for the retention of the tax on whiskey as a temperance measure. Now he endorses the repudiation of that doctrine by the Republican party, and excuses his tergiversation by the plea that "the free-whiskey plank in the Republican platform is the result of looking at the subject from the tariff side rather than the temperance side." This suggestion, that the point of view from which a measure is passed affects its operation, is truly diverting. Everybody knows that to cheapen the price of whiskey is to increase its consumption enormously. Mr. Crosby admitted last December that, looking at the matter from the temperance side, the tax on whiskey ought to be maintained, in order to restrict its consumption; now he says that if you look at the question from the tariff side, and call the tax on whiskey a "war tax," which ought to go, it is all right to increase its consumption enormously! "There is a moral side to it," said Mr. Blaine last December, and Mr. Crosby then said: "I believe that Mr. Blaine is wise." Now he says, "It is purely a matter of finance." In such absurdities and inconsistencies does the "defensive campaign" involve the representatives of what was once "the party of moral ideas."

When are the late Blaine boomers going to begin to work for Harrison? At present they are devoting all their time and strength to the personal abuse of everybody, in and out of their party, who did anything to prevent the success of the Blaine plot. It is probably a great relief to men so sore with disappointment to make faces at their jubilant enemies, and to call them liars and horse thieves, but that is not the way to promote union and secure victory for the party. Here is Charles Emory Smith, the inventor and custodian of the great Fitler boom, devoting his powerful intellectual forces exclusively to a showing up of Senator Quay's nefarious conduct in standing by Sherman at Chicago, and thus defeating Blaine. He does this work in his editorial columns, in double-leaded type; and, lest there should be any doubt as to who the gifted author is, he signs "C. E. S." at the end. Here is an extract which gives a fair idea of the tremendous force of the attack: "The leadership of Senator Quay was unwise and disastrous; the following of the delegation for the most part was abject and humiliating. The one was neither sagacious nor unselfish; the other was neither well-chosen nor self-respecting." This is carried on with wonderfully sustained power through an entire column. We have perused it all with pleasure and admiration. It shows with pitiless logic that Quay's failure as a leader consisted in his refusal to join Mr. Smith in the great Fitler boom. "If Fitler could not have been nominated," says Mr. Smith, "he could at least serve to stand for the State until the delegation could decide where its vote might be *prudently transferred*." Of course, that means transferred to Blaine. Nothing else would have been considered "prudent" by this great mind. Finally, Mr. Smith says—after exclaiming of Senator Quay's course, "What amazing politics!"—"We want a united party with trusted leadership; we can have it with reason, fair play, and liberal counsels all around; but the course pursued at Chicago is not the way to get it." But the course pursued at Chicago nominated Harrison, did it not?

There is a furious row in Pennsylvania between the Chairman of the Republican State Committee, Mr. Cooper, and Senator Quay. Mr. Cooper says that the trouble began upon the floor of the Convention in Chicago, when Mr. Quay told him that if he did not stop meddling with the members of the Pennsylvania delegation, he would have the Sergeant-at-Arms place him under arrest. Mr. Cooper, who is an "undying Blaine man," was laboring with the delegation in favor of his hero, and was explaining to them the apparently inexhaustible subject of Mr. Blaine's cable messages. In telling his story now, Mr. Cooper reveals the interesting fact that in addition to the two cablegrams which the *Tribune* has published, including the one marked "Private—use wisely," there was still another. The two were presented by Boutelle to the final caucus of the Blaine men on Monday morning, the day of Harrison's nomination. Mr. Cooper says:

"There was a feeling prevalent that they might be forgeries, and in order to determine whether they were genuine, it was decided to send Mr. Blaine the following cablegram:

"'Two cablegrams have been received from you persisting in your declination. Some friends doubt their genuineness. Cable me at once in Mr. Carnegie's cipher. BOUTELLE.'

"We had our suspicions aroused by the fact that the two cablegrams differed in the name 'Edinburg' and 'Edinboro,' from which place they were alleged to have been sent. After sending this inquiry, we took a vote, and found we could command 578 votes for Blaine at the proper time, and it was decided that if a reply should not be received from Mr. Blaine by the beginning of the fourth ballot, he was to be nominated. We adjourned our conference with that distinct understanding. As the second ballot was about to be taken, the expected answer was received from Blaine, saying that his two previous despatches were correct."

Now, the interesting point about this third message is, how came Boutelle to have in his possession the key to Mr. Carnegie's cipher? It must have been left with him before the coaching tour was begun, and its being so left seems to imply an understanding of some kind between Boutelle and the coaching

party that an emergency might arise demanding its use.

Justice should be done to Mr. Chauncey Depew. If he had not carried off the New York delegation at the start, Mr. Blaine would have got the bulk of those votes in the Convention. If he had not been a candidate before the Convention met, if he had not divided the primaries and county conventions, Blaine would have been nominated. New York cared nothing for Sherman, or Alger, or even Harrison. She wanted either Blaine or Depew. If there had been no Depew, Blaine would have had the State delegation, either with or without his own consent. History should be vindicated, and will be in the end. When the muse takes up her pen to trace the political currents of the year 1888 whose composition of forces led to the fourth and final defeat of James G. Blaine, she will write the name of Chauncey Depew as one of the chief contributors thereto. What Mr. Depew did he had the best reasons for doing. Mr. Blaine opened the road for him as much as for Sherman, Alger, and the rest. The fact remains that if Depew had not been in the race, Blaine would have got the prize and would have accepted it, Mr. Carnegie being the witness.

Mr. Depew has, since his return from Chicago, announced his intention of going to Europe for a few months. We trust he will seize the opportunity which this will give him of looking up the rascally Dutchman who so grossly imposed upon him last year about the passage of "a free-trade law," with great resulting misery in Holland, and the transfer of the Government of that country to "theorists." This person was not a chance acquaintance made at a hotel or in a railway train. He was, Mr. Depew said, "a prominent business man," and therefore can be readily found in Amsterdam, or Rotterdam, or Schiedam, or thereabouts. Mr. Depew owes it to his own reputation to expose his shameless lying as soon as he finds him. His task will not end, however, with the punishment of this dishonest man. It will then be his duty to find out what it is that caused the awful change which he says he witnessed in Holland last year, and which occurred between 1884 and 1887—a change which was nothing short of the conversion of a model community into a den of pauperism, and socialism, and crime. We hope he will make searching inquiries among the "theorists," and let us hear all about it in the fall.

It took the Republican Convention six days to make a Presidential ticket, and, after all, it seems that the work will have to be done over again, for the record shows that it nominated a "free-trader" for Vice-President. On the 5th of April, 1880, Mr. Townshend, Democrat and "free-trader," moved to suspend the rules and pass the following bill:

"That sections 2503, 2504, 2505 of title 33 of the Revised Statutes of the United States be revised and amended so that the duty on salt, printing-type, printing-paper, and the chemicals and materials used in the manufacture of printing-paper, be repealed, and that said articles be placed on the free list."

This was nothing more nor less than an "assault upon the protective system," which every "friend of American labor" was bound to oppose with all his might; and yet among the yeas, along with such names as Morrison and Mills, one finds recorded that of Levi P. Morton. The Republican party has thus nominated for Vice-President a man who has declared himself in favor of free salt and free raw material, in preference to free whiskey.

It was an act of injustice on the part of Mr. Reed of Maine to "sit down" on Judge Kelley as he did when the latter moved to postpone consideration of the Tariff Bill until after the election. The truth is, that the Chicago Convention endorsed Kelley's policy to the letter, and virtually proclaimed him the leader of the party on the tariff question. Until the Convention met and adopted its platform, Kelley was the only advocate of free whiskey in Congress, and the only Republican of note in the whole country who favored that policy. He and Warner Miller were the only ones who favored an increase of duties in order to lessen the revenue. The Convention adopted both these ideas, prohibitory duties and free liquor, and put them in the party platform. By so doing they handed the sceptre of leadership to Kelley, and it is sheer impertinence and usurpation on the part of Reed to take it away from him. If the Republicans in Congress are not ready to make an aggressive fight to embody their declared principles in legislation, the very least they can do is to put off the vote till after the election.

The Boston *Commercial Bulletin*, a high-tariff organ, is much cast down by the terms of the following circular sent out by the Sugar Trust:

"On and ofter July 1, 1888, New York refiners will not sell their sugars through any broker who sells sugar for refiners not in the Union or who corresponds with a broker who does. Please inform us at once if this will affect our relations with you. Do you sell direct or through a correspondent sugars for any refiner not in the Union?"

The first criticism of the *Bulletin* upon the circular is a literary one. It objects to the use of the word "Union" instead of Trust, which it considers a deceptive attempt to avoid the opprobrium which attaches to the latter phrase. It insists that the Sugar Trust should sail under its own colors, because it is really a Trust, and not a mere combination or union. Its next and chief objection is that the Sugar Trust is seeking to crush out competition by preventing grocers and dealers from selling any sugar except that which they (the Trust) supply. This course of procedure is said to be "unchristian and un-American." "Any man or set of men in the United States," it goes on, "has the right, now and ever, to go into the business of sugar refining, and no man nor set of men has the right to hinder in the least other than by fair competition." And then it says in conclusion, and with much solemnity: "This is a free country." No, dear *Bulletin*, this is not a free country, and will not be until people are allowed to buy sugar and other things without any other tax than such as may be required for the honest support of an economical government. The Chicago platform demands the repeal of the whiskey tax rather than the surrender of "*any part* of our protective system." Sugar-growing and sugar-refining are both parts of the protective system, and trusts are the natural outgrowth of that system. The Chicago platform is the true bulwark of all the trusts. Moreover, the platform does not prohibit any trust from calling itself a union if it likes that name better.

A rather weak attempt has been made to ascribe the lock-out, or strike, or disagreement, or whatever it may be called, by which 100,000 workmen in the iron trade are now out of employment, to the apprehensions of manufacturers concerning the pending Tariff Bill. Mr. T. M. Jones of the American Iron Works, Pittsburgh (we quote from the *Tribune* of July 1), said: "The agitation of the tariff had a decided influence upon the action of the manufacturers in refusing to sign the scale. The discussion in Congress causes an unsettled condition in trade, and, consequently, being unable to foretell the future, it is not deemed prudent to make contracts that would undoubtedly be affected by a reduction of the tariff." This Mr. Jones, the *Tribune* adds, is a brother and partner of the Chairman of the Republican National Committee. It is singular that the Jones family have so little confidence in the Senate of the United States, without whose concurrence no change can be made in the tariff. It will be very strange if the Republican Senators do not live up to the platform lately adopted at Chicago, which requires the repeal of the whiskey tax rather than the surrender of "any part of our protective system," and which demands an increase of taxes instead of a decrease, in order to reduce the revenue. If these declarations are not emphatic enough to protect bar-iron, and to enable the Joneses and other like-minded persons to fight the Amalgamated Association of Iron and Steel Workers without danger of a fire in the rear from Congress, it would be hard to understand what form of guarantee would suffice. It is certain that the Republicans control the Senate, and that no bill can become a law which does not pass that body. It is not likely that any Republican Senator will "spit upon the platform," as Horace Greeley did upon the Whig platform of 1852, though some Republican newspapers are doing this indignity to the Chicago construction, and many Republican voters are likely to.

It is evident that Mr. Jones is trying to throw dust in the eyes of the public, at the same time that he cuts down the wages of his employees 10 per cent. If it is an apprehended and not an actual decline in the price of bar-iron that leads him and his fellow-manufacturers to reduce

wages, their action is not justifiable. If it is really a fear of legislation that may not, after all, take place, and that cannot take place without the consent of the Republican Senators, then Mr. Jones and his fellow-manufacturers have been untruthful in their statements to their workmen. They have said that the market at the present time does not justify them in signing the scale, not that a future problematical and uncertain market may justify them. If they had said what Mr. Jones now says, that the Mills bill is causing the trouble, the workingmen would have laughed them to scorn. No such argument would have been given a moment's consideration. The men know that whether the tariff is one thing or another (and it has certainly not been on a descending scale for a quarter of a century past), the annual strife about wages is as regular as the seasons or the elections. They ought to know by this time that the rate of wages has no relation at all to the tariff, for whenever any desperate strife occurs their places are always filled by the overflow of newly arrived immigrants from Europe.

The dismissal of Mr. Seth Low of Brooklyn by the *Tribune* as a "Sunday-school politician," because he cannot swallow the Republican platform, is simply a renewal of the war on the "Pharisees and hypocrites" and "mollycoddles" which followed the bolt against Blaine in 1884. There is no class which excites so much deadly animosity among the Blaineites as men who make any pretence of bringing principle to bear on politics. Consequently, the Sunday-school, as a place in which the duty of following conscience without regard to consequences is taught, has become a synonym with them for cant and humbug, and serves as a term of reproach. All the political morality they teach themselves is marked "Private—use wisely."

The editor of the *Sun* has evidently made up his mind that he has no use for the remainder of his once proudly advertised circulation. In spite of the fact that his name has been hissed at the ratification meetings of the County Democracy and Tammany Hall, he sticks bravely to his policy of saying on an average one word for Cleveland and Thurman and three against them in every issue of the paper. He speaks favorably of them in a leading article, and "knifes" them slyly in paragraphs or extracts. At regular intervals he publishes judicial calculations showing that the Democrats are going to have a close fight, with the chances against them, if they stand honestly by their platform, and all these are promptly quoted in the Republican papers as "important Democratic admissions." Few things calculated to injure the Democratic ticket escape the editorial eye or fail to get into the *Sun's* columns, but it is very rarely that a sign of defection from the Republican ticket and platform, like the Chicago *Tribune's* articles, for example, finds the light there. This is a slyer game than the *Sun* played in 1884, when it did its best to elect Blaine, but it is not sly enough to escape the consequences which that entailed.

The letter addressed to Secretary Fairchild by Mr. James Burt, who had been in substance accused of participation in "sugar frauds" in connection with the Sherers at this port, repeats the statement frequently made before, that the question in controversy between Dr. Sherer and the Department, viz., whether the polariscope tests of sugar at this port were correct or not, was submitted to the National Academy of Sciences last year and decided in favor of Dr. Sherer. We think that the Secretary cannot afford to ignore this fact any longer. The National Academy is certainly better authority than a Boston newspaper reporter, better than Assistant Secretary Maynard, better than Secretary Fairchild, better than anybody else. It is, moreover, an authority recognized by law as competent to give decisions upon questions of this kind. When a government appoints a newspaper reporter to make investigations upon which charges affecting the reputation of individuals are based, and rejects or suppresses the counter-testimony of the highest scientific authority in the land, is it not bound to make some explanation of the reasons for so singular a proceeding?

"STAMFORD, Conn., June 28.—Four oyster sloops from Long Island are tied up at Stamford by the United States Marshal, and their captains arrested for taking oysters in Connecticut waters. This will prove an interesting question if brought before the court."

The above, which forms part of the telegraphic news of the week, strikingly illustrates the point made by Mr. Wells in his speech on the "Fishery Question" before the Reform Club, namely, that the separate States of the Federal Union claim to the utmost extent that jurisdiction over territorial waters, in respect to fishing, which the Senate of the United States, by refusing to ratify the Fishery Treaty, deny by implication to the people of the British provinces, and especially to the poor fishermen of Newfoundland. The parties in both cases claim that products of the sea—"oysters" or "bait"—caught in waters over which their local legal jurisdiction extends, are under their exclusive control as property, to use or sell, or not to use or sell, as they may see fit. In the case of Connecticut this seems right and proper. In the case of Newfoundland Messrs. Frye, Ingalls & Co. consider the claim presumptuous, and the effort to enforce it an outrage on the American people, to be resisted even to the point of war.

The college graduates have begun to receive their annual warning from the sages of the newspaper press against thinking too highly of the education they have received at college, and against supposing that it is going to be any particular use to them in the battle of life, and especially in the editorial career. There is no point on which some of the sages are so emphatic as the folly of supposing that a college degree will help a man in solving the solemn problems of journalism. One bright and particular star, in fact, laid it down recently that a college graduate was *ex vi termini* a spoiled journalist—that is, that preparation for a degree incapacitated a youth for the production of the pungent paragraphs, and the spicy headlines, and the castigation of hostile contemporaries, in which the journalistic novice is supposed to pass his time. It appears, however, that these efforts to keep down competition have very little effect, and that the college graduates, every year, in greater numbers and with undiminished audacity, continue to offer themselves for the awful and solemn duties of the journalistic calling. In order in some degree to save these youths from the consequences of their own rashness, a school of "practical journalism" has been set up in Cornell University, under the superintendence of a former reporter of the New York *Sun*, who is to instruct the undergraduates in the art of reporting fires, accidents, crimes, and thrilling incidents generally. This is apparently a branch of the larger department of "theoretic journalism" presided over by Prof. Fitch of the Rochester *Democrat*, in which, as we understand it, the art of journalistic thought and research is taught.

Mr. Theodore Thomas, in his long legal fight with the Musical Protective Union, has obtained a decision in his favor from the Supreme Court General Term, which is a serious blow to all kinds of boycotting. In the autumn of 1885 Mr. Thomas imported from Europe a new oboe player, there being at that time obtainable in this country no player of that peculiar and difficult instrument whom he considered competent to play in his orchestra. Being himself a member of the Musical Union, Mr. Thomas was fully aware of the existence of two by-laws which had been made especially to protect musicians in this country against the competition of new players from abroad. One by-law forbade the members of the Union from playing with non-union members on penalty of a fine for the first two offences and of expulsion for a third offence. Another by-law forbade the admission of any one to membership of the Union until after he had lived in this country at least six months. When the new oboe player appeared, the Union at first warned the other members of the orchestra, then fined them, and was about to expel them when Mr. Thomas went to the courts and obtained an injunction forbidding the Union to either fine or expel him. Argument was had upon this before Judge Potter, who sustained the injunction and referred it for final decision to the General Term. A few days ago the General Term made a decision affirming that of Judge Potter; Judges Brady and Van Brunt signing it, while Judge Daniels dissented. The decision is in the same line as that of the Court of Appeals in the case of the foreman of Gardner & Estes; the ground being, we believe, that the attempts of the Union to interfere with and injure Mr. Thomas's business constituted a "conspiracy" as defined by the Penal Code.

THE MUGWUMP JUSTIFICATION.

NOTHING but time could have furnished a justification for those who, in 1884, took upon themselves what we admit was, under the circumstances, the very great responsibility of severing their connection with the Republican party, and assisting in the transfer of the executive branch of the national Government to the Democrats. How great this responsibility was, may be inferred from the fact that in the opinion of the great majority of the Republicans, some or all of the following consequences were very likely, if not certain, to result from the accession of the Democrats to power. We cannot do better than quote Mr. Carlisle's enumeration of them in his speech on Thursday night, although we have frequently set them forth in these columns ourselves:

> "It was said that the election of a Democratic President would be immediately followed by the prostration of our manufacturing industries, the derangement of our finances, the debasement of our currency, and the destruction of the public credit; and that even the civil and political rights of the people would not be secure. According to these partisan prophets, the Supreme Court of the United States was to be reorganized and the constitutional amendments annulled; the Confederate debt was to be paid and the Confederate soldiers pensioned; the colored race was to be reenslaved in the South; the doctrine of secession was to be reasserted; the soldiers and sailors of the Union were to be deprived of the pensions and bounties heretofore granted to them, and all the terms and conditions of the adjustment which succeeded the late civil war were to be entirely disregarded."

This is not rhetorical exaggeration. It is a simple and strictly accurate description of the view, taken by a large proportion of the Republican party, of the attitude of nearly one-half the American people towards their own political system. Now, we were in 1884 of opinion that the mere existence of this belief was in itself a public danger; that good government under a constitution like ours was not attainable except through the competition of two great parties for popular favor, and that it was essential to the working of this competition that both should be held competent to administer the Government, however much they might differ on questions of policy. We held that the notion that there was only one party fit to execute the laws, must soon debauch that party by making it reckless and indifferent to public opinion, and that it had, as a matter of fact, debauched the Republican party, and that we could not have healthy politics without upsetting it.

The Mugwump vote in 1884 did upset it. It restored the regular working of party government in the United States by putting the opposition in power. It dissipated by actual experiment the terrible superstition that nearly 5,000,000 of voters were ready to ruin the country if they got a chance. We may safely ask all those Republicans, and especially the younger ones, who broke away from their party in that year, whether the experience of the last four years, on this point at least, has not fully justified their course. What American is there who cannot today, as the result of President Cleveland's Administration, speak more hopefully both of the present and future of American institutions than he could in 1884, even after conceding the truth of all that has been said or can be said touching the President's failure to meet the expectations then entertained of him as a reformer? His Administration has demonstrated once more that the United States Government is safe, not only in the custody of a certain class of Americans, but in the custody of any American majority, however made up. Surely this is an immense gain; surely it is of itself enough to make all Independents feel happy in looking back on their work of four years ago.

But this is not all. The secession of 1884 was also due in part to the belief that the Republican party had lost all its earlier impulses and aspirations, and had fallen irretrievably under bad influences, and that real reform was not to be looked for at its hands. That this was not a mistake, we think the history of the past four years has conclusively proved. In the first place, the Republican party, in exercising in that interval its legitimate function of a hostile critic, far from finding fault with the President's failures to reform, has reproached him for nothing except promising to reform, and has in every way in its power encouraged him to violate his promises and practise the abuses which his supporters expected him to abolish. In the second place, through all its organs in the press, it deliberately retained its hold on Mr. Blaine up to the meeting of the late Chicago Convention, as the best living exponent of its spirit and methods, thus proving that the nomination of 1884 was not the result of haste, inadvertence, or defective information. It then confirmed this action of the press by electing a convention which was only prevented from nominating him again by his own blundering and that of his agents, in an attempt to give the nomination the air of a compulsory return to public life of a wearied patriot. This view of the matter, too, has been amply confirmed by the platform drawn by the Convention, which, after much "arraignment" and declamation, actually proposed no positive legislation except a reduction of taxes, which is to include the abolition of those on whiskey and tobacco! On this platform, it has nominated a gentleman against whom personally we have not a word to say, but whose claims on the confidence or respect of the Independent voter may be inferred from the fact that, although he voted for the Civil-Service Law, he vigorously opposed the prohibition of the worst feature of the spoils system—the assessments on officials for party purposes—and disgusted even James G. Blaine by his activity and persistence as an "influence" at Washington. His position on the great question—the greatest question in politics, in fact, for every civilized community to-day — the nature and incidence of taxation, may be inferred from the following passage from a speech in Chicago on the 20th of last March:

> "I am one of those uninstructed political economists who have an impression that some things may be too cheap; that I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coat."

This at first blush sounds simply like the somewhat heartless expression of a successful lawyer's contempt for the small cares of that great mass of mankind who have to think well over every dollar they spend. But it is something far more serious than this. It is the language of a man who, assuming him to be honest and sincere in his public talk, has never either read or reflected on the nature of the sacrifices which the Government of a country demands from the bulk of the population when it asks them to give part of their earnings for its support. And there is a curious light thrown on this extraordinarily foolish talk by the fact that this candidate, who has such a contempt for cheap clothes, is put on a platform which calls for cheap whiskey. No Mugwump of 1884 can look on these things without feeling that in that year he chose the better part, and that time has only made his way plainer.

TRANSFORMATION OF PARTIES.

A FOREIGN observer, after a careful study of our political assemblies and our election methods a few years ago, expressed the opinion that the Republican party "contained the intellectual and moral bone and sinew of the American nation." The judgment was undoubtedly correct at the time it was rendered, but it is already evident that it will not hold true in the year 1888. A transformation of parties has been going on for four years past, and is now proceeding more rapidly than ever before, which changes the political attitude of the intelligence and morality of the nation, and ranges the preponderance of these ruling forces on the side of the Democratic party.

Democracy was in its early days the party of the people, really as well as nominally. But the rise of the slave power changed the nature of the organization. The dominant force in its councils came to be the oligarchy of slaveholders, a body numerically small, but politically most influential. Under its sway the party fell constantly further and further away from the principles of true democracy, as laid down by its founder, Thomas Jefferson, and became more and more thoroughly the party of a class. It broke its pledges, it repealed the compromises which it had declared for ever binding, it surrendered its convictions.

It was inevitable that such a policy should array against the Democracy the intelligence and the moral sense of the country. It was from this source that the Republican party was drawn. It owed its origin to the protest of the North against the attempt of the South to extend slavery, and at first it went no further. As Lincoln put it in one of his joint debates with Douglas in 1858, the issue was simply, on the one hand, to keep slavery out of new Territories and restrict it for ever to the old States where it then existed; or, on the other hand, "surrender and let Judge Douglas and his friends have their way and plant slavery over all the States — cease speaking of it as in any way a wrong — regard slavery as one of the common matters of property, and speak of negroes as we do of our horses and cattle." On that issue it was cer-

tain that "the intellectual and moral bone and sinew" would ultimately be found in the new party which Lincoln represented. The course of the Democrats during the war and during the reconstruction period only served to mass these forces more and more compactly on the Republican side.

The growing demoralization which characterized Grant's two administrations, and the disgraceful performances which followed the election of 1876, arrested the drift of the better forces towards Republicanism; but the inertia of party is exceedingly strong, and the most disgusted members of the organization still indulged hope for its rehabilitation—a hope which was encouraged by the nomination of Garfield in 1880. The selection of Blaine in 1884 was a rude shock, which forced many thousands of the most conscientious Republicans to vote against the candidate of their party; but most of them still clung to the hope that this was only a temporary aberration, from which it would recover.

The truth was, however, that the nomination of Mr. Blaine was more than a functional disturbance: it was the symptom of an organic disease which had attacked the very vitals of the party. *Nemo repente turpissimus*, is hardly less true when applied to organizations of men than to the individual; no party suddenly becomes most base. When it presents as its perfect flower a dishonest man, it is only because it has gradually been sapped of its virtue, so that it yields easily to the temptation of vice when veneered with "magnetism." The elevation of Mr. Blaine signified that the Republican party was no longer the party "of the people, by the people, for the people," which Lincoln led.

At last the party has thrown off all disguise, and openly appears as the champion of special interests against the masses of the people. At first the advocate of moderate protection for a limited period to "infant industries," as a mere incident of the taxing prerogative, it has now become the advocate of "protection for protection's sake," as a permanent feature, and the most important feature, of our governmental system. In 1876 and again in 1880 it "avowed the belief that the duties levied for the purpose of revenue should so discriminate as to favor American labor," thus clearly recognizing the principle that duties should primarily be levied only because they are necessary to support the Government. In 1884 it still virtually recognized the same principle by pledging itself to reduce the revenue, then larger than was demanded by the necessities of the Government economically administered, and promising to "relieve the taxpayer." But in 1888 it has turned its back upon its whole record; it ridicules its own former doctrine that duties are properly "levied for the purpose of revenue"; it condemns economy and demands extravagance, in order that more revenue may be needed; and when even extravagance seems to be insufficient, it proposes to repeal the tax on whiskey rather than lower any of the taxes on the food and clothing of the people.

The moral side of the tariff issue is here plainly revealed to the apprehension of the dullest mind. The "uncrowned king" of Republicans has himself presented it with remarkable force in his "Paris Message." Nobody can improve upon his argument of last December against the Republican platform of June, when he protested against the repeal of the whiskey tax because "there is a moral side" to the question, because the consequent cheapening of whiskey would increase its consumption enormously, and because "it would destroy high license at once in all the States."

In his 'Twenty Years of Congress' Mr. Blaine has shown how the Republican party came to absorb the intellectual and moral bone and sinew. In speaking of the Republican Convention of 1856, he says: "The Democracy saw at once that a new and dangerous opponent was in the field—an opponent that stood upon principle and shunned expediency, that brought to its standard a great host of young men, and that won to its service a very large proportion of the talent, the courage, and the eloquence of the North." A generation later it is the Democratic party, chastened by repeated defeats and sobered by responsibility, which stands upon principle, and there can be no doubt that its appeal will attract the same elements which were drawn to the Republican party thirty years ago. Already one sees signs of the revolution in the changed attitude of such men as the Rev. Dr. Storrs and ex-Mayor Low of Brooklyn. Already, too, one sees the difficulties of the "defensive campaign" which the Republicans must make, in the sneering editorial of the *Tribune* on Mr. Low as "a Sunday-school politician." The watchword of the Republicans in 1888 is the absurd cry, "Do you want British free trade?" as the watchword of the Democrats a generation ago was the equally silly cry, "Do you want your daughter to marry a nigger?" It is a melancholy end for a party which once contained, and deserved to contain, the best forces of the nation.

THE PROHIBITIONISTS AND THE WHISKEY TAX.

The attempt of the Republican party to masquerade in the livery of the Woman's Christian Temperance Union is meeting with ridicule from the very women who fashioned the garments. The sham was so apparent that no statesmanship was necessary to detect it. When, therefore, Miss Frances E. Willard, President of the Union, found that the Republican party, which has steadily advocated high license in local politics, had endorsed her demand for the repeal of the national liquor tax, her sentiment, instead of being that of self-congratulation, was that of scorn. In her address before the National Prohibition ratification meeting on June 22, she expressed this sentiment with all the emotional earnestness of which she is the mistress. She summed up the situation in the following words: "The party stands arrayed against itself in its State and national policy. The house is divided against itself and cannot stand."

It is the obviousness of the last sentence which gives to it its significance. For the past few years the restrictive taxation of the liquor traffic has been the one moral idea which the Republican party has everywhere endorsed. Yet the highest possible high license cannot compare in importance with the internal-revenue system. The Crosby bill as it passed the Republican Legislature proposed a tax of $300 upon each saloon where distilled liquors were sold; the internal-revenue system imposes a tax which averages $500 for every saloon, restaurant, drug-store, and grocery where liquors of any description are sold. The number of saloons and restaurants in the nation is but 90,000. The national liquor tax is $90,000,000. Were a high-license fee of $1,000 everywhere imposed and enforced, the concentration of the traffic would be such that the burden would not be equal to that which the internal-revenue system now imposes. Mr. F. N. Barrett of the *American Grocer*, whose estimates regarding the consumption of liquor were published by the Internal Revenue Department, calculates that half of the liquor consumed is bought not by the glass, but by the gallon. The effect of the internal-revenue tax upon the price of this portion is easily estimated. The cheaper grades of whiskey can be manufactured for twenty cents a gallon. The tax raises this price 450 per cent. Had the Crosby bill been made a law, the further increase would have been confessedly slight. Yet the party which advocated that, in the interests of morality, this further increase must be made, is now willing to make real the Irishman's dream of "whiskey a shilling a gallon, and no hanging for stealing," in order to preserve to the protected classes the extortions of the war tariff undiminished.

The argument which will be heard time and again during the coming campaign, that the Prohibitionists also are in favor of repealing the internal-revenue tax, is worthy of consideration. There is no doubt that the Prohibitionists are the sincere friends of temperance. Why, then, do they seem to endorse the position of the Republicans?

This question is easily answered. In the first place, they do not endorse it. At the ratification meeting mentioned above, Chairman Dickey violently denounced this plank in the Republican platform, and Miss Willard sharply distinguished between the Republican idea of free trade in alcoholic liquor and the Prohibition idea of no trade at all. This distinction is a thoroughly tenable one, and will be endorsed by every Prohibitionist in the country who has not crazed his own intellect by violent talk about "blood money."

In the next place, the chief argument of the Prohibitionists against high license does not apply to the national liquor tax. They have found in their municipal and State campaigns that the revenues derived from the saloons stand in the way of their agitation. Even the more sober-minded among them have thus come to regard high license as the liquor traffic's chief bulwark. It was very natural, then, that some of them should have supposed that the national liquor taxes would have a similar effect. The Re-

publican platform demonstrates their mistake. The national revenues derived from the traffic, instead of being its national bulwark, are its national menace. If anything shall ever bring the Republican party to endorse national prohibition, it will be mainly the desire to get rid of this revenue. Prohibitionists will not support the Republican declaration in favor of untaxed whiskey until the Republicans shall support their declaration in favor of no whiskey. The mass of them at the South will follow the lead of Senator Colquitt and support the Democracy. At the North they will vote in increased numbers for their own party ticket. North and South, they will be alike repelled by the Republican declaration in favor of free whiskey.

The platform adopted at Chicago offends the common conscience of the nation quite as much as its common sense. To the average man the demand that the war taxes in all industries shall be maintained rather than diminish the bounties to the favored few, is protection reduced to absurdity. In an equal degree the demand that the war tariff on necessaries shall be maintained, even though its maintenance involves a whiskey deluge, is protection wedded to iniquity.

THE NATIONAL LIBRARY BUILDING.

When Congress passed the act, some three years since, to erect a building for the National Library, it was felt by all interested in education and intellectual progress that a great step forward, though much too long delayed, had at last been taken. We fear that feelings of an opposite nature will greet the announcement of the vote of the House, on June 18, by which that body, by a vote of 114 to 50, not only refused to provide the means for continuing the work of construction, but resolved that it should be discontinued. We presume that such radical legislation, especially with the very large majority in its favor, was a great surprise to all concerned. It was the more astonishing because Mr. Randall, who had consistently opposed all previous bills granting money for this purpose, had provided, in reporting the item of $500,000 for going on with the work, for a strict limitation of the field of expenditure.

The truth is, however, that for years before the bill passed the House there was a general belief that it was, or would be made, the occasion of stupendous jobbery. We should hesitate to say that any Representatives voted for it because of this, but there can be no doubt that many voted "aye" in spite of it, feeling that the evil of enriching a few scamps at the expense of the taxpayers was more than balanced by the urgent need of proper accommodations for the immense collection of which Congress is the trustee. But most of them must have voted with great misgivings. The bill required—a condition, we believe, without a precedent—that the proposed structure should be built according to the plans of an individual architect, named in the bill, who was (outside of Congress) alleged to be incompetent, and was known to be far more of a lobbyist than a builder. He had previously been granted the extraordinary favor of a trip to Europe at the public expense, in order that he might study the libraries of the Old World, yet it was charged that his incapacity was such that all technical work was done by his partner, who otherwise was kept out of sight. And sure enough, when the office of construction was organized under the law, while the architect (only one architect having been contemplated by the act) was allowed a salary of $5,000, a person to do the work was provided for at a salary of $3,000, which was given to the aforesaid partner. Meantime, the proposed building was vigorously attacked by persons whose opinions were entitled to careful consideration. The Association of Librarians, at two different annual meetings, earnestly protested against it, as being a display of so-called architecture with almost total disregard of the needs of a library. At the same time the plans were strongly condemned by an editorial contributor to the *Century* as being bad art, while an exposure of their deficiencies by Mr. Poole, the Chicago librarian, was circulated in pamphlet form.

It seemed, however, that the plan was loved for the enemies it had made. In the House, particularly, it was the occasion of floods of eloquence, notably by Mr. "Windy Wordy" Rice, who orated and perorated at great length, carefully eschewing all practical considerations, but dwelling with fond delight on the arts of Greece and the arms of Rome, and implying that the library of Solomon in all his glory was not arrayed as would be that of Congress. It was to be not merely, nor indeed chiefly, a library, but a vast museum, art collection, rogues' gallery, and curiosity shop; and in its lofty halls countless generations—not of students, or scholars, or even Congressmen, but of country bumpkins—were to be awed by the limitless expanse of books visible to the naked eye, and spellbound by the beauties of a correspondingly great collection of the productions of "graphic art."

The promoters of the enterprise did, however, condescend to one piece of practical information, viz., that the cost of the structure was not to exceed $2,000,000, or, allowing for contingencies, $2,500,000—twice the sum, by the way, which is to provide for the far more useful collection of the Boston Public Library. But after the ground had been cleared and the foundations begun, there was a long hitch in the progress of the work, which was plausibly explained by the architect at the beginning of the present session, but which was otherwise accounted for by outsiders. The paper of Representative Dingley charged jobbery directly on the architect, and the Washington *Republican* asserted that no progress would be made until the superintendence of the work was given into the hands of a new commission—a hint which was followed in the appropriation bill just defeated. Of the three members of the Commission, it was argued that the Secretary of the Interior could not, in the nature of things, find time for such work, that the architect of the Capitol had his hands full of other work, as well, it was said, as being at cross-purposes with the architect Smithmeyer, and that the Librarian was not a man of affairs.

At the opening of the present Congress, the discontent with the slow progress of the work and distrust of the architect had reached such a height that the Commission found itself forced to appoint, at a salary of $4,000, Mr. Green, who had just completed the State-War-Navy building, to "superintend" the construction, or, as was said, to checkmate Smithmeyer's supposed plans of jobbery, and, at any rate, to prevent his drawing $5,000 a year (with the use of a coupé) indefinitely, with next to nothing to show for it. Shortly after this, Mr. Green being examined by the House committee of investigation, testified that the work would, he thought, require for completion not $2,000,000 or $2,500,000, but $7,000,000 to $10,000,000; and upon this exposition the House appears to have felt justifiable anger at having been deceived and trifled with, and refused further supplies till more economical plans, under other architects, should be laid before it.

ARTS AMONG FRENCH BEGGARS.

Some very interesting revelations have recently been made of the methods of the professional beggars in Paris, under the name of the various "trucs," or, as we in our slang should call them, "rackets," which they "work" in extracting money from the benevolent. The business of begging has, in fact, there been reduced to an art, displaying the usual French finish and perfection. It has a standard printed manual or textbook, the large edition of which is entitled 'Le Grand Jeu,' or Big Game, and the small abridged edition, 'Le Petit Jeu,' or Little Game. The former costs six, and the latter three francs, but they differ only in the amount of information they contain. The plan of both works is the same, and consists of a sort of directory containing the names of the various charitable persons capable of giving money or clothes in each quarter of the city, with some account of their means and pursuits, and of the particular "truc" or device which must be used in working their failings respectively.

This is the way the 'Grand Jeu' reads:

M. A.—Rich proprietor; readily gives a five-franc piece; pays rent in cases of eviction.

M. B.—Never gives any money; ask for clothes.

Madame C. (widow)—Is interested in children only; ask for a layette for the baby and linen for the mother; can also get milk tickets for the baby.

M. D.—Very religious. Occupies herself in getting people married and in promoting baptisms and first communions; gives full suits of clothes.

M. E.—Protestant; dresses children so that they can go to school; gives orders for shoes and clothes; asks for addresses and sends to make inquiries; must have a friend ready to answer.

M. F.—Old and radical Republican; very rich; tell him you are the victim of the Reactionary party.

And so on.

Of course pious Catholics offer the most fruitful field to the professional beggar, and especially pious maiden ladies; and the way of approaching them recommended in the manual shows a deep insight into human nature. A Catholic maiden lady or widow, especially in France, is charitable as a religious

duty, for the Church is very strenuous in making the relief of the poor a means of personal edification. Therefore, a poor man coming to such a lady with a story of a suffering wife and children, especially if seasoned with allusions to "better days," has always, *prima facie*, a fair chance of success. But as these stories are numerous and commonplace, the manual recommends that in approaching maiden ladies their sense of social propriety, as well as their religious sense, should be appealed to. That is to say, the beggar is advised to confess with some appearance of confusion that, although he has lived happily with his wife for many years, "their union has not been blessed by the Church," an omission which has long afflicted them both keenly, especially on the children's account, but that, alas, since they began to reflect seriously on the spiritual misery of their situation, they have never been able to get clothes sufficiently decent to go to church to be married—for, of course, even the poorest have their self-respect and sense of dignity, and would like to give their wedding day, though too long delayed, the air of a fête. This is almost always successful if well managed, because the lady can rarely bear to lose a chance of rescuing people from a positively sinful mode of life.

As a rule, when the story takes effect, not only is money given to get some clothes for the marriage, but the lady promises to see her own curé at once, and get him to perform the ceremony after a previous visit to the unhappy couple at their domicile. Sometimes, when there is a couple, and the man or woman is not a solitary impostor, they wait for the priest, and go through the ceremony with a fortitude bred by long use, but sometimes they decamp before any steps are taken to visit them.

The baptism or first-communion "truc" is worked in the same way. The pious lady is informed with streaming eyes that the children have never been baptized, or have never had their "first communion," either situation being of course full of horror to a good Catholic; and the reason of it is simply want of decent clothes for the family and of the small fee for the curé. Here again, if there are really children in the case, they often stand their ground, and take their baptism and the communion with the nonchalance of long experience. One woman confessed to an investigator, with some hesitation, that she herself had been married fourteen, and her children had been baptized eighteen times, and that every occasion brought her clothes or money. This reminds one of the Chinese witness who came before Mr. Justice Maule in England, and offered to take the oath on the Bible as a Christian. The Judge, doubting his Christianity, asked him where he had been baptized, and he answered through the interpreter that "he was baptized in every town he came to." In other words, in every town he, like the Parisian beggars, found some one who wished him to be baptized, and was willing to make it worth his while, in the Chinese sense, and he, therefore, cheerfully complied.

Another "truc" is what we should call the "rent racket," in which the beggar calls on the well-to-do man about twilight on a stormy evening in the autumn or winter, when the salon or cabinet looks particularly cosey in the lamplight, and makes known that his landlord is awaiting the result of the application before depositing him and his family on the sidewalk in the rain or snow. The case is a hard one, and inquiry at that moment very inconvenient, so the money is apt to come. It is also not a bad dodge for a young man in shabby black to visit a confirmed sceptic and priest-hater—such as abound in Paris—and represent himself as having been expelled from his home by a bigoted father for refusing any longer to study theology, the fabulous character of which he had found out and loathed, and in his distress had come to the most noted friend of free thought within his knowledge.

The "teacher dodge" is also said to be an excellent one, but is rather baser than most of the others, as it has frequently to be practised on persons of small means, and the practitioner has to have some smattering of literature. He comes to a professor or schoolmaster dressed so shabbily that it will be impossible to offer him immediate employment, and represents himself as a brother teacher out of place, and penniless through a series of misfortunes, and generally gets something on the spot, pending inquiries, which, of course, are always fruitless. But extremely bad clothing and considerable dirt are absolutely necessary here, in order to ward off all danger of an invitation to come in, sit down, and converse on scholastic matters. There are also some political "trucs," which the manual considers worthy of attention, though not eminently productive. That is, you may go to a Conservative as a poor man of right principles who has been driven from his employment by the hostility of a lot of Communists, and has gone down step by step into starvation, or you may go to a Radical as a Communard who has been hunted to death by the police for having conscientiously served the Communist ranks in a moment of youthful enthusiasm for humanity. In this field, so strong are the traditions of illegality in France that nothing seems wholly improbable. There came before the police courts the other day in Paris a case of blackmail, in which a poor young man was threatened with arrest by bogus detectives, and paid several sums for immunity. Being asked what he thought he was to be arrested for, he said he never heard or never inquired—he presumed it was to be an "arrestation politique," or political arrest; and being asked what this was, he said he did not know. The old "lettre de cachet" is still in the French air. 'Le Grand Jeu,' is, on the whole an interesting book, and a translation with adaptations to our manners might find some sale here.

THE LAST OF ANCIENT FRANCE.

PARIS, June 13, 1888.

THE Duc de Broglie is giving us a succession of historical works, in which he throws much light upon the history of the reign of Louis XV. It is somewhat singular that the history of the wars and of the diplomacy of the eighteenth century is, in many respects, less known than the history of earlier times. This is owing to the complications of the questions which were treated, to the shifting character of the alliances, to the disturbing elements brought into the politics of Europe by the rising power of the house of Brandenburg. The issues were new; the old lines which separated the great Powers were changing; the philosophical ideas which were in the ascendant, modified the principles of politics.

The eighteenth century may be defined as an age of transition—a great and confused preparation for the French Revolution, which disturbed all the foundations of the old equilibrium. The Duc de Broglie is studying its history in the Archives of our Foreign Office, and he has brought to light many facts which were unknown or little understood. He revealed to us first the hidden diplomatic correspondence of Louis XIV. in the volumes entitled 'Le Secret du Roi.' Louis XV. corresponded directly and secretly, independently of his own ministers, with some of his diplomatic agents. The Comte de Broglie was one of these, and it is natural that the Duc de Broglie should have taken much interest in this correspondence. In the volumes which followed he gave us all the details of the great duel between Maria Theresa and the great Frederick, and showed the part that France took in the mighty questions which arose in Germany at the time of the conquest of Silesia. Two volumes came out under the title of 'Frédéric II. et Louis XV.,' and two volumes more under the title of 'Frédéric II. et Marie-Thérèse.'

We have now two volumes more, under the title of 'Marie-Thérèse Impératrice (1744–1746). They begin at the moment when Louis XV., who had been lying dangerously ill at Metz—so ill that at one moment his life was despaired of—had recovered and left, by slow stages, for Freiburg im Breisgau, which was besieged by the French Army. The King spent a few days at Lunéville, at the house of his father-in-law. He made a magnificent *entrée* into Strasbourg. The siege of Freiburg was conducted by the King in person; it lasted a long time, and meanwhile Frederick, who had boldly taken Prague and established himself in Bohemia, was complaining bitterly that his French allies did nothing for him. Freiburg was take on the 7th of November, 1744, and Louis XV., who was impatient to return to Paris, was unwilling to begin a new campaign. He merely sent a few detachments to increase the French corps, commanded by Ségur, which served under the orders of Seckendorf; the French Army of Germany took up its winter quarters in the region of the Lower Rhine. The two allies of France, Frederick before Prague and Charles VII. in Munich, both remained in a very precarious position.

The malady of Louis XV. seemed to have diminished his faculty for work, which had never been very great. At Metz, when his life was in danger, the Duchess of Châteauroux, his mistress, had been dismissed. What would the King do now? How would the drama of Metz end? The Duc de Broglie tells, with many details, the story of the secret reconciliation of the King with the Duchess of Châteauroux, of her short triumph, so soon ended by her illness and death. The Duchess knew the King well. She wrote to the Marshal de Noailles: "The King is in perfect health, and so am I; let us only hope it will continue so, as, for the rest, I have no doubt it will." And when she saw the King for the first time, her first word was, "How they have treated us!" alluding to those who had caused

the separation in Metz. The return to favor of Mme. de Châteauroux produced an immense sensation. "Les dames reviennent" was, says the Duc de Broglie, the universal cry under this outrage to honor, to decency, and to religion. "Since he takes back his *catin*," said the *dames de la halle*, "we will not say a paternoster more for him." The Duchess of Châteauroux died of a dangerous fever, even before she could punish her enemies and reëstablish her full empire for a day. She was buried secretly, to avoid the insults of the populace. The King was much grieved, but he soon looked for new distractions, "since, in a depraved heart, pain may be great, but makes no long sojourn."

Louis XV. had left his allies in a dangerous position. Frederick was obliged to evacuate Bohemia. The King of France sent him the Marshal of Belle-Isle to concert a plan for a new campaign. Belle-Isle went first to Munich to confer with the Emperor, who felt himself in great danger. On his way from Munich to Berlin, he had the imprudence to take a road which led him to Elbingerode, in the territory of Hanover. Notwithstanding all his protests, Belle-Isle was arrested and conducted a prisoner to England, where he remained at Windsor. He was not set free on parole, but shut up in the great tower, where he was guarded day and night. On his arrival at Windsor, Belle-Isle learned of a great event in the papers (he had seen none during all the time of his forced journey): he heard of the death of the Emperor, Charles VII., whom he had helped to place on the throne.

"Belle-Isle a captive, Charles VII. in his grave, Bohemia reconquered, Bavaria threatened, the imperial dignity once more promised to the ambition of Maria Theresa, what remained of the great design which had convulsed Europe and cost so much blood to France? Hardly a thought in the mind of the man who had conceived it, and who was now condemned to impotence and champing the bit, languishing in a foreign land. There never was a more complete wreck; never was a political error more cruelly punished." The French Government, in the opinion of the Duc de Broglie, ought not, when the empire became vacant, to have tried at the same moment to intervene again in the imperial election and to pursue war at the same time in Flanders and in Italy. Louis XV. and his Ministers did not understand the force of the old proverb: "Qui trop embrasse, mal étreint." D'Argenson was Minister of Foreign Affairs; his portrait by the Duc de Broglie is admirably drawn. D'Argenson was a thinker, perhaps a dreamer; he had secretly conceived the plan of a new constitution for France (his 'Considérations sur le Gouvernement de la France' was only published after his death); he was a philosopher, and, twenty-five years before Rousseau, he prophesied the advent of democracy; he had intimate relations with Voltaire. He wished for peace, but France was at war and could not abandon all her positions over the Rhine or in Flanders; she had engagements with her allies. What was France to do with the son of Charles VII., the new Elector of Bavaria? Maximilian was only eighteen years old. He claimed the quality of Austrian Archduke and of King of Bohemia; he represented in his person all the rights of the House of Hapsburg, but these proud qualifications did not hinder him from being defenceless; the Austrian armies were on the soil of Bavaria. The French Court had been deaf to the last entreaties of his dying father; he had no army, no money; he was in danger of being taken into captivity. D'Argenson did not help him, and when Maria Theresa invaded Bavaria, it is not much to be wondered at if the young Prince accepted the conditions imposed by her. In a fortnight the whole Electorate was conquered without a struggle, and the new Elector was obliged to promise his vote in the imperial election to the husband of Maria Theresa.

It is evident, from all the details given by the Duc de Broglie, that the Elector acted in harmony with the popular feeling in Germany; that, though he renounced the pretensions of his dynasty, he satisfied his people when he reconciled himself with Maria Theresa. Germany was tired of the French alliance and of the French interference in her own affairs, and young Maximilian was the unconscious and unwilling representative of the national feeling. Can we call it exactly the national feeling? At the very moment when Maria Theresa imposed hard conditions on the Elector of Bavaria, she promised him a part of the spoils in the hereditary domains of Brandenburg. It was not enough, she said, to take away from the *robber* of Silesia what he had stolen from her; he must be punished by the loss of some, at least, of his provinces, and Bavaria should have her part. Thus the dangers increased for Frederick; and meanwhile his ally, the King of France, was giving all his attention to his campaign in Flanders. Under the influence partly of D'Argenson, who wished to have a purely defensive policy in Germany; under the influence, also, of his generals, who wished to concentrate all the forces of France at one point, Louis XV. neglected for a while "la guerre d'Allemagne," and himself prepared to join the fine army of Flanders, which he placed under the command of Maurice de Saxe.

Maurice had shown fine qualities of command in the defensive campaign of Flanders during the preceding winter. He had been looked upon till then only as a very daring and bold general; in this last campaign he had proved that he could combine prudence and skill with valor. He was a curious type of the German *condottiere*—given to the coarsest pleasures, always willing to fight and to play, looking on war as on a sort of game, living in the lowest company, as fond of money as of honors, a singular mixture of greatness and of moral destitution, of heroism and of vulgarity. The chief who was to be opposed to him in the new campaign was the young Duke of Cumberland, the second son of King George, who was only twenty-two years old, but who had shown much valor at the battle of Dettingen. It was universally thought that Maurice de Saxe was rushing to certain defeat, that Cumberland was destined to beat him; meanwhile, the Duc d'Aremberg would beat the Prince of Conti, who held a defensive position on the Rhine, and the two victorious armies were to concentrate under the walls of Paris. "I will get there," said Cumberland, "or I will eat my boots." When Maurice heard of this, "There is," he said, "an Englishman who is a little of a Gascon; if he cares to eat his boots, I will prepare them for him."

Maurice de Saxe marched on Tournay in order to undertake the siege of this town, and as soon as it became clear that a general action was imminent, Louis XV. joined him in person with the Dauphin. It was a bold undertaking to attempt once more to describe the battle of Fontenoy. All the readers of the Duc de Broglie's book will be unanimous in saying that his account is truly a masterpiece. There is a ring in it, a vigor, an enthusiasm which reminds the reader that the writer has in his veins the blood of two Marshals of France. I know few pages in all French literature finer than those which end the volume:

"Yes, it was a fine day, but the last of ancient France! She is there, still whole, still full of life and resplendent with all the jewels of her crown: a sovereign in middle life, full of a bellicose ardor which for an hour at least makes us forget all and forgive all; next to him, the heir of this secular monarchy, keeping, in his eyes of an almost infantine purity, a fire which shows the blood of Saint Louis and of Henri IV.; around them, all the sons of the ancient knights, worthy of their ancestors. . . . But let a half century pass, where will it be, this monarchy, the living incarnation of the country? Where will be all those who surround her and cover her with their bodies, the Noailleses, the Birons, the Grammonts? Their names will only be found disfigured in the decrees of a revolutionary tribunal, or inscribed on a funereal stone in the melancholy valley of Brittany, where lie the remains of the victims of Quiberon. Others, I know, have taken their place and fill it well. Sons of our land, transformed into soldiers in order to repulse the invasion of the enemy, will cover with their blood the fields already fertilized by their hands. Battalions organized by the iron hand of a conqueror will enter all the capitals of Europe. . . . You who shall read these pages, children of the French family, bid a last adieu at Fontenoy to the image of a past which made the prestige of your name. Before entering on the high sea, the sailor gives a look at the shores of his native land, brilliant with the fires of the setting sun."

Correspondence.

THE PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: The nominations have been made, and the four months' campaign is now to begin, a process regarded by foreigners with equal wonder and contempt. The turmoil and excitement pervading all classes of the country, the platforms, the brass bands and torchlight processions, the infinite speech-making apparently about nothing, the vast expense, and the interruption of business—all these seem to them to be not only folly, but wasteful and dangerous folly; and it is to be feared that their opinion is shared by not a few among our own countrymen.

There is no one who finds the business less to his taste than myself, yet I believe it to be richly worth all it costs, being in fact of quite inestimable and priceless value. The subjective effect, to begin with, is no small matter. It is well for a people that they should at intervals turn aside from the absorbing pursuit of money, and give themselves up to an interest common to all. It is the one thing that binds all together from Maine to Texas and from Oregon to Florida. All Europe was astounded at the outbreak of loyalty to the Union during the war, and certainly nothing does more to keep it alive than this embodiment of common interest in the Presidential election. An English writer, after describing a procession in New York in 1884, says, "Imagine eight hundred English barristers turning out from the Temple and Lincoln's Inn to walk in slow procession from London Bridge to South Kensington, shouting themselves hoarse for Gladstone or Disraeli." Yes, and imagine what a spirit in the nation that would imply.

But the objective effect is infinitely more important. Is it possible to estimate too highly an institution which, at the crisis of the civil war, gave us Abraham Lincoln, with Stanton, Seward, and Chase on one line, and Grant and Sherman and Sheridan on the other? Europe is bowed down with the weight of armies, for which the plea is that, however unprofitable and crushing they may be, it is necessary to have them ready for the one hour of trial. It would pay us to go on with Presidential elections for a century, even if the questions to be decided and the candidates to be se-

lected were of no importance, provided that they kept the machinery in such working order that the torrent and rush of the national will should place the right man at the head in the hour of supreme need.

President Eliot, in his excellent Phi Beta Kappa address at Harvard, said that democracy had accomplished three things—the war of Independence, the formation of the Constitution, and the preservation of the Union. But that he expressly declined any effort at prophecy, he might have added that our democracy stands face to face with a fourth problem which if it can solve, it will win for itself an undying crown of glory, and that is the conflict between the two branches of Government. To appreciate this we must take a somewhat wider view. France has been for eighteen years under the government of the Chambers, and though they have made a wonderful progress over previous attempts, there are again manifest signs of failure. The instability of ministries, the disorder of the finances, and the menace to the civil service and religious organization, have thoroughly alarmed the country, and it is turning its eyes as always towards a strong executive. Boulanger, himself a transparent humbug, is only the expression of this tendency. A strong President might do something, but he is elected by and the mere instrument of the Chambers, and neither Grévy nor Carnot has shown any power of resistance or any confidence in appealing to the country. There seems to be no resource but revision of the Constitution. Boulanger wants this in the interest of dictatorship, the Monarchists and Bonapartists in that of their respective schemes, and the Radicals—sad omen !—in that of a single omnipotent Convention. Revision means revolution, with results which no man can foresee. In Great Britain the extension of the suffrage is causing grave uneasiness. Parliament is omnipotent, and the Ministry just as much its creatures as that of France is of the Chamber. The executive power has no direct relation to the country at large. If trouble ever comes, there will be, besides the possible evils of democracy, an evil as bad and quite irrespective of that—the absolute rule of a legislature.

I have heretofore urged *ad nauseam* that Congress in its working is little or no better than the French Chamber, though the framework of our society and the condition of our finances are so strong that it cannot at present do so much harm. What I wish now to dwell upon is the power of the nation to set up its own executive, to support him in his efforts to bring Congress to reason, and to eject him if he shows signs of abusing his power for selfish purposes. There is not, and there never has been, anything like it in the world.

When I trouble you with a letter, it is always and only for one purpose. At present the force of the national will is thrown away on account of the restricted and negative power of the President. The elect of ten millions of voters ought to have as good a chance to be heard by his constituents as the member from a petty country district. Mr. Cleveland, in his tariff message, has hinted pretty strongly that it is Congress, and not party, which is the real obstacle to reform. In his acceptance of the nomination he has alluded in no doubtful terms to the forces which rise up on every side to resist the performance of his duty. If he or any future President should have the courage to ask, in accordance with the Senate report of February 4, 1881, that through his ministers he may have a public voice in the guidance of legislation and in appeal to the country against the dictation and domination to which he is subjected by Congress—then we shall see what view of the matter will be taken by democracy. G. B.

Boston, June 30, 1888.

SENATOR INGALLS'S ABUSE OF THE PRESIDENT.

To the Editor of The Nation:

Sir: I take the liberty of suggesting another case "de lunatico inquirendo" to be added to the one furnished by your Cleveland correspondent in No. 1197. It is the author of the article "Fetishism in the Campaign" in the June number of the *North American Review*. Nobody but a political monomaniac would or could come before the public with such a paper. No President of the United States within the existence of the aforesaid *Review* has had such absolute control of his party as Mr. Cleveland, and that party embraces about one-half the people of the country; yet a "grave and reverend" Senator tells us that he is without one spark of ability, and owes his present influence to his utter disqualification in the fullest sense of this term.

I am not a Democrat, and have little or no interest in the success of the Democratic party, but I claim to be able to see that it is not composed of fools and idiots, with a brainless pate for its leader. Here is clearly an instance of language having command of a man instead of vice versa, as is usually the case. Political animosity has so befuddled the "distinguished Senator's" brain that he does not know, and perhaps cares little, what he is saying. And yet he is one of the "trusted Republican leaders." From the infatuation which possesses this man and many others less able, rather than from that which holds the Democratic party spell-bound, we may well pray, "Good Lord, deliver us!" C. W. S.

CLEAR, USED SUBJECTIVELY.

To the Editor of The Nation:

Sir: Mr. Fitzedward Hall's letter on "*Clear*, the Adjective, used Subjectively," in the *Nation* for May 31, establishes a long and respectable history for this locution in English. Yet this history is but modern when compared with the date when our usage had its origin in the two Romance languages, French and Italian. It is nearly three hundred years, according to Mr. Hall, since the word was first employed with this meaning in English; but it occurs in precisely the same sense in Old French, some five hundred years before.

The first instance I find is in Philippe de Thaun, who flourished A. D. 1100-1135. In his 'Cumpoz,' 3220 (ed. Mall), occurs:

"D'içoselez bien clers."

In the 'Assises de Jérusalem' (thirteenth century):

"Je ne suis mie si cler come de l'autre."

In Italian the first occurrence (rendered a little doubtful, it is true, by the ambiguous case of the pronoun *mi*) is in Dante, 'Paradiso,' viii, 91:

"Fatto m'hai lieto; e così *mi fa chiaro*
(Poichè parlando a dubitar m'hai mosso)
Come uscir può, di dolce seme, amaro."

Passavanti (died 1357):

"Per esser più *chiaro* d'esser ben confessato."

Similar to the verb *clear*, as used by Downe in the supplementary quotation made by Mr. Hall, is the Italian *chiarire*. Thus, by Vincenzo Martelli (died 1556), Lett. 13: "Il che mi fece credere fosse andato a *chiarirsi* di qualche dubbio."

To me it seems more probable that English should have derived this usage from the Italian than from the French, for two reasons. First, in middle English there is not, so far as I am aware, any trace of it; and, secondly, because its occurrence in such a translator as Brent would seem to indicate that he, at least, had found it in Sarpi or some kindred Italian author. Besides, I know of no evidence that the locution persisted in French down to the sixteenth or early seventeenth century, at which time it makes its appearance in English.

Albert S. Cook.

University of California, June 19, 1888.

Notes.

G. P. Putnam's Sons will issue in the fall 'Omitted Chapters of History, Disclosed in the Life and Papers of Edmund Randolph, Governor of Virginia,' etc., by Moncure D. Conway.

Seven short stories by as many Philadelphia writers will be united under the title 'The Septameron,' to be published by David McKay of the same city.

Henry Holt & Co. will issue shortly a novel entitled 'In Hot Haste,' containing peculiarly interesting descriptions of German life.

The third volume of the 'Poetical Works of Robert Browning' (Macmillan), includes "Pippa Passes," "King Victor and King Charles," "The Return of the Druses," and "A Soul's Tragedy." The frontispiece is a curious portrait of the poet in 1835, in the full guise of the Romantic period.

The late Robert Carter's 'Summer Cruise on the Coast of New England' has been revived after a quarter of a century by Cupples & Hurd, Boston. It is hardly a classic, and in a literary point of view it suffers by comparison with similar narratives in which our popular magazines abound. Fish and fishing inspire a large part of the author's observations, which are most interesting when they relate to places since transformed into fashionable seaside resorts. Mr. Carter's praises of Mt. Desert—the furthest point reached on his voyage—involve a prophecy which has since been fulfilled, yet still not according to the possibilities of the island.

Mr. Sweetser's 'Mount Desert Guide-Book' (Portland: Chisholm Bros.) succeeds but does not displace the late Mrs. Martin's standard Guide-Book. It has neither the literary flavor nor the refined style of the latter work (fancy Mrs. Martin writing: "But the air is *tout à fait* different," or larding her description with the humors of Mr. Sweetser's page 18). Nor do its woodcut illustrations match her dainty photographs, nor is its map as fine a reproduction of that of the Coast Survey as hers. Of course changes have taken place in the past three years, which Mr. Sweetser is now the first to chronicle; and matters of transient interest (like the location of cottages), which Mrs. Martin avoided, are fairly in his province.

For especial use at the twenty-fifth anniversary of the battle of Gettysburg, just passed, Gen. Abner Doubleday has compiled, and the Century Co. printed in a neat brochure, with numerous maps, 'Gettysburg Made Plain.' The author, we need hardly say, was a part of what he describes.

Seasonable is not just the word for the reprint of 'Snap-dragons, and Old Father Christmas,' by the late Mrs. Ewing (E. & J. B. Young & Co.). There are, however, sensible persons who affirm that Mrs. Ewing's tales are always in order, and we will only add that Mr. Gordon Browne has again been employed to illustrate her fantasies, with his usual distinguished success.

Fifty-three examples of 'Royal Academy Pictures, 1888,' are given in the supplement to the *Magazine of Art* bearing this title (Cassell & Co.). They are better than the run of similar French photo-mechanical memoranda, and possess a good deal of interest, especially the portraits.

In his 'Records and Record Searching: a Guide to the Genealogist and Topographer' (London: E. Stock), Mr. Walter Rye prints what he has "learned during the last quarter of a century about the Public Records" of England. He informs the uninitiated how to compile a pedigree; how to write the history of a parish or other place; he describes the various categories of records and their repositories, explains the technical terms and abbreviations therein employed, gives lists of the various record publications of the English Government, and adds many odds and ends of information that he has picked up in the course of his investigations. The directions in regard to compiling the history of a place read somewhat like a cook-book recipe, but they may be useful to amateur historians. The work, as a whole, will prove a valuable guide to Americans going to England for the first time to consult original records.

Mr. G. H. Balg, whose translation of Braune's 'Gotische Grammatik' we noted favorably some years ago, is now publishing, by subscription, a 'Comparative Glossary of the Gothic Language, with Especial Reference to English and German.' Subscriptions will be received by the author, at Mayville, Wisconsin, or by B. Westermann & Co., 838 Broadway. The work is to be complete in seven or eight parts, at 50 cents each. Three parts (192 pp.) have already appeared, coming down to the word *hweila*, 'while.' We take pleasure in commending the enterprise to our Germanistic readers. When complete, the dictionary will supply a long-felt want. It is fuller than any of its predecessors in citations and references. Also, the treatment of etymologies is very full. Some of the author's etymological equations we might dispute, others we should like to see made more precise. But the work, as it stands, bespeaks the author's great industry and courage, and merits support. It is dedicated to Prof. March, and has the approval of Whitney, Max Müller, and Skeat.

The origin of the name Canada is laboriously sought in *Modern Language Notes* for June by Prof. A. Marshall Elliott. He pronounces it European and Spanish, finding its nearest primitive meaning to be a glade or swampy pasture such as bear this designation to-day on the pampas of the Argentine Republic. The fitness of applying such a term to the bold north shore of the St. Lawrence below Quebec —the first tract called Canada—is, however, hardly obvious.

Mr. W. A. Bardwell makes, in the *Library Journal* for June, an appeal for an index to illustrations, of which it can only be said that it would be a fine thing if it were practicable. A single line might, we think, be pursued most usefully, and that is portraiture. The editors of our illustrated periodicals have more and more seen the permanent value of this class of engravings, and the workmanship steadily improves. If only a contribution to *American* iconography were attempted, the result would be worth having. But librarians need not be taxed for this service; any intelligent person with superabundant leisure might undertake it.

The *American Meteorological Journal* at Ann Arbor, Mich., offers a prize of $200 for the best original essay on tornadoes, and one of $50 for the second best, with $50 still to be divided among those worthy of special mention. They must be sent to Prof. M. W. Harrington at the Astronomical Observatory, Ann Arbor, or to A. Lawrence Rotch, Readville, Mass., on or before July 1, 1889, with sealed addresses.

A capital rapid sketch of the romantic career of Joel R. Poinsett, accompanied by a good portrait, is begun in the July issue of the *Pennsylvania Magazine of History and Biography*, by Dr. C. J. Stillé. It is to be continued. Poinsett's papers have, it appears, been given to the Pennsylvania Historical Society, and are said to illustrate very fully his public and private life. He was a great globe-trotter, and an eye-witness of many famous events, such as, to mention but two, Napoleon's interview with Metternich on August 15, 1808, when he threatened Austria with annihilation; and the fight between the *Essex* (with the boy Farragut on board) and the British *Phœbe* and *Cherub*, off the port of Valparaiso (not Callao, as Dr. Stillé has it) in March, 1814.

The genius who presides over the illustrations of the new *Universal Review* will have to take care lest they bring the enterprise into deserved ridicule. To say nothing of the scandal caused by the short-skirted decoration of the Rev. H. R. Haweis's perfectly serious discourse on "The Parson, the Play, and the Ballet," Prof. Freeman must have felt mortified at the cheap pen-and-ink "humorous" design marring the page devoted to his article on "How to Grow Great Men." Mr. Freeman, by the way, comments on Mr. Lowell's New York Reform Club address, which declared it "the first duty of nations to produce great men." The political article, on "Home Rule and the Opposition Leaders," is by Mr. Frank H. Hill, whose view is that Mr. Parnell's movement "will most likely share the fate of the Repeal, Young Ireland, and Fenian movements which preceded it." Mr. Harry Quilter does for the Salon what he did in the first number for the Royal Academy, with plenty of pictorial examples.

That it is a difficult thing to write entertainingly about caricature is proved once again by Maurice du Seigneur in the June number of *Le Livre*. He combines as well as may be in one brief article an historical retrospect, with special reference in our modern period to the French school, descriptions of certain designs, and selected (rather than select) legends. But his greatest service is in annexing some inedited designs—Eugène Giraud's big-head and little-body portraits of Sainte-Beuve and G. Flaubert; and many amusing sketches by Albert Coinchon, and even by Prosper Mérimée. Another illustrated paper in this number is on the literature of horse-racing in France, and is written with a light touch by the Comte de Contades.

The vexed question as to the identity of the great river of Thibet, the Sangpo, with the Brahmaputra or the Irrawaddy, may now be regarded as settled in favor of the former river by the testimony of one of the native surveyors sent out by the Indian Government. This man, known as "K. P.," a native of Sikkim, had, in a former exploration in 1878, traced the course of the Sangpo to a further eastern point than any previous traveller had reached. On this present journey he was traitorously sold as a slave by his companion, a Chinese lama, in the Pemakhoi country, a little north of Assam. "K. P.," however, contrived to escape from his captivity, and followed the river down to a place where it "falls in a noble cascade, 150 feet in height and spanned by a rainbow, into a dark lake hemmed in by lofty cliffs." The existence of this waterfall was reported many years ago by the Abbé Desgodins, a French missionary in eastern Thibet, from native sources of information. From this point the explorer pushed on to within less than fifty miles of the Indian frontier, to a place where "he could descry, looking down the river, the haze above the Assamese valley on the eastern horizon." Here, for some unexplained reason, he apparently was obliged to turn back.

—*Scribner's* for July contains an article by Prof. Seymour which might well serve as a guide for the traveller in modern Greece. He shows, by his sketch of routes and excursions, how much the country has been opened up and made accessible within the past few years, partly in consequence of the classical study which has been carried on upon the ground; and the descriptions he gives of places and of manners and customs are excellent. The paper, however, seems meant rather to be an aid to the tourist, and to tempt him into a region where travel has been hitherto attended by great discomfort, than to embody the results of observation. Prof. Young's narrative of his journey to Russia to observe the solar eclipse of 1887 loses what would have been its main interest, inasmuch as a cloudy day made the expedition a failure; but he writes instructively of the great observatories he saw during his passage through the European countries, and the article is well illustrated. The best illustrations, however, are given in connection with the second of the railroad series, written by John Bogart. This deals with the engineering problems of construction, the tunnelling and bridge-building, and the difficulties of passing from level to level in mountainous or rough country. Especial attention is paid to the subject of driving foundations for bridges, particularly by means of the pneumatic caisson, of which the construction and workings are clearly described. There is a tone of enthusiasm in this article, an accent of the *esprit de corps*, which shows how truly engineering is the living American art. Other articles are not remarkable. Mr. Sullivan's story sustains his reputation as a careful and refined writer. Mr. Stevenson's remarks on the authors who are most popular and most nameless, the writers of the lowest reading class, are in his usual felicitous manner. Mr. Lathrop's Battle Ode for the Gettysburg anniversary reminds us that when the Pindaric style is execrable, nothing in poetry can be worse; this attempt no more resembles Campbell or Gray than a flying-machine does Pegasus.

—*Harper's* is as lacking in distinction as its companions. The leading contribution is a very excellent description of the life of the naval cadets at Annapolis, and the illustrations have the merit of freshness. The next leading paper, upon the conditions of life in the great new farming regions of Nebraska, Kansas, and Dakota, is a very faithful account of the matter, and the special topics (including that of the vast loaning business of the frontier) are well chosen. Mr. Warner, on the contrary, in his descriptions of the cities of Columbus, Springfield, and Indianapolis, is as near being dull as he ever gets; the only noticeable point he makes is the curious absence of any real local habitation and name for Lincoln's memory at Springfield, such as exists at Mount Vernon and Monticello for Washington and Jefferson. He seems to look to Kentucky to furnish the pilgrim-shrine eventually, but just how it is to be made he does not indicate. There is an archæological paper upon Egypt by Mr. Petrie, in which he enters upon the curious and perplexing labyrinths of race-types in ancient sculpture, and makes a number of interesting but inconclusive speculations. Mr. Lafcadio Hearn furnishes an ill-written and pretentious paper of travel in the West Indies, of which nothing

better can be said than that it gives occasion for a number of illustrations of negro types, male and female, which are not without an anthropological interest. The fiction of the number is enlivened by the first part of a novelette by Rider Haggard, in which we are sent back again to Allan Quatermain and the African wilds, to entertain our imagination with adventures.

—The *Century* is not more fortunate than the other magazines of the month. It is without an article above the average, and seems to fall back upon its war papers for supplies. The narrative of the career of the Confederate ram *Albemarle*, by those who were most directly engaged on both sides, is an interesting episode, and is remarkably well told; Lieut. Cushing's account of his escape down the river, after he had succeeded in blowing up the ram, being especially spirited and plain. The list of reunions of the veterans in which representatives of both armies have taken part is especially noticeable for the prominence of the Virginians in these exchanges of good will, Richmond and Lee Camp holding an easy and marked leadership in this work of peace. The Gettysburg poem, which is contributed by a Confederate soldier, Will H. Thompson, is also evidence of fraternity coming from the Southern side. Its sentiment is admirably toned to the occasion, and the expression itself is far better than is common in the magazines; some of the stanzas might well have been omitted, but in several there is that real lyric force which in American verse is noticeably absent. The Lincoln biography draws the portrait of McClellan as the "young Napoleon" very unfavorably, and in the discussion of the foreign affairs, and especially of the *Trent* incident, brings us back to statesmanship and the great value of Lincoln's restraint acting on Seward's temperament. Mr. Kennan continues his journey through the Irtish steppes with excellent travel-pictures, and the Sinaitic desert is photographed by an enthusiastic camera-explorer. The subject of disinfectants is treated briefly in another article, and Dr. Buckley discusses dreams in his warfare with superstition. The Lichfield Cathedral furnishes some pretty bits of illustration for Mrs. Van Rensselaer's series.

—An antiquarian correspondent writes us an odd incident concerning the grandmother of Levi Parsons Morton, the Republican candidate for Vice-President. In 1791 this lady, born Frary, in Hatfield, had been brought as a bride by her husband, Justin Parsons, to his home in Goshen, Mass. But the custom of warning all newcomers out of town, lest they should "gain a legal settlement," and so the town be obliged to maintain them in case they became paupers, was vigorously observed. Justin Parsons being then Constable, it became his duty by a paper on a post, and also crying aloud in church, to warn his wife "that she reside in said town no longer"—which he did on the 4th of April, 1791, and received twelve shillings as his "fee for warning." It is further noteworthy that in 1805 Justin Parsons represented Goshen in the Massachusetts General Court. He had been elected hog-reeve at the first annual town meeting. When nearly fifty years of age, he commenced the study of theology, and for more than a score of years preached in Vermont as a Congregational minister. His longest settlement, 1813–31, was over the united churches of Pittsfield and Stockbridge—forest towns with a total population of 596 in the heart of the Green Mountains. His stalwart form, white hair, ruddy face, beaming and benevolent eye, and apostolic simplicity gave him the title of Father Parsons, and made him and his horse everywhere welcome guests. In the first decades of our century the salary of hardly one Vermont minister was over five hundred dollars, and Father Parsons could not have been paid more than half that sum. But he raised some colts and knew how to trade horses. In fact, his touch must have turned everything to gold, for he is said to have been a principal benefactor of Oberlin, near which he passed the last score of years in his nonagenarian career. In 1797 the house of Justin Parsons in Goshen was made a pesthouse for the confinement of persons inoculated for the smallpox. About three score victims were here imprisoned on a diet of bread and molasses, cut off from all meats and salt, which were thought fatal, till the artificial disease should run its course. In this seclusion they would have died of ennui "had they not pitched coppers on the floor of one room so much as to wear the boards nearly through, as may be seen to this day." The son of Father Parsons, from whom Mr. L. P. Morton derives his name, graduated at Middlebury College in 1814, and was the first American missionary who ever reached Jerusalem. This was in 1821. He died in Alexandria the year following.

—Among books of the 'Battle of Dorking' type, one, recently published at Paris, entitled 'Rome et Berlin,' by Charles Rope, a former naval officer, has caused much remark. It professes to describe the operations of the French fleet and army on the shores of the Mediterranean and of the Baltic during this recent spring. Contrary to most squibs of this kind, it does not seem intended to point out defects in French organization; on the contrary, France wins all along the line. The work displays an unusual knowledge of the armies and navies of all Europe. It also brings out very plainly the weak points of Italy in case of a defensive war. The seacoast of Italy is so extended, and the peninsula so long in proportion to its width, that, if a French fleet suddenly left Toulon, it would be difficult to tell at what point it would strike, or successfully to ward off the first blow. Indeed, all the lines of railway connecting the north with the south might be cut before sufficient troops could be massed near the point attacked. By a coincidence, which may not be as strange as it at first seems, the plan of campaign described here is much like that which was expected during the recent so-called Spezia scare. The fright was genuine enough, and so was its cause. The French Government, in the expectation that the Crown Prince would die before his father, and that a war would break out on the accession of Prince William, began to mobilize its navy at Toulon, for the purpose of striking a sudden blow before hostilities had begun elsewhere. The objective point was, however, not Spezia, which is very strongly fortified, but Savona or Vado, in order to paralyze the northern railway system, and form a junction with a French army advancing from the north. The information came to the English Government, which at once despatched to Genoa the Channel Squadron, that had not been in the Mediterranean since the days of Trafalgar.

—According to M. Rope, the French fleet attempted Spezia; but, finding it too strong to take, contented themselves with blockading it, after a naval battle in which several of the best Italian ironclads were sunk. They then bombarded Castellamare, and, after another fight, occupied the roadstead of Maddalena to the northeast of Sardinia, which is intended to be the general rendezvous of the Italian fleet in case of war. Civita Vecchia was next taken, and an attempt was made to capture Rome by the quick march of an army of fifty thousand men. The strong new forts on the Campagna presented unexpected obstacles, and allowed the Italian troops to concentrate. The French retired, "not so much because they were beaten" as because things were not going on well in the north. Meanwhile, Germany had been able to send three large ships of war to join the Italian fleet in the Straits of Messina, so that the blockade of Spezia was raised; but in a fight off Savona the allies were completely defeated, with the destruction of the remainder of the Italian fleet. What had become of the navies of Austria and England during all this time, is not said; their existence seems to be ignored. The campaign against Germany is not so well managed by the author. Denmark hesitates, and, finally, being threatened with a German occupation, joins the French. After the consideration of plans for taking Jutland and Schleswig as a base, the French capture Swinemünde, make a diversion in the Island of Rügen, and, after a good deal of hard fighting in a long battle, take Stettin and march on Berlin. The Russians now declare war both on Austria and Germany, and make an alliance with France. The German ships are all destroyed; a tremendous battle is fought at Ahrensfelde near Berlin between 230,000 Germans and 270,000 Russians, French, and Danes, in which the Germans are completely beaten and obliged to ask for an armistice. Peace is made happily for France, which recovers Alsace and Lorraine, exacts a rectification of the Italian frontier and a large war indemnity from both Germany and Italy. The maps and plans of the book are excellent.

—For half a century, *i. e.*, since Jacob Grimm published his well-known essay in 1840, no one poem in Anglo-Saxon, except, of course, 'Beowulf,' has attracted so much attention as the version of St. Andrew's adventures, usually attributed to Cynewulf. We are therefore justified in speaking at some length of a recent Leipzig dissertation, 1887, by a young Virginian, Charles William Kent, entitled "Teutonic Antiquities in Andreas and Elene." The dissertation evinces industry and ample familiarity with the routine of Anglo-Saxon poetry. It entitles the writer to more than a "pass" for the doctorate. But whether he is fully equipped for so complicated a problem is another question. It is no longer safe to couple the Andrew poem and the Elene poem together, the general drift of opinion being now that the author of the one cannot be the author of the other. On the other hand, 'Beowulf' and the Andrew poem are to be treated together, as a palpable case of borrowing. No one should undertake to treat of the Andrew poem without first mastering the genesis of the legend, as treated by Lipsius in his 'Apokryphe Apostelgeschichten' (i, 543-622). Next, we are not at liberty to treat what at first sight appears odd to us in the Andrew poem as a survival of Teutonic belief and customs. Many of these oddities appear in the Greek-Latin legend. Thus, page 63, Kent speaks of St. Andrew's admission to the pilot that he has no money, as indicating among the early English a mercenary spirit. But this same incident occurs in the 'Acta' (cf. Lipsius, p. 550). Again, page 8, Kent says: "The description of God as a pilot, vv. 248 ff., is entirely analagous to the many stories current, according to which Woden had performed the same duties." In the footnote he refers to Zupitza, *Zeit. f. d. Alter.* xxx (175-185). We fail to discover any such opinion in Zupitza's essay, nor is it likely that the Berlin professor ever entertained it.

Zupitza is too familiar with Lipsius to ignore the fact that the entire god-pilot conception is a distinctively Gnostic invention (cf. Lipsius, p. 598). What of resemblance there may be between the pilot of Andrew and the god Wodan is of mythological import only to such as are prepared to admit a fundamental kinship between the Edda and the Gnosis; and that is still a long way off. We hope that Mr. Kent will continue his Andrew studies, only giving them another direction. Let him do for his poem what Glöde has done for the 'Elene.' The task will not be easy, but it will be remunerative, and we shall gladly welcome it. Meanwhile the Teutonic antiquities can and indeed must wait.

—The Hungarian Academy of Sciences has just published a work of four hundred pages by the Archduke Joseph entitled, 'Romano Tchikakero Siklaribe,' or Grammar of the Gypsy Language, which he intends to follow with a Dictionary of one thousand folio pages. The Archduke is well known as one of the leading Romany scholars. He had studied the Eastern languages, and especially the dialects derived from the Sanskrit, when, in an excursion to Bohemia in 1850, he was struck (as he says in his preface) by "the great number of words the meaning of which I understood in listening to the wandering gypsies. I entered into conversations and convinced myself that they spoke a language similar to the vernacular dialects of India. From that time I profited by every occasion of chatting with the gypsies, and visited their camps in different countries, until I succeeded in talking their language. I engaged educated gypsies to draw up a vocabulary containing the differences between the dialects and the Indian originals of the words." His enterprise was favored by his serving from 1853 to 1856 in a regiment so recruited that his soldiers spoke three Hungarian as well as one Wallachian dialect When on leave he visited the gypsy colonies in Nassau and near Erfurt, and afterwards served in Hungarian garrisons, where he had many occasions of practising talking. The Archduke knew nothing about the literature of the subject until he had acquired a full knowledge of the language. According to him, the first man who indicated the true origin of the gypsies was a Hungarian, Stephen Válvi, Protestant clergyman at Almás, who, at the University of Leyden, had made the acquaintance of some Malabar students, had been struck by the resemblance of their language to that of the gypsies, and had made, for the sake of comparison, a vocabulary of about one thousand Malabar words, which, on returning to Hungary, he found easily understood by the gypsies.

CRITICAL HISTORY OF THE AMERICAN REVOLUTION.

The United States of North America. Part I. [Vol. VI. of the Narrative and Critical History of America, edited by Justin Winsor.] Boston: Houghton, Mifflin & Co.

In all its fulness, the Revolutionary period of our history, to which the present volume of this standard work is devoted, is coextensive with the quarter of a century following the Stamp Act agitation to the adoption of the Federal Constitution of 1789. Within these years we have something like an era in which a certain movement is carried out to completion—one system overthrown and another set up. The historian must observe that the moment the colonist took issue with Crown or Parliament as to his obligations as a subject, and continued to insist upon his own interpretation of the home Constitution—finally making his position good through war—the work in hand remained unfinished until he re-established himself in a new body politic with a Constitution to suit himself. It was, in effect, that transitional period in which the inchoate colonial idea of governmental relations developed into our national idea of *e pluribus unum*, with mutual rights conserved through mutual concessions. One is hardly satisfied with simply knowing why and how the thirteen colonies became independent of Great Britain; he looks forward to their new platform, curious to ascertain, perhaps, how far it was a realization of early and digested plans, or how far it was shaped by the struggle itself and the situation at the close. It is a dovetailed, continuous piece of history. In this light the volume at hand covers only one portion of the period reached, and the reader must await the appearance of the chapters on the adoption of the Constitution to appreciate the whole in its bearing upon the destiny of the country.

What we have here is the story of the struggle—the eight years' war from 1775 to 1783—with the necessary preliminary chapters on the causes leading to the outbreak, and on the change of issue from that of justifiable resistance to that of total separation and independence. As far as it goes, the volume in the main sustains the high character of the work as established by the volumes already published, and while open to certain criticisms itself, is especially strong on its "critical" as against its "narrative" side. Like its predecessors, it is admirable in its general impartiality, its fidelity to historical truth, the style of the several contributions, and in the extent of the researches undertaken by the editor.

In the opening chapter we have a philosophical treatment of the causes of the Revolution from the pen of Mr. Mellen Chamberlain. He carries us out of the ruts at once by suggesting a closer study of contemporaneous English history, in the assertion that the Revolution was "no unrelated event," but formed "a part of the history of the British race on both continents"; furthermore, that it was "a strife between two parties, the conservatives in both countries as one party, and the liberals in both countries as the other." Again, "as an event common to the history of both nations, it stands midway between the Great Rebellion and the Revolution of 1688 on the one hand, and the extension of suffrage in 1884 on the other, and belongs to a race which had adopted the principles of the Reformation and of the Petition of Right." In other words, our Revolution was an inevitable and logical movement, in which the disputes about taxation, charters, navigation acts, and what not, were the local aggravating issues. Mr. Chamberlain could have gone further and claimed a difference in the two sets of parties themselves, the American Tory being less a Bourbon than the English Tory, and the American Liberal being much more of a radical than his namesake at home. It took that crisis and the war to open up England's eyes to the fact that one hundred and fifty years of isolation, independent development, local self-government, and unhampered growth generally had made another man of the colonist. A new political community had arisen here, and England did not know it. King and Parliament fancied that they were dealing with a rebellious spirit which must be curbed, failing to realize that behind it existed quite another spirit, which expressed the genius of colonial life and ideas. The one fact that interests us most to-day is, that the political views of the great Liberal party of the colonists not only were defended successfully in war, but have since been accepted by the mother country as the best for her own guidance. Great Britain long stood on Lord Mansfield's doctrine that equal and free voting communities were not essential, even in a representative government—that virtual representation answered all the purposes of actual representation; but within the century she has abandoned that position, and now stands squarely on the colonial platform of 1776, namely, uniform and direct representation of the people in all legislative bodies. This we may regard as something of a "vindication" of our forefathers.

Necessarily the greater part of the present volume is devoted to the war. Rev. Dr. Ellis writes on "Independence." Mr. Winsor, the editor, contributes the chapter on Lexington and the events of 1775, under the title of "The Conflict Precipitated." Gen. Geo. W. Cullum takes up the campaigns of 1776 and 1777 in New York as "The Struggle for the Hudson." Mr. F. D. Stone treats of Howe's and Clinton's operations in Pennsylvania and New Jersey as "The Struggle for the Delaware." Prof. Edward Channing describes "The War in the Southern Department"; Rev. E. E. Hale, the "Naval History of the Revolution"; Mr. A. E. Davis, "The Indians and Border Warfare"; and Mr. W. F. Poole, "The West, from the Treaty of Peace with France, 1763, to the Treaty of Peace with England, 1783." This series of well-written chapters, which must constitute the main interest of the work for the general reader, is supplemented, as already indicated, by exhaustive critical notes contributed by the editor, which must constitute the main interest of the work for the student or future historian looking for a convenient compendium of authorities and opinions from which to retell the story. Assuredly the story will be told many times over, for no completeness or excellence of labor in one generation will debar the patriotic writer of the next from associating his name with this same record of heroism and nation-founding. To such Mr. Winsor's critical notes will be a boon. These notes are enriched with many references to MS. maps (some of which are reproduced in the volume) which have not been accessible or consulted heretofore, while, on the other hand, it is a matter of some surprise that so little use has been made of the valuable collections of Revolutionary letters and documents at different points which others have but partially drawn upon. In this direction there is much important work yet to be done.

Welcome as this volume will be to the student especially interested in the Revolution, some weak points may be detected in the arrangement of the narrative portion. Were the several chapters to be separated from the critical essays and notes and presented as a complete description of the war, they would be open to the criticism both of not covering the entire ground and of presenting a faulty perspective. The latter defect may be noticed in the position assigned to the battles of Trenton and Princeton in the early part of the struggle. The whole significance of these two American victories—and it cannot be overrated—lies, as every schoolboy knows, in the fact that they closed the otherwise disastrous campaign of 1776 with a happy and brilliant surprise, offsetting Long Island and the loss of Fort Washington, rëestablishing confidence at a most critical moment, and effectually foiling the enemy for the time being. These battles are inseparable from the operations around New York in that year, but no reference is made to them in that connection. When Mr. Stone takes them up as

a part of the movements in New Jersey and Pennsylvania, their effect is lost. Nor is the continuity and climax effectively sustained in the treatment of operations on the Hudson. No doubt Burgoyne's surrender was vital and decisive, as the event proved. But it is not to be supposed that either the vanity of the British generals or the pride of the Ministry would permit them to regard any disaster occurring in 1777 as disturbing their ultimate schemes. Braddock had been Burgoyned in the Pennsylvania woods a score of years before. Might not another Wolfe appear to avenge Saratoga? Hence the occupation of New York and every move thereafter along the line of the Hudson becomes important. It is now known that the operations of '79, culminating in Stony Point, looked to something decisive, and again in 1780 the dickering with Arnold was another effort in the same direction. The "Narrative" shows no relation of events here. As to the final grand campaign ending at Yorktown, the interesting question of responsibility for British failure, which presumably should have been settled, is cautiously left open for some future verdict. As far as this work goes, Clinton and Cornwallis were equally innocent and equally responsible. We cannot say that anything was added to the value of the critical notes in the editor's acceptance of certain charges of treason lately brought against Gen. S. H. Parsons of the Revolutionary army. Far from proved in themselves, it was for such a work as this to express a doubt regarding them, and a hope that the matter would be thoroughly sifted. The probabilities are that the charges can be successfully refuted. "Anglo-Hessian," frequently used in one of the chapters, is a misnomer as applied to the enemy's army. There was no alliance there.

Barring secondary strictures, this work is to be regarded with pride. It is not likely to be repeated for a generation or two, and then there will be reason for another in the new material which is destined to appear in the interim.

MOST novel readers will not have forgotten 'The Story of a Country Town,' which was written by a Kansas editor, nor the interest which was aroused by the plain, honest portrayal in its pages of a phase of Western life not uninteresting in itself. Mr. Read is another Western editor, this time from Arkansas, who has put his experiences and observations in the form of a novel. He has not made nearly so good a story as Mr. Howe's; he has shown neither the feeling nor the imagination which counted for so much in the work of his brother—as Western editors delight to call each other. But he has shown the same realization of the value of his materials—especially the temporary value which is given to them by novelty. The curious people with whom Len Gansett cast his lot at Abbott's Ford, only needed to be drawn with intelligent realism in order to afford amusement. The sympathy and insight which would be necessary to endow the history of their homely affairs with anything higher or better than mere amusement, Mr. Read has given no indications of possessing. The plot is even commonplace, or would be so if carried out by a class of people better known in fiction; but in developing it the author has shown the same careless readiness which marks his style, together with a contempt for minute probabilities and perfunctory explanations that makes the tale extremely readable. He has taken up with a very simple trick in character drawing, too, which is always amusing and successful to a degree quite incommensurate with the ease of its employment—that is, the practice of tacking a peculiarity, a queer habit or eccentricity, upon a character, and labelling him, as it were, for the convenience of the reader. Critics have condemned this device ever since the first comparisons were drawn between the plays of Shakspere and Ben Jonson. Even Mr. Besant, who has been so kind in advising and counselling young novelists, warns them to beware of the enticing facility and delusive success of this method of characterization. Mr. Read's hearty humor and jocose spirits help him out a great deal, and one is quite content to keep up the acquaintance of the shiftless Braley until the last page, even though one then sees him depart with an order in his pocket for his precious "middlin' of hog meat," the pursuit of which had occupied him pretty constantly from the date of his introduction.

Small, however, as is the apparent skill with which Mr. Read has carried on the action of his rather trite and somewhat sensational plot, it is useless to deny that most readers will be surprised when young Gansett strikes the match in the face of the robber whom he had captured, and discovers his benefactor, Col. Bently. Then they will wonder that they should have been deceived into being surprised. The dénoûment is so entirely in the ordinary method that one is only entrapped by the writer's apparent clumsiness and the lack of design which his first chapters seem to show. One divines Honeycut's connection with the stage robberies without any trouble from the first, and realizes with equal readiness that his evil deeds will finally be the means of putting his troublesome meddling at an end.

In striking contrast with the naturalness and the impressiveness which belong to Mr. Read's novel, because he wrote from accurate knowledge and experience, are the presumption and misdirected efforts after originality and powerful effects to be found in the pages of 'Isidra' and 'A Blind Lead'—the former a story of love, war, and adventure in Mexico, the latter the history of a high-strung heroine of a mining camp, who drops dead on learning that her lover's affection is lost. Both writers are so strongly deluded with the notion that they are doing something very fine and important, that it is almost impossible to finish their romantic tales with any patience whatever. Both Mr. Steell and Miss Bates could not do better, if they expect to continue writing novels, than to take a lesson in simplicity and true values from Mr. Read.

There is something of improvement noticeable in the work of Mr. Henderson, though 'Agatha Page,' as 'The Prelate' was, is written at such a length, with such a tedious minuteness of explanation and description, that reading it, one imagines, will be to many only an exercise in judicious skipping. With so few incidents of real importance in the development of the story—and an old, old story, too, at that—with so little art in subjecting the much that is irrelevant, with an unenlivened, uniform treatment, it is no wonder if the quiet, fastidious good taste with which it is written will now and then pall on the reader. The story is even less American than was Mr. Henderson's first novel; for the heroine of 'The Prelate' was an American by birth, while the mother of Agatha Page was an Italian.

'Home Again' is a rather slight piece of work to come from George MacDonald's pen, and seems hastily, even carelessly, written. It is the story of a young Scotchman who goes to London to make a name and fortune in literature. His repeated failures and final partial success are described with a briefness not unwelcome when one thinks of the numerous novelists who have given us Coleman's career in detail. His illusive love affair, his final surrender and return to his father's house, and the love of his father's ward; the people, friendly and otherwise, with whom he meets—are all drawn with the cleverness and facility which could hardly help but belong to such a practised hand. Yet as usual they are but pegs for Mr. MacDonald to hang his sermons on.

Mr. Whiteing, too, has written a sermon which he has thinly disguised as 'An Adventure of a Person of Quality.' It is rather a heavy sermon, and arraigns the entire system of modern civilization, political economy and all. It is Carlyle mixed with milk and water. In spite of the delightful picture of the island, with its little community living in brotherhood, simplicity, and love, and in spite of the romantic passages between the pessimistically philosophical lord and the beautiful Victoria, one prefers Carlyle undiluted with pettiness, however charming, and romance untinctured with Carlyle, however softened and sweetened to the taste.

Romance and adventure pure and simple are to be had in Julian Corbett's 'For God and Gold.' It is a much better story than 'The Fall of Asgard,' by the same author, for it is closer to humanity. Though Mr. Corbett has not yet got to writing of the present time, he has not gone so far back as the Norse legends, but only to the times of Sir Francis Drake, whose character and career offer such excellent opportunities to the writer of adventure based on a semblance, at least, of fact. The story recalls 'Westward Ho' to some extent, but hardly enough to invite comparison. But even if one were tempted to make the comparison, 'For God and Gold' has nothing to lose thereby. For it is a story with an interest and individuality of its own, written in a quaint and taking way, and dealing with brave, high-minded, and generous people. No one can help loving the hero captain, or admiring his devoted and courageous men. Nor can one follow the history of their exploits as told by the polished and scholarly Mr. Festing without being interested.

Very different is 'Texar's Revenge,' a story

of our civil war by Jules Verne. It has been reported of the author of our most charming novels that he writes them as other men would saw wood. But we do not often meet with a novel that is more evidently produced mechanically than is 'Texar's Revenge.' There are characters almost without number, contrasts, surprises, mysteries, incidents, and situations which ought to be thrilling, descriptions which are probably correct to the letter, but which are, after all, scarcely more than botanical catalogues. Everything seems to be perfectly in rule and worked out carefully and with due completeness, but the spirit of life is lacking. It is a work of the saw and hammer, not of the imagination.

Mr. Riddell has written a very dreary, depressing story, chiefly, we suppose, for the purpose of utilizing an old Irish legend. But it was quite unnecessary to provide Mr. Terence Conway with the curse of any nun, legendary or real, in order to account for his misfortunes and pitiful career. His own character was fully weak enough to carry all the responsibility of his failures without saddling them on an Irish superstition. The friends and acquaintances of Mr. Conway are a rather poor lot of people, as people go in novels, and it is doubtful whether the pleasure of watching that gentleman reap the fruits of his own actions, and then half-heartedly lay the blame to the nun's curse, repays one for the time spent in their company.

The time is not lost, however, which is spent in making the acquaintance of the characters in C. H. W.'s 'Stories of New England Life.' They may be plain people, without romance or legends of any sort, without any tendency towards introspection or fine discrimination in the matter of motives or spirituality ; but they have a firm hold on the essentially worthy things in life and character. It is a hold which they maintain by faith, and which serves them through every-day trials and keeps them up to a high level of truth and right. The stories are excellent as stories; they are fine in the simplicity and quietness of their tone. Their interest is unstrained and natural as can be, yet it is always sufficient. They are subdued without being dull; they are telling and sincere. Most of the stories have already been printed in the magazines, and one who reads magazine stories now and then will perhaps recognize some of them as sketches which gave him pleasure years ago.

The volume of tales by Julian Hawthorne does not deserve such high praise, yet they are fairly good stories. Whoever enjoys Mr. Hawthorne's penchant for the supernatural, really could not object to stories like "Ken's Mystery" and "My Friend Paton"; and if we do not care for what is untrue to nature as we know nature, there is "David Poindexter's Disappearance," which may be explicable according to nature's laws, but which is too unreal for the laws of art.

Of the four stories in Mr. Murray's volume, only the first is really good, and it is but a sketch. It is better than the others because it is less pretentious and really has a point. The reader is interested, that is to say, in whether the Deacon and the Parson are going to win the race. Slight as this interest is, it is more than the fragments following possess. If Mr. Murray expects to find readers who will finish his books, he should devote more pains to devising some sort of a beginning and end for his stories, and then put something besides words in the middle.

A FUNCTIONARY OF THE SECOND EMPIRE.

Memoirs of Count Horace de Viel-Castel. Translated and edited by Charles Bousfield. 2 vols., 8vo. London: Remington & Co. 1888.

Count Horace de Viel-Castel was a brother of Count Louis, whose death occurred in 1887. He belonged to a family of the old noblesse, was born in 1802 and died in 1864. He was the author of half-a-dozen novels of fashionable life, of three or four historical works, chiefly concerned with the first French Revolution, and of a volume of poems. He was on terms of close friendship for many years with Princess Mathilde Demidoff, the daughter of Jérôme Bonaparte, a patroness of letters and arts, and herself an exhibitor at the Salon of 1859 and later years. It was, presumably, through this friendship that he became an adherent of Napoleon III., while his brother permanently withdrew from public office immediately after the *Coup d'État*. Shortly after the accession of Louis Napoleon, Count Horace was appointed Conservator of the Museum of Sovereigns at the Louvre, his chief in office being the Comte de Nieuwerkerke, Director-General of National Museums, and the avowed lover of the Princesse Mathilde, who was separated from her husband in 1845.

The English translation and edition of the memoirs begins abruptly in 1851, and ends as abruptly in 1864, without giving a word of information about the personality or biography of the author. The editor simply mentions that "it has been deemed advisable to omit much," but does not indicate what the omissions were or for what reason they were made. Neither does he supply an index, which is almost indispensable in a book of this kind, where so many names of prominent people occur (and most of them occur repeatedly) on many various pages. The translation reads smoothly, although marred by colloquialisms and infelicities, as when we read of the "Order of the Holy Spirit" instead of the Holy Ghost, or "fifteen days" instead of a fortnight, etc.

The diary throws little if any new light on the political or social aspects of the period which it covers, but it supplies many new details which serve to confirm the commonly received opinion of the utter corruption of manners and morals and politics of the Second Empire. The picture here presented of the open and unblushing profligacy of court circles carries one back to the days of the Orleans regency as depicted in the licentious novels of Crébillon the younger, with the aggravation that the chief men of the Empire, besides being loose in their lives, seem to have been without any sense of honor or dignity. The terms in which they are here spoken of remind the reader of Kinglake's invectives, and go far to justify his vigorous censure. Indeed, M. de Viel-Castel leaves nothing to be desired in the way of plain speaking. According to him, Walewski owed his position to the fact that his wife was one of the Emperor's favorite Sultanas; Persigny was as much like a gentleman as chicory is like coffee—a mere vulgar intriguer, tortuous in his methods, abject in appearance, as pompous as a lackey, and as spiteful as a beadle ; Fould, Mocquard, Morny, and other favorite councillors of the Emperor are described in equally complimentary terms, as are also the members of the Bonaparte family, who are spoken of collectively as being, with very few exceptions, a blackguardly set. The flower of the family undoubtedly was Prince Napoleon, popularly known as Plon-Plon, and detested by the French people for his cowardice. The book is full of him and his meannesses. Meanness, indeed, and actual avarice was always the distinguishing trait of the Bonapartes. Thus, under date of August 20, 1852, occurs the following entry:

"On his return from visiting the French seaports, Prince Jérôme went to report to the President the ovations he had received, and handed him the statement of his expenses. This the President declined to pay, telling his uncle that he had already given him more than two million francs, with a pension of three hundred thousand francs a year besides, and that it was impossible for him to do more. An altercation ensued. Jérôme lost all control of himself, and at last said, 'You have nothing of the Emperor about you.' 'You are mistaken,' replied the President, with perfect composure, 'I have his family about me.'"

Money played a great rôle at that time and among those men. Of the Empress, M. de Viel-Castel says that "she only thinks of what diamonds, jewels, and money she can get out of the Emperor; when any present is made to the Emperor, or the dedication of some work is offered him, she advises him to decline them, alleging that he will have to make some acknowledgment in return." In another place, in speaking of the President's absolute want of funds at the time of the *Coup d'État*, the Princess Mathilde is quoted as saying that "when Fleury had to be sent to Africa to bring home Saint-Arnaud and the other officers whose devotion could be relied upon, no one had money enough to pay the expenses of his journey."

It would be erroneous to suppose that the author's purpose in making these and similar revelations is to attack or discredit the Empire. He was from the beginning a devoted admirer and adherent of Napoleon III., and his mental attitude as displayed in this diary, taken in connection with his character as it is there unfolded, may serve in some measure to explain how it was possible for a vulgar adventurer to maintain himself for so many years on the French throne. M. de Viel-Castel was a gentleman of narrow mind and strong prejudices, but imbued with a feeling of patriotism and a love of rectitude and good morals. He had a hearty contempt for the middle class, and for the Orleanists, who represented the ideal of the middle class. He calls the Orleanists an accursed race, who have caused every insurrection that has taken place during sixty years. He says that "the Comte de Paris is the representative of a pretended right to the throne which rests on no kind of principles whatever, since the revolution which gave Louis Philippe the crown was in itself a negation of legitimacy. The proclamation of royalty in 1830 was brought about by some three hundred and odd votes, but the test of universal suffrage was never appealed to. The Comte de Paris, therefore, who represents neither legitimacy on the one hand, nor popular opinion on the other, protests against the fusion of Orleanists and Legitimists." Along with this contempt of the Orleans party, our author cherishes an ardent hatred of the Red Republicans and of all sorts of radicals, whether in religion or in politics. Of the French diplomatists of the Republic of 1848, he says that one-third were fops, another third blockheads, and the remainder had only just enough passable qualities to make them useful. Another tirade is as follows: "After 1848 we sent a fiddler to Naples, a melodramatic writer to Lisbon, a professor of languages to Frankfort, and to Berlin the son of an astronomer, a barrister of questionable repute, who passed his time in running after actresses and playing dominoes. *Risum teneatis?*" Victor Hugo he calls a

wretched knave, a poltroon, with the pride of Satan, and asserts, on the doubtful authority of Morny, that he offered his services to Napoleon as Minister of Public Instruction. He sums up his views tersely when he says, "The 'reds' are ruffians, the 'whites,' to whichever side they belong, are idiots, and the rest are supreme nincompoops. With such materials make a great nation if you can."

Who can doubt that these opinions were shared by a large body of the French people who were tired and worn out with revolutions, agitation, and turmoil, and were ready to welcome any government that seemed to possess some element of stability and to hold out some hope of order and tranquillity? Imagine the anarchist riot of Chicago repeated at numerous times and places on a larger scale; imagine prominent politicians and editors truckling to the insurrection, and taking sides with it; imagine the party of anarchy actually invested with power, and who can doubt that a strong sentiment in favor of crushing such dangerous opinions would speedily develop itself regardless of any injury done to the doctrine of liberty? It was such a sentiment that enabled Louis Napoleon to seize and hold the reins of power. M. de Viel-Castel is curiously blind to the character of the Emperor, although he sees very clearly and deplores frequently the turpitude of the men who surround him. He does not see, however, that these men suit the Emperor because their character corresponds to his own, and because men of integrity would not serve his purpose. This is the more singular, as he frequently comes very near forming a correct estimate of the Emperor. In speaking of Prince Napoleon, he says that he despised his father as all people without rectitude despise each other; but it does not occur to him to apply this axiom to the Emperor, although he mentions that the latter had no esteem for anybody, but classed all people under two heads, *useful* and *useless*.

Another circumstance which helps to explain the tame acquiescence of the French in the *Coup d'État* is that it was not unexpected. Under date of February 2, 1851, M. de Viel-Castel says: "Fatality marks the advent of the Second Empire, and the wisest course, in the midst of a people without faith, energy, or rectitude, is to anticipate nothing." On October 9, in the same year, he writes:

"We are now approaching what people call the crisis of 1852, and never in my experience have conspiracies been so rife. . . . Neither conspiracies nor *coups d'état* have yet come to anything, for one and the same reason, namely, that when the moment arrives for belling the cat, people are too timid to act. . . . On the 21st of last September the *Coup d'État* was all ready. On the 23d it was uncertain, because at the critical moment the generals, and, notably, Carrelet, could not be relied upon. It was, therefore, postponed. We can only trust to unexpected contingencies."

This tallies with the remark made by Maxime du Camp, in his 'Reminiscences,' that a *coup d'état* was expected daily, and that the only question was whether the President would get ahead of the Assembly, or *vice versa*. It may therefore be assumed not only that the shock was not a very startling one, but that there was almost a sense of relief in the reflection that the dreaded event had at last happened, and was no longer among the things to be apprehended.

Although an adherent of the Empire, M. de Viel-Castel has much fault to find with public men and public measures. He exclaims pathetically, "Alas, why am I so often obliged to blame a Government I like?" He disapproved violently of the English alliance and of the Italian campaign. He was a violent Anglophobe, and never tired of inveighing against British duplicity and hypocrisy. Lord Palmerston was his pet aversion. Next to him came Victor Emmanuel and Count Cavour. He was convinced that the Papacy could not survive the loss of its temporal power. He had no love for journalists and lawyers. Concerning the latter he says:

"The Emperor in his former fulminations always criticised unsparingly governments composed of lawyers, and yet no administration was ever so full of them, so monopolized by gentlemen of the long robe, as his own. It is true that under Louis Philippe barristers occupied too many of the important offices, but the principal ministers were always Broglies, Molés, Guizots or Thierses. To-day we have descended lower still: Rouher is a barrister, Billault a barrister, Magne a barrister, Abbatucci a barrister, and so on. A barrister could not be found for the post of War Minister, but the Minister of Foreign Affairs [Walewski] is a Polish Jew, a bastard son of Napoleon I., and the Minister of State [Fould] a bankrupt Jew, who, through the agency of his son, manages to manipulate all important financial transactions."

He is equally candid in his remarks on the Empress and her mother. What he says about her greed of money has already been quoted. A graver blemish is referred to in the assertion that "she is very thick with Madame Walewski. The Empress and Madame Walewski are inseparable; they wear the same dresses and bonnets, have the same opinions, and concert together, the one in her position of legitimate, the other in that of illegitimate wife, to oppose the Emperor in his Roman policy."

In another place we read:

"In the life of the Emperor she fills the same part that Mme. du Barry did in Louis XV.'s. She befriends the ladies whom the Emperor *distinguishes* with his regard, favors their relations with her husband, and through their influence seeks to wield a greater power over him. Countess Walewski, the favorite Sultana, and Countess La Bédoyère, and Mlle. Pomeyrac, both of whom are known to be on the best possible terms with the Emperor, are received by her with the greatest cordiality."

Of the Emperor's intimate friend, Count d'Orsay, and of his wife, Lady Henrietta d'Orsay, M. de Viel-Castel has some equally edifying things to say. Of Rachel, the actress, he remarks: "Rachel fully understands the charms of good manners and choice conversation, but it is said that there are times when she easily dispenses with either."

He has no patience with the pretensions of authors and authoresses, and is unsparing in his censures on their lives and manners. He repeats some of the arrogant sayings of the elder Dumas, whose magnificent self-conceit was even greater than that of Charles Reade. At a dinner at Princess Mathilde's, the novelist said: "In four years' time I shall go for an extended voyage, and shall leave behind me, as a farewell to my country, two unfinished novels with this inscription upon them: 'Frenchmen! you who bear that splendid name are a nation of thirty-five millions; there are five thousand writers among you. Well, I defy any of you to finish my two novels.'" We are told that on this occasion Dumas monopolized the conversation from seven to eleven, and spoke of no one but himself.

Concerning George Sand there are some severe strictures. Béranger is called the biggest scoundrel in all Christendom; Musset was mad with pride and drink; Paul Delaroche is a tradesman. "Lamartine Belisarius may be seen every day at his office, where, if you go to subscribe your twenty francs for his periodical publications, you are received by the great man himself. He holds out his helmet to you and says, 'Date obolum Belisario.' You let your napoleon fall into the old Roman's headpiece. You get your receipt and he sees you to the door." Of Eugène Sue it is written, the day after his death, "He was a mediocre writer, without morality or conviction, and a disreputable individual in every sense."

Taken as a whole, these volumes present a gloomy picture of their time and country. The bitterest enemy of the French people could not draw a more damaging indictment of their character.

Forms of Animal Life: A Manual of Comparative Anatomy, with Descriptions of Selected Types. By the late George Rolleston, D. M., etc. Second edition, revised and enlarged, by W. Hatchett Jackson, M. A., etc. Pp. xxii, 937. Oxford: The Clarendon Press; New York: Macmillan.

THE first edition of this work, published in 1870, was one of the earliest, if not the very first, to embody the method, since become so general, of presenting approximately complete accounts of *types* or representative forms. The revision was begun in 1879, but Professor Rolleston, who—as stated in *Nature*—"rose every morning at six o'clock to get two uninterrupted hours for writing it," was soon afterward incapacitated, and his death in June, 1881, left to Mr. Jackson, already engaged as collaborator, what the latter regarded as a "sacred trust." The fulfilment of this trust has resulted in the product of a volume inconveniently large and undesirably costly; and while it is a monument to the learning and industry of the authors, there may be fairly entertained a doubt whether the task of preparing a second edition should have been undertaken at all.

As a guide to actual work in the laboratory the book is not entitled to mention; the few directions given, as on p. 17, are not sufficiently explicit, and the use of a red injection for the veins (p. 1) needlessly contravenes nature and precedent. The "General Introduction" discusses in a philosophical spirit some of the broader questions which are now forced upon zoölogists by the facts of Comparative Embryology, a science which—as is well remarked in the preface—has been formulated since the first edition was published. Of the body of the work a large fourth is occupied by descriptions of preparations, dissections or skeletons, of the rat, rabbit, pigeon, snake, frog, perch, ascidian, snail, mussel, cockroach, sphinx, crayfish, starfish, earthworm, leech, tapeworm, polyzoon, sea-anemone, sea-fir, fresh-water sponge, paramœcium, and amœba. Accurate and clear as these descriptions are, it is obvious that, excepting in so far as they are illustrated by the thirteen figures, they can be of direct use only to Oxford students. Then follow fourteen plates exhibiting portions of the anatomy of the rat, pigeon, frog, skate, slug, mussel, oyster, cockroach, several insects (including spiders), crayfish, starfish, earthworm, leech, tapeworm, hydra, etc. The cockroach and crayfish are well displayed, but most of the other plates are more or less unsatisfactory, either from the omission of important features or from crowding, as with the skate; the brain of this last, by the way, is very far from well adapted to serve as a type of that organ, while its multivalvular "conus," since it exists in ganoids likewise, deserved a better "showing." There is, of course, great room for difference of opinion as to the forms to be selected as representatives, but the lamprey might well have been added, and a simple ascidian should have been, even to the exclusion of some of the matter devoted to rodentia.

The larger part of the volume is strictly a manual of comparative anatomy, differing from nearly all similar works of like scope in the paucity of pictorial illustration. Nor is this defect compensated for by the evidence of a most commendable desire on the part of the surviving author to incorporate the latest possible results of research. In another respect, even more fundamental, this work is simply less objectionable than most; the italicized characterizations of certain groups, *e. g.*, the mammals, p. 359, exhibit the customary reckless intermingling of features which are constant and peculiar, with such as are constant but not peculiar, or peculiar but not constant. Out of a not unnatural deference to the views of Huxley, the Amphibia are still ranged as "Ichthyopsida," thus ignoring the less obvious but more essential characters of brain and heart, which would link them with the Reptiles rather than with "Fishes." The Tunicates are recognized as more nearly allied to the vertebrates than to the mollusks, and there is a fair account of the group and description of a preparation; but it is to be wished that some of the space and figures devoted to rodent anatomy might have been given to illustrations of urochordal structures.

As is almost universally the case in compendiums of even the highest class, the accounts of the vertebrate brain are inadequate and misleading, and there are practically no representations of the structure of a part which, aside from its lofty functions, is at least of some morphological value. The statement (p. 418) that "the cerebral hemispheres are solid in the Teleostei [bony fishes], nearly or quite solid in Elasmobranchii [sharks and rays], but contain large ventricles in Ganoidei [sturgeons and garpikes]," would merely confuse the ignorant, while it would compel the well-informed teacher to spend much time in qualification or correction, and might well arouse in the minds of students an unmerited distrust of the entire work.

Notwithstanding the well-known epigram to the effect that the author should prepare the index even if no other part of his book, this important service seems to have been intrusted to one who lacked both special knowledge of his subject and ordinary accuracy. For example, *optic chiasma* is entered under the adjective only, and reference is made to but one of the several places where it is more or less fully described; so far as might be judged from the index, a *nervous commissure* exists only in the snail, and one looks in vain for *decussation*, *pons*, and for the three well-known and important commissures, anterior, middle, and posterior, which exist among the vertebrates. The omission of *Odontornithes* from the index will, however, be approved by that increasing body of naturalists who doubted from the first whether the possession of teeth by certain fossil birds should justify their separation as a subclass, any more than the absence of those appendages of the mucosa should lead us to dissociate in the same degree the turtles from the other reptiles, the ant-eaters from the other mammals, or the sturgeons from the other ganoids.

For the most part the ambiguous terms of description *upper* and *lower* are replaced by *dorsal* and *ventral*, although there are occasional lapses, as where the cephalic or anterior part of the rabbit is spoken of as the "upper half." On p. 343, by inadvertence doubtless, *conarium* is made a synonym for *hypophysis*, and the middle name of a celebrated English anatomist is misspelled on p. viii; but typographical errors are very few, and, in view of the frequent necessity for qualifying clauses in order to secure accuracy, infelicities of expression are rare. Indeed, the following passages, from the preface and the introduction respectively, show that devotion to natural science does not necessarily hinder the development of purely literary power: "Every modern anatomist must also be a modern linguist." . . . "Nor has natural selection left untouched the record written on the pages of the life-history of any animal; it has falsified it in various ways at every stage—the ovum, its segmentation, the embryo. Special embryonic organs may attain a great prominence; normal embryonic phases may be slurred over, or perhaps extinguished. It is often hard to say what is ancestral, what acquired, to distinguish between structures which may be inherited or independently evolved."

The Life of Samuel Morley. By Edwin Hodder. A. D. F. Randolph & Co. 1888.

THE gradual transfer of power during the last century from the landed aristocracy of England to the commercial classes is a subject that will repay the study of some future historian. It is not yet true that the aristocracy has given place to a plutocracy, but the tendency has been strongly in that direction. So long as members of Parliament are unpaid, they must, under the modern suffrage, either possess wealth or be supported by the possessors of wealth. Many conspicuous exceptions to this rule will suggest themselves, but no one will deny that the present composition of Parliament shows the growth of English trade and the decline of the landholding interest. The time is not very near at hand when noble birth will be an obstacle to political advancement, as was the case in Florence, and the world of fashion will, of course, always worship titles; but the intelligence of the country is not domi nated by snobbishness, and the demagogues are actually teaching Demos to execrate the name of a lord.

Samuel Morley was, owing to these changed conditions, as truly born into a great representative position as if he had been the only son of a peer. The house I. & R. Morley was already a great one when he first entered it, and its reputation was built upon the enduring foundation of honorable dealing. The character of their goods never deteriorated, and it is possible to obtain from them articles that are thread for thread identical with those produced fifty years ago. There is in their employ at present a silk framework knitter who made the Queen's stockings when she was crowned, and at the age of eighty-four reproduced them for her jubilee, and during that period an order from the Queen has always been on the books of the establishment. The factories of the house were, and still are, chiefly at Nottingham, but it long since became necessary to conduct the business in London, and John Morley, the father of the subject of this biography, removed there early in the century. He was a keen politician and a great friend of Joseph Hume, and worked hard for the return of Liberal members both for Nottingham and the city of London, but his chief prominence was as a leading Nonconformist. His house was celebrated for its hospitality, and was visited by all the prominent men of the day belonging to the Dissenting Church, and it was under such influences that Samuel Morley was educated.

It would be hard to say whether the development of his character was determined more by heredity or by his environment. The traits for which his family had been distinguished were prominent in him, but they were traits that seem to have been necessarily evolved by the stringent discipline of the Morleys' business. Efficient service was insisted on; but it was always rewarded. "A berth in Morley's meant self-respect, honor, and emolument, such as no other place in England gave to faithful service." For many years Mr. Morley personally paid their salaries to his young men, for the purpose of making their acquaintance, and he was always ready to assist them with his counsel. The business was so conducted as practically to make partners of all who were employed in it. Men were compelled to work hard and long when trade was brisk, but they were not discharged when it was slack. Connected with the stores were "household" arrangements—library and reading-room, dining-hall, and parlors. Religious influences were encouraged, but religious professions were not required, and though Mr. Morley was a strong advocate of temperance, and became an abstainer in order that his example might not offend others, he caused beer to be supplied to such of his employees as chose to use it. For cases of failure of health or accident a system of pensions was provided, and in recent years the amount annually disbursed in this way was never less than £2,000. It was Mr. Morley's desire to introduce a system of profit sharing, but he was unable to convince himself that it was practicable. It was easy to see that it would work while there were profits to share, but difficulties would arise in years of depression.

The great wealth which Mr. Morley acquired by means of his extraordinary business talents and his strict commercial integrity was expended with unbounded liberality. The admission to partnership of those of his assistants who had proved their fidelity and capacity, enabled him to leave the details of his business to their care, and eventually his time, from being applied to making money, was chiefly spent in giving it away. The number of his benefactions was prodigious, and it was necessarily the case that he was sometimes imposed upon, but he never gave recklessly. He cared little to identify his name with any vast institution, and preferred, where the occasion admitted, to make his donations conditional upon the equal generosity of others. He was especially interested in the diffusion of religious teaching among the humbler members of society, and contributed to the erection of vast numbers of chapels; but he was as ready to assist in the good works of other denominations as in those of his own, and, in spite of much opposition, succeeded in utilizing some of the London theatres for Sunday worship. It would be impossible even to enumerate the benevolent and religious societies with which he was connected, and in many of which he held office. His financial skill, as well as his purse, was at the disposal of all of them, and they were represented to the number of over one hundred at his funeral.

By virtue of his wealth, his abilities, his character, and his convictions, Mr. Morley was the head of the Nonconformists, but he was free from the bigotry, the prejudice, and the Philistinism that are sometimes associated with that name. As his father had said to him, so he said to his children: "In matters of religion and politics you are to decide for yourselves"—advice which seems to have resulted, in several instances, in their connecting themselves with the Established Church. He was active in the movement for allowing burials to take place in the parish churchyards without the interference of the representatives of the aristocratic church; but when that restoration of ancient rights had been secured, he held that subsequent measures should be carefully framed with refer-

ence to the preservation of vested interests, and, at the cost of much odium, he severed his connection with the Church Liberation Society. He believed that the Church ought to be released from its dependence upon the State, but he was convinced of the injustice of disendowment, and preferred that disestablishment should be brought about rather from within than from without. The disestablishment of the Irish Church, however, he heartily supported. In all such questions he was distinguished by the breadth of his views, and while he severely criticised many of the practices of the Established Church, he was always ready to recognize her merits. "Why don't you get rid of these abuses?" he would say; "you would find that many who now keep separate from you would unite with you if only you would reform abuses." That moderation and spirit of concession which have so happily influenced the progress of England was exemplified in him, and his position enabled him to make the most effective use of these qualities. The more bigoted of the Dissenters frequently fell out with him, but his good sense generally triumphed. His judgment is very well illustrated by his conduct towards Mr. Holyoake, as contrasted with his feeling towards Mr. Bradlaugh. Both were disbelievers in Christianity, belief in which was of the very constitution of Mr. Morley's nature; but as he knew that Mr. Holyoake was of irreproachable life, and had spent his strength in disinterested labor for the poor, he felt that it was his duty to contribute to the fund that was raised for his support. Mr. Bradlaugh's atheism, being aggravated (justly or unjustly) by a somewhat unsavory reputation, did not arouse the spirit of toleration in Mr. Morley's breast.

In political life Mr. Morley was of course a Liberal, and in Parliament closely followed Mr. Gladstone, who appreciated his support and publicly testified to the value of his services. It is interesting to note, as showing his freedom from the supposed corrupting influence of "capitalism," that in a great many instances he used his influence and his money to enable representative workingmen to offer themselves as candidates for Parliament. He liberally assisted the union of agricultural laborers, and devoted much pains to the establishment, not only of better relations between them and the farmers, but of improved conditions of rural life. As proprietor of the *Daily News* he was in a position to exert a powerful influence upon public opinion, but he seems to have seldom used the paper as the vehicle of his own views. While in Parliament he was especially prominent in connection with educational measures, and his opinion was always of weight on matters relating either to the material or moral interests of the nation. No measures, however, were especially identified with his name.

Mr. Hodder complains that his task has been a difficult one. No doubt this is true, but much of the difficulty was due to the fact that he completed it within nine months. As a result we have a colorless compilation of very moderate literary merit, and in places needlessly diffuse. He touches upon too many things in his attempt to do justice to the multifarious activity of Mr. Morley, and his portrait is blurred and confused. Longer study would have enabled him to treat his subject in a broader manner, and Mr. Morley's life was in so many respects typical of what is best and strongest in the great English middle class that the labor would have been well bestowed.

The Politics of Aristotle. With an Introduction, two prefatory essays, and notes critical and explanatory by W. L. Newman. 2 vols. I. Introduction. II. Prefatory Essays. Books i. and ii. Text and notes. Oxford: The Clarendon Press; New York: Macmillan.

Aristotle's work on 'Politics,' it was recently remarked by an eminent authority, is still the best text-book of the principles of political science. While, in some matters, Aristotle was feeling his way like a pioneer, in general he is surprisingly modern. The political life of ancient Greece was more active than that of any other people of the world's history. The Greeks were born politicians. Each petty principality had its distinctive form of government and its own code of laws. The political constitution of Athens differed widely from that of Sparta, and both from that of Thebes. Athens herself modified her government in important particulars during the historical period, not to speak of the two forms of oligarchy which ruled that city for a few months. The earliest extant literary work in Attic prose is a treatise on the Athenian State, which has come down to us among the minor works of Xenophon, side by side with a tract on the Spartan Constitution. Plato's most elaborate work presents a scheme for an ideal State, and in his old age, seeing that his first plan was suited only to beings purer and better than ordinary mortals, he presented in the 'Laws' a modified project of government. The comedies of Aristophanes show that such visions of perfect States were common. Xenophon, in his 'Cyropædia,' describes an ideal State, with the excellences, but not the defects, of the Spartan Government. Every conceivable scheme had been proposed, and most had been tried. We have been brought up to consider Rome as the legal country of antiquity; certainly the Greeks were the political nation of the world.

Aristotle had before him an abundance of material—far richer material than he had for his treatises in the department of natural science, where his far-sighted and fruitful observations and inferences awoke the wondering admiration of Darwin. He had made a collection of two hundred and fifty constitutions, polities, of which only fragments are extant. His criticisms on existing governments and theories of government are very keen. His remarks on the relation of the three departments of government, on hereditary monarchies, causes of revolution, influence of food on habits, bearing of the occupations of the people upon the State, origin of money, laws unsupported by public sentiment, life appointment of judges—all are as modern as the propositions of Euclid. And while we do not find in this treatise the literary style which we might expect from Cicero's expression, "Aristotle's golden river of speech," yet Aristotle uses here few of the technical expressions which make some of his metaphysical works so crabbed, and scholars have found distinct traces of literary care. The contents and form of Aristotle's 'Politics,' then, would render the work attractive to American students who have gained some familiarity with Greek. The accessible commentaries on the 'Politics,' however, have been rather severely philological, and Aristotle has been too much neglected generally in America.

Three years ago Jowett published a translation of the 'Politics,' and a volume of notes (see the *Nation*, March 4, 1886). The essays which were to accompany the translation have not appeared. Meanwhile a Fellow of Balliol College, of which Jowett is master, has published the two volumes before us. This work is a true monument of German erudition. The editor is familiar with German methods of research and the results of German scholarship in this department. The book, too, has characteristic German excellences and defects. Of the nearly eleven hundred pages, the text covers but fifty-six. The first volume of 600 pages is occupied by the Introduction—a large book in itself, but without articulation, absolutely without any division into chapters, and, of course, without index. The closely printed table of contents and the running marginal notes do not afford any substantial relief. On the margin of page 78 stands "The second"; the reader turns back nine pages before he finds "The first," and nothing in the text affords immediate help. The reader, again, is often at a loss to know whether "this subject" refers only to the minor question discussed on the last two pages, or to the larger topic which has occupied a hundred pages. A book more perplexing in its mechanical arrangement on a classical subject could hardly be contrived. By the lack of division into chapters, the editor warns off all readers who are not prepared to study his whole work in course; by the heaviness of his early pages he warns off all who do not care to study diligently. Some pages bristle with long untranslated Greek quotations. Occasionally the editor translates all but the technical words; thus he arrives at the definition of the State: "[the πόλις] is a κοινωνία issuing in a whole and formed for the end of perfect and self-complete life"—where nothing is gained by the use of the Greek words for *state* and *community*. But when he finally reaches the discussion of the political works of Aristotle and Plato, his style is vigorous and his pages are almost popular in their nature. The criticism of Plato's 'Republic' is intelligent, and the statement of Aristotle's views is admirable.

The second volume has 56 pages of text (about one-fourth of the whole work), with 66 pages of introductory essays, 40 pages of critical and 320 pages of exegetical notes. The commentary is about five times as full as that which accompanies Jowett's translation. It is diffuse but learned, presenting the results of laborious research. It is prevailingly philological and antique, rather than political and modern; but it introduces illustrations from modern times, from resident aliens in France and America, customs of the Shetlanders, Montenegrins, etc., and quotes from Mill, Comte, and Burke. As it stands, the work is an edition for scholars, and is a rich treasury for them. It might easily have been made more useful to the general reader, who will still find much to interest him if he looks for it patiently.

Agostino Bertani, e i suoi tempi. Per Jessie White Mario. Florence: G. Barbèra. 1888. 4to, pp. 650.

Mrs. Jessie White Mario, widow of the famous Italian patriot Alberto Mario, is one of those noble Englishwomen who, out of pure love for Italy, have given their life work for her cause. A worshipper of Mazzini, and married to one of his most steadfast and unconditional followers, she was initiated from the first into all the inner workings of the so-called *partito d'azione*, headed by Mazzini, and sustained by such men as Garibaldi, Bixio, Bertani, Mario, Crispi, Cairoli, Medici, and, in fact, most of the great leaders who became afterwards prominent in the history of the Italian regeneration, though not strictly following Mazzini's republican ideas. Mrs. Mario is, therefore, not only a contemporary, but an eye-witness, and in a great measure a

partaker in the struggle, having been chief nurse of the ambulance corps throughout every campaign in which Garibaldi took part, and acquiring the deserved appellation of the Florence Nightingale of Italy.

Since the fulfilment of Italian unity and independence, she has zealously labored to illustrate with her pen that momentous period of Italian history, and her works will remain a source of authentic data to the future historian of Italy. We had occasion to notice her life of Mazzini—a very exhaustive work—and now we have before us the life and times of Agostino Bertani from original documents left in his will to Mrs. Mario. Like Mazzini's life, this also is most thorough, fully authenticated, and illustrative of the events which preceded and kept pace with the Italian revolution, and the part taken in it by the "party of action," of which Dr. Bertani was a prominent leader.

Agostino Bertani was born in 1812 of a gentle family, his father being an eminent lawyer, and his mother a member of the noble family of the Parravicini, and both deep in the liberal conspiracies of 1820–21 in Lombardy against Austria, so well remembered through the imprisonment and exile of Pellico, Maroncelli, Foresti, Gonfalonieri, and others. He was thus educated from his earliest youth to the ideas of Italian liberty. He graduated as physician and surgeon at the University of Pavia, and was by merit appointed assistant to Prof. Porta in the surgical clinic of the hospital. There he took a high rank as operator and instructor, and, having completed satisfactorily his two years' service, he received from the faculty the prize of a Continental tour of instruction. It is worthy of note that the certificate to this effect was signed by Prof. Cairoli, Curator of the University, and father of five heroes of Italian liberty, four of whom died in several fields of battle, while the surviving one was Prime Minister of King Humbert, and wounded by the dagger of an assassin aimed at the King.

On his return from his travels in 1841, Dr. Bertani was appointed assistant surgeon of the hospital of Milan. But within four years his practice became so large that he had to resign in order to give all his time to it, and to editing the *Medical Gazette*, of which he was the founder. He was at the same time one of the group of conspirators for the liberty of Italy; and from the Revolution of 1848 to the day of his death, he dedicated all his energies to the cause, without ceasing to be an eminent surgeon. He was on the barricades during the famous five days in March, 1848, when the Milanese drove the Austrian troops out of the city, and was a member of the Committee that obliged the Austrian Governor O'Donnel to sign liberal concessions. Among the members of this revolutionary Committee we read the names of Correnti, now Minister of the Royal House; Cairoli, above mentioned; Cernuschi, now the millionaire financier of Paris; and others who also became famous. Dr. Bertani worked with the ardor of a patriot and a philanthropist, going from the barricades to the hospital to care for the wounded, and from it back again to the barricades. He was appointed by the Provisional Government surgeon in chief of the Liberal Army, and from that date he became, so to speak, the recognized chief surgeon in all the following revolutionary wars of liberty. On the defeat of Charles Albert, and repossession of Lombardy by the Austrians, he followed Garibaldi to Rome, where he established his ambulance at the front among the shot and shells of the French.

It is striking to read now—after nearly thirty years, and the changes that have taken place in Italy—the order of the French General Oudinot, after the surrender of Rome, that every *foreigner* should leave the city within three days. The "foreigners" referred to were all *Italians* who had not been born in the Papal dominions. Thus driven from Rome, Dr. Bertani established himself in Genoa, where in a short time he obtained a most lucrative practice, numbering among his patients, besides the Italians, such eminent English visitors as Sir James Hudson, Ambassador at Turin; Bulwer Lytton, Lady Minto, Lady Russell, and many others, yet being at the same time the medium of communication for all revolutionary movements.

One of the most intimate of his Mazzinian and radical friends was old Gustavo Modena, the actor. The present generation knows very little about him, but in his days he was the greatest actor in Italy, and the teacher of that famous school of dramatic art which formed such artists as Ristori, Salvini, Rossi, Majeroni, and other celebrities. His letters to Dr. Bertani, full of wit and radicalism, are one of the pleasantest features of Mrs. Mario's book.

Memorable among the historical dates in this biography is the 30th of April, 1860, when Dr. Bertani, being confined to his bed by illness, Garibaldi, Crispi, Bixio, Medici, Acerbi, and others met in his sick-room, and, after reading the letters from the Sicilian patriots asking assistance, decided on the famous expedition of the "One Thousand," which changed the fate of Italy. On May 5 Garibaldi sailed from Quarto for Sicily, leaving Bertani as his trusted agent for collecting funds and recruits; and from day to day he sent letters giving warnings and directions, first to recover 200 guns that were missed, and finally authorizing him to contract any debt in his name as dictator of Sicily. In fact, in less than two months, from a conspirator Dr. Bertani became the banker and representative of Garibaldi.

Mrs. Mario publishes a large number of Garibaldi's facsimiles throughout this period, which add interest to that almost legendary heroic enterprise, inviting the reader to a familiar view behind the scenes of those famous men who created the unity and independence of Italy. Of these Dr. Bertani was one of the foremost, following Garibaldi to Sicily and Naples, Aspromonte and Mentana, and then, as member of Parliament, working for Italy to the day of his death in April, 1886. Carducci, the eminent Italian poet, paid him the following tribute, saying: "He might have been a great physician and a wealthy one, but wished instead to be a great citizen and a physician of those who did not pay"—which was literally true, for he used to cure the poor for charity, his friends for love, and only the rich for a fee; but these were not the majority of his patients, and he died a poor man.

Mrs. Mario's book is printed and bound in exquisite taste, with a fine photogravure of Dr. Bertani for the frontispiece. Evidently a labor of love, it is one for which the Italians should be grateful to her.

Notes for a History of Lead, and an Inquiry into the Development of the Manufacture of White Lead and Lead Oxides. Compiled by William H. Pulsifer. D. Van Nostrand. 1888.

THE handsome octavo of nearly four hundred pages which bears this modest title, is an exhaustive history of the metal lead in its connection with the human race. The various ways in which lead has been procured, the processes of manufacture, and the uses to which it has been applied in all ages and lands, are considered not only with a good comprehension of the chemical and mechanical principles involved, but also with much erudition. The author of the book, for many years a manufacturer of white lead in St. Louis, appears to have conceived an affection for the dull and heavy substance with which he has been brought into close contact, and has devoted much time to an investigation of the story which is here set forth. That an active business man, washing off the factory dirt, should give his evenings to research, and, crossing the ocean in his vacations, should delve patiently in the library of the British Museum and those of the Continent in a conscientious effort to be thorough, is in a high degree creditable. Mr. Pulsifer appears to have gleaned what the literature of antiquity affords with relation to his subject; various curious facts are derived from crabbed mediæval manuscripts, the deciphering of which must have cost no small degree of patience; and as regards modern writers upon the topic, signs abound of a wide and careful reading in various languages.

As a maker of white lead the author naturally gives much space to the consideration of that form of the metal; but when it is learned that one-third of the lead at present produced goes into that shape—a greater amount, probably, than is put to any other one use—the space will not seem disproportionate. To the man of affairs, the full account of the various processes of the manufacture of white lead and the economic chapters relating to the development of the commerce in it, in America and Europe, will have much practical value. There are, however, points that will interest the scholar; as, for instance, when Mr. Pulsifer establishes the identity of the *cerussa* of the Romans with our modern white lead. The general reader will find most to interest him in the full account of the purposes which lead has been made to serve, some of which are very curious.

The ancients, like the moderns, used lead to fasten iron into stone, to give a glaze to pottery, and as a help in the manufacture of glass. Very singular were the "imprecation tablets, surreptitiously deposited in tombs, and sometimes even in the coffin of the deceased, that a curse might follow him to the other world," which seem "to have been more frequently deposited by women than by men." Vitruvius describes elaborately a vast aqueduct, the lead in which would cost to-day two millions. The leaden bullets of the ancient slingers often bore an inscription in relief, such as "Appear," "Show yourself," "Desist," "Take this," "Strike Rome." "The Greeks were especially fond of bullets with such mottoes, and they have been found upon Marathon and many other famous fields." While considering white lead as a cosmetic, Mr. Pulsifer quotes from Xenophon a pleasant dialogue between a young husband and wife:

"Said Ischomachus: 'Would I treat you with most loving consideration if I smeared my body with minium, and painted under my eyes in order to deceive you; or, if I so cared for my body that it should be healthy and strong, and thereby be in truth and by nature painted? Would you prefer, when you pressed your lips to my cheek, to touch my own natural and healthy skin, or a plaster of ceruse and minium?'

"'Ah,' she cried, 'it would be much more pleasant to touch your skin, and to see you not with powder on your cheeks.'

"'Believe me,' said Ischomachus, 'I like not ceruse nor minium on your dear face.'"

We have read Mr. Pulsifer's book with much interest. By producing a work so well written

and scholarly he has dignified his calling. His fellow-craftsmen will feel under an especial obligation to him, but his chapters have interest also for the world at large.

Boating. By W. B. Woodgate. Boston: Little, Brown & Co.

THIS is one of the Badminton library of books devoted to various sports and pastimes, and it is fully equal to the volumes which have preceded it both in interest and completeness. A learned introduction by the Rev. E. Warre of Eton deals with Greek and Roman rowing, with biremes, and triremes, and quinqueremes; and then Mr. Woodgate takes up the story, and, beginning with the first race for "Doggett's coat and badge" in 1715, tells of early races at Eton and Westminster, and so comes down to the first race between Oxford and Cambridge at Henley in 1829, and the beginning of the races for the "Wingfield sculls," the equivalent of the amateur sculling championship in the following year. Elaborate tables at the end of the book give the results, times, and other interesting particulars of all the important races in England from 1830 to the present time, and nothing has been left undone to present an adequate history of the growth of scientific rowing. Incidentally, many interesting contests are referred to, as, for instance, the race in 1843 between Oxford and Cambridge crews at Henley, which is known as the "Seven-oar episode." Just before the final heat the Oxford stroke fainted. Cambridge objected to a substitute, and the Oxford men determined to row with seven oars, and, as the wind was abeam and favored the side which was manned by three oars, they eventually won by a length!

Amateurs of the present day may have forgotten that the sliding seats which have added so much to the pace of modern rowing are one of the many results of American ingenuity, and that their introduction into England was due to the visit of two Tyne crews to this country in 1871. The crew captained by Chambers was distinctly faster than that captained by Taylor, but the Taylor crew rowed against the Biglin-Coulter, an American crew using the sliding seats, and Taylor satisfied himself that the slide was an improvement. As soon as the Tyne crews returned to England, Taylor arranged a match, and had his boat secretly fitted with slides, and the ease with which his crew defeated their former antagonists led to the universal adoption of slides at the Henley regatta of 1882.

The chapters on scientific oarsmanship and training are admirable discourses on the text, "If a thing is worth doing at all, it is worth doing well." The rules laid down are sound, though possibly too numerous to be readily borne in mind. Out of the seventeen *details* noted at p. 57 most oarsmen will consider the following as worth more than all the others put together: (1) "Keep the back rigid and swing from the hips"; (2) "Maintain the shoulders braced when the oar enters the water"; (3) "Use the legs and feet correctly and at the exact moment required." Mr. Woodgate is undoubtedly right in recommending a modification of the old training diet in the direction of more fluid and more vegetable food, and his advice on this head applies with even greater force in our climate than in England.

Mr. Woodgate is quite unable to account for the curious fact that, since the appearance of Hanlan, English professional oarsmen have been lamentably inferior to their Canadian, American, and Australian competitors. He considers Beach, the present Australian champion, faster than Hanlan was at his best, and holds him up as an example of the old saying that "A good big one is better than a good little one"—a truth which is further exemplified by the statistics of the University races, which show that in two cases out of every three the heavier crews won.

In the course of his story, Mr. Woodgate has occasion to mention many of the leading oarsmen of past years, while, with exemplary modesty, he never speaks of his own doings; but his conclusions carry additional weight from the fact that he was one of the best oars in England during the sixties, and was often seen at Oxford sculling directly ahead of the 'Varsity eight—a position which would have been fraught with danger to a less speedy performer.

The book contains a number of good illustrations and useful maps of the different English race-courses.

BOOKS OF THE WEEK.

A Bachelor's Wedding Trip. Philadelphia: Penn Publishing Co. 50 cents.
Adee, D. G. No. 19 State Street: A Novel. Cassell & Co. 50 cents.
A Pure-Souled Liar. Chicago: Chas. H. Kerr & Co.
Black, A. The Story of Ohio. Boston: D. Lothrop Co. $1.50.
Browning, Robert. Poetical Works. Vol. III. Macmillan & Co. $1.50.
Brown, L. Q. C. Kenneth Cameron. Philadelphia: T. B. Peterson & Bros. $1.25.
Carter, R. A Summer Cruise on the Coast of New England. New ed. Boston: Cupples & Hurd. $1.50.
Curtis, W. E. The Capitalists of Spanish America. Harper & Bros.
Davis, Varina A. An Irish Knight of the 19th Century. John W. Lovell Co. 25 cents.
Doubleday, Gen. A. Gettysburg Made Plain. The Century Co. 25 cents.
Ewing, Mrs. J. H. Snap-Dragons, and Old Father Christmas. E. & J. B. Young & Co. 30 cents.
Fellows, G. S. "Loisette" Exposed; together with Loisette's Complete System of Physiological Memory. New York: G. S. Fellows & Co. 25 cents.
Giffin, W. M. Civics for Young Americans; or, First Lessons in Government. A. Lovell & Co.
Gréville, H. Perdue. Wm. R. Jenkins. 60 cents.
Hawthorne, J. A Dream and a Forgetting. Belford, Clarke & Co.
Heywood, P. D. An Ocean Tramp. Boston: D. Lothrop Co. $1.25.
James, H. The Reverberator. Macmillan & Co. $1.25.
Lane-Poole, S. The Story of Turkey. G. P. Putnam's Sons. $1.50.
Lang, A. Euterpe: Being the Second Book of the Famous History of Herodotus (ed. 1584). London: David Nutt.
Le Cato, N. J. W. Tom Burton; or, The Days of '61. Belford, Clarke & Co.
Malet, L. A Counsel of Perfection. D. Appleton & Co. 50 cents.
Mariager, P. Pictures of Hellas. W. S. Gottsberger.
Napoleon Smith: A Novel. The Judge Publishing Co. 50 cents.
Parker, Rev. J. The People's Bible. Vol. 8. Funk & Wagnalls. $1.50.
Payne, J. The Mystery of Mirbridge: A Novel. Harper & Bros. 50 cents.
Rice, J. H. Mexico, Our Neighbor. John W. Lovell Co. 25 cents.
Ross, C. The Gallery of a Random Collector. G. P. Putnam's Sons. $1.25.
Schneider, P. Aus dem Leben Kaiser Wilhelms. Berlin: Otto Jenke; New York: Westermann.

SPIELHAGEN'S NOVELS.

New Edition, paper, 50 cents each.

PROBLEMATIC CHARACTERS,
THROUGH NIGHT TO LIGHT,
HAMMER AND ANVIL, and
THE HOHENSTEINS.

"These characters live: they are men and women, and the whole mystery of humanity is upon each of them."—*N. Y. Evening Post.*

"We have no hesitation in pronouncing 'Hammer and Anvil' one of the greatest masterworks of fiction in any language of late years."—*N. Y. Evening Mail.*

Henry Holt & Co., New York.

Germany.

PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, etc. Summer resort for seabathing. Fine surroundings. Isle of Rügen, University of Greifswald. For circulars address Prof. J. M. Crow, Ph.D., Grinnell, Iowa, or Prof. A. Fleischmann.

F. W. CHRISTERN,

254 Fifth Avenue, between 28th and 29th Sts., New York. Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

FRANCOIS COPPEE, "A L'EMPEREUR Frédéric III."—asking the late Emperor to return Alsace and Lorraine to France—and Ernst Lemcke, "Réponse au rêve de M. François Coppée"—French verses, 8 pages, 4to. Printed for private circulation. A few copies can be mailed to those interested in the subject on receipt of 25 cents by B. WESTERMANN & CO., 838 Broadway, New York.

INSTRUCTION IN FRENCH.—ILLUSTRATED FRENCH MONTHLY JOURNAL, 12 numbers, p. paid, 60 cents a year. ADVANCED FRENCH COURSE, 26 numbers, p. paid, $1.10 a year. Send stamp for specimen. E. ROTH, 1135 Pine St., Phila.

INSURE YOUR LIFE
AS YOU
INSURE YOUR PROPERTY,
each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratios of death claims and expenses. Maximum security. Minimum cost.

and Mortgage Notes Guaranteed. Interest payable at National Bank of the Republic, N. Y. Girard Life Ins. Assn. & Trust Co., Philadelphia. Broadway National Bank, Boston. Under same supervision as Savings Banks. Chartered 1872. The amount of outstanding obligation LIMITED BY STATUTE.

TO BE SOLD BY PRIVATE CONTRACT. The Castle Carr Estate, 9 miles from Halifax, in the West Riding of Yorkshire, England.
The castle is of modern construction (Norman and Elizabethan styles), and stands in its own park and grounds in the midst of Yorkshire Moors. In the park is one of the finest fountains in England.
The Castle is complete as a modern residence, and not too large.
The estate comprises about 2,052 acres, of which about 552 acres are divided into small grazing farms let to responsible tenants, and remaining 1,500 acres form one of the best grouse moors in England.
Fishing and fowling rights are also appurtenant.
Shooting over adjoining grouse moors may be obtained by arrangement.
For plans, views, and detailed particulars apply to MEE & Co., Solicitors, Retford, England.

Completion of the First Volume (A–B) of

THE OXFORD ENGLISH DICTIONARY.

"That great Anglo-Saxon undertaking. . . . We need hardly remind our readers that this work ought to be not only in every gentleman's library, but in every intelligent household."—The Nation.

Part IV. Bra-Cass. In two sections. Section 1—Bra-Byz (completing the First Volume), $2; Section 2—C-Cass, $1.25. *This day.* Volume 1, strongly bound in half morocco, $13. *In a few days.*

A New English Dictionary on Historical Principles,

Founded mainly on the materials collected by the Philological Society, Edited by James A. H. Murray, B.A. Lond., Hon. M.A. Oxon., LL.D. Edin., D.C.L. Dunelm, etc., sometime President of the Philological Society, with the assistance of many scholars and men of science.

THE OXFORD ENGLISH DICTIONARY aims at furnishing an adequate account of the meaning, origin, and history of English words now in general use, or known to have been in use at any time during the last 700 years.

THE OXFORD ENGLISH DICTIONARY embraces a vocabulary which will be found to be alike in ancient and in modern words much more extensive than that of any existing dictionary.

THE OXFORD ENGLISH DICTIONARY in the present volume, of which A fills 603 and B 637 pages, contains the words beginning with the letters A and B, comprising 31,254 words, not reckoning the simple combinations of obvious meaning, such as *air-current, air-passage*, which are practically unlimited.

"This monumental work. . . . Never before has the English language been treated lexicographically in a manner so truly comprehensive and scientific."—*London Times.*

"This dictionary is the most important contribution ever yet made to the history of our language. No one is safe in giving the history of an English word without consulting it. No one can consult it without learning something. . . . No student of language can do without it; every Anglo-Saxon may be proud of it."—*Independent.*

"As for criticism, in the ordinary sense, there can be no question of it. The Dictionary will itself be the greatest monument of English philological criticism ever constructed."—*Saturday Review.*

"No one will hesitate to say that the speedy completion of this vast undertaking is, or ought to be, an object of great concern to every educated speaker of English. . . . Every Englishman who can possibly afford it ought to do his part in forwarding this great enterprise of national interest by purchasing the parts as they appear."—*Athenæum.*

American edition of Dr. Martineau's Study of Religion.

A STUDY OF RELIGION; Its Sources and Contents. By James Martineau, D.D., LL.D. American Edition. Revised by the Author. 2 vols. Large 12mo, $4.50.

"Long and exacting as are these discussions, they are incomparably the richest and most satisfying treatises on the intellectual and moral questions which concern ethics and religion that have appeared in the English language during the century. They are the monument of a lifetime devoted to the disinterested pursuit of truth. . . . One who has mastered these four volumes ('Types of Ethical Theory' and 'A Study of Religion') and the literature which they include in their range of thought has gone to the bottom of many of the problems which relate to the present and the future of mankind, outside of a personal revelation from God."—*New York Times.*

A CONCISE DICTIONARY OF MIDDLE ENGLISH, from A.D. 1150 to 1580. By the Rev. A. L. Mayhew, M.A., and the Rev. Walter W. Skeat, Litt.D., LL.D. etc. 12mo, $1.90.

A HISTORY OF ENGLISH SOUNDS, from the Earliest Period, with Full Word-Lists. By Henry Sweet, M.A. 8vo, $3.50.

THE PRINCIPLES OF SOUND AND INFLEXION, as illustrated in the Greek and Latin Languages. By J. E. King, M.A., and C. Cookson, M.A. 8vo, $4.50.

SELECTIONS FROM POLYBIUS. Edited by James Leigh Strachan-Davidson, M.A. With 3 maps. 8vo, $5.25.

New Volume of 'Stephen's Dictionary of National Biography.'

DICTIONARY OF NATIONAL BIOGRAPHY. Edited by Leslie Stephen. Vol. XV. Diamond—Drake. 8vo. $3.75.

"The value of this monumental work becomes more apparent with every volume."—*New York Commercial Advertiser.*

"For reference and for other uses to which such a dictionary can be put, it will be as much desired and sought after in this country as in England. It will stand almost in the same relation to our mutual wants as a dictionary of our common language."—*New York Observer.*

A New Uniform Edition of Mr. Robert Browning's Collected Works.

THE POETICAL WORKS OF ROBERT BROWNING.

In Sixteen Volumes. Published monthly. Globe 8vo. Each $1.50.

Vol. 1. Pauline; Sordello. Ready.
Vol. 2. Paracelsus; Strafford. Ready.
Vol. 3. Pippa Passes; King Victor and King Charles; The Return of the Druses; a Soul's Tragedy. With a Portrait. Ready.

Mr. James's New Story.

THE REVERBERATOR.

By Henry James, Author of 'The American,' 'The Europeans,' 'Daisy Miller,' etc., etc. 12mo, $1.25.

"Mr. James is here at his best. His canvas is not too large, and he fills it to perfection. Every character in the book stands out in clearly defined proportions, so admirably minute and complete is the technical workmanship. . . . It is impossible not to enjoy the process by which the characters of the story are portrayed for us."—*London Globe.*

RECENTLY PUBLISHED:

PARTIAL PORTRAITS.

By Henry James. Globe 8vo, $1.75.

"There is an undeniable charm, if not precisely a fascination, about Mr. James's criticisms which holds and half convinces even the reader whose point of view is the very opposite to his own."—*Critic.*

"No volume of essays of more interest and value has appeared in recent years."—*Boston Times.*

TWELVE ENGLISH STATESMEN.
New Volume.

OLIVER CROMWELL.

By Frederic Harrison. 12mo, paper, 50 cents; cloth flexible, 60 cents: cloth, edges uncut, 75 cents.

"Well and truly has Mr. Frederic Harrison told the story of Oliver Cromwell's life and work; and what a story it is."—*London Spectator.*

"The difficulties of the task have been grappled with in a masterly manner and with brilliant success."—*Scotsman.*

A SEASON IN SUTHERLAND.

By John E. Edwards-Moss. 12mo, $1.25.

The *Scotsman* says: "Mr. John E. Edwards-Moss's book of sportsman's notes, 'A Season in Sutherland,' is a delightful book. When that is said, the work of criticism is done. Its charm is a personal one. The book has, of course, objectivity (if the name be worthy of the thing). It relates to the amusements of a summer spent in the extreme north of Sutherland. The author tells us of his garden and its flowers, his going forth as a wily fisher, his lounging upon the lawn, his fishing in the deep sea, his shooting of grouse and stalking of seals, and of changes that come over the face and voices of Nature in the ears and eyes of sportsmen who are attentive to these matters."

In Paper Covers, price 50 cents each.

TO POLITICAL CLUBS.

The New York WEEKLY POST is the only distinctively tariff-reform paper published.

It is printed on good paper, from new type, and with new web presses having a capacity of nearly 50,000 copies per hour, the 12-page paper coming from the press folded, with leaves pasted in and cut at the edges. Its clear typography is unexcelled; however excellent the contents of a newspaper may be, it is useless if its typography is unreadable. A sample copy of the WEEKLY POST (sent free to any address) is its own best prospectus.

Subscription price, $1 per year. Short-term subscriptions paid for by political clubs will be accepted at 8 cents per month, less 10 per cent. discount. If 500 or more names are sent, 15 per cent. discount. Address

THE WEEKLY POST,

TO BE SOLD BY PRIVATE CONTRACT. The Castle Carr Estate, 9 miles from Halifax, in the West Riding of Yorkshire, England.

The castle is of modern construction (Norman and Elizabethan styles), and stands in its own park and grounds in the midst of Yorkshire Moors. In the park is one of the finest fountains in England.

The Castle is complete as a modern residence, and not too large.

The estate comprises about 2,052 acres, of which about 552 acres are divided into small grazing farms let to responsible tenants, and remaining 1,500 acres form one of the best grouse moors in England.

Fishing and fowling rights are also appurtenant.

Shooting over adjoining grouse moors may be obtained by arrangement.

For plans, views, and detailed particulars apply to MEE & Co., Solicitors, Retford, England.

Recent Publications.

The Pennsylvania Museum AND School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.

All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.

Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.

At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:

1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.

Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.

Full information will be given to any one deciding to exhibit.

If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.

The sympathy and coöperation of all interested in this Art Industry are earnestly requested.

Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

STUDIES OF HOLLAND.—*By Edwin* D. Mead. 10c. CHARLES H. KERR & CO., Chicago.

Scribner & Welford's NEW BOOKS.

New Work by Prof. Henry Drummond,

AUTHOR OF

'Natural Law in the Spiritual World.'

Tropical Africa.

By Henry Drummond, F.R.S.E., F.G.S. With six maps and illustrations. Cloth, $1.50.

DAILY TELEGRAPH.

"Professor Henry Drummond, F.G.S., thinks that heavy books of travel have had their day, and so he gives us in 'Tropical Africa' a single volume, 'dealing with the larger features of the country, lightly sketched, and just enough of narrative to make you feel that you are really there.' Throughout brevity has been aimed at, but the style is so genial, and the facts for the most part so novel, one could well have pardoned Professor Drummond had he been more voluminous."

SCOTSMAN.

"The only fault which most readers will find with the present volume is its brevity. Professor Drummond is a keen observer of natural history; he is not without humor and pathos, and he possesses the power of presenting graphic sketches of scenery or character in simple language. There is nothing heavy or redundant in his book. It is lively and interesting from the first page to the last; and though students of African travel may ask for fuller details, the non-specialist public will probably gain a clearer idea of Central Africa from Professor Drummond than from any other writer. His chapter on the termites, or so-called white ants, is probably the most graphic extant, and his theory that these insects perform for Africa the work done by earthworms in temperate climes is original and is likely to stand."

GLASGOW HERALD.

"No one who has read that remarkable volume, 'Natural Law in the Spiritual World,' requires to be told that Professor Drummond is a keen observer, and it is certainly not a slight advantage, when great questions are stirring, to have the clear and candid opinions which so accomplished and able a traveller has gathered on the spot concerning the future of Africa."

A New and Cheaper Edition.

On Some of Shakespeare's Female Characters.

In a Series of Letters. By Helena Faucit (Lady Martin). A Third and Cheaper Edition. With Portrait. 8vo, $3.00.

"This is one of the books we dare hardly criticise. . . . We have seldom met with a book which has given us more refined enjoyment as we read, and more original matter for meditation afterwards."—*Times*

"The book is delightful, full of information and helpful commentary on Shakespeare, while at the same time it reveals to us in the most effective way a very lofty and beautiful individuality."—*British Quarterly Review.*

"Interspersed with the accounts of the plays in which she has appeared, there are fragments of dramatic autobiography of much interest and value."—*Saturday Review.*

The Prima Donna.

Her History and Surroundings from the Fourteenth to the Nineteenth Century. By H. Sutherland Edwards. 2 vols., 8vo, cloth, $7.50.

General Contents: Catalini—Pasta—Sontag—Malibran—Grisi, etc., etc.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

The Nation.

NEW YORK, THURSDAY, JULY 12, 1888.

The Week.

PRESIDENT CLEVELAND'S admirable letter to the Fourth of July meeting in Tammany Hall will satisfy everybody that he is going to force the fighting on the tariff-reform issue. He shows no more disposition to fear the consequences now than he did when he sent his message to Congress last December. He sounds the keynote of the campaign in a few sentences, which sum up the whole question with the terseness and force of aphorisms:

"Our Government belongs to the people. They have decreed its purposes; and it is their clear right to demand that its cost shall be limited by frugality, and that its burden of expense shall be carefully limited by its actual needs. In the midst of our impetuous enterprise and blind confidence in our destiny, it is time to pause and study our condition. It is no sooner appreciated than the conviction must follow, that the tribute exacted from the people should be diminished. Those who oppose reform attempt to disturb our workingmen by the cry that their wages and their employment are threatened. They advocate a system which benefits certain classes of our citizens at the expense of every householder in the land—a system which breeds discontent, because it permits the duplication of wealth without corresponding additional recompense to labor, which prevents the opportunity to work by stifling production and limiting the area of our markets, and which enhances the cost of living beyond the laborer's hard-earned wages."

Rarely has the President's gift for expressing, in the homely language of common sense, the fundamental truths of large public questions stood him in better stead. The educating influence which his leadership has already exerted was forcibly shown by the enthusiastic reception which the Tammany audience gave not only to his letter, but to the strong speech which Mr. Mills made upon the real objects and effects of his Tariff Bill. A year ago a mere mention of a speech on the tariff would have emptied Tammany Hall.

Mr. Mills's speech was a model of its kind, and we fully agree with an estimate which a Tammany leader made of its influence, that it was worth at least 10,000 votes for the Democratic ticket. It will be worth more than that if it is circulated as freely as it ought to be. Mr. Mills confined himself to a frank and simple explanation of what his bill really proposes to do. There is no point upon which light is more valuable at this time, for not one man in a hundred has the remotest idea of what the bill actually is. The Republicans all shout that it is a free-trade measure, but scarcely one of them has ever read it or an accurate outline of it. Mr. Mills showed first that it would cut down the surplus $1,000,000 by taking the duty off lumber, for this reason: "The duty of $2 a thousand feet has been worth $35,000,000 to some of the 'lumber kings' of Michigan and other States, but we believed it was better that they should not make so much money, and that the struggling farmers on the prairies, who now live in sod houses, should be enabled to get lumber so cheap that they could build nice, comfortable farmhouses." Then the bill would take the duty off salt, because nature supplies it, men and beasts are in constant need of it, and the tax is merely kept on to "foster a monopoly as selfish and grasping as exists in the world." Next, it would take the duty off tin plates, which now amounts to $5,700,000 annually, though there is not a tin-plate manufactory in America. The abolition of this duty would not throw a single laborer out of employment.

In regard to the free-wool proposal of his bill, Mr. Mills spoke with especial force, and his words are a striking contrast to the "baa-aa" argument which Congressman Horr put forth at the recent Republican ratification meeting. There is not, he said, nearly enough wool grown in this country to clothe our people. We grow 265,000,000 pounds a year, and it requires 600,000,000 pounds to make clothing for our people. High duties keep out nearly all wools except the coarse carpet wools, and the result is the use of shoddy in the manufacture of the woollen clothing which workingmen wear. Over $44,000,000 worth of woollen goods are imported annually, at an average duty of 58 per cent. If wool were admitted free of duty, these woollen goods could be manufactured so cheaply in this country that the imports would stop, and we should soon be supplying foreign markets as well as our own, while the increase in our manufacturing product would increase enormously the demand for labor, and consequently enhance the rate of wages. Subsequently Mr. Mills showed, what has been shown over and over again, that the average duty on imports is now 47.10 per cent., and his bill proposes to reduce it to 40 per cent., a reduction of only 7.10 per cent. This is what the Republicans call free trade, and rather than submit to an average duty of 40 per cent., they declare that they will give the country free whiskey.

The President has given Congress some rudimentary but necessary instruction upon the question of pension legislation. Both houses of Congress have made repeated efforts to induce him to treat the subject, as they persist in doing, from the demagogic point of view, but he persistently refuses to do so, preferring to treat the American soldier as a man of character and self-respect rather than as a beggar. In a message sent to the Senate on Thursday he answers the recent "arraignment" made by that body upon his pension policy, by saying:

"None of us should be in the least wanting in regard for the veteran soldier, and I will yield to no man in a desire to see those who defended the Government when it needed defenders, liberally treated. Unfriendliness to our veterans is a charge easily and sometimes dishonestly made. I insist that the true soldier is a good citizen, and that he will be satisfied with generous, fair, and equal consideration for those who are worthily entitled to help. I have considered the pension list of the Republic a roll of honor, bearing names inscribed by national gratitude and not by improvident and indiscriminate alms-giving. I have conceived the prevention of the complete discredit which must ensue from the unreasonable, unfair, and reckless granting of pensions by special acts, to be the best service I can render our veterans."

He says that there are before him now more than 100 special pension bills which can hardly be examined within the time allowed for that purpose, and suggests that "It would be well if our general pensions laws should be revised with a view of meeting every meritorious case that can arise. Our experience and knowledge of any existing deficiencies ought to make the enactment of a complete pension code possible." This is a rational and statesmanlike solution of the difficulty, but there is little likelihood of Congress adopting it so long as there remains a "soldier vote" to be angled for.

Secretary Fairchild has been having, with a correspondent of the Springfield *Republican*, another of those talks on the "sugar fraud" affair which fill his friends—among whom we count ourselves—with sincere regret. This time he is replying to Mr. George William Curtis in *Harper's Weekly*, and asserts that he knows more about the matter than Mr. Curtis, because Mr. Curtis has not seen "the evidence collected by the agents of the Department." Now the agents of the Department who have got up this sugar-fraud story are simply one Byrne, a newspaper reporter at one time connected with the Boston *Herald*, and offering not a single guarantee, that we have been able to hear of, as to trustworthiness or knowledge either of frauds, sugar, custom-houses, valuations, or polariscopes. It is on the report of this man, whose selection for such a work by the government of a great commercial State may safely be called grotesque, that all this fraud story rests in the last resort. This was bad enough, but was aggravated when Assistant-Secretary Maynard undertook to make "politics" out of the report, and it is still further aggravated by Mr. Fairchild's passionate determination to stand by Mr. Maynard and see him through his troubles. Of course, if frauds at the Custom-house in the semi-scientific valuation of an article yielding such large revenues as sugar, were suspected, a civilized Government ought to have had them at once investigated; but the investigation ought to have been conducted by a commission, containing a scientific man of repute, a business man of repute, and perhaps a lawyer or politician of repute, and the evidence ought to have been taken publicly. If Secretary Fairchild really wishes to explain, he must begin by saying why he selected poor Byrne to overhaul the great

custom-houses of the country, and what Byrne was supposed to know either about sugar or evidence, and what his experience of life has been in any field. These are on their face somewhat ridiculous questions to ask, but they have to be asked and ought to be answered.

What is the matter with all the Republican leaders, orators, and editors? Not one of them seems able to speak of Harrison without in some way throwing cold water on his candidacy. "Steve" Elkins speaks of him as being a candidate of whom Warner Miller was able to say "almost with enthusiasm" that he "would come nearer to carrying New York" than any other candidate. The *Tribune* has made no concealment of its belief that Blaine would have been a stronger candidate. The Philadelphia *Press* has declared that the course pursued at Chicago, ending in Harrison's nomination, "is not the way to get a united party with trusted leadership." And now Mr. Estee, the Chairman of the Convention, in formally announcing to Gen. Harrison the fact of his nomination, says: "It is true, distinguished gentlemen, well known to the people, who were experienced in public affairs, illustrious in character, and worthy of the people's confidence and support, were before the Convention as candidates, *and yet you were chosen.*" That is not even "almost enthusiastic."

The first really enthusiastic support of Harrison that we have seen, outside of Indiana journalism, comes to hand in Mr. Wharton Barker's *American* of Philadelphia. Mr. Barker declares that Gen. Harrison has been his favorite candidate for five years, and implies more or less directly that for that reason he feels sure of his election next November. He pronounces the platform "straightforward, sound, and strong," and remarks: "Let us by all means have an open and direct contest on the question whether the duties on foreign goods shall be high enough to protect American industry." That statement of the issue gives rise to a suspicion that Mr. Barker has not read carefully the platform which he commends, for in that the question of the campaign is stated in a very different way, and to this effect: "Rather than reduce, revise, or alter in any way, save to make higher, the present high-tariff duties, we are in favor of giving the country free whiskey." The campaign is scarcely a fortnight old yet, but the issue is already squarely drawn as to whether cheaper food, clothing, and other necessaries of life, or free whiskey will be more beneficial to the American people. Mr. Barker will have to walk faster if he is going to keep up with the procession.

After a week of that prayerful consideration which he always gives to every question that has what Mr. Blaine calls "a moral side," Mr. Henry C. Bowen, the editor of our esteemed religious contemporary the *Independent*, announces his cordial approval and hearty support of the free-whiskey policy to which the Chicago Convention committed the Republican party. Mr. Bowen sets an excellent example to more squeamish secular editors by disregarding the absurd pretence that it makes any difference whether or not it is "a remote contingency" in which the party would resort to this policy, rightly holding that it is a question of principle. Nor does he sympathize with those secular editors who seek a salve for their less robust consciences by advancing the theory that the removal of the tax on whiskey would not increase intemperance. He entirely agrees with Mr. Blaine that it would of necessity foster drunkenness; his exact words are: "We believe the tax to be a check on the traffic." But so much more disastrous than any increase of drunkenness, however great, does he consider any reduction in the taxes upon the necessaries of life, however small, that he would remove the tax upon whiskey entirely rather than touch the tax upon wool, for instance, or upon lumber, or upon tin plates. "Rather than the surrender of any part of our protective system," the *Independent* would flood the country with cheap whiskey; and upon this platform Mr. Henry C. Bowen confidently appeals to the religious convictions of the American people.

The signs of severe mental, and even physical, suffering among the Blaineites over the charge that their candidate intrigued for the nomination at Chicago, continue to be numerous and grave. They are apparently ready to produce affidavits from various innocent men that during the whole period of the Convention's sittings he and his host, Mr. Carnegie, were absorbed in their coaching trip and in the beauties of English and Scotch scenery, and, if they had a telegraphic cipher, only used it to warn "the Boys" that Mr. Blaine positively must not be nominated. We now advise them to let the matter drop. They cannot convince a single human being who knows them or their ways of the truth of anything they say, particularly when what they say runs counter to notorious facts. Moreover, Mr. Blaine was not nominated. He is now simply a private citizen coaching with Mr. Carnegie. As such he interests very few people. Why not let him be? Why weep and curse and call names over him? Why cannot the disciples pull themselves together and be men? Life doubtless will now be hard for them, but not harder than for tens of thousands of uncomplaining widows.

Mr. Hamilton Fish, jr., is a very singular person. He told the Fassett Committee in his testimony on Monday what all his brother members of the Aqueduct Commission must have known to be incorrect, that the bad quality of the inspectors on the aqueduct was due "in great part to the character and unfitness of the inspectors sent us by the Civil-Service Commission, of which the editor of the *Evening Post* is Chairman." The editor of the *Evening Post* is not Chairman of the Civil-Service Commission. The examinations for inspectors are conducted by examiners selected by the Aqueduct Commission, under rules framed by the Aqueduct Commission, which the Civil-Service Commission adopted *pro forma*. The Chief Engineer rates the papers. If Mr. Fish did not know this fact, what a man he is to be drawing $5,000 salary from the State. If he does know it, what a man he is to go on the witness stand and swear to a misrepresentation.

Mr. Fish's testimony left no doubt whatever as to who the originators were of the scheme to turn over the building of the new aqueduct to a gang of plunderers headed by Squire and Flynn. Mr. Fish swore that the Republican Speaker of the Assembly first revealed the plot to him, and said in so many words that its success was desirable in order to strengthen the Republican party in Westchester County and keep up the Republican wing of the Legislature in the fall elections. Mr. Fish went ahead with that end in view. He laughs at the idea of taking into account the interests of this city. He drew a bill reorganizing the Aqueduct Commission by adding three new members. He had a Republican Senator introduce it. He had personal interviews with John O'Brien, Chairman of the Democratic State Committee, and the principal aqueduct contractor, and with Judge Muller, the Governor's confidential friend in all the aqueduct "deal" business, and obtained from them pledges of Democratic support for the bill. As they had large Republican majorities in both branches of the Legislature, all the "Democratic support" they needed was the Governor's. Mr. Fish lobbied for the bill for several weeks, with the understanding that when it should be passed he should be one of the new Commissioners at a salary of $5,000 a year.

The bill passed the Senate as it had been drawn, adding three new Commissioners, at a salary of $5,000 a year each, but leaving in the Mayor and Comptroller as *ex-officio* members to look after the interests of New York city taxpayers. When it reached the Assembly, a Republican member moved an amendment striking the Mayor and Comptroller from the Commission. This left the city without a single official representative upon the Commission, and put Squire, the characterless Commissioner of Public Works, in control of the work of building the aqueduct by securing four of the seven members of the Commission who could be depended upon to follow his lead in all questions. The bill, thus amended, although denounced on the floor of the Assembly as an infamous piece of legislation, was passed by the unanimous Republican vote of that body. It was taken on the same day to the Senate, and although roundly denounced there by a Democratic Senator, was passed there by the unanimous vote of the Republican majority. The Gov-

ernor, in the face of all appeals and protests, appointed the men agreed upon.

We recall nothing in the curious political history of this city which is quite equal to this. We have had plenty of revelations of dishonest methods by men who, like Tweed and Sharp and our Boodle Aldermen, appeared to have no moral perceptive faculties. They made money out of politics as a trade, and they could see no reason why there should be such a fuss about their doings when they were exposed; but this is the first instance in which a gentleman, brought up under the most favorable conditions for giving him high moral and public-spirited ideas of official duty, has come before the public, and avowed, without a trace of shame, that he engaged deliberately in a plot with a lot of unscrupulous politicians of the opposite party to plunder the city of New York in the interest of "politics," and to secure for himself a salary of $5,000 a year. He refuses to say that he sees even any impropriety in entering into a "combine" with a contractor to pass a bill which that contractor favored. After this it will not do to charge that the frauds and corruption in our city politics are due to the influence of the "ignorant foreign vote." Here is a native American gentleman entering into a plot with other Americans, including a Republican Speaker of the Assembly and a Democratic Governor of the State, to cheat and rob the taxpayers of New York, and they are able to bring to the support of that plot the entire Republican majority of both branches of the Legislature and win the approval of the leading Republican organ of the city when their work was crowned with success. This whole disgraceful job was of American origin, and the men who conceived it and carried it forward to success pride themselves upon their "Americanism" as being the only genuine brand. The tremendously American *Tribune* was their sole ally and defender in the respectable press of this city, and the sole newspaper here which covered with personal abuse and vilification the gentleman who exposed the character of the head of the plunder conspiracy, and thus defeated it when its success seemed certain.

Mr. John Jarrett, whilom President of the Amalgamated Association of Iron-Workers, at present attorney for protection, gave some testimony before the Senate Committee on the relations of labor and capital, which it is worth while recalling. Said he: "The wages paid the iron and steel-workers (I refer to those who are connected with our organization) are on the whole tolerably fair. I claim that this condition is simply the result of organization among the workmen. . . . As a rule, in such mills as are not controlled by our organization, lower wages are paid. Of course, there are all sorts of arguments used by the owners of these mills. . . . They claim that the controlling influence whereby wages are governed in this country is the tariff, and they say they pay all the tariff guarantees them." He went on to say that this claim was all humbug, and that it was the Association alone that forced employers to pay good wages. At the same time he put in a valiant plea for protection, though he was considerably distressed by the close questions of Senator Call, who finally brought him up squarely as follows: "I understand you that, but for the trades-unions, the benefit of the tariff would be absorbed wholly by the manufacturers?" The President of the Amalgamated got the better of the advocate of protection in Mr. Jarrett, and he replied, "It would be largely so." We commend these statements to those iron-workers in the West who are now trying to find out what is the true market price of their labor unaffected by the tariff, and whom the manufacturers, or a few of them, are trying to fool with the old "claim" that wages must go down on account of tariff agitation.

An interesting outcome of the tariff war between Italy and France is the appeal for Governmental assistance now made by the wine-producers of southern Italy, who find themselves with over two hundred million litres of last year's wine on hand, its market having been cut off by the "war." They now contemplate the utilization of this stock by distilling it, and they petition the Government to refund excise taxes already paid on the wine, to reduce the distillation tax on their behalf to one-half its usual rate, to confer a considerable bounty on the exportation of spirits, and to give them reduced rates of transportation on the Government railways. It is not very likely that these demands will be granted, for not only would they entail a very considerable expense themselves, but the fear is entertained that the granting of them would be the signal for a flood of claims for help from other industries in distress.

The alleged Parnell letters still agitate British society and politics. The Liberals are indulging in fierce denunciation of the Attorney-General, who appeared as counsel for the *Times* in the libel suit brought by O'Donnell, for reading these letters in his opening speech, and then failing to prove their authenticity, to which he answers that the Court cut him short, and would not let him present his evidence because the plaintiff's case was so poor. Parnell, who was subpœnaed but not called, has denounced them as forgeries in his place in the House of Commons, but the *Times* says his "naked denials" do not suffice, and says this, while loudly proclaiming that under no circumstances would it tell him how the letters came into its hands, or what reason it has for believing them authentic, except that it considers Parnell capable of writing them. Michael Davitt has intervened in the discussion to make an excellent suggestion, namely, that if the Attorney-General really believes the letters to be genuine, and really believes that the letters show complicity in assassination, it is his bounden duty to prosecute Parnell criminally as an accessory before the fact. As long as this is not done, indeed, the whole affair must wear the air of campaign thunder.

As a question of social ethics the affair is an odd one to occupy a society which plumes itself so much as English society does on its nicety in matters of honor and fair play. Until now it has been held everywhere, if A produces a letter alleged to be written by B, and damaging to him, and B denies that he wrote it, A is then bound to produce his reasons for believing that B did write it, and chief among these reasons would be an account of the manner in which it came into his (A's) possession. The curious part of the Parnell case is, that A here refuses to acknowledge that B's demand imposes on him (A) any burden of further proof whatever. If the case went to trial in a court of law, the *Times* would produce the letters, and Parnell would repudiate them. The *Times* would then produce experts to testify that they were in his handwriting. He would doubtless produce just as many to testify that they were not in his handwriting. The *Times* would then be asked for corroboration in the shape of a history of the letters. This, however, it declares it will under no circumstances give. If there were no "politics" in the matter, of course such a declaration would produce general derision.

A year ago, when some allusion was made to these charges of the *Times* in the House of Commons, the Irish party challenged a full investigation at the hands of a Parliamentary committee, which they were willing to have composed exclusively of political opponents. The Ministry rejected the proposal, and the *Times* strenuously opposed it, insisting that a court of law was the only place for such a proceeding. To this the Parnellites made answer that they were not willing to go before a jury of London tradesmen animated by the usual prejudices of their class, and that they did not wish the investigation to be hampered or restricted by the rules of "legal evidence." For the passion for "legal evidence" in all investigations of a political character, where it is desirable for any reason that the field of inquiry should be narrowed, and all the probabilities on which men form their judgments in the ordinary affairs of life be shut out from view, is just as strong in England as it is here. But the effect on the public mind of the refusal of the Parliamentary inquiry was very great, and discredited the *Times* considerably, if not fatally. It is not likely that the O'Donnell trial will help it. In fact, it is hard to resist the belief that the youth who conducts that journal and his exceedingly simple-minded proprietor have been made the victims of a monstrous imposture by a knot of Irish speculators, who have sold them for a good round sum a sackful of blood-curdling but skilfully prepared documentary revelations. If the secret history of this bargain ever comes out, it will probably be as entertaining as anything in the history of credulity and deceit.

THE PROPOSED SUGAR BOUNTY.

THE debate upon Mr. Cannon's proposition to repeal the tariff on sugar and establish a system of bounties in its stead, demonstrates the incapacity of the Republican party to deal with the surplus. The controversy was practically confined to the Republicans, and the participants were almost equally and altogether irreconcilably divided. Mr. Cannon received the applause of the one faction when he declared that if he must choose between untaxed sugar and untaxed spirits, he would vote for untaxed sugar. Mr. Kelley called forth the applause of the other when he quoted the protection plank in the Chicago platform, and eulogized its demand for the repeal of the internal-revenue system, by declaring that he was ready to say, "Lord, now lettest thou thy servant depart in peace, for mine eyes have seen the glory of the Republican party." Neither faction confined itself to the advocacy of its own line of action; each condemned that proposed by the other.

Mr. Cannon and his supporters showed that while the unprotected industries of the South had been bounding forward, the production of sugar in Louisiana had fallen from 218,000 hogsheads in 1880 to 145,000 in 1886. In other words, the policy of protection had failed. Mr. Kelley and his supporters dealt blows to the bounty proposition. Mr. Kelley declared that it was contrary to all precedent and contrary to the genius of American institutions. Mr. Holmes of Iowa denounced it as bad ethics and bad financial legislation. Mr. Anderson of Kansas declared that the proposition was one to give to the Republican party the shibboleth of bounty instead of the shibboleth of protection. Never was so much economic truth heard from the lips of protectionist Congressmen. On the one side it was admitted that the protective tariff is a bounty system, and on the other a bounty system was denounced as iniquitous and contrary to the principles of democratic government.

Many good Republicans have expressed surprise that the party leaders in the national Convention did not endorse the policy represented in this debate by Mr. Cannon, instead of that represented by Mr. Kelley. To the mass of Republicans free sugar, with or without bounties, has for a long time seemed the wisest and the most acceptable method of getting rid of the surplus. Even the New York *Tribune*, in its issue of September 22, 1886, declared itself as follows:

> "*The Tribune does not believe that taxes on tobacco and liquor ought to be reduced or removed while the tax on sugar and other necessities of life is retained without change.* . . . So long as the conspiracy which seized the government of Louisiana by crime, and which defrauds a majority of the people at every election, continues to send Democratic representatives to Congress, the *Tribune* does not consider that they have any right to plead protection as a pretext for a duty which is contrary to Democratic principles, and which, from a revenue point of view, should be reduced rather than any tax on luxuries or vice."

This bloody-shirt declaration in favor of protection only to Republicans, would not, indeed, have formed a very valuable campaign document in a closely contested election. Nevertheless, the fact that no Republicans are benefited by the sugar [illegible] certainly seemed to join with everything [illegible] in pointing towards the sugar tax as the fi[rst] one to be reduced. Yet when the Chicago Convention met, free sugar was not mentioned, and free whiskey was demanded rather than reduce in any way the protective tariff which the war had established.

Such seeming perversity on the part of the Committee on Resolutions certainly calls for an explanation. It is hardly enough to say that the corporations which dictated the platform had been living in a fool's paradise, and lost all sense as to the feeling of the masses. Maj. McKinley certainly knew in some degree the sentiments of his constituents, and he would not have drafted that platform had he seen any other way in which the interests of protection might be maintained permanently. Mr. Kelley's speech on Saturday is the clearest indication yet given as to the line of argument which governed the Committee. They saw that a declaration in favor of sugar bounties would be an open confession that the protective tariff is a tax upon the consumer. They also saw that in the face of public opinion the Republican party dare not exchange the shibboleth of protection for the shibboleth of "bounty"; and, lastly and chiefly, they knew that a bounty to the sugar interest was, for good reason, contrary to all American precedent. The only bounty ever granted to any industry was that to the fisheries in the early days, and this was avowedly an administrative measure for the maintenance of a school for a volunteer navy. The giving of a bounty of $6,000,000 a year directly to a particular interest, without any warrant either in the written Constitution or in precedent, was a measure which the Committee on Resolutions at the National Republican Convention was naturally reluctant to demand.

We are not in the habit of arguing against the constitutionality of a protective tariff. The dictum of John Marshall, that where a general power is given to the national Government the means by which it shall be exercised must be left to the discretion of Congress, has always seemed to us final upon this point. Yet the disbelief in the constitutionality of such taxes is not confined to unreconstructed Democrats. Judge Cooley, in his 'Principles of Constitutional Law,' states the matter as follows:

> "Constitutionally, a tax can have no other basis than the raising of revenue for public purposes; and whatever governmental action has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise a revenue, but to discourage and indirectly prohibit some particular import for the sake of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principle."

If this be the constitutional status of a protective tariff which Congress imposes in carrying into effect a power certainly granted it, what possible justification is there for granting a bounty without even the pretence that it is to regulate commerce or carry out any one of the powers delegated to the national Government? The national Government, as every one knows, is one with no powers except those expressly granted it. The State [illegible]ment is one with all powers except those [illegible]xpressly prohibited. Yet in the year [illegible] State law authorizing bounties was [illegible] unconstitutional by the Supreme [illegible]he United States, only one judge [illegible] Justice Miller gave the decision [illegible] as follows (Loan Association vs. To[illegible]all., 653, 664):

> "[illegible] that a benefit results to the local [illegible]wn by establishing manufactures, [illegible]may be said of any other business wh[illegible]mploys labor and capital. The merchant, the mechanic, the innkeeper, the banker, the builder, the steamboat owner, are equally the promoters of the public good, and equally deserving the aid of the citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public treasury to two-thirds of the business men of the city or town."

Even a Pennsylvania court (Sharswood, J., in 62 Pa. St., 491–495) has taken the same position:

> "To lay with one hand the power of the government on the property of the citizens, and with the other to bestow it on favored individuals to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of law and taxation."

To not only exempt one industry from taxation, but to make it the recipient of taxes, is to give to it the feudal privilege of legal robbery. When, through our local governments, the favored industry subjects property-owners to contribution, the courts have uniformly denounced the crime as "robbery." If our national Government should subject the laborers of the country to contribution in order to grant a bounty to the sugar-planters of Louisiana, the same crime would be involved. The Republican party is incapable of reducing the surplus. The policy advocated by one faction violates the moral instincts of the nation; the policy advocated by the other violates the principles of its constitutional law.

CHEAP CLOTHES.

A FORTNIGHT ago we quoted the following from a speech of Gen. Harrison last March:

> "I am one of those uninstructed political economists that have an impression that some things may be too cheap, that I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coat. I believe it is true to-day that we have many things in this country that are too cheap, because whenever it is proved that the man or woman who produces any article cannot get a decent living out of it, then it is too cheap."

We said then that this was distinctly the talk, not of a hard man, but of a man who was literally, as he himself admitted, "uninstructed"—that is, had not reflected on his topic. When he touched on the moral aspect of cheap clothing, he was evidently much in the state of mind of Gen. Hancock when the latter took up the tariff in the campaign of 1880. He had doubtless heard that the tailors and seamstresses who make cheap clothing are often poorly paid, and he knew that if he were conscious of wearing a coat which had been made by poorly-paid labor, he, being a well-to-do man, who goes to an expensive tailor, would feel uncomfortable; so he wandered on over the subject in a hazy way until he reached the conclusion that all cheap clothing was a bad thing, and that a man or woman who wore a

cheap coat would "necessarily" become "a cheap man or woman."

Whether this doctrine will play any part in the Republican canvass, of course we cannot say. But whether it does or no, it must be distinctly borne in mind that it is a new doctrine, and that it needs much elucidation. The older view of those who trace a connection between a man's clothing and his moral condition, has always been that a man is improved and his self-respect maintained by wearing good clothes, and that what makes a man feel "cheap" is not the cheapness of his clothing, but its poor condition. All observers of human nature hitherto have testified, and all laborers among the poor have corroborated their testimony, that you cannot do much for the moral elevation of a man as long as he is not decently clad, and that the minute you give him decent clothing, his rise becomes easier, no matter what the clothes may have cost. Nothing, in fact, as all the world except Gen. Harrison knows, degrades so rapidly as ragged and filthy garments. If you want to find cheap men or women, you must look for them inside patched and threadbare coats, trousers, and gowns. The most hopeless feature in the tramp's condition is his indifference to the condition of his clothing. As soon as you get him to wear a good coat you have started him on his upward journey, and he would laugh, and all philanthropists, and moralists, and statesmen, and economists that we have ever heard of would laugh heartily with him, if at this point Gen. Harrison were to appear on the scene, and cry, "Hold on; how much has this coat cost? If it be a cheap coat, it will do the man no good. Let me see the bill, in order that I may feel sure that wearing it will really exert the improving influence on him which we all so much desire."

In truth, there is probably no sign of a people's condition on which modern economists and statesmen rely so much in forming judgments about their government and industry, as the condition of their clothing. A badly-dressed people is taken to be, by the general verdict of mankind, an ill-governed people, or a people cursed with a poor soil or a bad climate. All statesmen in modern times profess, at least, to desire to make clothing easy to get for the mass of the population, and the only way to make clothing easy to get—now that the age of plunder has passed by—is to make it cheap. We venture to assert that the records of the last thousand years may be searched in vain for the notion that it improved men and women to make their clothing more difficult to procure. It is with Gen. Harrison an absolutely original idea. It derives, indeed, a touch of humor from the fact that it is contradicted by the personal experience of nearly every man and woman in the country.

There is nobody in the United States, outside of a small circle of great railroad, oil, coal, sugar, and lumber "kings," who is indifferent to the cost of his coat. To ninety-nine out of every hundred Americans it is a matter of serious concern, especially in the case of a large family. A man wearing a dear coat—that is, a coat which he has had difficulty in paying for—always feels cheap, because the more his coat costs him the less of other necessaries or pleasures of life is he able to procure. Nothing makes a man feel cheaper than an oppressive clothes bill. It means poorer lodgings, simpler food, fewer books, less travel, less amusements of every kind. It may not strike Gen. Harrison in this way, but to the mass of mankind any other view will seem almost comical. To "the toiling millions" perhaps the greatest blessing Providence could bestow would be a climate which made clothing unnecessary except for decency, or a product of some kind which could be used as clothing without any process of manufacture, so that it would cost little or nothing.

What was probably running in the Republican candidate's mind when he made the remark we have quoted, was the sad lot of the poorly-paid tailors and seamstresses who make up the cheaper kinds of clothing. We find that these tailors and tailoresses numbered in 1880 133,756. If we concede that they now number 200,000, it must be borne in mind, even if the tariff bettered their condition, which it does not, that it would be difficult to justify deliberately increasing the necessary expenses of 60,000,000 for the sake of a class so small. As a matter of fact, however, the wages of this class do not depend on the cost of the clothing. The cheap clothiers do not pay their tailors according to the prices they get for their garments. They pay them according to the number of tailors and tailoresses competing for the work to be done. What keeps these tailors and tailoresses poor is that there are ten of them competing for every bit of work that offers. Moreover, any argument for dear clothing for their benefit leaves out of sight the fact that they too need clothing. Possibly in Indiana the clothiers let their tailors have their own clothes for nothing; but in all other parts of the world the tailor has to pay for his clothes like any other man. If he makes them himself, he has to buy cloth and spend labor on it which would otherwise bring him in money. They cost him about the market price when they are made up. A dear coat depresses and cheapens him just as it does everybody else. A ragged or threadbare coat destroys his self-respect and keeps him away from church, or the park, and from picnics and parades, just as it does everybody else. His children suffer in mind and body from being out at elbows in winter just as the children of lawyers would; and the notion that great difficulty in getting a coat would lead to his moral or spiritual elevation would amuse him in a grim, melancholy way.

FIFTY YEARS OF AMERICAN ASTRONOMY.

At Williamstown, on the evening of June 25, a select audience gathered to hear the address of Professor Truman Henry Safford, commemorative of the erection in 1838 of the first college observatory in the United States. It was fitting that Mr. David Dudley Field of New York should preside on this occasion, being himself the founder in 1869 of the Field Memorial Professorship of Astronomy, and the builder five years later of the Field Memorial Observatory of Williams College, where Professor Safford is the able director, and has made important contributions to exact astronomy. The Trustees of the College will publish entire, in permanent form, the rather difficult, not to say delicate, piece of historic research which Professor Safford has so capably concluded. Meantime, we attempt a brief abstract of it here.

Beginning with the publication of the 'Principia' about 200 years ago by Newton, who himself had a small observatory at Cambridge, but whose mighty genius was too fully occupied with great mathematical problems to permit his nightly watch of the heavens, the founding of the Greenwich Observatory first claimed attention. Navigation was then extremely dangerous; the only guides across the ocean were afforded by a knowledge of the motions of the heavenly bodies, and this could follow only the patient labors of astronomers. Charles II., with all his vices, possessed human sympathy enough to found an observatory, to preserve his sailors from shipwreck.

Flamsteed, its director, the first Astronomer Royal, was succeeded by Halley, whose famous work on the orbit of the great comet of 1682, done to test and exemplify his master Newton's theory, had a direct bearing on the founding of American observatories, for the comet's second reappearance in 1835 furnished fresh proof of the law of universal gravitation. But Bradley, the next Astronomer Royal, made the Greenwich Observatory what it now is, the most prominent one, all told, in the world. So splendid was his work that Auwers, a most eminent living German astronomer, has spent years in recalculating and republishing the results. Then came Bliss, followed again by Maskelyne—who, not recognizing the possibility of "personal equation," discharged an assistant for noting time differently from himself—whose great service was the establishment of the 'Nautical Almanac.'

America had not yet declared her scientific independence. Thus these few things were of necessity premised about English astronomy, as our own was naturally based upon it. Our methods of scientific teaching were, in fact, thoroughly colonial; English text-books were reprinted for use in some of our colleges till within the second half of the present century. Practical necessities soon, however, required the employment of astronomical observers to settle boundary disputes, a confusion of landmarks having grown out of Old World habits. For example, inspection of a map of Massachusetts shows the extremely rough subdivision into counties and townships: Clarksburg is six miles long from east to west by two in breadth; Hancock fifteen long from north to south; Cheshire has twenty-two corners. Nor are State boundaries by any means plain and simple. There were disputes everywhere between the colonies. In 1767 the proprietors of Maryland and Pennsylvania sent to England for two astronomers to determine their common parallel. In response to this call came a former assistant to Bradley, Mason by name, and Dixon with him as assistant, the first trained observers ever employed in the United States, and whose work was the first piece of accurate measurement in this country. Practical astronomy of the kind brought here by Mason and Dixon is admirable training for young observers; we have since

had much, and it has afforded inestimable benefit in our scientific development. It may be easy to deal with mathematical formulas by a warm fire in a pleasant room, or even to watch the stars from a well-appointed observatory; but it is not so simple to cut one's way through the forest, spending the nights in observation and the days in moving on through the woods, carrying on horse or mule-back the most delicate instruments, when one must watch every step of the beast to see that the chronometers get no jar, and conducting withal the most refined calculations under conditions of great difficulty.

About this time, Rittenhouse, an American astronomer of Dutch descent, was making a reputation, and had built in 1769 a little observatory at Norriton, near Philadelphia, where he observed the transit of Venus of that year. Through Rittenhouse and his help to others in their observations, this important phenomenon added much to the astronomical impulse given by the labors of Mason and Dixon.

After the Revolution, the first great astronomer of America was Nathaniel Bowditch, born of a family of shipmasters in 1773, brought up and resident in America, author of the 'Practical Navigator,' which brought him a modest fortune, and finally the translator, editor, and publisher at his own expense of Laplace's great 'Traité de Mécanique Céleste.' Bowditch, dead in 1838, had a young friend, Benjamin Peirce, of profounder ability in mathematics than himself. Robert Treat Paine, an enthusiast and careful observer, went over sea and land to watch solar eclipses, and determined many longitudes and latitudes, especially in Massachusetts, which, along with Borden's triangulation of the State, gave a measure of the earth by no means seriously inaccurate.

Meanwhile, a general survey of the coasts was beginning under Hassler, a Swiss astronomer and geodesist, who trained an able set of assistants; also, the West Point School had educated many promising pupils, Graham among others. Yale College had procured a good telescope of five inches aperture as early as 1832. The year following occurred the great November shower of meteors. This, with the telescope, the teaching power of Prof. Olmsted, and later the return of Halley's comet, stirred much astronomical enthusiasm at Yale. But the telescope was prevented from doing much that it might have done by the absence of a suitable observatory; it was set up in the covered tower of a college building, and rolled upon casters over an unsteady floor, and young Mason alone made accurate observations with it. He, with Stanley, died early, while Loomis and Lyman are now aged professors at Yale; but Chauvenet, on the whole the most eminent, on leaving the College went into the service of the United States, and later removed to St. Louis, where he became the Chancellor of the Washington University. His 'Spherical and Practical Astronomy' is probably the best book of its class extant; it is quoted abroad as well as at home, and is an inexhaustible store of the best mathematics of the subject.

Thus, a half century ago, American practical astronomy was beginning to show itself. About Boston were a few skilled amateur observers, among them William Cranch Bond, with a little private observatory in Dorchester. In the Government service were skilled observers, but there was no permanent observatory at Washington or elsewhere in the country. The sailing of the Wilkes Exploring Expedition for a voyage around the world, on which it was intended to determine the longitudes of many places by observations of the moon, created the necessity of like observations at known points on land. Gillis, a young lieutenant in the navy, was instructed to carry on such work which he did from 1838 to 1842, his instrument being set up under a temporary shed on Capitol Hill at Washington. Bond did like work at Dorchester, Mass., but these astronomical beginnings, which led later to the establishment of observatories, were themselves subsequent to the building of the Williams College Observatory by Albert Hopkins.

In 1834 Hopkins visited Europe to procure philosophical apparatus, and to learn of foreign methods of investigation and teaching. At that time the impulse to scientific study which was contemporaneous with the French Revolution, and which had continued through the Napoleonic wars, had spread over nearly all Europe; even England had almost submitted to the Continental ways of studying mathematics. In Germany and the Baltic provinces of Russia there were astronomers—Bessel, Struve, Gauss, Argelander, Encke—who taught practical astronomy as a university discipline. In England, however, and perhaps France, it was not so; at Cambridge, mathematical instruction had, little by little, taken the form of training men to pass examinations in the mathematics, and the senior wranglership was the goal of the ablest men of the University. Our American courses were in part copied from the English courses of the last century—little by little modified to meet our circumstances; but their adaptation was not perfect, partly because no definite idea was dominant. An admirable helper to his more widely known brother, Mark Hopkins, who became the President of Williams College in 1836, Albert Hopkins furnished the new impulse which soon led to the building of the observatory. This he did chiefly at his own expense, even quarrying the needed stone with his own hands. A quaint little structure, it was well planned and built, and the Hopkins Observatory is still useful for the students in a variety of ways. Chiefly built in 1837, it was formally dedicated the 12th of June, 1838.

This first establishment of a permanent observatory is a striking landmark in the history of American astronomy. Hitherto all efforts to establish one had failed: people were too materially inclined to encourage so ideal a science. Even the practical uses were sometimes overlooked. A surveyor petitioned Congress for release from the requirement to run lines due north and south: he lost too much time in watching for the polar star in foggy evenings, and thought lines run in any direction would do as well, provided they were tolerably straight. Congress had sternly set its face against the establishment of a national observatory; the Coast Survey, indeed, receiving its appropriation on the express condition that no expenditure should be made for any such purpose. But Gilliss proved an effective astronomical missionary upon Capitol Hill, and at the conclusion of his observations there, Congress authorized the building of a "depot of charts and instruments"—the present Naval Observatory at Washington under a disguised name.

The next large observatory was founded at Cambridge, Mass. Peirce was greatly interested in the magnificent comet of 1843, and through his exertions, and those of the younger Bowditch, money was raised for a large telescope. This was completed in 1847, while the observatory itself was built the year before. Peirce soon after laid the scientific foundations of the 'American Ephemeris and Nautical Almanac,' while Davis secured its practical realization, and the first volume was issued for the year 1855. Meanwhile, the Coast Survey had steadily on, after Hassler's death, under [illegible], a grandson of Franklin, from whom he [illegible]ed both scientific ability and executive [illegible]lomatic capacity to a high degree.

[illegible]e completion of the quarter century [illegible]ng with the outbreak of the civil [illegible]rican practical astronomy had made [illegible]ress. There was what might be [illegible]ool of astronomers, and numerous [illegible], both public and private, though [illegible]r too little money for their maintenance in regular activity. There was also an astronomical journal of much merit, published by the zeal and munificence of its editor, Dr. Gould. Some of the early achievements of our astronomers have been of permanent use to the science, among them the chronograph, and the telegraphic method of determining longitudes. But while progress was most marked in branches of practical import, those who gladly took hold of more speculative problems were not lacking.

Professor Safford next dwelt at some length upon the life and work of the great optician, Alvan Clark, recounted in our columns on his death, about a twelvemonth since.

The last twenty-five years have brought much material advancement to American astronomy. It is hardly possible to go deeply into it; in many respects it repeats the earlier history. Observatories have been founded in new places, sometimes with the means for their maintenance, sometimes without. A few of the older ones have received large accessions of invested funds, notably the Harvard College Observatory, with an endowment exceeding half a million dollars. The ability and success of our younger astronomers in handling deep and difficult problems has been proved entirely adequate; the men have rarely been lacking, but only lately have they found education and encouragement. The public mind has changed its attitude towards astronomy: there is much pride in the achievements of astronomers. European scientists now come occasionally to see what is doing here, and the profession of an astronomer is a recognized career.

In estimating the relation of astronomy in the work of the college of the future, Professor Safford's paper was full of important suggestion. He with other eminent teachers believes in the disciplinary value of astronomy as an independent study. The best mathematical training deals with tangible objects—the abstraction should have a sensible basis. He would have the observation of the common phenomena of nature accompany the study of arithmetic and geometry in the common schools. The pupils should learn to watch the barometer and thermometer, sunset and sunrise, the phases of the moon, the motions of the clouds; should know the Pole star, Ursa Major, Orion, the Pleiades, Leo, the Scorpion; should learn to distinguish between the stars and the planets, to watch for the aurora borealis, to note the colors of the rainbow. The high school, or college preparatory school, should always have its telescope, and some simple means of accurately keeping time; a few notions of scientific astronomy should not fail to be inculcated. The college professor should have a variety of instruments, so that students may watch the heavens for themselves. To introduce this work may take a generation; but the colleges have begun to do their part in teaching the teachers, and courses in practical astronomy are now given in various institutions.

In a strong college, independent work to advance the science should be going on. Great telescopes are not a necessity; they often render the astronomer helpless. To provide for

the prosecution of original research, the instructor must have a certain amount of time free from other occupation, and such instruments supplied as will be most serviceable in the specific lines of investigation attempted.

Prof. Safford himself affords no mean instance of the way in which such work should be carried on; and a score of our colleges would be highly benefited had they alumni to follow the generous example of Mr. D. D. Field at Williams, and provide instrumental equipment where there is fair indication that it will not lie idle.

THE GETTYSBURG CELEBRATION.

GETTYSBURG, July 4.

THE reunion of veterans at Gettysburg in the interest of peace and reconciliation between the blues and grays has not been the success in point of numbers which it was expected to be. The promoters appear to have relied all along on an appropriation of $25,000, or thereabouts, from Congress, to provide subsistence and lodging for those who came on. This expectation was disappointed, and only a very small sum was voted at the last moment, which was expended in tents. The consequence of this was that the work of preparation was postponed from day to day until it was too late to give the necessary notice to men scattered so widely over the continent as the veterans of the two armies are, or to make any suitable arrangements for their reception. Of course there are not many veterans so situated with regard to this world's goods as to make it easy for them to take a long journey at this season, and live even for three days at the costly abodes into which the Gettysburg hotels managed to turn themselves for three days. If even one-half the number which was looked for had actually come, they would have had to live out in the fields and beg their bread in the streets. As a matter of fact, I think 2,000 or 3,000 Union veterans, and 200 or 300 Confederates made their appearance. Many more of the latter would undoubtedly have come if they had had notice or any reasonable expectation of finding board and lodging during their stay.

Moreover, there is no indiscretion in saying that a good many Northern officers were kept away by the belief that the celebration this year was an unnecessary duplication of the reunion of last summer, at which the blues of the Army of the Potomac did all that need be done, or can be done, to assure the grays of cordial appreciation and good will; and that it was got up largely to support Gen. Sickles in his controversy with the friends of Gen. Meade, touching his (Sickles's) conduct on the left wing, on the second day of the battle. As a matter of fact, Gen. Sickles was the most prominent figure on the Union side in the proceedings on last Sunday and Monday, and after him came Gen. Butterfield, who was Meade's chief of staff, and contends that he gave Meade advice on the third day, which he did not take, but which, had he taken it, would have ended the war. Of course, if Meade made a huge mistake in not listening to Butterfield, it strengthens the theory that Sickles was right in disregarding Meade's orders in the selection of his second position in the battle.

Anyhow, the proceedings this week centred in these two gentlemen, but only brought very few other distinguished Unionist officers on the ground. Governor Beaver of Pennsylvania was there, so was Gen. Barlow, and Gens. Hunt and Robinson, and Slocum and Doubleday and Crawford; but if there were any others known to fame, they escaped my observation. On the Confederate side the only two men of mark present were Longstreet and Gordon, but they were probably the two of all the Southern survivors of the great contest whom Northerners are most eager to see. On Longstreet years are beginning to tell; his hair and beard are almost white, but the lines of vigor in his face are still nearly as visible as they can ever have been, in spite of the air of great serenity which has settled in his eyes, and the stiffness which has begun to mark his gait. Gordon, on the other hand, who, with his lithe figure and alert movements, his eagle face, and flashing eye, does not look over fifty, is still, as he has always been in both appearance and manner, the type of the dashing Southern soldier. His speech was both eloquent and earnest and gracefully delivered, and was listened to with visible pride and pleasure by his wife, whose expression of mingled gentleness and dignity was just what the occasion called for in any one who represented Southern women to an audience assembled to hear of peace and reconciliation.

Mr. George William Curtis's address, it must be said, was worthy of what the celebration was originally intended to be—that is, a larger and more representative assemblage than that which listened to him. His tribute to Confederate valor and the purity of Confederate motives, delivered with great vehemence, was all that any Southerner could have desired, and brought a genuine glow of pleasure over Longstreet's tranquil face, and won vigorous applause from his sinewy hands, and it prepared the way well for the subsequent plea for the establishment of the suffrage at the South on a better and more republican basis. The whole speech, in fact, is, I think, pretty sure to circulate widely at the South and be pondered fruitfully. None of its own orators has paid a more splendid tribute to Pickett and his column who delivered the final charge on the last day of the fight, or has done greater justice to the efforts the South is making to recover from all her misfortunes and mistakes.

To those who find their historic sense gratified or stimulated by the sight of fields on which great human controversies have been settled by the sword, the field of Gettysburg must for ever remain one of the most interesting spots in the world. What it needs now of all things is a respectable guide-book. The Century Co. has issued one by Gen. Doubleday—good as far it goes—but it is a mere military summary of the events of the three days. The others, which attempt to give detailed narratives, are beneath contempt. What with balderdash, cheap sentiment, and attempts at lurid description, they may fairly be called a discredit to the country. One of them seriously maintains that God Almighty created Little Round Top expressly to furnish a position in which Meade's army might save the Union. No stranger who took up this rubbish would suppose that the army which won the battle had stood higher in point of intelligence than any the world has seen except the German. Of the kind of material which was to be found in the ranks, I met with a striking illustration in walking with Gen. Barlow over the ground on which he received his wound on the first day of the fight. We found a gentleman there examining the spot, who told us he was a private in a Connecticut regiment on that unlucky day, and had been wounded and carried to a house hard by. He is now a professor in a prominent college. The whole field of the operations in the three days is being covered with monuments indicating the various positions held by the different regiments and batteries on different days, the losses they sustained, the spots in which distinguished officers were killed and wounded, and so forth. They are, of course, of varying degrees of taste, and I heard of some which were assailed for inaccuracy or pretence; but, on the whole, they express a happy thought, and future generations will be grateful for them. I think they are the first attempt in the history of war to preserve the memory of the rank and file on the very spot which their valor and endurance has made famous. When all that are proposed have been erected, there will be about 600 of them, but we trust they will not justify the cant phrase by making Gettysburg a "Mecca." The guide-books and more talkative veterans have got hold of this "Mecca" idea now, and one hears it at every turn; and to any one who has seen the squalid crowd who go to the original "Mecca," and thinks what that "Mecca" is, it suggests sad poverty in terms of reverence.

The field will, however, never be illustrated and marked as it ought to be until the heroic deeds of the Confederates are also commemorated in stone or brass, like those of their Northern foemen. Without this even the Northern record will not be complete, for the full measure of Northern pluck and bottom cannot be presented without some account of the force by which the Northern positions were assailed in the last two days of the battle. It is to be hoped this defect will be supplied by the South before long, both as a tribute to its gallant dead, and as a final acknowledgment that all bitterness has passed away from the memory of the struggle. Something towards this end was done at the blue meeting last year, when it was voted to erect a monument to "American Valor" on the spot where Armistead fell, within the Union lines, at the head of Pickett's charge. I doubt much whether any Northern man or woman now visits and studies the field without wishing to share in the glory of that splendid feat of arms — that is, to claim as countrymen the soldiers who made up Pickett's column. One easily sees that it is this which takes most hold of every visitor's imagination after he has become familiarized with all the varying features of the fight. I do not recall anything in military history which can quite match it, among even such exploits as the march of the English column at Fontenoy, the rush of Macdonald's column across the plain at Wagram, the crowning of the heights of Albuera by the British in Spain, or the attack on St.-Privat by the Prussian Guards in 1870. No cavalry exploit can be compared to it—neither the charge of the Light Brigade nor that of the French Cuirassiers at Reichshofen. In a cavalry charge there is exhilaration in the swift motion through the air, and no strain of exertion on heart or lungs, and the excitement or agony of expectation is sure to be brief. But Pickett's men, laden with arms and ammunition, had to make their way under a burning July sun, across fields heavy with grass or grain, over 1,200 yards—fully equal to a mile on the high road—under the shells and grape shot of 120 guns, and towards the end the pitiless pelting of 20,000 rifles, leaving heaps of dead at every step, without shrinking, and they carried their flag into the enemy's lines. No American who admires human courage and endurance can walk over the ground they covered with their dead without feeling proud that this continent has produced such men.

E. L. G.

MINISTERS AND SOVEREIGN IN GERMANY.

BERLIN, June 20, 1888.

GERMANY has been passing through a political crisis which will, directly or indirectly, affect the interpretation of the sovereign's position towards the Ministry, and the responsibility of the Ministers to the Crown. In periods of intense political feeling there is a rapid development, if not of institutions, at least of the interpretation of relations already existing.

The two factors which brought about the present political issues were the death of the Emperor William, and the accession of the liberal-minded and progressive Frederick III. to the throne. Since the dissolution of the Parliament of 1878, a conservative reaction has set in, having its source in the overmastering will and absolute authority of the Imperial Chancellor. His ascendancy over the mind of the Emperor William in all political questions, whether of external or internal policy, cannot be questioned. There has been the gradual growth of ministerial independence, but subordinate to the controlling mind of the Minister President. Twenty-four colleagues in office have risen to power and fallen during his sway, and it is not strange that any interference with a rule exercised so long should be resisted as a violation of his prerogatives. Frederick the Third's accession to the throne was marked by the issue of two significant documents—his imperial rescript to the people and his letter to Prince Bismarck, in which he announced the principles that would characterize his reign. They indicated the possession of distinct views and a royal will to rule. The publication of the latter document inspired hope in the minds of all who desired to see Germany a constitutional State in which the rights of the people and the prerogatives of the Crown should be found consistent. The letter to Prince Bismarck seemed to indicate a new era. The past was not criticised, but the reform and simplification of the administrative system were stated to be necessary.

It cannot be supposed that Prince Bismarck, proud of the absolute system that had grown up under his rule, looked with pleasure upon the introduction of new forces which should disturb the old. English parliamentary government and ministerial responsibility are alike odious in conservative circles in Germany. It is necessary to take these views into consideration in order to understand the successive outbursts of feeling which swept over Germany during the reign of Frederick III. To this must be added the chauvinism, which is in part the product of German victories in the last war, which in popular belief causes German greatness to tower above that of all other lands. Hence foreign influence is regarded with aversion. This will explain the national indignation which flamed out fiercely at the proposed marriage of the Princess Victoria and Prince Alexander of Battenberg. One not familiar with the tone of the German press at that time can form no conception of the national self-consciousness and childish folly to which expression was given. The Empress Victoria was the object against which shafts dimly disguised were directed. The Cologne *Gazette*, the ablest and usually one of the most judicious of the press, spoke of the influence in politics of certain ladies of high rank; the "English influence" at court was bitterly attacked, and the visit of the Queen of England was deprecated as adding her royal influence in favor of an unpopular marriage. The marriage was characterized as a marriage of interest on the part of Prince Alexander to which he was otherwise indifferent. [illegible] spect for the Emperor was impaired b[illegible] senting him as having so weak a will [illegible] ruled by the Empress. "The German [illegible] desires to be ruled by kings, not women. [illegible] marriage would result in a double wa[illegible] France and Russia. On this feverish st[illegible] the public mind the resignation of the Ch[illegible] lor, the creator of German unity, whose [illegible] for his fatherland would not permit him t[illegible] responsible for the unpatriotic course w[illegible] was determined on at court, was reported. [illegible] alone loved his country better than all e[illegible] Why should a maiden's heart stand in the way of the national good? Public meetings were called and addresses prepared to avert the threatened resignation of Prince Bismarck.

It can now hardly be believed that the issue raised at the time of the Battenberg affair was never a real one, but was used by the Chancellor for political effect, with the design of making his position impregnable and his authority dominant in the national mind, in order to discredit in advance the liberal programme of the Emperor, and any court influence which he might not be able to combat directly. It is the misfortune of Germany at the present time that opposition to any measure of the Government is regarded as unpatriotic and subversive of the peace of the State. Upon authority which I cannot doubt, I believe that at the first discussion of the proposed marriage between the Emperor and Prince Bismarck, the matter as a political question was settled, and that the Emperor accepted the views of the Chancellor, and the question ceased to be one of Government concern. There is reason to believe that the Emperor proposed at first to raise Prince Alexander of Battenberg to the rank of prince in Prussia, and assign him to a high military command—an action which, in connection with his union with the Princess Victoria, would have made his subsequent acceptance of the throne of Bulgaria impossible. The whole machinery of the Government press was set in motion to discredit the marriage. The ruthless criticism of the imperial family was a severe blow at the dignity of the Crown. Perhaps never before in Prussian history have the views of a sovereign been depicted in so unfavorable a light, with so little cause. Prince Bismarck, in maintaining his own position, was ready to sacrifice the dignity of his imperial master and his family. Such an offence cannot be easily atoned for. The anti-English sentiments of the Crown Prince—the present Emperor—were thrown into the scale to contrast with the supposed liberal sentiments of his father. The result of this first crisis was to establish Prince Bismarck more firmly than ever as the support and "standard bearer" of German nationality, as he was called by the Crown Prince Wilhelm in his unlucky after-dinner speech.

A second crisis, less intense than the first, arose in connection with the bestowal of certain decorations. The first order conferred by the Emperor Frederick, the highest order of the Prussian Crown, that of the Black Eagle, was bestowed upon the Empress and upon Dr. Friedberg, Minister of Justice, his former teacher and an eminent jurist, a man of Jewish descent. This was followed by the bestowal of numerous decorations upon high officials, elevations to the nobility, and by the pardon of numerous political and military offenders which usually accompanies the opening of a new reign. The purpose in the gift of these orders, to recognize eminent men of all shades of political opinion, soon encountered the opposition of the Cabinet. The exercise of personal prerogatives of the Crown which had never been questioned, was suddenly met by the threatened resignation of the Ministry in case certain orders were conferred. Von Forckenbeck, the chief Bürgermeister of Berlin, a member of the Fortschrittspartei, received a decoration, but accompanied by the statement that it was for services in behalf of the sufferers from the floods, in order to rob it of all political significance, and to show that opponents of the Government, however prominent, must have other claims for recognition. Professor Virchow received the Order of the Red Eagle of the second class, but the bestowal of certain other orders encountered the opposition of the Cabinet. It was proposed to confer a decoration upon a former member of the Reichstag whose sympathies were strongly liberal, although he was not a member of the Extreme Left. He had been once tried for libel against Prince Bismarck and acquitted. On the principle that you never forgive the man you have injured, a crisis arose in which the resignation of the entire Ministry was threatened, and the proposed honor was abandoned.

These ghosts of discord were no sooner laid than a question of less general interest brought about the Cabinet crisis which resulted in the retirement of Herr von Puttkamer, the Minister of the Interior and Vice-President of the Ministry of State. No Minister of the entire Cabinet was personally so obnoxious, but he had held office for nine years, and was apparently superior to every attack. He was also connected by family ties with Prince Bismarck. He had signalized himself when a young man as Landrath, by ordering all office-holders to support actively the Government candidates, and by summoning to trial all whose self-respect did not permit them to obey his unauthorized demands. The effort to reform German spelling which was associated with his name was successful in the schools, but encountered the opposition of the Government, which forbade its use in official documents. Nothing could exceed the superciliousness of the Minister's bearing towards representatives of the people who ventured to criticise his measures in the German Diet or in the Prussian Parliament. The only defeat which the Government suffered during the winter was over Puttkamer's bill accentuating the provisions of the law against the Socialists, adding expatriation to the penalties which the Government could inflict. As this law is administered now, residence in any German State of a suspected person becomes practically impossible. The Socialists were able to show that Puttkamer's secret paid agents in Switzerland were criminal characters, perpetuating their term of office by information secured at Socialist meetings over which they presided, and of which they were the moving spirits, and in one case supporting entirely a Socialistic newspaper for circulation in Germany—in short, they were *agents provocateurs* of the very movement which they had been sent to aid in suppressing. The sworn evidence of the Zürich official which confirmed these charges produced such a sensation that the National-Liberals and Catholics united to oppose the expatriation clause of the Government bill, for which a simple act continuing the present law for two years was passed. The Minister's position, however, was shaken by a parliamentary investigation of several elections, in one of which his own brother was a candidate, in which he had thrown the Government influence in his brother's favor.

The bill for prolonging the legislative period in Prussia to five years had already passed, and had been for several weeks before the Emperor for his signature. He had signed a similar law which had been passed by the cartel-parties in

the Reichstag, but saw grave reasons against extending the law to Prussia, owing to the difference in the system of election. At this time, on the last day of the session, a powerful party attack was made by the Freisinnig Deputy Richter upon the whole ministerial policy. His speech was not confined to the question of freedom of elections, but he characterized the attitude of the Cabinet towards the Emperor in all questions that had arisen since the beginning of his reign; it had attempted to coerce the will of the sovereign by the threat to resign; it had substituted ministerial rule for royal rule; it had lashed popular sentiment to fury against the royal family in the proposed marriage of the Princess Victoria after the question had been settled. In place of sham constitutionalism with a ministerial dictatorship, he would prefer to return to absolutism. Never before had the power of the Ministers exceeded that of the Crown and of the representative of the people. The purpose of the Crown to rule in consonance with the will of the people is impossible with ministerial absolutism. No words or epithets were spared which could irritate the Government. The speech was abusive, and transgressed what we should consider all parliamentary bounds, but in substance was irrefutably true. The Emperor addressed a letter to Minister von Puttkamer, in which he announced his purpose, in connection with the publication of the law extending the legislative period, to issue a royal rescript forbidding all interference by Government officials with the freedom of elections, and emphasizing respect for the popular will. In this emergency the Minister invoked the aid of Prince Bismarck, who returned from Varzin to urge the Emperor to postpone the publication of the law in order to enable Von Puttkamer to vindicate his conduct in reference to elections. The Emperor found the defence unsatisfactory, and informed him that his interpretation of his duties did not consist with the Emperor's views of his duties as a Minister of the Crown. Hereupon the Minister tendered his resignation, which was immediately accepted. The energetic action of the Emperor was apparently a surprise to Prince Bismarck, who did not anticipate his colleague's retirement.

But a contest, however noble, waged by a dying Emperor, must cease with his life. The impending death of the Emperor caused men to shape their course according to views which would soon be controlling. The opinions of the Crown Prince were pronounced, and no one could doubt what policy would prevail upon his accession. No party ventured to form itself against the mighty influence of the Chancellor and the prospective ascendancy of conservative views in the person of William II. The new Emperor has issued his proclamation, first to the army, and secondly to his people. To the army he said: "We belong to one another, I and the army; we were born for one another, and we shall remain united by an indissoluble bond, whether by the will of God we have before us peace or tempest." The address to the people is modest and devout. The re-establishment of Prince Bismarck as the supreme director of affairs is the first result of the death of the Emperor Frederick. The possession of a positive will and positive views by William II. will in time find expression, possibly independent of his chief Minister. Private and public utterances concerning the national loss are very different. Patriotism induces the Government press to speak warmly of the noble, knightly character of the late Emperor, but I have not noticed an expression of public misfortune that he did not live to carry out his views. The Conservatives and those who, with William II., "conceive of the German people as an army marching to the assault," believe that the peaceful spirit of the late Emperor was not suited to the present emergency, that an alert, assertive military spirit is demanded to defend the frontiers and maintain German supremacy. The Emperor Frederick would never have adopted an aggressive policy, but his spirit was essentially that of a soldier, and no one can doubt that the military glory of Germany would have been safe in his hands. Others saw in the ascendancy of liberal and humane views a severe shock to the political system which, under Bismarck, is fast becoming among the people a tradition. The advent of new ideas would introduce weakness into the fabric of the State, and the solid social order would be destroyed, and in its place views of individual liberty and private rights would supplant the conception of the splendid structure of a consolidated monarchy. Socialism, not French republican ideas, was to be feared. Against the latter, national patriotism was a sufficient defence.

The Catholic press has steadily supported the prerogatives of the Emperor against the tyranny of ministerial rule. The Catholics, Jews, Poles, and South Germans all lament the loss of a humane and tolerant ruler, and, somewhat strangely, the Freisinnig press has been strongest in its support of the rights of the Crown against those of the Ministers. During the past winter, in the Reichstag and in the Prussian Parliament, both Ministers von Puttkamer and Von Goslar, the Cultus-Minister, have said defiantly: "We are the servants of the Crown; we are responsible to the sovereign alone, and not to Parliament." The Conservative press has represented ministerial responsibility, as it exists in England, as the greatest foe to a stable government and a commanding foreign policy: England's constant change of Ministers has destroyed her influence in European politics. In Germany, we have had during the reign of the Emperor Frederick the spectacle of Ministers asserting their responsibility to the Crown, and their independent responsibility over against the Crown. The supremacy of the Chancellor, by absorbing an authority over all his colleagues, extending through every bureau of administration, bears certainly a relation like that of the masters of the palace of the Merovingian kings. Criticism of his measures by the interpretation of the courts becomes easily libel, so that the acts of the great Minister in his height of power are almost as inviolable as the person of the King.

The reign of the Emperor Frederick lasted ninety-nine days. It will always be associated with the lofty purpose which marked its beginning and the heroism and pathos which attended its close. It is interesting, in this review of his short reign, to recall the principles with which he ascended the throne, which were stated in his famous letter to Prince Bismarck. It was written in San Remo, and communicated before publication to the Prince when the Ministry met the new Emperor in Leipzig. The letter shows that the years of waiting had been years of preparation for his duties as ruler; it exhibits a remarkable grasp of the province of government, and a statesmanlike view of political questions upon whose successful solution the future of Germany will depend. The constitution and rights of all the allied States of the Empire, as well as those of the Reichstag, are to be conscientiously regarded, but a like respect for the prerogatives of the Crown is demanded. At the same time, it must be considered that the province of these mutual rights is to promote the public welfare, which remains the supreme law of the land. Newly arising and undoubted national needs must always be fully satisfied.

"It is my will that the principle of religious toleration, which has been sacredly guarded for centuries by my family, shall extend to the protection of all my subjects, to whatever religious community or confession they may belong. Every one of them stands equally near to my heart, and all have alike in days of danger proved their full devotion." "I shall warmly support so far as lies in my power all efforts adapted to elevate the prosperity of the various classes of society, to reconcile conflicting interests, and to moderate unavoidable misunderstandings, without arousing the expectation that it is possible by the intervention of the State to put an end to all social evils." "I regard the fostering care which should be devoted to the education of the growing youth as intimately associated with social questions. A higher education must constantly be made accessible to wider circles, yet on the other hand grave dangers are created by half culture, by which claims in life are awakened which the resources of the nation cannot satisfy; similarly, a one-sided effort for increased knowledge must not disregard the proper task of education."

Local self-government, economy of administration, the reduction of taxation so far as it was practicable, and the simplification of the bureaus of administration were recommended. The letter closes with the significant words: "Unmindful of the splendor of illustrious deeds, I shall be content if in the future it can be said of my reign, it was a benefit to my people, useful to my country, and a blessing to the realm." It is impossible not to admire a spirit which conceived of its work in so brave and hopeful a way amid so many opposing forces. I cannot believe it would have suffered final defeat.

W. T. Hewett.

TWO SKELETON CITIES.

Granada, June 16.

Spain has been hitherto outside of the regular current of tourist travel in Europe, but every year adds to the number of sight-seers, and an unmistakable sign of its growing popularity with the travelling public may be found in the fact that the publishers of the famous Baedeker guides have sent out an agent to prepare a volume on Spain—partly also, no doubt, for the convenience of the German commercial travellers, who are invading Spain at present by the hundred, and are to be seen at all the hotels. Apart from the interesting sights which it contains, Spain offers unusual facilities for a "round trip," for, with few exceptions, the most attractive points are grouped in a circle along the principal lines of railway and steamboat travel. Starting at Burgos, the tourist whose time is limited to six or eight weeks proceeds to Valladolid and Madrid, thence to Toledo, Cordova, Seville, and Cadiz, thence by steamer to Tangier, Gibraltar, and Malaga, thence to Granada, Valencia, and Barcelona, and finally, to complete the circle, back to France via Saragossa. Village life may be easily studied by stopping over at some of the smaller stations, and even this is hardly necessary, so far as the populace is concerned, for on the religious holidays, which are as numerous as Sundays, all the villagers and peasants visit the cities in their best clothes, ready to be inspected and to inspect you in turn.

The three cities at which a stop of at least a week each should be made are Madrid, Seville, and Granada; and if the tour is made in spring, Seville should be visited before Granada, because it is a much warmer place, many Sevillans, in fact, going to Granada in summer for fresh air. I am not of the opinion of those who advise tourists to waste as little time as possible in Madrid. The capital has fewer

architectural and antiquarian attractions than such places as Toledo and Cordova, but it has the finest picture gallery—one of the best in Europe, full of gems—the streets are more animated, both day and night, than elsewhere, the promenades more frequented, and the women *not* inferior in beauty to those in Andalusia. For Americans, Madrid has an additional attraction in the hospitality of the present Minister and his wife, at whose Monday receptions and afternoon teas one has an opportunity to meet the best society in Madrid and observe its ways. The presence of the Minister's niece, a Virginian, prevents the Spaniards from being too conceited regarding the beauty of their women. In much frequented cities the number of Americans may make them a burden to the diplomatic representatives of the country, but in Madrid they are comparatively rare, and therefore always welcome at the Minister's house. As Mr. Curry had planned a visit to Toledo with his family, I prolonged my stay in the capital a day in order to have the pleasure and advantage of their company and that of the Secretary of the Legation, Mr. Strobel, who lately distinguished himself by amicably arranging the Morocco difficulty, and who knows Toledo as well as a native.

As Toledo, though visited by all foreigners, has not a single tolerable hotel, tourists are in the habit of going there in the morning from Madrid, and returning in the evening, which leaves them only about four hours to see the place and its wonders. It is much better to take the evening train to Toledo, and spend the night at a *casa de huespedes*, or boarding-house, kept by two ancient dames, where one can find a tolerable amount of comfort and fair meals. We chose this plan, and did not regret it, although the noise in the narrow streets, where a whisper sounds like a shout and a footstep like a horse's gallop, precluded the idea of sleep, while the beds seemed to have become the last refuge of bloodthirsty inquisitors transformed by metempsychosis into their entomological equivalents. The only serious disadvantage of arriving at Toledo in the evening is that one misses the general sight of the hill-town on approaching it; but this can be easily compensated for by ascending the hill across the river on the following day, and thence enjoying the bird's-eye view of this fortress-city, which was strong enough at one time to withstand a four years' siege, as one can readily believe on noting its commanding, inaccessible site on a hill, surrounded by high walls and by the river Tagus, which sweeps around it in a semicircular curve.

The omnibus from the station, after crossing the old bridge and passing through the Puerta del Sol, once the only entrance to the city, plunges recklessly into a maze of streets so narrow that there is hardly room for the few people in them to pass by without being ground to powder, and one begins to speculate what would happen if it should meet another wagon. But this fear is idle, for the railway omnibus is the only vehicle in this town of 20,000 inhabitants, traffic being carried on chiefly with donkeys and mules, as elsewhere in Spain, and as it doubtless was at the time when Toledo was the capital of the country and had ten times as many inhabitants as at present. The houses remain, but in a more or less dilapidated state, and what one sees is merely "the skeleton of the ancient city, the necropolis of three empires." The flesh and blood, the people, are gone, never to return, and I actually believe there are to-day more dogs than human beings in Toledo. One need only walk for ten minutes along these narrow, tortuous streets to realize the absurdity of the sentimental complaints that the capital should have been transferred from Toledo to Madrid. Such streets, doubtless, are of great advantage in so far as they keep out the scorching rays of the sun, but they would be wofully inadequate to sustain the traffic of a modern capital, all the more as most of them run up and down hill. As, moreover, the scenery from Toledo is by no means equal to that at Madrid, while the climate is quite as trying—as scorching in summer and as cold in winter—and the streets more dusty, owing to the scarcity of water, it seems time to protest against the habitual scolding of tourists for devoting a whole week to Madrid and only a day to Toledo. All that the ordinary tourist cares for in Toledo—the cathedral, the Alcazar, the gates and churches, the remains of the Roman circus—can be seen in a day, and some little time will even perhaps remain for visiting the place where the famous "Toledo blades" are manufactured for the army, at the rate of about 3,000 a year; they are, however, made of imported metal, and said to be inferior to the ancient original article.

As I am not writing a guide-book, I shall not attempt to describe the famous Toledo Cathedral, all the more as I find in my own experience that the most vivid descriptions of architectural monuments make but a confused impression on the mind until one has seen them with his own eyes. How much there is to be seen in this cathedral may be inferred from the fact that Señor Parro, author of a work of 1,550 pages on Toledo, devotes as many as 745 to the cathedral! Special admirers of ecclesiastic sculpture and architectural details have here a week's study and enjoyment laid out for them; but the relish for much of it must be an "acquired taste," and I fancy that much of the pleasure given to Christians by mediæval cathedrals might be traced by a psychologist to various religious associations rather than to purely æsthetic sources. The priests thoroughly understood the art of blending artistic with religious emotions, and thereby increasing their power over the populace—very much as Wagner intensifies the interest in his music by means of his poetry and scenic accessories. But times have changed, and the power of the priests is gone—in Spain at any rate. The churches are attended by mere handfuls of people, mostly women, or a few men of the lower classes; the monasteries have been suppressed; and no outward respect is shown to the priests—no one bows or runs to kiss their hand as formerly; while there is much scoffing and "irreverence" among all classes. Indeed, competent observers agree that the pendulum has swung from the extreme of bigotry and fanaticism to the opposite extreme of scepticism and indifference. Toledo, which was once the chief seat of the Inquisition, is still the great stronghold of the priesthood. Here lives the primate, second in dignity to the King alone; but he no longer has the power to impose a fine of 2,000 maravedis on kings for not attending service. Could he at present impose proportional fines on all Spanish "Catholics" who neglect to attend service, he would be the richest man in the world.

Toledo is such a labyrinthine, dreary, desolate place, its deserted streets so suggestive of Pompeii, that, notwithstanding its numerous art treasures, I fancy that few tourists are sorry to leave it after seeing the principal attractions. It is customary to return to Madrid and take the train the following day for Cordova, but it is possible to save a day by going from Toledo to Castillejos, and waiting there about five hours for the night train to Cordova. I chose this plan, and thus had an opportunity to see what sort of a life people lead at a small station consisting of two or three houses. A very quiet life it is, the only "events" being the arrival of the trains, which are rather frequent. One freight train contained several carloads of soldiers, while on several other cars were a dozen peculiarly shaped high wooden boxes, through the chinks in which small boys peeped with an expression of awe. I thought that possibly a band of robbers had been caught and boxed, and that the soldiers were their escort, but on following the example of the boys I found that the boxes contained Andalusian bulls for the ring in Madrid. Small a station as Castillejos is, it has its two well-armed and well-dressed civil guards, and its beggar. The beggar accosted me only once, and when I paid no attention to him he stalked away proudly, lit a cigarette, and paid no further attention to me. Afterwards I saw him at the buffet buying his supper. I followed his example, and succeeded in securing three hard-boiled eggs, bread, and a bottle of wine.

At eleven o'clock the train arrived, and when I awoke in the morning, I was in Andalusia, the "garden of Spain," famed for its fragrant orange groves, its wine, women, and song, its dances, its gayety, its festivals, its Moorish architecture, its "Murillos," living and painted, and its perennial blue sky. After fasting so long among the arid, treeless hills of northern Spain, it was a perfect picnic for the eyes to feast once more on green meadows, groups of trees, and a tropical luxuriance of vegetation. When the train entered the station, we found it crowded with an eagerly expectant crowd, and a brass band struck up a lively tune. Who had told them I was coming? But no; nobody paid me the slightest attention except a porter who wanted to carry my valise. The crowd and the music were intended for greater men—for a group of bull-fighters, who soon emerged from a first-class car and were at once greeted by the authorities and surrounded by admirers. Subsequently I repeatedly found a group of people waiting in front of their hotel to catch a glimpse of them. These bull-butchers, although the most vulgar-looking and brutal persons to be seen in Spain, and although despised by refined people, are worshipped by the masses with an ardor hardly credible unless one has witnessed its manifestations with his own eyes. If you ask a boy what he intends to be when he grows up, he will instantly reply, "Un torero." Biographies of these butchers are sold in front of the bull-rings, and there is hardly a window in the town where their photographs are not exposed for sale, together with pictures of the fights in every stage—pictures which also "adorn" fans and handkerchiefs.

At first sight Cordova does not belie its Andalusian title, by right of which it ought to be animated and gayly decked out with trees and flowers. The hotel omnibus passes a fine public garden and a number of new houses in the outskirts. But as soon as the city proper is entered, the tourist becomes aware that Cordova is still what Gautier called it half a century ago—a city of whose body "il n'en reste plus maintenant que le squelette blanchi et calciné." We have entered another skeleton city—a term the more applicable from the prevalent habit of whitewashing all the walls and all the houses. The same narrow, dark, tortuous streets as in Toledo, and equally deserted. Mr. Augustus Hare says of these streets that "they have a more thoroughly African appearance than those of any other town in Spain. One threads one's way between interminable whitewashed walls, their scanty windows guarded by heavy iron bars, over a pebbly pavement so rough that it is like the

bed of a torrent littered with straw from the burdens of innumerable donkeys." This is quite graphic; but what shall we say of the impudence of Théophile Gautier, who wrote exactly the same thing in the same words many years before Hare?—"Cordoue a l'aspect plus africain que toute autre ville d'Andalousie; ses rues, ou plutôt ses ruelles, dont le pavé tumultueux ressemble au lit de torrents à sec, toutes chonchées de la paille courte qui s'échappe de la charge des ânes, n'ont rien qui rappelle les mœurs et les habitudes de l'Europe. L'on y marche entre d'interminables murailles couleur de craie, aux rares fenêtres, treillissées de grilles et de barreaux," etc. I find in Gautier's otherwise most charming 'Voyage en Espagne' numerous plagiarisms of this sort from the works of his successors, who, however, have duly punished him by rarely, if ever, mentioning his name. Washington Irving was another sinner like Gautier, having surreptitiously anticipated many things to be found as original matter in subsequent tourist and guide-books. All of which argues a sad state of literary morality in the good old times.

No longer enjoying Mr. Strobel's erudite guidance, and having an invincible prejudice against professional guides (except when limited time makes them a necessary evil), I studied the map of Cordova, and resolved to find the great mosque alone. But in five minutes I was as hopelessly lost as if I had descended in a balloon into the midst of an Alaskan forest. When I began to ask my way, it was amusing to note the perplexed expression on the faces of the Cordovese. They knew exactly where I wanted to go, but how to direct me was the puzzle. It was "no go." Finally, I gave a boy a copper to take me to a place where I could buy a pocket compass. I might have had him take me to the mosque quite as well, but my spirit was aroused, and I resolved to find that mosque alone, even if I perished in the attempt. With map and compass in hand it was easy enough to walk straight up to it, and in the same manner I found my way about the city subsequently as infallibly as if I had been a Cunarder in mid-Atlantic bound for New York or Queenstown. And the mosque was quite worth the trouble I had taken to find it. Notwithstanding that much of its glory is gone (thanks to the stupidity of the bishop who marred the central portion by building a church in it, thereby reducing the number of columns from 1,400 to 860, and partly destroying its sublime proportions), it made a deeper impression on me than any building I had ever seen, excepting the Doges' Palace in Venice. It was a sensible idea on the part of the Moorish builders to seek to attain sublimity by lateral expansion and distance, by length and width, rather than by height (as in Gothic cathedrals), and by the superabundance of columns. The disadvantage of the Gothic style is, that height can only be appreciated amid great physical discomfort and straining of the neck muscles, while the beauties of the ceiling can only be appreciated with the aid of an opera-glass. The Cordovan Mosque is quite low, but if the original ceiling remained, and the central columns were restored, I am sure this would not be felt as a disadvantage.

I cannot refrain from once more referring to Théophile Gautier and his influence. Concerning the impression made by this many-columned mosque, he says: "Il vous semble plutôt marcher dans une forêt plafonnée que dans un édifice; de quelque côté que vous vous tourniez, votre œil s'égare à travers des allées de colonnes qui se croisent et s'allongent à perte de vue, comme une végétation de marbre spontanément jaillée du sol." Possibly Gautier was not the first who compared these columns to a marble forest, but I suspect he was, as the comparison did not strike me as very pertinent on the spot. Nevertheless, it was eagerly taken up by all subsequent writers, and underwent a regular evolution in specificality, so to speak. De Amicis, for instance, says: "Imagine a forest, fancy yourself in the thickest portion of it, and that you can see nothing but the trunks of trees. So, in this mosque, on whatever side you look, the eye loses itself among the columns. It is a forest of marble whose confines one cannot discover" (!) And Mr. E. E. Hale caps the climax by saying regarding this "forest of marble": "It is not hard to persuade yourself that you hear the wind, as you might in a forest at home."

The costliness of the "marble forest," and the other evidences of wealth in the mosque, though but a shadow of what they were once, almost convince one that there is little exaggeration in the assertion of the old Arabian historian that Cordova, about a thousand years ago, was the most important city in Europe, containing a million inhabitants, 600 inns, 300 mosques, and 900 baths. It has now about 50,000 inhabitants and one public bath. And this change is due to the influence of the priests who expelled the industrious Moors and Jews, and compelled them to seek new homes in Granada and Morocco. The influence of the Moors, however, has remained in the character of the streets and the houses, with their cool inner courts or patios. In a walled town, where space is very valuable, only a great inherited love of gardens, fountains, flowers, and fresh air could induce the inhabitants to sacrifice so much space to these patios.

I was fortunate in arriving at Cordova during its principal festival week, even though I had to pay double price at the hotel, and to consider myself lucky in getting a room at all. The festival consisted in illumination with colored lights of the alameda, or public promenade, both sides of which were lined with booths containing chiefly toys for children. At one end were some cheap shows and some restaurants, in front of which a kind of crullers were fried in olive oil. Behind the booths was a donkey market, but the purchasers seemed to be scarce, being probably frightened away by the frightful braying choruses; and towards evening the roads were crowded with the unsold donkeys returning home. The seats along the alameda (for which two cents is charged) were all occupied, and a dense throng of pedestrians made locomotion difficult for any one but the water-carriers, more numerous here than anywhere else. They keep their water cool by having it in porous jugs, the evaporation from which keeps the water at a pleasant temperature and obviates the necessity of using microbe-infected and dyspepsia-breeding ice. Spain has much to learn and adopt from us, but it has some improvements to offer in return; and among the foremost are the Andalusian water jugs and the cool and cosey patios, which serve as reception rooms in the morning and evening.

HENRY T. FINCK.

Correspondence.

THE PRESIDENT AND THE COMMITTEE ON PENSIONS.

TO THE EDITOR OF THE NATION:

SIR: By press despatch we have a fragment of the Report of the Pension Committee on eight vetoed pension bills, and while I cannot criticise it as a whole, I can certainly call attention to the apparent want of information by the Committee as to the origin and office of the Executive Negative. Presumably it is this which gives to the concluding sentence that inaccuracy and exaggeration which, ordinarily, has no recognized position outside of the stump speech:

"The right to so use the power of Executive disapproval as to change the ordinary method of legislative action by a majority vote upon proper subjects of legislation, merely because the Executive differs from Congress upon the sufficiency of proof or the expediency of relief, does not, in the opinion of your Committee, exist. Such a misconception of the extent of the Executive power, making it limitless, is fraught with danger to the independence of Congress and to its constitutional powers, and it clearly implies that a usurping President who proposes to subordinate to his will that of the department to which the Constitution has confided the principal powers of government, can rightfully do this and prevent the will of the people from taking statutory form, except by a two-thirds vote of each house of Congress."

I suppose by this last sentence the writer means to assert that the President regards his veto power as limitless, and that the exercise of it, which by the Report is reprehended, is a usurpation; but I confess my inability to understand how "a usurping President" can "*rightfully*" use unauthorized and revolutionary power.

If the Report contained nothing except this sentence, I should not regard it as worthy of notice. The statement as to the office of the veto deserves consideration. The Committee say that the President ought not to use his veto merely because he differs from Congress upon the "sufficiency of the proof" or the "expediency of the relief." This language is apt, of course, dealing with the special subject of pension-relief bills, and is a clear statement of what the Committee meant to say; but it is a misconception gross enough to be almost characterized as perverse.

When the President comes to consider a private or general pension bill, under his oath of office it is his imperative duty to refuse his approval if, in his opinion, the evidence supporting the bill be insufficient, or if the proposed legislation be inexpedient. This is the precise occasion calling for Executive disapproval, and the Committee could not possibly have placed their contention upon ground more untenable. The non-partisan constituency of the President commend him especially for the courage with which he has dared to exercise this constitutionally conferred power. The duty of approval involves examination and consideration, and unless the duty is carelessly or faithlessly done, the Presidential negative must be interposed whenever, in his judgment, the majority has acted hastily, or upon insufficient proof, or against the public good. Any one of these conclusions following examination leaves the Executive no alternative but to notify Congress to reconsider their action. When he does this with a respectful statement of his objections, it seems almost childish to make response through a *paper* like the one we quote from.

Mr. Hamilton, after stating the necessity for the veto, says: "It not only serves as a shield to the Executive, but it furnishes an additional security against the enaction of improper laws. It establishes a salutary check upon the Legislative Body, calculated to guard the community against the effects of faction, precipitancy, or of any impulse unfriendly to the public good which may happen to influence a majority of that Body" ('Federalist,' Letter lxxiii); and throughout the discussion it was assumed that, though the negative was a qualified one, it was the President's duty to as-

sert it against any and all laws which, in his judgment, were bad. Mr. Hamilton was of opinion, also, that the veto would from its nature be often used, and he was quite right upon the assumption that the Federal Executive would always have the patience to examine and then the courage to determine questions of right and expediency in the acts of Congress coming to him for approval. In 1832, when the Senate considered the bank veto, Mr. Clay said: "The veto was an extraordinary power, which, though tolerated by the Constitution, was not expected by the Convention to be used in ordinary cases"; but Mr. Webster, with of course broader knowledge of constitutional questions, stated the true rule when he said: "It is not to be doubted that the Constitution gives the President the power which he has now exercised; but while the power is admitted, the grounds upon which it has been exerted become fit subjects of examination."

So here, the Pension Committee may question the sufficiency of the President's reasons for his action, but they weaken themselves in popular estimation when they characterize a manly and intelligent use of a constitutional power as a usurpation. W. H. Effinger.

Portland, Oregon, June 29, 1888.

A PROTECTIONIST "FACT."

To the Editor of The Nation:

Sir: As the protectionists assure us that the country will go to ruin if the war tariff is in any way reduced, I am sure they will need every argument possible to sustain their position, and so offer them this authoritative and official one:

"It will, however, be advisable for those who wish to preserve their self-respect as Americans, when considering the relations borne by England to the industrial development of this country, to remember that England has always done her utmost to prevent any industrial or political development of the American people. . . . In addition to these consistent acts of continuous hostility, England, as has already been stated, has succeeded in introducing into American colleges the text-books written by her professors of political economy, and American young men are thereby indoctrinated with English free-trade ideas, which it usually takes them from five to twenty-five years to recover from. Nor are these by any means the only emissaries of English policy in America. Certain so-called leading American journals in New York city and elsewhere, for reasons best known to themselves, advocate English free-trade theories, while the English 'Cobden Club,' whose avowed purpose is the propaganda of English free-trade ideas, makes special effort to secure, by courtesies extended, the influence of leading Americans, and also circulates pamphlets and other printed matter as widely as possible in the United States. In short, it is a matter of public notoriety that England neglects no available opportunity to disseminate in America the free-trade theories she deems so essential to her interests.

"In considering these theories it is well to keep one fact in mind, and that is, that from the first hour of English settlement in America down to the present time, the active influence of England has been constantly exerted to prevent, retard, and destroy the industrial and commercial development and prosperity of the United States.

"No amount of later compliments or courtesies, however unusual or distinguished, paid to living or deceased Americans, can obliterate these historical facts, or should be suffered to weaken the memory of them in the minds of patriotic Americans mindful of their country's welfare; because the situation of Great Britain is such that necessity of self-preservation compels her to continue in the same course towards this nation that she has ever adopted.

"The historical events just recited may be commended to the consideration of such youthful Americans as find themselves inclined to Anglomania, who affect English costumes and customs in dress, manner, and speech, and who would esteem it a compliment to be taken for English, 'which they never could be, you know.'" ('Education in the Industrial and Fine Arts in the United States,' by Isaac Edward Clarke, A.M. Washington: Government Printing Office. 1885. Art. "Industrial Relations of England to America," pp. cc-ccii.)

I feel that I have remained a "patriotic American" by calling my fellow-countrymen's attention to this Government publication on fine art. Y.

P. S.—Will Mr. H. C. Lodge please copy? *Vide* A. Hamilton's Works, ed. Lodge, v. 3, p. 416.

PRUSSIA'S HEGEMONY IN THE GERMAN EMPIRE.

To the Editor of The Nation:

Sir: The writer in the *Nation* of April 26 on the constitutional position of Prussia in the German Empire might have cited the case of Waldeck as an example of the various ways by which Prussia controls more than her constitutional seventeen votes in the Bundesrath. As this little duchy feels unable to pay its army assessment, Prussia charges herself with the expense, on condition that the vote which Waldeck possesses in the Bundesrath shall always be cast with her own.

The inhabitants of Waldeck are quite willing that their small territory should be added to the Prussian dominion, but Prussia refrains from incorporating it, partly because she wishes to avoid the appearance of absorbing the smaller States, but chiefly from the fear that Waldeck, in losing its autonomy, will also lose its vote in the Bundesrath. The Administration papers say openly that could some arrangement be made to secure that vote to Prussia, the Government would not hesitate to annex the duchy. J. C. N.

Berlin, June 20.

Notes.

Ground Rents in Philadelphia is the subject of the third number in the series of monographs on Political Economy and Public Law, edited by Prof. E. J. James, and published by the University of Pennsylvania. It will appear shortly, and the names of its editors, Messrs. Allinson and Penrose, are a guarantee of excellent performance.

The second volume of 'Cent ans de république aux États-Unis,' by the Duc de Noailles, is about to appear. An extract from it under the title, "Le Pouvoir exécutif aux États-Unis," was given in the *Revue des Deux Mondes* for June 15. In this the author attempts to show what it is that makes the originality of the American republic, and what is its essential difference from the republics of Europe.

'Drames Philosophiques,' by Ernest Renan, is announced as in preparation by Calmann Lévy. It is to be a thick octavo volume, but there is no indication as to whether it is a collection of his already published writings in this direction, or an entirely new work. The same house announces, for immediate publication, the fifth volume of the 'Histoire des Princes de Condé,' by the Duc d'Aumale, accompanied by portraits and maps. A long passage from this forthcoming volume was read at the session of the French Academy on June 14, and published by the *Revue des Deux Mondes* in its issue of June 15, under the title, "De Lens à Vincennes." It closes with a page of personal explanation from the author concerning his treatment of the events which follow in the life of the Grand Condé, in which the exiled Prince, recalling his own unmerited disgrace, expresses himself in regard to his hero in language which has evidently been carefully weighed: "L'homme de bien a le devoir de protester à tout risque contre l'acte tyrannique qui, dans sa personne, atteint le publique; de résister, de lutter même, si, au péril de sa vie, il peut mettre un terme à l'oppression de tous. Il n'a pas le droit de troubler sa patrie, de la déchirer, d'y porter la guerre, pour venger une offense personnelle."

Calmann Lévy has just published 'Madame de Custine, d'après des documents inédits' (Boston: Schoenhof). In these new "études sociales et littéraries," M. A. Bardoux continues his studies of society at the end of the last century and the beginning of the present one, with the grace and charm that rendered his previous work upon Madame de Beaumont so attractive.

Jouaust (New York: Duprat & Co.) has just begun the publication of a "Bibliothèque des Mémoires relatifs à l'histoire de France," with the 'Mémoires de Choisy sur le règne de Louis XIV.,' in two 16mo volumes. It is edited by M. de Lescure, and accompanied by a preliminary notice, notes, an analytical table of contents and an index. The same publisher also begins another collection, "Les Pièces de Molière." Each play will be published separately, and illustrated by engravings from the designs of Louis Leloir, and notices and notes by M. Auguste Vitu. The first volume, which is already issued, is "L'Étourdi."

Henry Gréville's 'Perdue' has just been added by W. R. Jenkins to his "Romans Choisis."

For Ginn & Co.'s "Classics for Children" Mr. Edward Everett Hale has made a selection from the 'Arabian Nights,' mainly following Lane's version, and taking over also some of the familiar illustrations from his edition. Another volume is to follow.

New to our list of periodicals is the *Historical American*, begun this month at 90 Euclid Ave., Cleveland, O. Its aim is "to expound the best and most advanced thought of our time, as well as to picture the past and present, and to predict the future." In comprehensiveness, this programme certainly leaves little to be desired, and Mr. Lester F. Ward's name is appropriately connected with it. The magazine is illustrated.

The June number of the *Ohio Archæological and Historical Quarterly* is wholly given up to the proceedings at the Marietta Centennial (Columbus: A. H. Smythe). A steel portrait of Dr. Manasseh Cutler is prefixed; Gen. Rufus Putnam is rather crudely delineated on page 32, and there are several good topographical and antiquarian illustrations.

The first article in the *English Historical Review* for April is "The Campaign of Sedan," by William O'Connor Morris. The conclusion arrived at by the writer is, that the German success was due rather to Moltke's generalship than to any superiority in equipment or fighting qualities. And yet Mr. Morris does not appear to place Moltke in the highest rank of commanders. He says: "Moltke, without a claim to the grand original genius and resource of Napoleon, is, nevertheless, with the possible exception of Lee, the best strategist of the school of Napoleon. But, like the great Emperor, he showed in 1870 . . . that utter incapacity to understand the power of popular movements and patriotic passion which cost Napoleon so dear in Spain, in Russia, and notably at Waterloo." Leslie Stephen follows with "Chatham, Francis, and Junius," showing, against Mr. Dilke, that "there was not merely a conjunction of the two (not very heavenly) bodies [Junius and Francis], but a coincidence through an arc of their orbits." "The Plantation of Munster, 1584-1580," by R. Dunlop, gives a detailed account of this unsuccessful attempt

at settlement. Miss Robinson contributes a concluding article to "The Claim of the House of Orleans to Milan." This claim is fully set forth in the two articles, in its origin, its history, and its lawfulness; and after its "absolute and impregnable" character has been demonstrated, it is shown that it was shipwrecked upon the principle of nationality—that the real reason for its failure was that "the French Dukes of Milan were, in their own dominions, foreigners." Of the Notes and Documents, the most noteworthy is a paper upon the recently deceased Paul Ewald, by Prof. J. R. Seeley.

Krummacher, whose paper on Carlyle's style in 'Frederick the Great' we noted in January, continues the subject in the latest *Heft* of the *Englische Studien*, xi., 433–457. The present paper deals with Carlyle's use or omission of the definite and indefinite article, and peculiarities in the use of nouns, adjectives, prepositions, etc. We have to repeat our praise of the author's industry and acumen. And if we are to exercise our own critical faculty, we may remark that we fail to detect a *triple* negation in the passage quoted p. 456*e*, scarcely even a *double* negation. Wishing any one or anything "at the Devil," p. 457, is by no means a Carlylism; "to admire at" (="to wonder at") is a decided provincialism, not unknown in America.

A colored and lacquered bust of a young Japanese girl, by a native artist, makes an attractive frontispiece to the *Studio* for June. A shameful interest attaches to the story of the way in which a piratical American publisher has "adapted" Walter Crane's color designs. Mr. Clarence Cook continues his notice of the Academy, and criticises justly, as it seems to us, the distinction bestowed on Mr. Brush's "The Sculptor and the King," to which was awarded one of the prizes of the exhibition.

L'Art for June 1 (Macmillan) is very severe on the eight purchases of pictures made by the State from the late Salon. Detaille's "Le Rêve" alone is tolerantly treated, though the black-and-white copy of it we have somewhere met with is not very captivating, and one would say generally that what might be called the "dream business" has been done to death by artists. The rest are handled with severity, Henner's fumbling "St. Sebastian" in particular. Only four of the eight canvases, we remark, were sketched in the Illustrated Catalogue of the Salon. Roll's "Manda Lamétrie" was given in the last number of the *Universal Review*, along with Rafin's "Le Soir," and the praise which Mr. Harry Quilter accords to both is in amusing contrast to *L'Art's* depreciation of the same pictures; but on the face of it we are disposed to side with the latter critic. In the *Courrier de L'Art* for May 25, M. G. Dargenty censures the exhibition of Victor Hugo's drawings as if they were one phase of his genius, or were remarkable as art. "Is it not enough," he asks, "to have equalled Dante and surpassed Shakspere?"

The report on the manufacture of oleomargarine in Massachusetts contained in the nineteenth annual report of the Board of Health of that State is entirely favorable to this unpopular but useful industry. Noticeable in the same document is the discussion of the ventilation of schoolrooms heated by stoves—a paper freely illustrated by diagrams.

The State Historical Society of Wisconsin, in coöperation with the Historical Department of the State University, desires to collect statistics and other facts in relation to *organized* emigration into the State of Wisconsin. Any person willing to assist in this work is requested to correspond with Mr. Reuben G. Thwaites, Secretary of the Society at Madison, marking the communication "Organized Emigration" on the envelope. Printed or written documents, in English or otherwise, bearing upon this inquiry will be thankfully received by Mr. Thwaites for the Society.

—Mr. W. J. Linton writes us from London under date of June 28: "May I ask leave to correct a statement in your kindly notice of 'The Masters of Wood-Engraving' in the *Nation* of June 7? The size of the book (short royal folio), as shown by the specimen pages, is a little under seventeen inches by twelve. It therefore does not require 'a double page' to admit cuts of twelve by eight."

—With great pleasure we announce the arrival of Part iv. of the Philological Society's New English Dictionary (Macmillan). It is divided into two sections, the first completing at once the letter B and the first volume of this monumental work. The second section ends with *cass-weed*. We must, as usual, defer proper notice of the new instalment till time has been afforded for careful examination. Here we can only make a few gleanings from the preface to vol. i., which accompanies the first section. The editor points out that while, as in other dictionaries, the main words beginning with A exceed in number those beginning with B, the space devoted to the latter is considerably in excess of that devoted to A—contrary to the rule in other dictionaries. "This difference arises from the diversity in the historical character of the words under the two letters respectively, and the effect which this has upon the relative space required by them in a dictionary which deals with a language historically." The obsolete words under B are rarer than those under A; "fewer of the Old English and Norman words [which characterize B] have dropped out of use, than of the much more recent learned importations of the Renascence which, after a short literary life, perished before the end of the seventeenth century." Furthermore, more than three-fourths of the whole English A and B vocabulary on record since the twelfth century is still in current use—"striking evidence of the continuity and general identity of our language during seven centuries." B, as had already been made known, furnished the hardest etymological nuts to crack. The editor explains his action on the question of admitting adjectives derived from proper names. *African* was excluded, but *American* was admitted because *Americanize* and *Americanism* had to be reckoned with. As the wicked intention of the abolitionists to *Africanize* this country was once much talked of among us, probably *African* would have been admitted in consistency had not the printed page been closed. As regards pronunciation we read: "The Editor was once present at a meeting of a learned society, where, in the course of discussion, he heard the word *gaseous* systematically pronounced in six different ways by as many eminent physicists." "On several occasions," too, Mr. Murray says he "has applied directly to the introducer of a word to know how he pronounces it, or means it to be pronounced, and has received the answer that he has never thought of its pronunciation, does not presume to say how it ought to be pronounced, and leaves it to people to pronounce as they like, or to the DICTIONARY to say what is the *right* pronunciation." Of the letter C we are told that, unlike B, it contains only a small proportion of Old English or Teutonic words, but many from the Latin (directly or through the French) and the Greek. "And words of Celtic origin are proportionably numerous."

—Among the Editor's warmer acknowledgments to his colaborers on both sides of the Atlantic, those to an American scholar residing in England take precedence:

"And first of all, and above all others, to Mr. Fitzedward Hall, D.C.L., who, as a voluntary and gratuitous service to the history of the English Language, has devoted four hours daily to a critical examination of the proof sheets and the filling up of deficiencies, whether in the vocabulary or the quotations. Those who are familiar with the pages of his 'Modern English,' his 'English Adjectives in -able,' and his numerous articles and papers on special points of English, know with what an amazing wealth of evidence the author illustrates the history of every word, idiom, or grammatical usage upon which he touches; the whole of his stock of quotations, references, and indices, he has generously placed at the service of the Dictionary, and there is scarcely a page to which he has not added earlier instances of words or senses than those which our readers have found; many rare words and rare senses have been added entirely from his stores."

—Mr. Howard Williams has translated for Bohn's Classical Library (New York: Scribner & Welford) one volume of Lucian's 'Dialogues.' The present selection comprises "The Dialogues of the Gods," "Zeus the Tragedian," "The Convicted Zeus," "The Ferry-Boat," "Menippus." Now, the "Dialogues of the Gods," the translation of which we have examined as a sample of the whole, are largely studies of form, and whoever undertakes to translate them should try at any rate to give something of the grace of the original—dancing-master's grace though it be. But Mr. Howard Williams has renounced at the outset any attempts to make a "*spirited*" rendering, for which he italicises his contempt, and professes "to adhere to the original as closely as essential differences of idiom allow." In spite of this profession, however, the unfortunate schoolboy who should take Mr. Howard Williams at his word will assuredly come to harm, if he tries to make a practical use in the classroom of this droll jumble of over-doing and under-doing, of antiquated English and modern slang, with not a few downright mistranslations, which are worse, we venture to say, than any to be found in those "*spirited* versions" which, according to Mr. Williams, are "for the most part not distinguished by any very strict fidelity to the original." The article with the proper noun, which is in most instances merely an index of familiar speech, comes in not unfrequently for terrible emphasis, and the unlucky aorist is made to yield its supposed momentariness at every turn. And side by side with this would-be grammatical exactitude, we find: γοργός, 'lively,' 'nimble,' translated "Gorgon," 'for all I care,' rendered by "for my own sake," a whole section spoiled by ignorance of so familiar an idiom as the use of ἔδει; and τοῖς παιδικοῖς explained in the notes by an ellipsis of ἔρωσι. In these notes, by the way, the translator manages every now and then to dull a point which he had not entirely blunted in the text; and the second-hand learning heaped up at the foot of the page is made thoroughly distasteful by the false accents with which the Greek quotations are dusted. In fourteen lines of a familiar passage from the "Medea" there are more accentual mistakes than there are lines, and one hideous misprint besides. In short, we can only express our judgment of this performance by the Lucianic word: θυννώδης —the word which Mr. Williams in despair translates "very fishy." What of Lucian Mr. Williams has spared is of far more importance for the student of Greek life and thought in the second century than the dialogues contained in this volume, and it would be a pity to have that spoiled also. But who is

there that will give us an English Lucian to match Bernays's translation of the 'Peregrinus'?

—Another new volume of the "Bohn Classical Library" bears as its title 'Julian the Emperor,' and under this heading Mr. C. W. King has put his versions of Gregory Nazianzen's Two Invectives against the Emperor Julian, and of the Funeral Oration of Libanius in honor of the same personage, together with Julian's theosophical works, or, in less ambitious phrase, his discourses on the Sun and on the Mother of the Gods. The interest of the first part of the volume is supposed to lie in the opportunity thus afforded the English reader of comparing the divergent accounts given of the imperial philosopher; of the second part, in certain modern parallels. As for the student of history, so far from leaving him to draw his own conclusions, Mr. King takes a malicious delight in prodding the clerical inveigher, and can hardly be said himself to keep the desirable judicial attitude. But those who know the period, know that discourses of this kind have scarcely any value for history. The supposed historical facts are as often as not invented for the sake of showing off an acquaintance with Herodotus or Thucydides. It is a world of reminiscences, of phrases, all the more remarkable because people actually did something in those days. Still, Mr. King thinks that he has found archæology and art enough, chiefly of the numismatic order, to repay the quest, and in testimony of this he has supplied the volume with a full index. As for the literary delight to be had either from the original or from the stiff translation, that may be put down as a *minimum*, in spite of the reputation of the Cappadocian Father and of the teacher of Julian. Julian's own contributions to the volume do that vivid person injustice. In the "Cæsars," the "Misopogon," one may recognize something of the vigor that marks the Romanticist on the Throne in action; but the "Discourse on the Sun," the "Discourse on the Mother of the Gods," are dreary performances. However, one must have sympathy with the theosophic mind to understand it, and the only practical objection we have to urge is the rarity of the theosophic mind. As in the Lucian, as in so many of the Bohn volumes, the Latin and the Greek of the Julian are abominably printed.

—The Year Book of the Library of the University of Norway (*Universitets-Bibliothekets Aarbog for 1887*), recently issued, contains the Librarian's report and the catalogue of accessions. The report is for the fiscal year 1886-87, and shows an increase of 6,336 volumes, making the total contents of the library on June 30, 1887, 296,518 books, 1,412 manuscripts, and 602 maps, besides the collections of prints and music and a considerable number of duplicates. During the year, 26,578 volumes were loaned out, and 27,867 volumes were brought to the reading-room for use there. Of the books so used the greatest number, 12,110, were historical works, philology coming next, 7,976, followed by belles-lettres, 4,992; law, 4,728; medicine, 5,442; natural history, 3,832, and theology, 3,727, while 520 manuscripts were examined. The excellent and well-equipped reading-room of this institution deserves special mention. It was constructed some five or six years ago in the court of the library building, but it is well lighted and comfortable. There are 2,500 reference books ranged round the walls, and the current numbers and parts of several hundred periodicals and society publications are placed at the disposal of readers with commendable promptness.

—The catalogue of accessions is divided into three parts, the first containing the titles of works (printed or published in Norway during the year 1886) of which copies have been deposited in the library, in accordance with the Norwegian Copyright Law, by 140 printing and lithographic establishments. These titles embrace 956 books and pamphlets, 120 periodicals, 109 newspapers, 132 pieces of music, 24 maps, 13 prints, and 916 leaflets—a respectable showing as the literary production of a year for a country with a population of less than two millions. None of the great names in the contemporary literature of Norway occur in the catalogue for 1886, except that of Björnstjerne Björnson, who appears only as the translator of an article contributed by Col. Robert Ingersoll to the *North American Review*. The other translations from American authors are, an Indian story by Miss Alcott, entitled 'Onawandah,' Professor Anderson's 'Norse Mythology,' Cooper's 'Deer-Slayer,' and Mr. Henry George's 'Progress and Poverty' and 'Social Problems.' Norway is not without a literary censorship, and three of the titles are followed by notes stating that the works have been suppressed. The second part of the catalogue contains the Norwegian books printed prior to 1886 which were received during the year, and also the books printed abroad, but relating to Norway; while the third part includes the foreign accessions, arranged under subjects. The additions from German and French literature are valuable, and the number of titles under "Philology" is noticeable. Very little original American literature, however, is included—less than a dozen volumes in all; and these, with the exception of two volumes of the *Critic* and Mr. Stedman's 'Poets of America,' have been selected apparently because their contents had some relation to Scandinavian subjects.

—Prof. H. Jordan of Königsberg, whose lamented death (Nov. 10, 1886) left unfinished the standard work upon the topography of ancient Rome, left also a fragment, entitled 'Die Könige im alten Italien,' discussing a problem which had occupied his attention in the last months of his life. This problem was to account for the fact that the kings of patrician Rome bore the names of plebeian *gentes: i. e.*, leaving out the Etruscan Tarquins, the names Pompilius, Hostilius, Marcius, and Tullius are, he thinks, exclusively plebeian. To account for this, he advances the startling theory that the earliest Rome, the Rome of the three tribes, embraced patricians and plebeians alike, the exclusively patrician rule having been established later, and in connection with a new immigration (*jedenfalls getragen durch eine starke Einwanderung*). Undoubtedly, if the author had lived, he would have revised his work, and especially would have elaborated his theory more fully; as it stands, it suggests more questions than it answers. It is difficult to conceive how a theory which completely reverses the accepted view can be made to harmonize with the evidence. Especially, it may be remarked, the exclusively plebeian character of these names is by no means established. The Marcii and Tullii of the later Republic were undoubtedly plebeian, but so were also the Junii and Cassii; while there are traditions (which he is obliged to discredit) of patrician Marcii and Tullii in the early Republic. The names Pompilius and Hostilius are too rare to be taken into account. On the other hand, there are numerous instances of plebeian branches of patrician *gentes*, descended probably from clients; the best known example is the Claudii Marcelli. In any case it is surprising that (with the exception of Horatius) none of the great patrician names of the early Republic—Valerius, Fabius, Quinctius, etc.—occur under the kings; but we must remember that the long rule of the Tarquinian dynasty gave opportunity for some families to sink into obscurity and others to rise in importance.

LE CONTE'S EVOLUTION AND RELIGIOUS THOUGHT.

Evolution and Its Relations to Religious Thought. By Joseph Le Conte. D. Appleton & Co. 1888. xviii., 344 pp., 8vo. Ills.

Professor Le Conte is well and favorably known to the scientific as well as to a large proportion of the non-scientific reading public. He is a man in whom reverence and imagination have not become desiccated by a scientific atmosphere, but flourish, in due subordination and control, to embellish and vivify his writings. Those who know them have come to expect a peculiar alertness of mind and freshness of method in any new work by Professor Le Conte, whether his conclusions be such as they are ready to receive or not.

The questions suggested by the title of the present work must weigh with more or less persistence on the mind of every intelligent and liberal thinker. And the more fully the thinker is acquainted with the methods, scope, and apparent results of modern science—the more thorough his sincerity with himself, the greater his devotion to truth, lead where it may—so much the more poignant must be his travail, and the more fervent his prayer for light "if there be light." The man who can keep his science and his religion in two boxes, either of which may be opened separately, is to be congratulated. Many of us cannot, and his peace of mind we cannot attain. Therefore, every contribution towards a means of clearer vision is most welcome, above all, when it comes from one who knows the ground on which he stands, and has conquered his right to be there.

Prof. Le Conte has attempted to give (1) a very concise account of what is meant by evolution; (2) an outline of the evidences of its truth drawn from many different sources; and (3) its relation to fundamental religious beliefs. As for the first and second propositions, we shall pass them over, with only the comment that they are treated in a manner no less satisfactory than our author's qualifications would lead us to expect. We believe that we can employ the space assigned to this review most usefully for our readers in giving them a brief synopsis of the third part, in which Prof. Le Conte has solved for himself the greatest of the problems which confront humanity. Those who would know the reasoning by which the argument is sustained must, and we hope many will, go to the work itself.

Prof. Le Conte accepts evolution as an established law of nature, and regards the materialism which so many draw from it as an unwarranted and hasty inference. Everybody knows that every one of us, individually, became what we now are by a slow process of evolution from a microscopic spherule of protoplasm, and yet this did not interfere with our idea of God as our individual maker. Why, then, should the discovery that the first individuals of each species originated by evolution destroy our belief in God as the creator of species? Prof. Le Conte asserts divine agency by natural process as opposed, on the one hand, to the theologian who asserts divine agency and denies natural process, and, on the other, to the materialist who accepts natural process while denying divine agency. If evolution be materialism, so is

gravitation and every other law of nature. The only difference is, that here is the last line of defence of the dogmatist, and his yielding implies not a mere shifting of line, but a change of base; not a readjustment of details merely, but a reconstruction of Christian theology. While the author believes this to be necessary, it does not seem to have many terrors for him.

The next step considers the relation of God to nature. The dilemma is stated without compromise. Either God is far more closely related with nature, and operates it in a more direct way than we have been accustomed to suppose, or else nature operates itself and needs no God at all. There is no tenable middle ground. The author promptly accepts the first alternative, and postulates a Deity immanent, in whom (in the most literal sense) not only we but all things have their being, in whom all things consist, through whom all things exist, and without whom there would be and could be nothing. According to this view, the phenomena of nature are naught else than objectified modes of Divine thought, the forces of nature are different forms of one omnipresent Divine energy or will, the laws of nature the regular modes of operation of that will, invariable and unchangeable. To the objection that this is pure Idealism, Prof. Le Conte points out that the received Idealism regards the external world as composed of objectified mental states of the observer, while in the present conception it is the objectified modes of the mind of God, a very substantial reality conditioning us on every side.

In treating of the relations of man to nature, the author contrasts the two views, as old as the history of human thought, according to one of which man is an immortal spirit belonging to a world of his own, while the other regards him as a part, and relatively a rather insignificant part, of nature, belonging strictly to the animal kingdom, and his thought, emotion, consciousness, and will as products of his brain in the same sense as bile is the product of the liver. He combines and reconciles these mutually exclusive extremes by treating the phenomena of consciousness and thought as of an entirely different order from the physical changes in sense organs through which the former become evident—so different that it is impossible to imagine the nature of the nexus between or to construe the one in terms of the other. This relation lies evidently beyond the domain of science. It requires some other *kind* of knowledge than human to understand it. There is nothing especially strange in this, since the same mystery underlies the essential nature of all phenomena. Physical and chemical forces, admitted as existing, are mutually convertible in terms of each other and of motion. Standing on the plane of material existence, all its phenomena fall into intelligible order. But there is another plane above this, having no intelligible relation with it. Material forces are a mystery of the first order. But mental and moral forces and phenomena are a mystery even from the standpoint of the other, and therefore of the second order.

Now, in the gradual evolution of the animal kingdom, did the immortal spirit enter with life, or with sentient life, or somewhere in the ascending scale of animals, or with the advent of man? If with man, was it something added, or did it grow out of something already existing in animals? The author holds as the only tenable view that the spirit of man was developed out of the anima or conscious principle of animals, and that this again was developed out of the lower forms of life force, and this in its turn out of the chemical and physical forces of nature; and that at a certain stage in this gradual development, viz., with man, it acquired the property of immortality precisely as it now, at a certain stage, in the individual history of each man, acquires the capacity of abstract thought.

In support of this he urges that there is nothing wholly exceptional in such transformation with the sudden appearance of new powers and properties; but, on the contrary, it is in accordance with many analogies in the lower forces, and therefore *a priori* not only credible, but probable. There is now a sort of taxonomic scale of force and matter in sharply limited and distinct planes. These are: (1) the plane of elements; (2) that of chemical compounds; (3) that of vegetal life; (4) of animal life; and (5) the plane of rational and, as we hope, of immortal life. Each has its own appropriate force and distinctive phenomena, and there is between each a very distinct break. Though there are various degrees of the force characteristic of each, yet the difference between the characteristic forces is one of kind as well as degree. Although energy by transmutation may take all these different forms, and thus does now circulate up and down through all these planes, yet the passage from one plane upward to another is not a gradual passage by sliding scale, but *at one bound*. When the necessary conditions are present, a new and higher form of force at once appears, like a birth into a higher sphere. This is appropriately and ingeniously illustrated, as by the formation of water from gases, and of protoplasm in a green leaf. With each new irruption of the universal energy into a higher plane, there appear new, unexpected, and, previous to experience, wholly unimaginable powers and properties. The forces of nature being naught else than different forms of the one omnipresent Divine energy, which has taken successively higher and higher forms in the course of cosmic time, the author points out that the upward movement has been wholly by increasing individuation, not only of matter, but also of force. Finally, the same energy, completely individuated as a separate entity, and therefore self-conscious, capable of separate existence, and therefore immortal, we call the spirit of man. In animals, spirit is deep submerged in nature, as beneath a water surface, wholly ignorant of any higher, freer world above. In man, spirit emerges above the surface into a higher world, looks down on nature beneath him, on other emerged spirits about him, and upward to the Father of all spirits above him—emerged, but not wholly free; rising above the lower plane, but not entirely foot-loose.

Now, if man be indeed something more than a higher species of animal, if man's spirit be indeed a spark of Divine energy individuated to the point of self-consciousness and recognition of its relations both Divine and natural, it is evident that this new relation should include a difference of attitude between the individual and God, as compared with the mutual attitude of Divinity and unindividuated nature. The possibilities of mutual reaction afforded by this conception enable us to imagine an inspiration or revelation to the spirit of man, which shall not, in the physical sense, be a reversion or interruption of natural law, but something of a different nature and on a higher plane. There is evidently no other kind of revelation possible, and such revelation is given to all men in different degrees. But there is, and in the nature of things can be, no test of truth but reason, by which all things must in the last instance be tried.

Having shown how, following the line of scientific thought, we are logically driven to the doctrine of Divine immanence, the author proceeds, in a very ingenious argument, to free his hypothesis from Pantheism, and to show how, in his opinion, we are also logically impelled to a belief in a Divine personality. His statement is necessarily analogical and suggestive rather than convincing, but we think he shows, at least, that there is a door open in this direction.

The problem of Evil is regarded from an evolutionary standpoint. Not happiness or innocence, but virtue, is the goal of humanity; virtue cannot be given, it must be self-acquired, by a knowledge of and conformity to the laws of the moral world. We cannot conceive of a moral being without freedom to choose. Evil, then, has its roots in the necessary law of evolution, is a necessary condition of all progress, and preëminently so of moral progress. All that we call evil, both in the material and spiritual world, is good so long as we hold it in subjection to the spirit, and only becomes evil when we succumb. True virtue consists not in the extirpation of the lower elements of man's nature, but in their subjection to the higher. The latter are nourished and strengthened by their connection with the former, while the lower are refined and glorified by their relation to the higher, until by this mutual reaction the whole plane of being is elevated.

Such is, in brief, the scheme presented for our consideration by Professor Le Conte. That it will not satisfy the mind in bondage to hereditary dogmatic systems is self-evident. Nothing in harmony with scientific rigor would do so, nor is it worth while for any one to attempt, for the scientific mind, any repetition of the nauseating incongruities which have so often been put forward under the guise of a "reconciliation of science and religion."

PLYMOUTH AND THE BAY COLONY.

The Puritan Age and Rule in the Colony of the Massachusetts Bay, 1629–1685. By Geo. E. Ellis. Boston: Houghton, Mifflin & Co. 1888. 8vo, pp. 576.

The Pilgrim Republic; an Historical Review of the Colony of New Plymouth, with Sketches of the Rise of other New England Settlements, the History of Congregationalism and the Creeds of the Period. By John A. Goodwin. Boston: Ticknor & Co. 1888. 8vo, pp. 662.

We cannot complain of a want of scholarly attention to the dark questions of our early colonial days. To Doyle's judicial and broad, though somewhat slow, history of the Puritan colonies, and Adams's lively but one-sided essay on the 'Emancipation of Massachusetts,' are to be added these works by Dr. Ellis and Mr. Goodwin, both learned, both sombre, and both somewhat clerical, not to say Puritan, in their lore, but not the less fit on that account to enter into the inner life of that strange period, with its curious compound of harshness and enthusiasm, of mediæval bigotry and modern statesmanship. The two volumes have very different aims. Dr. Ellis has not tried to write a detailed history. His work is an essay on the religious aspects of that curious age, and it is easy to guess that the desire to answer Mr. Adams, and exhibit the Massachusetts Puritans in a less odious light, had no little effect upon the execution of his plan. It is not difficult to show the Puritan defects in a striking and hateful aspect; at the best they seem savage enough in the light of modern liberal thought. The difficulty is to get out of our modern atmosphere, and revive enough of their surroundings and modes of thought to get a genuine histori-

cal insight, and judge them by their age, not ours.

Dr. Ellis helps us a good deal here. He is not dramatic or animated. He gives little space to sketching character or picturing scenes. But he does succeed in showing us why the Puritans felt bound to carry out that "grim and iron rule of bigotry, austerity, and intolerance," and how they grew

> "strong thru shifts an wants an pains,
> Nussed by stern men with empires in their brains,"

as Lowell says. They were trying a wonderful experiment of government by pure Bible rule, in an age peculiarly ripe for such a trial, for both the feudal civil institutions and the old feudal church had been outgrown, and experience had not shown what could take their place; and the boundless enthusiasm for the newly discovered Bible made it seem most natural to appeal to it as the final arbiter. They could not try the plan fairly without using exceptional and violent means. They had not the slightest idea of separating Church and State. In that period few had conceived of the possibility of such a thing; and even in our own time many will not willingly accept the thesis which Dr. Ellis thinks has been practically demonstrated, that no organic form of civil government can safely base itself on religion. The Reformation in England had the closer union of Church and State for one of its main features; and when the extremer English reformers migrated to form their colony here, they drew the tie closer still. The Church did not govern directly, but indirectly her influence was omnipotent. The parish was the unit of crystallization, only church members voted, the elders were constantly consulted by the magistrates, the Mosaic Code was treated as legally binding, and the enemies of the Church were promptly expelled. This idea could not be carried out without a good deal of severity, but it had a wonderful grandeur in that age, and such severities did not wear the barbarous look that they have to our eyes. Harshness seemed a practical necessity. To punish obtrusive dissenters by nothing but banishment was a concession painful to not a few. The extremists would have liked to treat them as they did Indian combatants—sold the squaws into slavery, and brought away only the heads of the men. Such was the age.

It is easy to make too much of the narrow limits of the Puritan charter. Some of the earlier New England patents had been merely for trade, but the charter of 1628 was granted for a different purpose and had a different form. A religious government in the Christian faith was put forward as one of the purposes of the plantation. Even trading corporations could banish unwelcome intruders; but this was a municipal rather than a trading corporation, and considerable legislative power was conveyed by the clause of the charter authorizing the colonists to make laws, enforced by fines, imprisonment, "or other lawful correction, according to the course of other corporations in this our realm." Certainly this did not authorize the infliction of the death penalty in cases which, like witchcraft, were not capital at common law, and it did not authorize the sale of Indian captives. For these acts the colonists had only what satisfaction they could get from the Mosaic law. But a vast number of provisions, not only criminal but civil, were quite within their power, as in matters relating to husbands and wives, administration of trusts, etc. Writers on the subject are apt to forget the very peculiar state of the law in England at that date, when the common law was still in swaddling clothes, incompetent to deal with many of the commonest events of life either penally or civilly, and requiring to be constantly supplemented by some other authority.

The English people tolerated the equity jurisdiction of the Chancellor, the military jurisdiction of the King, and the civil jurisdiction of his Privy Council and courts of high commission, and especially the broad ecclesiastical jurisdiction of the Church, largely because they believed that it was necessary to fill these extensive gaps in the common law. And when they came to this country they found much the same gaps, and filled them as best they could by action of the General Court and church discipline. It is a high tribute to the common law that the colonists, with their religious instincts and organization so strongly opposed to its cold utilitarianism, should yet have worked back into it, naturally without a jar. There were no lawyers at first, and some of the early actions were more like the proceedings of the board of directors of a charitable institution than a modern court; but, as prosperity came and courts were organized, the common-law process came back insensibly. The point most like a break was at the revocation of the charter in 1684; but the change in practice had preceded that change in law, and the theocracy had been overthrown in the hearts of the silent majority before the political changes in England brought about its overthrow. The experiment of Bible government had been tried and had failed, under peculiarly favorable circumstances, in the hands of a set of vigorous enthusiasts, at a time when the Bible, as Dr. Ellis says, was held as it never had been before and never has been since—not only as all-sufficient, but as requiring, by positive divine injunction, that it should be so used and obeyed. "No thought of what is to us so obvious in the impracticability of the experiment seems to have presented itself to those who put it on trial."

It was requisite that there should be resolute adherence by the adopters, and a firm rule over sojourners, who, although not parties to the experiment, had to be compelled to conform to it. We cannot blame the Puritans for perceiving this and acting on it. Their rigor against dissenting preachers was political as much as it was religious. Dr. Ellis devotes a whole chapter to showing the cordial reception given to the Jesuit Father Druillettes, who made no effort to teach his views. It was because Mrs. Hutchinson and President Dunster and Roger Williams and Samuel Gorton (whose trial for heresy Dr. Ellis does not mention, by the way), and more especially the Quakers and Anabaptists, either proselytized actively or attacked the magistracy, that they were put down so harshly. If they had said nothing, and gone to church regularly, they would not have been bothered. As it was, we may concede that it was necessary to get rid of them, but it was most impolitic as well as illegal ever to impose the death penalty. And yet it is curious to see how it was present in the minds of the judges in heresy trials, with a horrible fascination, from the very beginning.

In his chapter on the Quakers, Dr. Ellis quietly abandons some of the extremer positions that he once took in defending the Puritans. The witchcraft horror he treats as outside his subject, because it occurred under the commission of a royal Governor, after the power had passed from Puritan hands, though he would concede, no doubt, that it was the intolerant Puritan zeal for the Mosaic law that made the persecution possible. Another point on which Dr. Ellis might well have been fuller is the growth of the opposition party, as shown in the history of the Brattle Square and Old South Churches.

Mr. Goodwin's 'Pilgrim Republic' covers a very different ground. Dr. Ellis's work is an elaborate essay on one phase of the life of the great Bay Colony. It is a part of a great controversy, an authoritative statement of the Puritan defence. Mr. Goodwin's is a local history, narrating the early republican régime at Plymouth with great fulness of detail, touching upon many controverted points, and handling them with coolness and justice, though without much imagination or humor. He begins by explaining that while the Bay Colony was Puritan, the Plymouth one was not, having severed from the very beginning that connection with the English Puritan Church which the Bay men for many years nominally kept up. And he plumes himself not a little, as Plymouth archæologists are wont to do, on the greater liberality and freedom from persecution which the Separatists showed.

Such was the roundabout connection between the two things, however, that this result was due more to a cautious recognition of the dangers of their peculiar position than to any religious open-mindedness. Neither colony cared much doctrinally for the tenet. Only four years after the settlement, before they had got a firm foothold, Brewster told Lyford that the Plymouth men did not insist upon it, and Lyford says that the non-Separatists were in a majority. Politically, however, they had destroyed their chance of a charter by their outspoken course, and they were unable, therefore, to pass any valid laws. The colony existed only by the connivance of the English Government, and this had a marvellous effect in subduing any over-vivacious enforcement of their religious belief. The Bay men began more shrewdly. They were the same race, with the same beliefs, and just as much Separatists at heart as the Plymouth men. In their practical home administration they dropped the tie the moment they landed, with a quiet unanimity and promptness that is very suggestive; but by keeping up the nominal connection abroad with the English Puritans they secured a powerful support for half a century, which not only preserved their charter so long as that party had power, and gave a tacit assent to their legislation, but added materially to the tide of wealthy emigrants which their fertile soil drew upon them. The violent extremists were a minority in both colonies, but in Plymouth they were kept back, while at the Bay success unfortunately kept them in power and made them more violent. It was their prosperity and power rather than their religion that made the Bay men worse persecutors than the settlement beyond, and led them to go further than was necessary or wise.

Mr. Goodwin's book is in this way an answer to Dr. Ellis, for if the Plymouth Colony could prosper so well without persecution, the Bay men might also. The Puritans probably urged that it was not mere prosperity that they were after, but harmonious communion of the saints; but they did not get that anyway as it turned out. It is hardly necessary to say that the Plymouth Pilgrims did not tolerate crime because their legal position was so shaky. They followed the example of President Dunster, who, when he understood that there was no law punishing a burglary which a couple of Harvard students had committed, took them in hand paternally and administered a sound flogging. And they did not confine their punishment to what we think criminal nowadays. The stocks and the whipping-post were ready not only for the thieves and malefactors, but for those who reviled the clergy or stayed away

from public worship. Gorton's maid-servant, as Mr. Goodwin might have noted, was threatened with banishment as a common vagabond for smiling in church. On Cape Cod Bay as on Boston Harbor they wished to have

> "Men of God in courts and churches watch
> O'er such as do a toleration hatch."

They got rid of Gorton and Williams and others who urged dissent, and they sold their Indian captives into slavery with a cheerful eye to the main chance. They even passed the same severe laws against witches and Quakers as the other colonies did, but here they paused. They did not enforce them, and the witchcraft trials were total failures. They were a people of sound common sense, and one thing in that connection may well be noted: the utter failure of the community experiment. The colony would have perished if the salutary spurs of individual ownership and competition had not been restored; and they were wise enough to find it out in time and profit by the lesson.

ZOROASTRIAN LITERATURE.

The Zend Avesta. Part iii, the Yasna, Visparad, Afrînagân, Gâhs, and miscellaneous fragments, translated by L. H. Mills. [The Sacred Books of the East, vol. xxxi.] Oxford: at the Clarendon Press; New York: Macmillan. 8vo. Pp. xlvii, 400.

THE fragments of the old Zoroastrian literature known as the 'Zend Avesta' may be divided into three groups, dealing with the religious and civil law, with the legendary law of Iran, and with the liturgy and metaphysics of Zoroastrianism. The first elements are embodied mainly in the 'Vendidad,' the next in the Yashts, and the last in the 'Yasna,' 'Visparad,' 'Afrînagân,' etc. The 'Vendidad' and the Yashts were translated for the series of the "Sacred Books of the East," by M. James Darmesteter of Paris (Parts i and ii making vols. iv and xxiii of the series); the present volume, containing the rest of the 'Avesta,' translated by Mr. L. H. Mills, brings the work to an end, and the student of Zoroastrianism will thus have in his hands all, or nearly all, of what remains of the sacred literature of the Parsis.

The 'Visparad' and half the 'Yasna' are liturgical books, the books of sacrifice (this is the meaning of Yasna); the other half of the 'Yasna' consists of the celebrated Gâthas or Hymns, which are the oldest and are considered to be the holiest part of the 'Avesta' and the very essence of Zoroastrianism; they are also the obscurest part of it. They have been translated in their entirety or in part more than once, and the passages are not many on which there is perfect agreement between any two of the translators.

The five Gâthas are five groups of hymns which have been arranged together according to the five different metres in which they are written. The language differs from that in the rest of the 'Avesta'; it is more archaic in its forms and its lexicon, and bears a closer affinity to the Vedic dialect. The contents are also of a different character, though the Gâthas are frequently quoted and their spirit breathes through all the sacred books. The 'Younger Avesta' possesses a rich mythology much like that of the Vedas, whereas the Gâthas have the severity and abstract character of a moral and dogmatic composition. Its main subjects are the idea of Dualism, the opposition of Ahura Mazda (Ormuzd), the Beneficent Spirit, to Ahriman, the Spirit of Destruction, the glorification of the former and the six Amshaspands, who are the divine impersonation of six of the highest abstractions of the moral, social, and material world; the permanent struggle of the two spirits, and the victory to come of the good one.

The difficulty of the Gâthas does not lie in the ideas expressed: they are nothing new to the Avesta student, as they permeate the whole of the 'Avesta'; it lies in the eccentric and artificial way in which these ideas are expressed. In this point, also, the Gâthas remind one of the Vedic phraseology; nothing is less simple, less natural than the style of the Vedas, those supposed strains of unaffected and spontaneous primitive poetry; nothing either less flowing or simple than the moral commonplaces in which the Gâtha poet unceasingly delights. He thinks that brevity is the essence of speech; half the grammatical helps are suppressed, and the idea is half uttered in an imperfect sentence meant to invest it with the mystery and majesty of an oracle. From the passages whose meaning is clear, one can see that the mystery is not in the idea itself, but in the voluntary imperfection of the grammar, in the archaism of forms and the number of ἅπαξ λεγόμενα. It follows also that the problem is not one to be given up in despair; it is a work of time, and the solution depends mainly on a patient comparison of the many tautologies with which these texts abound.

Mr. Mills is not unknown in this country, of which he is a citizen, though he has studied in Europe and now resides in Oxford. He was not originally trained as an Oriental scholar; he became one late in life by dint of energy, and he is a wonderful instance of what will and singleness of purpose may accomplish under not very favorable circumstances. Nearly fifteen years ago, being engaged in researches upon Gnosticism, he found himself obliged to study the Zoroastrian dualism, and especially the Gâthas. He set to work, and studied Zend; but no Zend text can be surely understood without the help of the traditional translations written in that enigmatic language, the Pehlvi, the study of which requires a knowledge of both the Aryan and Semitic family of languages. But from the Gâthas, the scholar drifts unavoidably to the Vedas, which alone can throw light upon many particularities of the language, and also upon the old groundwork of ideas which underlies the Zoroastrian edifice. Mr. Mills toiled for years through that heavy and obscure Pahlavi literature; he went to Munich, the richest library of Europe in Pehlvi books, to prepare an edition of the Gâthas which should contain the Zend text, the Pehlvi translation of the Zend, the Sanskrit and Persian translations of the Pehlvi; all these materials being given either in the original character or in Roman transliteration as well as in an English translation. Mr. Mills, with admirable zeal and disinterestedness, had his work privately printed and sent to the leading Zend scholars, asking for their advice and suggestions, and he passed several years in recasting it. We understand that this most useful encyclopædia of Gâthic literature has at last received its definitive form, and is about to be published with the aid of the East India Office. It is to be hoped that Mr. Mills will find also in his own country the additional support needed for this most important publication.

The present translation embodies the result of Mr. Mills's researches. As he himself very modestly acknowledges, it cannot be expected for a long time that any new translation of the Gâthas will command the approbation of all Zend scholars, both owing to the special nature of the Gâthas and also to the many divisions on points of theory which exist between the members of the Zend Brotherhood. All acquainted with the state of the Avesta studies know that for many years there was a fierce struggle between those who practically make Zend a mere dialect of Sanskrit, and the 'Avesta' a counterpart of the Vedas, and those who think that the Zoroastrian tradition does more to teach us about the meaning of the Zoroastrian texts than all the Vedas in the world. The latter view is now fast getting the upper hand; it may appear strange that its triumph was so long delayed, and it may be said that the ascendancy of the Vedic school of interpretation in Germany has been most injurious to Zend scholarship, and has delayed its progress for twenty years. We do not wish, of course, to ignore the valuable help that the 'Veda' may give to Zend philology, nor the indirect light it throws upon what may have been the pre-Zoroastrian state of Iranian thought; but it is clear as day that the actual meaning of the Zend language and Zoroastrian doctrine is to be sought for first of all on Iranian ground. That the Parsi tradition is not always reliable, that commentators are apt to subtilize and blunder here as elsewhere, cannot be doubted; but above the direct and conscious tradition embodied in the scholastic books, which may err, is heard the indirect, unconscious, and perfectly safe testimony of that objective tradition which reigns all through Zoroastrianism, from its oldest text to the most recent.

Mr. Mills has tried to steer between the Vedic craze and a tame acquiescence in tradition as found in the Pehlvi translations. It must be confessed that such acquiescence is not the easy thing it may seem, as the Pehlvi translation is not seldom as obscure as the original. That in spite of his long acquaintance with the Pehlvi tradition, Mr. Mills is no blind follower of it, is shown besides by more than one passage in which he boldly makes appeal to the Veda. It is principally in such passages, we confess, that we should differ from the learned translator. For instance, to suppose that the Zoroastrian Gâthas should have the slightest reference to the Vedic *aranis* (xxxi, 3) is to us out of the question; and this appeal to the Vedas is the more strange as here we have one of the few passages in which the traditional translation is easily understood, easily accounts for the text, and agrees with a long series of concording traditions. The passage refers to the ordeal of fire, and contains the revelation of the *Varnirang* so often alluded to through all the Parsi literature.

We have no space to enter into further details. Suffice it to say that no new translator of the Gâthas will do his work without taking Mr. Mills's translation into consideration, and that his collection of materials will be a boon to all Zend scholars. We understand that it is proposed to create for him a Zend readership at Oxford; we should welcome this recognition of the importance of Zend studies by the great English University, as well as of the services rendered to Zend philology by the admirable zeal, scholarly patience, and unflagging enthusiasm of our American scholar.

Hannah More. By Charlotte M. Yonge. [Famous Women Series.] Boston: Roberts Bros. 1888.

A REALLY interesting study of Hannah More might easily be made by treating her literary career as a part of what may be called "comparative literature"—literature considered in its relations to the general intellectual life of the age, and to the social conditions by which it is shaped. But Miss Yonge has preferred to give a simple narrative, and it must be said a

dull one, of the incidents of Mrs. More's life. She includes, of course, mention in some detail of her writings and of their reception by the public, but she dwells, as of more importance, on her practical labors for the poor. These labors were indeed admirable, and very remarkable for that day in the largeness of her scale of operations, but essentially possess only a personal interest, so to speak, and would need to be touched in a more dramatic spirit, and with more intimate sympathy, than in this volume to render them interesting. The motto of Miss Yonge's volume would fitly be a quotation from George Eliot, who, reading in her youth Mrs. More's Letters, wrote: "The contemplation of so blessed a character as hers is very salutary."

There might on the other hand be found much entertainment, and something even more valuable than entertainment, in tracing out the causes that made Garrick give his admired friend the name of "Nine"—as uniting all the nine Muses in one—and led to her now forgotten tragedy of "Percy" being highly extolled by the generation to which Sheridan belonged. At the moment that Johnson was writing the 'Lives of the Poets,' he was ready to cry out in a company discussing poetry, "Hush! hush! it is dangerous to say a word about poetry before her [H. M.]; it is talking of war before Hannibal."

When, at the age of forty, she published anonymously her first prose volume—a treatise whose suggestive title, 'Thoughts on the Importance of the Manners of the Great to General Society,' was well carried out by the good sense of its contents—it was as enthusiastically welcomed as her later productions. The second edition sold in a week, and the third in a morning. A few years later, a short and popular refutation of Paine, in the form of a half-humorous dialogue between village politicians, was, if we may believe Miss Yonge, circulated by hundreds of thousands of copies; and, previously, another pamphlet directed against the attacks on religion in the French National Assembly of 1792—the proceeds of whose sale she devoted with liberal and unsectarian benevolence to the benefit of the seven thousand emigrant French clergy in England—obtained two hundred and forty pounds.

Her next literary venture was the writing in company with her sisters—not less able women than herself—a number of stories, ballads, and religious readings, "tracts" for the uneducated. The well-known 'Shepherd of Salisbury Plain' is one of these, of which Wilberforce said that he would rather present himself before Heaven with the 'Shepherd' in his hand than with one of Scott's novels. Every one was reading the tracts, these "Cheap Repository Tracts." Their readers were not only those for whom they were intended, but the Duchess of Gloucester, and her uncle, the Earl of Orford (Walpole), and the Archbishop of Canterbury (Moore), and the Bishop of London (Porteus), and untitled Mason, the friend of Gray, and Dr. Wordsworth, the Master of Trinity, who pronounced them more "novelish and exciting" than was desirable. Two millions of these tracts were sold in one year.

Then came a volume called 'Strictures on Female Education,' which brought down upon Miss More an attack from Peter Pindar because of her views about poets, of whose band she no longer wished to be, in spite of Johnson having said (to Dr. Beattie) very solemnly that Miss More was "the most powerful versificatrix in the English language"—a tribute Miss Yonge has not recorded.

Not long after this time she had to meet the brunt of a more painful and widespread burst of abuse directed against her in consequence of her efforts to elevate the lower classes. Such sympathies were thought to savor of revolution, and the onslaught upon her was so furious and bitter that nine clergymen, among them the son of the Bishop of London and his chaplain, wrote pamphlets in her defence. The attack was even spoken of as "a national disgrace." She was in the ranks of no party. On one side she heard the bark of the *Anti-Jacobin Review*, and on the other felt the bite of a Jacobinian curate, who accused her, among other similar crimes, of being art and part with Charlotte Corday in the assassination of Marat, as a hireling of Pitt. She could laugh at this, but she must have laughed more gayly when at another time her book on 'Practical Piety' was abused by the "high Calvinists" on the ground, among others, that she called the sun *he*, as if she idolatrously believed in Phœbus Apollo.

Miss Yonge perhaps does not sufficiently sympathize with Miss More's liberality of mind to bring this quality into due prominence, and, especially, keeps rather in the background her intelligent interest in French matters and familiarity with French literature of the seventeenth century. It is possible Miss Yonge might hesitate to report the story Hannah More tells of herself, that one day Dr. Johnson "reproved me with pretended sharpness for reading 'Les Pensées de Pascal,' alleging that, as a good Protestant, I ought to abstain from books written by Catholics. I was beginning to stand upon my defence, when he took me with both hands, and, with a tear running down his cheek, 'Child,' said he, with the most affecting earnestness, 'I am heartily glad that you read pious books, by whomsoever they may be written.'"

It was not only piousness, but excellence of all kinds that Hannah More was quick to discover and to value wherever she found it, and it is this kindly simplicity of her intelligence, her good-hearted openness of mind, that still keeps her memory green. She liked 'Don Quixote' as well as Pascal, and read both in alternation with the 'Arabian Nights,' 'Tom Jones,' and the Greek tragedians. She was eager that her little friend "Tommy" Macaulay should "become a complete Frenchman," that she might give him the works of Racine. Of 'Corinne' she says, "Like *Pistol*, I swallowed and execrated, yet I went on swallowing. . . . There never was such a book—such a compound of genius and bad taste." When her own 'Cœlebs in Search of a Wife' was translated into French, Mme de Staël, in her turn, "swallowed," and probably execrated while praising; but her praise can hardly have echoed the phrase, "a compound of genius and bad taste."

Some of Miss More's other works had also the honor of translation—oddly enough, into Cingalese and Tamil; and it is interesting to know that several of the "Cheap Repository Tracts" were widely circulated in Russia. 'Cœlebs' was translated into German, as well as French, which Miss Yonge does not mention. Before her death, too, she could merrily exclaim, "I have conquered America!"—and traces of her conquest may be yet observed.

Colchester. By the Rev. Edward L. Cutts, B.A. [Historic Towns. Edited by E. A. Freeman and William Hunt.] Longmans. 1888. 8vo, pp. xii, 219.

THE first four chapters of this book are devoted to the Roman period of Colchester history. The author is evidently afflicted with a mild form of what Madox, in one of his manuscripts in the British Museum, calls "the Roman dance," which has prevailed in England since Camden's day. Within the past decade or two, there have been some indications that the local historians of England are trying to get rid of this disease, whose chief symptoms, in the acute stage, consist in futile excursions on the etymology of the name of the town, rambling disquisitions concerning sundry pots, fibulas, and other Roman antiquities found in or near the city, and the inference, founded thereon, that the town in question was exceedingly ancient, manifestly the long-lost Calleva or Camulodunum. Such excellent recent works as Hedges's 'Wallingford' (1881) and Tomlinson's 'Doncaster' (1887) show that the "Roman dance" has not yet ceased to afflict England. We do not wish to disparage the value of such discussions, when, as in the case of Mr. Cutts's book, they are rationally conducted. We merely emphasize the fact that in a volume on the general history of Colchester, a quarter of the whole work ought not to be devoted to so small and comparatively unimportant a part of the subject, even though the lineage of the town may be traced back to the "oppidum of the Trinobantes," the royal abode of Cymbeline, and the "Colonia" of Claudius.

The only other chapters that are open to much censure are the two on "municipal government" and "jurisdictions." The latter contains more antiquarian gossip than local constitutional history. There is no work in existence that gives us a clear idea of the nature of the mediæval municipal courts of England, their relation to each other and to the crown. Surely, the historian of a town, in treating of its judicature, should at least furnish us with an enumeration of the different burghal courts, the extent of their jurisdiction, the frequency of their sittings, and the titles of the presiding officers. But we seek in vain for this information not merely in the book before us, but also in most English local histories.

In discussing the municipal government of Colchester, the author speaks of the civic courts as something wholly distinct from the meetings of the burgesses for the management of the local polity. Then, after making some dubious conjectures concerning the burghal officers, he goes on to say: "Here we have the germ of the municipal institutions which it is the business of this chapter briefly to sketch" (pp. 135, 136). It is not at all clear what "here" refers to; he presents nothing tangible enough to be called the germ of the municipal constitution. The latter is, in fact, to be sought in the burghal judicature, which constituted the nucleus of the town assemblies and other municipal institutions.

But, regarded as a whole, Mr. Cutts's book is one of the best of the series. Chapters xii and xvii are particularly well worked up; they contain much valuable information, and afford some vivid glimpses of the every-day life of the mediæval burgesses of Colchester.

History of New York City: Embracing an outline sketch of events from 1609 to 1830, and a full account of its development from 1830 to 1884. By Benson J. Lossing, LL.D. A. S. Barnes & Co. 8vo, pp. 881.

The Story of the City of New York. By Charles Burr Todd. G. P. Putnam's Sons. 12mo, pp. 478.

The Story of New York. By Elbridge S. Brooks. Boston: D. Lothrop Co. 8vo, pp. 311.

EACH new history of New York makes it more and more incontestable that the coöperative plan employed by Mr. Winsor in the case of Boston can alone produce anything satisfactory here. The works of Valentine, Booth,

Stone, and Lamb are defective either in completeness or in essential qualities of grasp, proportion, accuracy, and style. Mr. Lossing's is open to the latter criticism, and purposely subordinates the political to the social and material phases of the city's history during the period on which he specially dwells, and which, by the way, is that of his own acquaintance by contact with New York. Mr. Lossing is a chronicler and an antiquarian, rather than an historian, and his narrative is formless and scrappy to the last degree. We are not surprised that no table of contents is provided; it would have implied a scheme of orderly arrangement of which there is very little beyond the chronological division. Instead of being oppressed by the wealth of his materials, Mr. Lossing could allow two pages (pp. 394–397) to a "remarkable poem" on the changes in New York in the first half of the present century, and eight pages (pp. 247–254) to "a remarkable poetical contribution" to the *Mirror*, which are neither remarkable nor poetical, and have no place whatever in a serious historical review. They illustrate, however, perfectly, Mr. Lossing's conception of his task. The footnotes are largely given up to biographical sketches. Nearly two pages are allotted to each of the following persons: Tweed, Cornelius Vanderbilt, J. W. Francis, C. D. Fredericks, and Judge Daly, and a page to a page and a half is not uncommon. It may be judged, therefore, how large a portion of the volume is consumed in this manner—not the least useful, we admit. The principle of selection, however, in these sketches is as mysterious as in the portraits.

We should be glad if we could vouch for Mr. Lossing's punctiliousness in such information as he chooses to give, but we cannot. He ought not to spell the poet's name "John Pierrepont" (p. 251); he should not say, as on p. 330, that the American Anti-Slavery Society was founded in Philadelphia on December 30, 1833, December 6 being the true date. His statement on the same page as to William Jay's hand in framing the Constitution of that society is unsupported by evidence, and is incredible, seeing that Judge Jay was not present at the founding, and that the so-called essential declarations of policy flowed from the Declaration of Sentiments, which was wholly the work of Garrison. Moreover, the New York abolitionists had to be gently constrained by the latter to go to Philadelphia at all. But it would be idle to push further our critical examination of this ponderous book, of which the most that can be said is, that it supplements to some extent other histories but little more commendable.

Mr. Todd, who acknowledges having had the advantage of using the foregoing work, ends his history where Mr. Lossing begins his, *i. e.*, with the year 1830. Mr. Todd says he has "adopted the view of most scholars, that history ceases fifty years back of the present time, contemporary record taking its place"; but we must say that we have never heard this view advanced, unless by the "scholars" of Chautauqua who have persuaded the Rev. Edward Everett Hale to draw the line in his manual at the war of 1812. Neither Miss Martineau, nor Kinglake, nor Justin McCarthy, nor Thiers, nor Louis Blanc, nor Karl Hillebrand, nor Treitschke, nor, in the case of our own country, Botta, Von Holst, the Comte de Paris, McMaster, Schouler, has acted upon it. Moreover, all the political lessons derivable from the history of New York city are to be sought in the past sixty years—the era of mobs, of rowdy political clubs, of rings, and, as against these, of incessant struggle to maintain a healthy municipal existence with the most mixed population in any civilized community, and with a defective civic pride and consciousness and continuity. Mr. Todd does touch a little on these topics—as a chronicler, he would say—for he gives a chapter, mildly denominated "The Mouse in the Cheese," to Tweed's doings, and draws "the moral of it." But his outlook is mainly material and social. His subdivisions are good, but "The Free City" is an ill-chosen title for the last. New York was never that, except in the traitorous dreams of Fernando Wood. Mr. Todd's narrative is agreeable and thoroughly readable. More might have been told in the same compass, but he has, we presume consciously, disregarded proportion in favor of picturesqueness.

Mr. Brooks's volume opens as if designed for youthful readers, but one quickly finds that the serious preface is a truer indication of the author's intention. A philosophical treatment has seemed to him at once best and within his grasp, and to it he sacrifices freely the details which distinguish and enliven Mr. Todd's annals. Two works on the same subject, and occupying about the same space on the shelf, could hardly furnish a greater contrast in their conception and execution. Mr. Brooks gives 52 pages of large type to the period before the English conquest of New Amsterdam; Mr. Todd gives 96 of smaller, besides a chapter of 36 pages on the social and domestic life of the Dutch colony. Mr. Brooks asserts, with quite as much positiveness as the evidence warrants, a Spanish occupation or exploration a century before Hudson's arrival. With equal positiveness he finds a Spanish etymology for the name Manhattan. He speaks of "the questionable discoveries of Verazzano." Mr. Todd ignores the Spanish claim, identifies the name of the island with that of the Indian tribe inhabiting it, and asserts that "Verrazano was, therefore, the first European to discover and sail into the city of New York." Mr. Brooks, again, sums up Peter Minuit as "a self-willed and self-seeking adventurer." Mr. Todd more charitably says: "Of the four Governors of New York under the Dutch dynasty, none are worthier of kindly remembrance than Peter Minuit."

But we will not pursue the parallel on this line. Mr. Brooks makes up for his generalizations by appending "the story of New York told in chronological epitome," in a very handy form. He gives, too, the Constitution of the State of New York, and a bibliography. Mr. Todd has also his appendices—one chronological, another a list of mayors. Both works are illustrated—Mr. Todd's much the more usefully; and he alone provides maps.

An Explanatory Digest of Professor Fawcett's 'Manual of Political Economy.' By Cyril Waters, B.A. Macmillan & Co. 1888.

THIS little book suggests an essay upon the advance which has been made in political economy since Professor Fawcett published his 'Manual' in 1863. Professor Fawcett represented the orthodoxy of that day. He was a disciple of Mill, and the master represented "progressive orthodoxy" even more than did the disciple. Mr. Waters is a disciple of Mr. Fawcett, and in the book before us he has conscientiously refrained from showing that he has either learned or forgotten anything of serious importance. On page 3, for instance, we find the famous proposition that "a demand of commodities is not a demand for labor," as if a farmer did not furnish food to support the same amount of labor whether he uses his wheat to buy carriages or buy carts. On page 13 we find a statement of the wage-fund theory which would suggest that the author had read neither General Walker nor Henry George. It is stated baldly that "the rate of wages depends upon the ratio between capital and population at any time, and is regulated by it." There is no intimation that the productiveness of the labor has anything to do with the question. Had the law been examined in the light of statistics, it would have been seen at once that the ratio of capital to population is double as great in England as in Iowa, while wages are much less. However, the absence of such statistical examination was characteristic of the political economy of a generation ago, and Mr. Waters is perhaps not to be blamed that he has not improved upon the methods of his masters.

There is, however, one feature of his book for which Mr. Waters is to be blamed, and that is its abominable "Mnemonic Rhymes." For example (page 14):

> "In every trade or business, wages vary, don't you see?
> As that trade or business pleasant or unpleasant still may be,
> And as with ease and cheapness, or with trouble and expense,
> Such trade or business may be learnt, and this is common sense,"

etc., etc.

Were these rhymes as good as they are bad, it would still be difficult to express the sentiments aroused by an attempt to teach political economy by means of them.

Wit, Wisdom, and Pathos from the prose of Heinrich Heine, with a few pieces from the 'Book of Songs.' Selected and translated by J. Snodgrass. 2d ed. Boston: Cupples & Hurd. 1888. 8vo, pp. 338.

THIS book, of which the first edition was published in 1879, but which was not put upon the American market until now, is well worth reading, especially by those to whom Heine is not accessible in the original. It is fuller than the small volume of 'Scintillations' put forth fifteen years ago by Mr. Simon Stern of Philadelphia, and the extracts are longer. They are, indeed, long enough to afford some idea of the exuberant wealth of wit, humor, fancy, wisdom, sentiment, and learning scattered with a lavish hand all through the writings of Heine, not excepting mere pot-boilers, such as newspaper correspondence and the like. The 'Reisebilder' is, it is true, enjoyable by English readers in the translation of Mr. Charles Godfrey Leland, made a generation ago; but the remaining prose works are to them a sealed book, except for the glimpses vouchsafed by the present volume.

The translation is, in the main, satisfactory, being close enough to satisfy the requirements of fidelity, but not so literal as to smother the spirit of the original. How easy it is for the most practised writer to stumble in rendering the simplest sentence from one language into another, may be seen in Matthew Arnold's Essay on Heine, when he quotes as follows: "The Englishman loves liberty like his lawful wife, the Frenchman loves her like his *mistress*, the German loves her like his old grandmother." The word here rendered as "mistress" is, in the original, "Braut," and Mr. Snodgrass correctly translates it "bride." Another instance may be found in an essay by George Eliot in the *Westminster Review* for January, 1856, where Heine is made to speak of himself as a young man of one-and-twenty, while Mr. Snodgrass correctly has it two-and-twenty. It is curious to remark that in the French edition of Heine, authorized by him, and published under his eye, we read, "jeune homme de *vingt ans*," making a discrepancy of one year more than George Eliot's version. In the same

passage George Eliot translates: "So you want a bonus for having taken care of your sick mother, and refrained from poisoning your *worthy* brother?" Mr. Snodgrass gives us: "You think, then, that you should have a gratuity for tending your sick mother, or for not poisoning your *elder* brother?" Heine's phrase is "Ihren *Herrn* Bruder," and *worthy* is a decided intensification of Heine's irony, while *elder* is simply a mistake; "gratuity" is a more correct rendering than "bonus" of the original "Trinkgeld."

Mr. Snodgrass is not as successful with Heine's verse as he is with his prose. The most that can be said in his favor is, that he does as well as is possible for one who is not himself a poet. His versions are, perhaps, not inferior to those of other amateurs, like his countryman, Professor Blackie, or our own James Freeman Clarke, but they will not compare with the spirited work of Emma Lazarus. Like the last two, Mr. Snodgrass has himself passed away, since this edition was brought out.

Ignorant Essays. By Richard Dowling. D. Appleton & Co. 1888.

MR. DOWLING appears to be a person of literary enthusiasms, and the subject of his "ignorant essays" is his own "fads." He seems to have been affected by modesty when he selected his title, but there is no other evidence that he possesses that virtue. He expresses his opinion with a largeness of phrase that intimates his entire belief in himself; in fact, he does no more than "rave," like a college student over his favorite books. Enthusiasm, however, is not unpleasant to witness when it assumes so naïve a form. What he has to say is not criticism—his statements have no other charm than a boyish abundance of literary spirits; but it is something to be able to maintain the high temperature of a youthful adoration for Keats, De Quincey, and Mangan into the mature years of cold judgment. When Mr. Dowling is not enthusiastic, he is either clever or humorous—such cleverness as consists in naming "the two best books" as Nuttall's 'Standard Dictionary' and 'Whitaker,' out of which he makes a whole essay, and such humor as we can best illustrate by his remarks upon ourselves, alias "Uncle Sam":

"His contribution to the arts is almost nothing. His outrages against established artistic canons have been innumerable. He owns a new land without tradition. He laughs at all traditions. He has never raised a saint or a mummy or a religion (Mormonism he stole from the East), a crusader, a tyrant, a painter, a sculptor, a musician, a dramatist, an inquisition, a star-chamber, a council of ten. . . . He has devoted his leisure time, the hours not spent in cutting down forests or drugging Indians with whiskey, to laughing at the foolish old notions which the foolish old countries cherish. He has a wonderful fertile estate of two thousand million acres, only one-fourth of which is even to this day under direct human management. . . . But in none of these did he find anything but axes and whiskey of the least use."

So he goes on for pages to inform us that our literature has begun with burlesques and blasphemies exclusively, inasmuch as "Emerson, Bryant, Cooper, Poe, Hawthorne, Lowell, Holmes, and Irving are merely Europeans born in America," whereas "Ward, Harte, Twain, and Breitmann are original and American." Such humor, such cleverness, and such boiling enthusiasm as we have indicated make up a volume not inaptly named.

Histoire du Plébiscite. Par Charles Borgeaud. Le Plébiscite dans l'antiquité: Grèce et Rome. Geneva: H. Georg.

IN view of the fact that democracy is gaining a stronger foothold among civilized nations, M. Borgeaud feels justified in attempting a history of the part played by the people in the making of laws, the evolution of mass-meeting legislation. The volume before us treats of the ancient plébiscite, particularly that of Sparta, Athens, and Rome.

Contrasting the idea of law which prevailed at the beginning of history with that of to-day—then the voice of deity, uttered from the clouds and interpreted by priests; now the act of men, the result of reasoning and debate—the author asks for the reason of this change, and finds it in the history of the plébiscite. While some would place the transition in the rise of democracy in Athens, he finds a peculiar field for this evolution also in Rome. By a subtle operation of the mind, which we can scarcely appreciate, the Romans, without losing their supreme reverence for oracular utterances, began to take divine ordinances under human revision when these did not agree with popular desires. With the rise of the *plebs* and the introduction of the *plebiscitum* began a method of legislation which came to be regarded as coordinate, as *lex inauspicata*, till, finally, under the great jurists, law came to be defined as "that which the people commands and ordains." While the plébiscite of the ancients was quite different from the modern idea, and the proportion of people participating very small, yet its operation affected legislation in a manner parallel to that of humanism in religion and philosophy.

The student of politics will feel indebted to M. Borgeaud for his succinct yet entertaining treatment of this subject, and will await with interest the remainder of the work.

Madame de Sévigné. By Gaston Boissier. 8vo, pp. 205.—*George Sand.* By E. Caro. 8vo, pp. 235. Translated by Melville B. Anderson, translator of Hugo's 'Shakespeare.' [The Great French Writers.] Chicago: A. C. McClurg & Co. 1888.

THESE volumes in the original having been noticed at length by our Paris correspondent, it needs only to be said here that they are well translated, and that they have the meritorious quality of reading like translations. While he is never betrayed into the use of French idioms, Mr. Anderson follows his authors so closely and accurately that the character of the form continues to harmonize with the character of the thought—an effect too little aimed at by translators. This result is furthered rather than hindered occasionally by a felicitously free translation of a new word or phrase. In such passages Mr. Anderson seems, either by labor or by luck, to have found the very expression the author would have used had he been writing in English. The only criticism to be made is on the translation of the poetical passages which occur here and there. Mr. Anderson is evidently not an easy versifier, and his readers should be assured that he does but scant justice to poor Coulanges and the other *chansonniers* of his day.

35 Cents; $4.00 a Year.

Political Essays.

By James Russell Lowell. 1 vol., 12mo, gilt top, $1 50.

This book contains twelve papers, mostly on political questions relating to the War for the Union—its antecedents, phases of opinion during its progress, and salient features of the reconstruction which followed. The book closes with Mr. Lowell's recent address on "The Place of the Independent in Politics."

Mr. Lowell's sterling patriotism, his loyalty to his convictions, his marvellous literary charm, and his abundant and delicious humor lend special interest to this timely book.

The English Dramatists.

Edited, with Notes, by A. H. Bullen, of the British Museum. The works of George Peele. In two volumes, 8vo. The set, cloth, $6.00; *Large-Paper Edition*, $8.00.

The Lamplighter.

By Maria S. Cummins. *New Popular Edition.* 12mo, cloth, $1.00; paper, 25 cents.

'The Lamplighter' is probably, next to 'Uncle Tom's Cabin,' the most popular story ever written by an American author.

BRYN MAWR COLLEGE,—A COL- lege for women, ten miles from Philadelphia. Offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, History, Political Science, Physics, Chemistry, Biology, including Botany, and lectures on Philosophy. Gymnasium, with Dr. Sargent's apparatus complete. Fellowships (value $450) in Greek, English, Mathematics, History, and Biology.
For Program address as above.

PENNSYLVANIA, Bryn Mawr.

DAY AND BOARDING AND COL- lege Preparatory School for Girls. For prospectus, address Miss FLORENCE BALDWIN.

PENNSYLVANIA, Chester.

PENNSYLVANIA MILITARY ACA- demy. 26th year opens September 19. A MILITARY COLLEGE with four graduate courses: CIVIL ENGINEERING, CHEMISTRY, ARCHITECTURE, and ARTS. Degrees conferred in each, respectively C. E., B.S., B.AR., and A.B. A thoroughly organized Preparatory Department. For Circular, with full information, address Col. CHAS. E. HYATT, Pres't.

PENNSYLVANIA, Germantown.

FRANKLIN SCHOOL, CHARTERED 1887, offers for boys an advanced college preparation, and special training in English, English Literature, History, and Elocution. Reopens September 20. A large staff of teachers, with specialists in French, German, and music. Terms for resident pupils, $600.
Exceptionally fine building and equipments, with extensive grounds.
The Register, with full information, sent on application. GEORGE A. PERRY, A.M., Head Master.

PENNSYLVANIA, Germantown.

MISS MARY E. STEVENS' BOARD- ing and Day School, 202 and 204 W. Chelten Ave., begins its 20th year Sept. 20, 1888. The school has been *approved* by Bryn Mawr College, and Miss Stevens is *authorized* to prepare students for the entrance examinations. Pupils pass the examinations in this school.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for Young Ladies reopens Sept. 28, 1888.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9TH MONTH, 11TH. Thirty minutes from Broad Street Station, Philadelphia. Under the care of Friends. *Full college course for both sexes.* Classical, Scientific, and Literary. Also, a Manual Training and Preparatory School. Healthful location, large grounds, extensive buildings and apparatus. For Catalogue and full particulars, address
EDWARD H. MAGILL, LL.D., President.

RHODE ISLAND, Providence.

FRIENDS' SCHOOL FOR BOTH Sexes. Founded in 1784. Excellent home. Students from 18 States. All denominations. Thorough work in English, Science, Classics, Music, and Art. Our certificate admits to College.
Address AUGUSTINE JONES, LL.B.

VIRGINIA, Lexington.

WASHINGTON & LEE UNIVERSI- ty. Academic Departments; Law, Engineering. Important changes in Academic degrees.
Apply for catalogue.

Teachers, etc.

A GENTLEMAN, HAVING LONG experience, prepares for college, civil-service, and Regents' examinations. Address PROF. MARTIN, 236 West 4th St.

A PH.D. OF THE JOHNS HOPKINS University, wishing to teach Greek and Latin exclusively, desires a change of position. Address E. M., care of the *Nation*, New York.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

N. E. BUREAU OF EDUCATION does business in every State and Territory. HIRAM ORCUTT, Manager, 3 Somerset St., Boston, Mass.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 7 East 14th St., N. Y.

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.
E. O. FISK & Co., 7 Tremont Place, Boston.

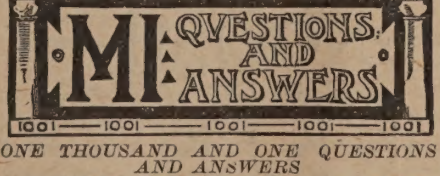
Roanoke College,

IN THE VIRGINIA MOUNTAINS.

Several Courses for Degrees. Also, a Business Department. Special attention to English. French and German spoken. Large library. Best moral and religious influences. Students from 16 States and Territories and Mexico. Graduates in 28 States. Expenses for nine months $149, $176, or $204 (including College fees, board, &c.). THIRTY-SIXTH SESSION BEGINS SEPT. 12TH.
For Catalogue, &c., address
JULIUS D. DREHER, President,
Salem, Virginia.

CLAVERACK COLLEGE

AND HUDSON RIVER INSTITUTE,
Claverack, N. Y.
Makes a specialty of preparing young men thoroughly for all colleges, a number of which receive pupils upon its certificate, without examination. It presents also systematic courses of study in the Collegiate, Latin, Scientific, Academic, Normal, Commercial, Oratorical Departments and the CONSERVATORY OF MUSIC AND ART.
Its healthful and picturesque location makes a delightful school home.
35TH YEAR OPENS SEPTEMBER 10.
Send for Illustrated Catalogue.
Rev. A. H. FLACK, A.M., Pres't.



ONE THOUSAND AND ONE QUESTIONS AND ANSWERS

ON UNITED STATES HISTORY, GEOGRAPHY, ARITHMETIC, ENGLISH GRAMMAR, THEORY AND PRACTICE OF TEACHING, PHYSIOLOGY AND HYGIENE. PRICE, EACH, 50 CENTS.

These Question Books are absolutely without a rival in preparing for examinations, for reviewing pupils in school, or for use as Reference Books. They can be sold in every family that has children to educate. The author of these books is an experienced teacher. *Circulars mailed free.* THE BURROWS BROTHERS Co., Publishers and Booksellers, Euclid Avenue, Cleveland, O.

FOR TEACHERS.

MASSAGE.—A REFINED NORWE- gian lady, graduate of School for Massage and Gymnastics for Health, wishes engagement of at least one year's duration with a hospital, a first-class physician, or by private parties as massagist or companion.
She is most highly recommended by Dr. Budde, Physician to King Oscar II. of Sweden and Norway, and by other prominent doctors and patients. Address
"NORA," care of Nation.

MACMILLAN & CO.'S NEW BOOKS.

NEW NOVELS.

NOW READY:

Mrs. Humphrey Ward's New Novel,

ROBERT ELSMERE.

By Mrs. HUMPHREY WARD, author of 'Miss Brotherton,' etc. 12mo, cloth, $1.50. *Reprinted by permission from the Seventh London Edition.*

"The book is a drama in which every page is palpitating with intense and real life. It is a realistic novel in the highest sense of the word."—*The Whitehall Review.*

"Comparable in sheer intellectual power to the best works of George Eliot. . . . Unquestionably one of the most notable works of fiction that have been produced for years."—*The Scotsman.*

Mr. Gladstone writes of this novel in the new number of the *Nineteenth Century:* "The strength of the book seems to lie in an extraordinary wealth of diction never separated from thought; in a close and searching faculty of social observation; in generous appreciation of what is morally good, impartially exhibited in all directions; above all, in the sense of omission with which the writer is evidently possessed, and in the earnestness and persistency of purpose with which through every page and line it is pursued. The book is eminently an offspring of the time, and will probably make a deep, or at least a very sensible impression; not, however, among mere novel readers, but among those who share, in whatever sense, the deeper thought of the period."

F. Marion Crawford's New Story,

WITH THE IMMORTALS.

By F. MARION CRAWFORD, author of 'Mr. Isaacs,' 'Saracinesca,' etc. Globe 8vo, cloth, $2.00.

"There is nothing in current serials so full of thought and of suggestion as is this curious story. It is almost packed with historic knowledge, and brilliant in wit, allusion, and epigram."—*Boston Traveller.*

Henry James's New Novel,

THE REVERBERATOR.

By HENRY JAMES, author of 'The American,' 'The Europeans,' 'Daisy Miller,' etc. 12mo, $1.25.

"The public will be glad to find Mr. James in his best vein. It is a relief to come upon this sparkling study of life and character in the manner which won for him general reading. . . . The book is thoroughly readable, and one is thankful again that there is so brilliant an American author to give us entertaining sketches of life."—*Boston Sunday Herald.*

"Mr. James is here at his best; his canvas is not too large and he fills it to perfection. Every character in the book stands out in clearly defined proportions, so admirably minute and complete is the technical workmanship. . . . It is impossible not to enjoy the process by which the characters of the story are portrayed for us."—*London Globe.*

Macmillan's Summer Reading Library.

In Paper Covers, price 50 cents each.

Designed to illustrate the principal Text-Books of Elementary Geography. With Colored Maps and Plans. 8vo. 30 cents.

A New Text-Book of Physiology.

General Physiology.

Including the Chemistry and Histology of the Tissues and the Physiology of Muscle. By John Gray McKendrick, M.D., F.R.S. 8vo. $4.00.

TWELVE ENGLISH STATESMEN.

NEW VOLUMES:

OLIVER CROMWELL.

By FREDERIC HARRISON.

12mo, paper, 50 cents; cloth, flexible, 60 cents; cloth, uncut edges, 75 cents.

"A most powerful and stirring portrait of one of the most singular men that the English race has produced. . . . Mr. Harrison compares the rise of England under him to continental power to the rise of Germany in our own time; it astonished foreign nations and won their respect to an equal degree. It is, however, on Cromwell, and not upon England, that attention is fixed, and the treatment is admirable."—*Boston Post.*

"Well and truly has Mr. Frederic Harrison told the story of Oliver Cromwell's life and work, and what a story it is."—*London Spectator.*

HENRY II.

By ALICE STOPFORD GREEN.

12mo, paper, 50 cents; cloth flexible, 60 cents; cloth, uncut edges, 75 cents.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JULY 19, 1888.

The Week.

THE country is to be congratulated on the unanimity with which the Democrats stood by their determination to make the importation of wool free to our manufacturers. The wool duty is, from every point of view, perhaps the least defensible of all the conflicting and injurious provisions of our tariff scheme. Its history has been a continuous history of logrolling and of intimidation of the legislators of the nation by the representatives of special interests. As to its intrinsic merits, no rational theory of protection can justify the imposition of a protective tax on this product of the most primitive of industries, a tax which is a vexation and hindrance to manufacturers as well as a burden upon the whole population as consumers. If this opinion needed any confirmation, it might be found in the fact that though Germany, France, and Austria maintain protective tariffs, and are also wool-growing countries, they impose no duty on wool. We do not believe that high duties on it could ever have been imposed here had it not been for the constant political pressure exercised by the wool-growers, and the "deals" they have been able to effect with the woollen manufacturers. It is interesting to note that on the last day of the debate a letter was read from President Whitman, of the National Association of Woollen Manufacturers, protesting against the relief of his industry from a tax upon its raw material. This is quite in keeping with the history of the wool duty. But Mr. Whitman might profit by reading the extremely cogent and admirably sustained argument which he himself, in the name of his Association, submitted to the Secretary of the Treasury in 1885. We have nowhere seen the cause of free wool more ably advocated, or the burdensomeness of the wool duty to all classes and interests more clearly set forth.

The debate on the rice duty, like that on the sugar duty, shows an interesting condition of mind on the part of the Republican members. They manifest an extraordinary desire to look into the merits of the case in regard to these two Southern products, and consequently develop very contradictory opinions. The only way to avoid such differences is to stick to every duty through thick and thin, which is the policy formally adopted by the Chicago platform. Mr. Hopkins of Illinois argued that the duties should be made lower, because "the statistics show that no business North or South pays any better than the cultivation of rice," and he stated that the production was now fifty per cent. greater than before the war. Then it was pointed out by a Southern member that this was an error, Mr. Hopkins having accidentally got the ante-bellum figure wrong by just one hundred million pounds, so that in reality there has been a decline of about thirty per cent. And, sure enough, a little further on in the debate, up rises Mr. Bayne and indignantly asks whether the consumers of rice are to be taxed at a high rate for the benefit of a small and retrograding industry. But why bother about the consumer, or go into details of more or less? Has not the Chicago platform given you the simple rule that every protective duty is to be retained, or, if it must be modified to reduce the surplus, it is to be raised to the prohibitory point?

Another respect in which the Republican treatment of the sugar and rice questions contrasts with their treatment of the other items of the bill is, that they talk about the total rate of duty in these cases, and not about the reduction from the present rate. In the case of every other item in the bill they clamor against the slightest reduction, on the plea of its destructive effect upon those engaged in the industries affected. Now, the Mills bill does not commit the inconsistency of leaving the sugar and rice duties untouched; it reduces both of them something like 18 per cent. It may be held that the reductions proposed in the bill are not sufficient; but it is absurd, and especially so for high-tariff men, to estimate the justice of the proposition by considering simply the total rate of duty. The Mills bill is not a free-trade measure; it is a very moderate and conservative measure for the reduction of the present tariff. Mr. Elliott of South Carolina did well to remind the Republicans that "it is a condition we are confronting, not a theory," and that the condition in this case was a duty of something like 113 per cent. imposed by Republican legislation.

An element of picturesqueness is occasionally infused into the tedious discussion of economic questions by Mr. Nelson of Minnesota, whose evident American patriotism does not prevent him from feeling a pride in his Norse ancestors and his hardy Norwegian kinsmen of to-day. In the steamship-subsidy debate the other day, Mr. Nelson began a little speech by saying that he had not intended to take part in the debate, but that while listening to it "thoughts came into his mind of what great navigators his ancestors had been, and what great navigators their descendants still are." He told what high rank the merchant marine of Norway holds, it being next in magnitude to that of the United States, although Norway has a population of less than two millions. He ridiculed the notion that our ocean shipping was in its present low state on account of the operations of rebel cruisers twenty-five years ago, and mentioned that when those cruisers were causing our ship-owners to sell their vessels at a sacrifice, "hundreds of them were purchased by that little country of Norway, and used in her commerce, although she had as good and ample material for shipbuilding and as good ship-carpenters as you had." And it was with evident pride that Mr. Nelson replied to a Republican member who asked why they bought them: "They bought them because they could buy them cheaper, under those peculiar circumstances, than they could make them at home, and because they had the privilege of buying them," whereas with us "the trouble is, you have put the American merchant marine in a sort of strait jacket."

Senator Hoar has made an elaborate attack on the Fisheries Treaty, which he calls "a speech," but which is in reality an essay, filling a pamphlet of sixty pages, and containing a history of the American fisheries from the earliest times. We need hardly say that it contains very little that is new, which is no discredit to Senator Hoar, considering what thorough discussion the subject has undergone. He makes one new charge against the Administration, that it refused or failed to communicate the proposals and counter-proposals made while the Commission was in session. To which Mr. Bayard replies that it is absolutely untrue; that no record of the proceedings was kept except the daily protocols drawn up by the Secretary, which were transmitted to the Senate when called for in March of this year. When one extricates the Senator's main complaint from the mass of historical matter that envelops it, it is found to be simply the old one that the Canadians will not allow Americans to carry on the fish trade from Canadian ports. American fishermen wish not only to fish in Canadian waters, and to enter Canadian ports for wood, food, and repairs, but to enter them for any purpose whatever, or, in other words, to enter them both as fishing and trading vessels. The Canadians offer these privileges in return for the free admission of their fish and fish oil to our ports. This Senator Hoar treats as an impudent proposal, and he is not only angry with Secretary Bayard for listening to it, but for failing to override it by threats. No arrangement with Canada will satisfy him, or even be accepted by him as worthy of discussion, which does not compel the Canadians to share with Americans all the advantage and profits of their home fisheries.

Of course, this seems, on its surface, fair enough. But it is in reality most disingenuous. There are no fisheries on our coast in which the Canadians ask to be allowed to share or to fit out in Boston or Gloucester to carry on. When they come to our ports, they come simply as trading vessels with a commodity to sell. They do not seek to make our coast the basis of their fishing operations. In denying them access to American ports, we should, therefore, be denying them privileges accorded to all the world in order to punish them for refusing to let us share in something in which we do not deny them rights of property. The vicinity of fish-

ing grounds is an advantage of the nature of property to the inhabitants of the coast. It would doubtless be churlish to refuse to allow foreigners to share it on any terms. But the Canadians do not do this. They say, "You may share all our advantages; your fishing vessels may enter our ports for any purpose, if you will give us free access to your markets." Sooner than accede to this, however, Mr. Hoar is ready to go to war. To him a proposal from a foreigner that we should take off an import duty on anything, has a savor of impudence about it like a proposal to commit some act of dishonesty or indecency, and he would punish it if he could. He quotes in the opening of the essay Burke's picture of the energy and success of the New England fishermen, and then goes on, with much fuming and fretting, to furnish an excellent illustration of that admirable saying of the same orator, that "a great empire and little minds go ill together."

It is difficult to tell whether the attempts of the Chicago *Tribune* to become reconciled with the programme which its party has this year laid down for itself partake more of the pathetic or the ridiculous. Its repudiation of the ultra-protection plank of the platform is complete, but it is exercising all of its ingenuity to find some way to excuse its support of the ticket on that platform. Its latest attempt takes the form of an argument to prove that the recent National Convention at Chicago had no right to speak for the party. It calls the free-whiskey utterance the "blunder or trick of a platform committee," and lays down the proposition that "a convention called as the agent of an existing political organization with well-known principles and policies must act within its commission, and perform only the specific duties intrusted to it," comparing such a convention to a church synod or conference. It is hardly worth while, perhaps, to argue against so ridiculous a proposition. A political convention is made up of delegates who are chosen just as much to adopt a platform as they are to nominate a ticket. There is, in fact, no other existing authority to set forth the party's principles. "A party's platform can only be changed," says the *Tribune*, "by consent of its members." The *Tribune* has announced that its way of withholding its consent to the free-whiskey platform is going to be to sustain the candidates who have been placed on that platform, and who have in their informal acceptances of their nominations signified their commendation of the doctrines held out to them, and will, of course, do so more explicitly in their formal letters of acceptance. The *Tribune* knows perfectly well that the only way the people can manifest their condemnation of a political platform is to defeat at the polls the candidates selected to put that platform into effect.

The woman suffragists appear to have a strong case against Judge Nash of Washington Territory, who recently declared the act giving women the right to vote in that Territory unconstitutional. He took the ground that when Congress, in the organic act, granted the Territorial Legislature the right to confer suffrage, it did not expect the Legislature ever to confer it upon women, and therefore that no Territory can grant its women a right to vote unless it can be shown that a majority of Congress believed in woman suffrage at the time when they conferred upon the Territory the power to regulate suffrage within its borders. This would be a weak position at best, in view of the fact that three Territories have granted suffrage to women without any question of their power being raised, and that the women of Wyoming have been voting for nearly twenty years; and the opinion loses all claim to respect in view of the experience of Utah. It will be remembered that when Congress two years ago wanted to deprive the women of that Territory of suffrage, it inserted a special section in an act, thereby admitting that the Territorial Legislature had been within its right in granting them the ballot, in the absence of Congressional prohibition of such action, and that the theory of such action being unconstitutional was absurd.

Our Consul at Amsterdam calls attention in a recent report to an interesting movement which has been started in Holland in the shape of an association called "The Foreign Country." This society has been organized by a number of the most prominent merchants and manufacturers of Holland, and by other influential citizens, with a view to keeping up the commercial rank of Holland in competition with the more powerful nations which are now so greatly enlarging their distant markets. The advantage which England and Germany have over Holland "is chiefly due," says the circular of the Association, "to the fact that both these countries possess in the principal markets of the world commercial establishments, entertaining direct intercourse with the mother country. By this means trade and navigation with the English and Germans are constantly stimulated, and their industry is kept informed by countrymen about the wants and requirements of other nations, and obtains fresh opportunities for the sale of its productions." With a view to supplementing the deficient opportunities of the Dutch in these respects, the Association "intends to procure, through personal influence of the members and by the interference of our consuls, for such young men as it shall think fit, appointments with commercial counting-houses in trans-Atlantic places." The Association intends to pay the travelling expenses of these young men, and give them such other pecuniary assistance as may seem necessary, with the understanding that the beneficiaries shall feel themselves morally bound to return the money when they are in a position to do so, and the money so returned will be again employed for the same purpose. We have no doubt that the energetic merchants of Holland will push this scheme of commercial fellowships with vigor, and it will be interesting to observe its development. But why not first try our plan of giving the foreign consulships to broken-down politicians, men with weak lungs in search of a warm climate, drunkards, ne'er-do-weels whom their friends want to get rid of, and active stump orators?

The London *Economist* has been making very severe strictures upon the mode in which the budget for India is determined. It has complained that the estimates are very loose, being made, in accordance with custom based on the provisions of an old law, some weeks earlier than it is possible to arrive at an accurate knowledge of the returns for the closing year. It also urges that there is no effective outside control over the financial administration of India. "The British Parliament is supposed to exercise supervision and control; but although this is the theory, every one knows that in practice Parliament never devotes more than a few hours at the fag end of a session to the consideration of the Indian budget, and then scrambles through the discussion in the most perfunctory and superficial fashion." In the issue of July 7, from which we have been quoting, the *Economist* writer, in replying to a defence of the Indian administration against his charges, made in an official communication by E. J. Sinkinson, one of the Secretaries of the Indian Government, handles Mr. Sinkinson without gloves; but at the same time the high position which the British civil-service system occupies in the public estimation is signally illustrated. After saying that the £70,000,000 of Indian taxation are "spent according to the virtually uncontrolled discretion of a handful of Government officials, there being not even an independent non-official audit of accounts," it is no small compliment for a severe critic to add: "That these officials are a body of honest and honorable men, filled with a sense of their responsibility, and striving earnestly to promote the best interests of the people of India, every one acknowledges. Still they are only human, and prone to err; and it is in the very nature of things that absence of control leads to laxness, and the growing up of practices that are apt to develop into abuses."

Frances Power Cobbe, discussing in the last number of the *Contemporary Review* the effect of scientific views of life on religious thought, mentions as an illustration the growing love of medical publications among the young of both sexes, and the growing interest in surgical operations. This brings her, naturally enough, to the practice which has sprung up within a few years among the doctors, and is particularly common in this country, of describing the patient's condition in detail in their daily "bulletins" when he happens to be a distinguished or well-known man. Formerly the bulletin used to be simply a statement of the patient's condition, whether better or worse, more or less hopeful, than the previous day. Now the attending physicians insert the reasons for their conclu-

sions in the shape of accounts of the patient's temperature, and of the working of various internal organs — stuff, in short, which is of no earthly value to the public, simply satisfies the disgusting curiosity of a low class of newspaper readers, and ought to be confined to the nurse's record. The bulletin, too, is now signed by a larger number of doctors than it used to be. Formerly the principal physician told over his signature all the public needed to know. Nowadays a bulletin without four or five names to it seems to carry little weight. In fact, the multiplicity of signatures has a most unpleasant look of advertising. It produces the impression that the head doctor is trying to give as many of his brethren as possible a chance to get their names before the public in a conspicuous way. The general result is, as Miss Cobbe truly remarks, that—

> "The last recollection which the present generation will retain of many an illustrious statesman, poet, or soldier will not be that he died like a hero or saint, bravely, or piously, but that he swallowed such and such a medicine, and was perhaps sick at his stomach. Deathbeds are desecrated that doctors may be puffed and public inquisitiveness assuaged."

Those who remember the bulletins issued during President Garfield's and Gen. Grant's illness, and those of some others more recently, will think this a very mild way of putting it. The bulletins are not the worst of the matter, however. The interviews of the reporters with the physicians are a distinct aggravation, because they always contain fresh particulars—that is, a great deal of diagnosis and prognosis thrown into a popular, and sometimes a humorous form, to which the reporter gives as many journalistic touches as are necessary to make a thoroughly nasty mess. Has not the question an ethical side, which deserves the attention of the Medical Associations? Ought not the doctors to be restrained in the composition and publication of bulletins, as they are now in the matter of advertising themselves by periodicals or by hand-bills?

The proposal of the English Ministry to furnish a commission of judges to try the *Times's* charges against Parnell seems to be most reasonable and well-advised. A commission of English judges is probably the best tribunal for such a purpose that it would be possible to devise, and its decision would be accepted as the best obtainable, by the whole civilized world. The *Times* would of course prefer a London jury, but every fair-minded Englishman appreciates the force of the objections which the Parnellites make to an action at law, restricted by rules of legal evidence, and tried before a body of this kind. The Parnellites will now seek to exclude from the consideration of the Commission everything but the authenticity of the letters indicating complicity with assassins which the *Times* attributes to Parnell, while the *Times* seeks to have all the charges it makes in its pamphlet, "Parnellism and Crime," laid before it. The letters are, however, the only thing a sensible man need feel called on to answer. The rest of the pamphlet is an ordinary "campaign document," full of vague insinuation, forced inference, and ingenious collocation, all seasoned with the regular journalistic abuse. It would hardly be possible to get a bench of judges to agree to wade through it.

Nothing in our day could better illustrate the hold which the journalistic superstition has on the modern mind than the importance which the British public attaches to the *Times's* charges. They are really made, and believed in with knowledge, so far as is known, simply by the editor, Mr. Buckle, an obscure young man, formerly an assistant editor, and Mr. Walter, the proprietor, an elderly and dull country squire without any personal weight or influence. If the cry were, "Buckle and Walter believe Parnell was an accomplice of assassins," nobody would pay much attention to it, and most people would be amused by it. But by calling Buckle and Walter "the *Times*," the charges assume in Englishmen's minds great gravity, and compel the Government actually to organize a special tribunal to try them. Respect for the *Times*, without regard to the kind of men who are behind it, is really a discredit to a civilized nation in our day. It is a conversion of the cylinder press into a sort of fetish, such as an African chief would undoubtedly make of it, but of which men in broadcloth ought to be ashamed.

The influence of the Floquet-Boulanger duel on French politics, odd as it may seem to us, is likely to be very great. Floquet has shown himself a powerful and skilful debater in the Chambers, and has made mincemeat of poor Boulanger whenever he took the floor; but the French public does not expect a "brave général" to be much of an orator, and it does not discredit him seriously to be worsted in encounters of the tongue with an "avocat"—a well-known term of contempt in French military circles. To be worsted in a duel with swords, however, with an avocat considerably his senior—in fact, not far from sixty years old—is something which they are not likely to forgive in a soldier. Rochefort, who is an extremely French Frenchman, probably expressed the popular feeling very correctly in saying, as is reported: "How wonderful! The youngest general in the army let himself be pinked by a barrister nearly sixty years old!" In other words, whether Boulanger gets well or not, we have probably seen the last of him as a politician, and the Republic will be greatly fortified by having in one way or another disposed of a military pretender who at one time seemed dangerous.

The peculiar circumstances attending the reëlection of President Diaz will freshly warn Americans against reading their own political ideas into the Mexican political forms. The fact that a man could be elected President without having ever said that he would accept the office, without ever having been formally nominated, or having put forth a declaration of principles and purposes, or having one put forth for him by a party whose representative he had been chosen to be, is enough of itself to show how hollow is the pretence of popular elections in Mexico. And when we add to this the fact that the legislative power has been renewed in the same underground manner that has marked the choice of the Executive, so that it can be said of the new Congressmen that their "politics are mostly unknown," we see how impotent universal suffrage may be. In fact, the necessary preliminaries to a real election by the people are wanting in Mexico. The country does not know what a political party is, in our sense of the word. The only thing approaching a party platform known to Mexicans is the pronunciamiento of the leader of a revolution; and that means of political education is now, happily, largely a reminiscence. There is no such thing as public political discussion. The press has been so closely muzzled of late that its limited power as a political educator has been made smaller than ever. The indirect system of voting is a most manageable instrument, and the elections pass off almost in secrecy. Indeed, the hopeless wonder with which intelligent Mexicans regard our own immense fervor and agitation at times of important elections, is proof enough that their popular voting is only a name.

Yet all this is not saying that the choice of Gen. Diaz for a third term is not highly complimentary to him and his Administration of the past four years, nor that it is not probably the best thing that could have happened for the country. He has undoubtedly made a valiant stand for economy and efficiency in the public service. In all international relations, excepting, perhaps, a part of his policy in respect to Guatemala, he has conducted affairs with prudence and dignity. The enormous financial difficulties of the country he has made determined efforts to meet, and if his success here has not been as great as was anticipated, it has been perhaps as great as was possible in the nature of the case. The pronounced favor he has always shown towards plans for popular education and religious freedom will be a guarantee against any serious Catholic reaction under his rule. In fact, he has recently taken occasion to declare anew his opposition to the clerical programme, and has been, in consequence, bitterly assailed by some of the organs of the Church. That his election marks a new step in the centralizing tendencies of Mexico is certainly true; yet it may very well be that the best hopes for the future lie in the establishment of a firmer national power, even if it has to be a personal power, which will enforce order, direct and stimulate internal improvements, and work towards the diffusion of education, and so, at last, towards a recovery by the people of their constitutional right to self-government. That President Diaz is moved more by a desire to accomplish something like this for his country than by personal ambition, is a belief which his attitude during his present term certainly warrants.

WHISKEY.

Col. "Bob" Ingersoll probably never made so great a mistake as that glowing eulogy on whiskey which he wrote about a year ago, and which we here reproduce :

"I send you some of the most wonderful whiskey that ever drove the skeleton from a feast or painted landscapes in the brain of man. It is the mingled souls of wheat and corn. In it you will find the sunshine and shadow that chase each other over the billowy fields, the breath of June, the carol of the lark, the dews of the night, the wealth of summer, and autumn's rich content—all golden with imprisoned light. Drink it, and you will hear the voice of men and maidens singing the 'Harvest Home,' mingled with the laughter of children. Drink it, and you will feel within your blood the star-lit dawns, the dreamy, tawny dusks of many perfect days. For forty years this liquid joy has been within the happy staves of oak, longing to touch the lips of man."

The objection to this is that, after making all due allowance for the exaggerations of poetry, it gives a radically misleading impression as to the social value of even very old whiskey. If whiskey produced the effects which Col. "Bob" ascribes to it, it would undoubtedly be the best gift bestowed by Providence on suffering, toiling humanity. But unfortunately it does not produce these effects on any, or on more than very few at all events. It may possibly cause some to "hear the voice of men and maidens singing the 'Harvest Home,' mingled with the laughter of children." But what the great majority of people hear when they take it in sufficient quantity to be affected by it, is the voice of men swearing at the maidens, and the yells of children under the application of the paternal poker and tongs. In truth, it affects different people in different ways. Some it makes hilarious and others morose. Some can take a good deal without feeling it, while others are upset by a mouthful of it. It was extremely rash of the Colonel to predict to any particular individual what its effect on him would be. Very likely its principal effect on his friend was to make him feel within his blood simply a passionate desire to lie down and go to sleep.

The solemn truth is, that anybody who would now maintain that whiskey is a convivial drink, in any proper sense of the term, would, as Canning remarked of the man who said he liked dry champagne, maintain anything. It obtained its fame as such in ages and countries in which men who drank together did not converse or expect to converse, or to have any pleasure but that of getting very drunk, or, in other words, of losing the ability to walk steadily or talk coherently. In those days, say the seventeenth and eighteenth centuries, when men met socially, they always fell to drinking, and in Scotland and Ireland the drink was whiskey; but it did nothing for them in a convivial sense except set them to singing songs in the brief interval before they became absolutely silly. In those days, as any one may see in reading Pepys's Diary, whenever two or three men got together over a bottle or a tankard, they did not talk—they sang, or one sang and the others joined in the chorus. The choruses of the old songs, mostly rigmarole, were intended simply to enable the whole company to take a hand in the entertainment. For this purpose of starting the singing, whiskey was perhaps as good as anything. But, for social purposes in an age when men meet to talk, and have lost the art of singing convivial songs, all spirituous liquors are well-nigh worthless. They steal the senses and paralyze the tongue too rapidly. Few can drink whiskey for half an hour, even in the smallest sips, without becoming more or less incoherent, if not noisy and quarrelsome.

In a period when men converse when they meet, and have topics of conversation furnished them in great abundance by the newspapers, what is wanted is a liquor that will exhilarate only slightly, and which is only intoxicating when taken in great quantities, and the effects of which pass off rapidly. This is furnished by most kinds of wine or beer. People can "sit over" wine or beer for hours, and get just enough stimulation from it to loosen their tongues, without any fear of a disturbance or disorder or sickness. Whiskey-drinking in the same manner and during the same period would probably produce very disgusting scenes, and break the party up in a row, and send them home as nuisances or terrors to their wives and children.

For this reason the failure of the vine in France and some other countries of continental Europe, and the substitution of whiskey and various forms of brandy for wine, as popular beverages, must be regarded as one of the greatest misfortunes which have overtaken the modern world. We have several times given in these columns some account of the alarm it is exciting in France and Switzerland, and of the energetic measures which have been proposed to check the spread of what is called "alcoholism"—that is, of the passion among the masses of the people for drinks containing 50 or 60 per cent. of alcohol, instead of 6 or 7 per cent. At this moment, both the statesmen and scientists of continental Europe are really at their wits' ends to devise means of saving the health and morals of the population from what we may call the ravages of all distillations from barley, rye, corn, potatoes, beet-roots, or, in other words, what we may generically call whiskey. They do not want to have "landscapes" painted in the brains of the population, especially when the landscapes are generally filled with snakes and demons and all manner of vermin.

The United States has had this experience already, and has certainly profited by it. It once had cheap whiskey, and we know what the result was. The *Chicago Tribune* described it thus the other day:

"Wipe out the internal revenue altogether, what would be the result then? Down would go whiskey to 25 cents a gallon, and by retail to 3 cents a glass, as it was in ante-war days, when the best Monongahela whiskey could be had for 5 cents a swig, and common whiskey for 3 cents; and all the evils of those days would be let loose again with redoubled force, because money with which to buy liquor is so much more plentiful now. There are plenty of men living who can remember the 25-cents a-gallon whiskey days. They can remember how the farmers came to the towns, some with jugs, some with kegs, and some with barrels. Some would give excuses that they were afflicted with all the diseases to which flesh is heir, and which could only be cured by whiskey. They had malaria, and might have snake-bites to cure. Their drinking water was so poor they could not use it without mixing whiskey with it. Never were farmers in such an unhealthy and moribund condition as in those days. They could not get through harvesting, threshing, ploughing, corn-husking, or log-rolling without it. It was as necessary to the hay-mowing and the harvest as the scythe or the sickle. The whiskey-jug on such occasions was as common in the West as the rum-jug in New England, when every one, from the deacon to the farm hand, had his wet rations. In those days of cheap whiskey there were ten drunkards to one now. Delirium tremens was a common disease; now it is rare. Then every one filled up with whiskey or rum. It was one of the staffs of life in every house."

The Providence *Journal*, discoursing recently on the same subject, said :

"For nearly half-a-century prior to the outbreak of the last war the Government imposed no specific tax on whiskey, and exercised no direct supervision over its production. It was an era of 'free whiskey,' and what was the result? The average market price was twenty-four cents a gallon, and it could be bought by the drink in saloons at three cents a glass. The effect was seen in the pitiable inebriety prevalent in all classes of the community—an evil that was so exceedingly common that the early temperance reformers had great difficulty in making people believe it was an evil at all. In the country districts, especially, where now is the stronghold of temperance, drunkenness was almost universal. Whiskey was one of the chief articles of barter at all the cross-road stores; the whiskey jug was a conspicuous figure in every farmer's market-wagon; and even the women and children were habitual whiskey-drinkers. It is not beyond the memory of men now living when in the country towns it was no more uncommon to meet a tipsy clergyman than to see a woman or half-grown boy staggering under an overload of spirits, or a farm-hand lying 'blind drunk' by the roadside. The Rev. John Marsh, in his 'Temperance Recollections,' describes his flock in Haddam, Conn., a typical New England community, as 'a stanch, well-informed but plain people, whose labors were in ship-yards, coasting, fishing, quarrying, and farming; labors in which ardent spirits were a daily ration at eleven and four as regularly as food was provided at other hours. A pitcher of water, as a part of table furniture, was unknown. No one, not even the most delicate female, used it.'"

We do not care what any one's views about temperance or total abstinence may be; every man who values either law or order, or rational conviviality, must hate whiskey, or must desire, if he cannot banish it from the land altogether, to see it made hard to procure. There is no greater delusion than to suppose that a glass of whiskey can be considered the "social glass," or that real conviviality—that is, the free interchange of ideas, or jokes, or songs, or quips or cranks of any description—is promoted thereby. On the contrary, it is a highly anti-social drink. It rapidly produces either stupor or extreme irritability, and is, indeed, especially adapted to the needs of the solitary drinker. It never tastes so well as in the private jug of the lonely toper. It is a liquor which is probably only drunk in ninety-nine cases out of a hundred by men who wish from the bottom of their hearts they could give it up, and find that it fills their blood not with the "tawny dusks of perfect days," but with awful forebodings of domestic and professional ruin.

GEN. HARRISON'S RECORD.

The Indianapolis *News*, an intelligent and independent journal, occupies the anomalous position of supporting the Republican can-

didate for President and opposing the Republican platform and the election of Congressmen who stand upon that platform. This seems to us a case of extraordinary stultification, for the election of Gen. Harrison would obviously nullify the work which the *News* hopes for from the tariff-reform Congressmen, inasmuch as he would be bound by the platform upon which he stands to veto a bill such as tariff reformers would send him. We hailed Gen. Harrison's nomination as "a very respectable one," and a happy escape from the threatened renomination of a personally unworthy and unfit candidate. At the same time we pointed out that his personality would cut but a small figure in the canvass, and that the selection of such a man "leaves the field open for the freest discussion of the principles which divide the American people." We must confess, however, that Gen. Harrison's record in the Senate proves, upon examination, to be far less creditable to him than we had supposed, and that his position upon certain great issues was so indefensible that we could not support him, even if he stood upon a decent tariff platform. First among these issues we rank that of centralization. We hold stoutly to that view of the relations of the States to the Federal Government which was held by the Republican party of Abraham Lincoln's day; and we believe with Gen. Hawley, one of the few Republicans in Congress who still maintain the ancient doctrine of the party, that the "tendency towards a consolidation of the entire powers of Government," as illustrated in the bill for Federal interference in education in the States, "is one of the strongest to-day, and one of those most dangerous to the Republican experiment as our fathers understood it." Gen. Harrison holds the opposite view—a view which runs directly counter to the Constitution as interpreted by the Supreme Court, and which would sanction an entire revolution in the relations between the States and the general Government. His support of the Blair bill, given, as the *Congressional Record* shows, after careful deliberation and with full knowledge of what it implied, proves him a believer in centralization in its most dangerous form.

Gen. Harrison's pension record shows that he is not a safe man to trust with executive power at a time when the Treasury needs protection from the raids of the claim agents and camp followers. He voted for the Dependent Pension Bill, which President Cleveland vetoed, with the approval of the country, in February, 1887—a bill which even so partisan a Republican journal as the Cincinnati *Commercial Gazette* was constrained to admit "opened the door for vast abuses." Moreover, he introduced a great number of private pension bills, several of which were so very bad that Mr. Cleveland had to veto them, one of the proposed beneficiaries having been a man who had deserted. Furthermore, he would be bound to approve any pension grab like the revival of the arrears job, involving the payment of hundreds of millions, which would surely pass Congress if the Republicans controlled both branches, the party being already committed to it. Gen. Harrison's position regarding the pension question should cost him the support of independent voters.

The Republican candidate has shown himself a man who favors the most reckless extravagance. The St. Paul *Pioneer-Press*, a Republican paper of standing, was quite within bounds the other day when it called the Hennepin Canal scheme "the most gigantic and unequalled piece of jobbery" ever contained in a river and harbor bill, and described it as an "attempt to commit the National Government to the construction of a stupendous system of sewerage for Chicago." Senator Ingalls of Kansas once described it (July 10, 1886) as a scheme "to commit the Government to the expenditure of between $10,000,000 and $25,000,000 to lift the commerce of the Northwest step by step up a gigantic water stairway of 208 feet up to the Mississippi River, and then let it down again step by step, and up again 140 feet more to Chicago." Nor is the scheme bad alone in itself; it would inevitably prove the forerunner of many other equally tremendous jobs. Congressman Browne, the oldest and ablest Republican Representative from Indiana, who has always earnestly opposed the project, argued against it on one occasion (July 20, 1886) with great force upon this broad ground: "Rich as this nation is, great as are its revenues and its sources of wealth, you are entering upon a system which, if not arrested, may bankrupt this magnificent republic of ours." Gen. Harrison voted for this "most gigantic and unequalled piece of jobbery"; and, what is worse for him, he did it with his eyes open, for he once delivered a speech in favor of it in the Senate (July 8, 1882). A Senator who endorsed the Hennepin Canal scheme, by that very act showed himself unfit to be President.

All that has come to light about Gen. Harrison's private character since his nomination strengthens the impression that he is an estimable person, and does not live in constant apprehension of somebody's printing letters which he had directed to be burned because they would expose his dishonesty. This is a great gain over the situation four years ago. But it necessarily eliminates the personality of the candidate from the canvass, and leaves him to stand before the people upon his party's platform and his own record in the Senate. The former alone should condemn him, but if it were not sufficient, the latter is fatal to him. The advocate of centralization, the defender of reckless pension schemes, the friend of Hennepin Canal jobs, is not a safe man to be President.

PUBLICITY.

THE value of the proceedings before the Fassett Committee can hardly be overestimated. The work which these legislative investigations have done for the cause of good government and political morality during the last few years has been very great. The effects of the Sharp investigation, for instance, will undoubtedly be felt in municipal affairs for many years. It brought a whole band of criminals to justice, or drove them out of the country, or checked their activity, and, what was better than all, revived public faith in the possibility of enforcing the Penal Code against corruptionists. It was, in fact, on the general disbelief in the possibility of obtaining convictions for bribery that men like Sharp flourished and grew rich. Very likely they will before long again grow bold and resume their trade; but they will not in our time be as bold as they were, or make as much money as they used to make. The press might have denounced them for a hundred years without making as much impression on them as was made by one hour of examination under oath.

The investigation of the Custom-house affairs by the Senate Committee was also very fruitful. Without it, Assistant-Secretary Maynard's flat denials would have stood unimpeached, and apparently unimpeachable, and he would have lived on as a martyr of newspaper malignity and slander. But the minute the subpœna was applied to his case, a flood of light about appointments and removals and frauds and "pernicious activity" burst forth and helped purify the political atmosphere. At this moment, too, the aqueduct investigation is giving us illustrations of political manners and morals even among what may be called picked men, which are and will continue to be most wholesome for doctrine, for reproof, and for instruction in righteousness.

It has often been said bitterly of these investigations, by people who do not like to be investigated, that they do not confine themselves to "legal evidence," and that they are conducted under the influence of partisan motives. It is true that the evidence they take is not always legal evidence, but legal evidence would not answer the purpose. No rational man who wishes to inform himself about a person, place, or thing confines himself to legal evidence. He takes human evidence—that is, the evidence on which the human race manages its affairs and shapes its conduct—and mighty good evidence it is. Lawyers do not like it, but it makes the world go round.

Nor is it an objection to these investigating committees that they are animated by partisan motives. Their motives do not hurt their work, except, possibly, by restricting the field of operations. But even when they do restrict the field of operations, they make compensation by driving the plough deeper in the ground which they cover. No politician can be got to make a thorough inquiry into anything from a simple desire to benefit his country or his race. He must be allowed a few earthly aims and low desires in order to get really good work out of him as an investigator. What the public demands is that he shall summon witnesses, produce books and papers, and ask a full line of pertinent questions. If he does this, it matters little how corrupt his motive may be.

Now, what is the fundamental reason why these investigations are so valuable? Simply the fact that they supply publicity about transactions which ought never to have been private. They communicate to the public information the public ought to have pos-

sessed from the beginning, but which it is the chief aim of a great many men in office to keep from it.

A large proportion of the public officers in this city, we venture to assert, would like the business of their offices to be considered strictly private and a large proportion of their subordinates "confidential" agents; but nothing worse could happen either to them or the service. There is hardly a man in any public office who is not helped and fortified, not only against other people's badness, but against his own, by having the world know what he is about.

Take, for instance, the case of this Aqueduct Commission. Nearly everything of an objectionable or disreputable character which has been revealed in the evidence is the result of secrecy. The Commissioners were expressly directed by the statute to open the bids or proposals "publicly." They evaded this with the connivance or consent of men of Mr. Dowd's standing, by secretly ascertaining beforehand what bids would be made, and what bids they would accept. They took, moreover, every precaution possible to keep from the public all knowledge of the motives which animated them in performing this most important of all their official duties, by failing to keep any minutes or other record of their proceedings. Had these proceedings been public, as they ought to have been, there is little doubt the work would not have been awarded in two huge sections to two firms of contractors, because the flimsiness of the reasons for this arrangement, which is now acknowledged, would have been detected at the outset. The theory that from any point of view it was desirable to give the work out in two large slices would, of course, have never been produced when all concerned knew that the job was immediately to be divided up among a large body of sub-contractors. Nor is it at all likely that Fish would have got up his little scheme of reorganization had he known that the other Commissioners would not give him the shelter of silence, and that he was going to intrude himself into a body of men who were in frank and loyal relations with the people of the city, handling the public money on the table with open books.

BRITISH WAGES.

THE present agitation of the tariff question has given rise to a great demand for statistics bearing upon the various aspects of the subject. It is, however, almost a commonplace that no cause is so poor but that it can find statistics which can be made to appear to support it. The complexity of most statistics is such that a skilful and not too scrupulous advocate can make them tell strange tales. But this is not all, nor the worst; there always remains the connection of cause and effect, which statistics alone cannot enable us to determine. Those who laud our protective system as the corner-stone and the only safeguard of our prosperity and of the welfare of our workingmen, usually consider their task accomplished when they have written down the figures which record our progress during the past generation. This progress has taken place under protection, and they think they are acquitted of the task of showing that protection has been the cause of it. But, fortunately, our own is not the only country which has statistics; and any one who examines the statistics of other countries will soon convince himself of the absurdity of the claim that our indebtedness to the protective system is shown by the evidence of statistics.

There are two classes of facts, especially, which are a dreadful stumbling-block to the protectionist statistician: the superiority of English to Continental wages, and the rise of wages in England during the free-trade era. As to the latter point, we have fortunately very high authority for determining it. On the opening of the fiftieth session of the Statistical Society of London in 1883, its President, the eminent statistician, Mr. Giffen, chose for the subject of his inaugural address "The Progress of the Working Classes in the Last Half-Century." The table which he there presents, though itself showing in a striking way what opportunities such tables offer for intentional perversion, exhibits unmistakably an enormous rise in the wages of British labor. The least increase shown by any occupation in the fifty years is 20 per cent., in nearly every case the increase is more than 50 per cent., and in one case, that of the Bradford weavers, it exceeds 150 per cent. From a table showing so great a diversity in the different occupations, it is difficult to draw an accurate numerical conclusion; what is plain is, that the workingmen of England have made an enormous advance in their rate of wages. Nor is this all. At the same time that his wages have been increased, the English workingman's hours of labor have been diminished, the nine-hour day being now almost universal in England; Mr. Giffen estimates the average reduction of hours at 20 per cent. A French economist, M. Émile Chevallier, in his work on 'Wages in the Nineteenth Century' (Paris. 1887), to which was awarded the prize of the Académie des Sciences Morales et Politiques, sums up the matter in this way (p. 100): "The English workingman has obtained in fifty years an increase of from 50 to 100 per cent. in his money wages, and a diminution of 20 per cent. in the duration of his daily work; he has therefore made an advance in round numbers of from 70 to 120 per cent."

As to the comparison between English and Continental wages, that is a less simple matter; the variations are great in each country, and the classifications of employees vary from one country to another. The fact, however, that there is a vast difference in favor of the English workingman is notorious; it is as unnecessary to prove it by statistics as it is to prove that our own workingmen have better wages than those of Great Britain. As to the exact figures, one can only appreciate the difficulty of arriving at them by taking a glance at the bulky volume published by the United States Bureau of Statistics in 1875, under the title of 'Labor in Europe and America.' No mode of striking an average could lead to a really accurate result; and any result arrived at by one who was illustrating a thesis might be suspected of being more or less influenced by bias. We shall, therefore, quote the figures given by the French economist already cited as being apparently the best attainable, though no special importance should be attached to them: "The United States, then, hold the highest position; wages there are 3½ per cent. higher than in Australia, 84 per cent. higher than in the United Kingdom, 162 per cent. higher than in Germany, and 205 per cent. higher than in France. Great Britain, in its turn, shows a rate of wages higher by 42 per cent. than that of Germany, and by 65 per cent. than that of France."

The statistics we have cited as showing the increase in British wages during the past fifty years are not adduced to show that free trade raises wages. They are merely given in rebuttal of the ever-recurring fallacy that any improvement which has taken place in our own country under the régime of high tariff is to be attributed to that institution. But the contrast between English and Continental wages—which, we repeat, does not rest upon any special statistics, but is matter of common knowledge—this contrast is something more than a mere rebuttal. Not only does it utterly break the force of the position that the superiority of our wages to those of Europe is due to protection, but it constitutes in itself a positive proof that a high rate of wages has its source in something deeper than a system of taxation, and may be maintained by an energetic and favorably situated people in the face of the inferior wages of inferior and less fortunate competitors.

ARGENTINE FINANCES.

THE remarkable material expansion of the Argentine Republic during the last seven years of peace has not entirely escaped notice in our own country, despite our limited commercial relations with the great Power of the Plate Valley. The rapid extension of her railroad systems, the vast sums devoted to other public works, the reclaiming of immense areas of fertile land from the danger of Indian forays, the marvellous quickening both of domestic and foreign trade—of all these things we have heard vaguely, though, at the same time, color has been given to the suspicion that the whole might be an unnatural inflation to be followed by a disastrous collapse. Argentine credit, for example, has all along been comparatively low, inferior to that of Chili or Brazil. A new 5 per cent. loan, negotiated in January, 1887, commanded only 85½ in London. Specie payments had to be suspended early in 1885, and when the two years had elapsed which had been fixed as the limit of the suspension, its term had to be extended, resumption now being promised for the 9th of January, 1889. Meanwhile, the national income had been steadily falling behind expenses, the foreign and domestic debts were each mounting higher and higher,

so that the remark of the Argentine Minister in Washington, in 1885, that the financial condition of his country was "not quite satisfactory," was as mild a phrase as could well be used under the circumstances.

Still, there were all the while hopeful features. The republic has a splendid record for fidelity to her public obligations. The interest on her national debt has always been punctually met, and one of her Presidents once solemnly asserted, with general approval, that the nation would suffer hunger and thirst rather than fail to pay its debts. At a time of civil war, thirty-one landed proprietors in the Province of Buenos Ayres signed an agreement to pay the interest on the national debt until after the termination of the strife. Then, too, the expensive system of internal improvements was accompanied by a great development of natural resources and enlargement of foreign commerce. A total foreign trade of $83,202,750 in 1877 had swollen to $218,000,000 in 1887. And if the debt had gone on increasing in great leaps, so had the revenue, the national revenue rising from $14,824,096 in 1877 to $59,138,000 in 1887.

In fact, the recent message of President Celman to the Argentine Congress appears to show that the republic is now mistress of the financial situation, certainly that she is now in a more assured position than ever before in her history as an independent Government. For the first time on record the revenue for 1886 had more than covered the outlay, and the President reports that the surplus for 1887 is still larger. At the same time, the public debt has been reduced by more than eight millions of dollars, and the credit of the country so much strengthened that the 5 per cent. bonds issued a year ago at 85½, are now quoted at 97, while the 6 per cent. loan of 1882 now commands from two to five above par. The abolition of export duties, together with the allowance of drawbacks on imported bags, boxes, etc., for the shipment abroad of national products, has greatly stimulated the export trade, which showed an increase in 1887 of $14,600,000, principally in grain, hides, and frozen meats. The returns for the first three months of the current year show a further gain of $4,000,000 in foreign commerce, even over the unprecedented figures of 1887.

Since the date of her independence the Argentine Republic has negotiated twenty different foreign loans, of a total capitalization of $221,438,077. In interest she has paid $55,904,613, and for redemption of maturing bonds $86,212,653. The total amount of the foreign debt on the 31st of March of this year was, according to the message of President Celman, $92,427,000. The domestic debt, at the same date, amounted to $47,000,000. The provinces have besides a foreign debt of $88,219,611, and a domestic debt of about $25,000,000.

The national revenues are derived from import duties, which are fixed, with a few exceptions, at 25 per cent. ad valorem, from stamps, the Post-office, railways, telegraphs, the tax on real estate, and other minor taxes. The per-capita taxation under national laws amounted, in 1886, to $12.42.

The banking and currency of the Argentine Republic have been in an extremely unsettled condition for several years. A resolute attempt to put them upon a better basis was made in the law of November 3, 1887. This was nothing less than the creation of a system of national banks expressly modelled on our own. It made banking practically free, and provided a national currency guaranteed by national bonds bearing 4½ per cent. interest in gold. These bonds are delivered to any banking institution submitting to the required governmental inspection, for 85 per cent. of their par value, and may then be deposited as security for an emission of bills up to the face value of the bonds. President Celman reports the entire success of the new scheme, saying that the circulation of the new national banks already amounts to $88,500,000, and that they bid fair to supply the monetary needs of the country.

THE UNIVERSITY OF BOLOGNA AFTER EIGHT CENTURIES.

BOLOGNA, June 16, 1888.

IN reviewing the festivities which accompanied the celebration of the eighth centennial of the University of Bologna, there are certain moments on which the memory loves to linger; and there are one or two points which suggest less agreeable reflections. To begin with the latter: Although the foreign delegates were theoretically the guests of the University, they were never formally presented to the Academic Senate, nor, except by mere chance, did they have an opportunity of making the personal acquaintance of any of the professors. Many who came to Bologna with a sincere desire of learning something of the workings of an Italian university, and of getting to know some of the many learned men who fill chairs at Bologna and in other Italian universities, went away no wiser than when they came. This omission, which might at first seem disrespect, was due solely to mismanagement and imperfect organization; but as the Rector Capellini, who was mainly responsible for what was as disagreeable to the Italians as to the strangers, has since resigned in consequence of the criticisms on him, nothing more need be said on this subject.

A great contrast to the official management was afforded by the uniform success which attended everything that was either undertaken or carried out by the students, whether their reception of the foreign students, with the white ox, the great cheese, and the big cask of Barbera wine, presented by their comrades of Padua, Pavia, and Turin, or their torchlight and humorous mediæval processions, their burlesque festival, or their celebration in honor of the memory of Galvani. In kindness, in amiability, and in courtesy they were constant, in season and out of season. Their hospitality was unbounded, and many of them will doubtless find it hard work to get through the next year on their scanty means. The poet Guerrini told me that he knew a poor medical student who had given up his only room to two Germans, and had taken meanwhile a bed at the hospital in which he was studying. They were, of course, this being Italy, not unassisted by the richer citizens; and several noble ladies lent their horses and carriages, with coachman and footman in full livery, to help them do honor to their guests. Their tact was such that no disagreeable incident occurred between the French and German deputations, who, indeed, fraternized at first to such an extent as to excite the wrath of certain Parisian newspapers. Their courtesy to all was so great that many a foreign professor found his way smoothed for him by the good offices of the first student he chanced to address.

In a city with the secular musical reputation of Bologna—and, if report speaks truly, it is to a mediæval Bolognese student that we owe the song "Gaudeamus igitur"—music would naturally form part of the programme of any feast. Twice during the official celebration we listened to a cantata written by the poet Panzacchi, and composed and directed by the ambitious young *maestro*, Baron Franchetti. Twice Wagner's opera, Italianized into "Tristano ed Isotta," was given as a gala spectacle. Best of all was a concert of classical and modern music by the celebrated orchestra led by Martucci. Selections from Weber, Beethoven, Rossini, Rubinstein, Tchaikofsky, Brahms, Berlioz, and Wagner were executed with a delicacy and precision which enchanted the severest German and American critics present. Unfortunately, the course of historical concerts and the performances of Mendelssohn's "Elijah" had not yet begun; they are to come later.

A fantastic torchlight procession in honor of royalty made us lament the organized horrors which render so hideous the last nights before a Presidential election. No mazy dance of fireflies along the Arno could be more beautiful. Rows of lights, groups of lights, combined into odd figures and shapes—the Queen's favorite marguerite, the star of Italy, the cross of Savoy, fans, wreaths, and palm-leaves—followed each other for an hour, yet all in order, in rhythm, and with due sequence of color and effect. Yet the materials were simple—light frames of lath or wire on the end of a staff, small glass tumblers filled with some tallow-like composition, and provided with a wick, and bits of white and colored paper pasted round them to protect the lights from the wind. Any clever Italian can, at a slight expense and with a day's labor, illuminate the front of his house more effectively than with any number of flaring gas-jets.

The evening at court differed from other soirées of this kind only in being held in the long galleries of a mediæval building, unused to such gayety since the times of the Cardinal Legates, and in the relaxation of etiquette. Presentations were made without difficulty, and the King, who usually avoids occasions of ceremony, talked as freely and pleasantly with the delegates as did the Queen. The Prince of Naples did his part well, but his youth made him shy and more constrained. The presence of the Queen lent a charm to the place which President de Brosses could never have felt, agreeable as Cardinal Lambertini was, and excellent a Pope as he afterwards became. A surprise was reserved for the end of the evening. Looking out of the windows, we saw the square densely packed with thousands of people; and in the strong electric light every upturned face was visible and distinct. All Bologna was listening to a military serenade, the music of which we had scarcely noticed; and the appearance of the royal party on the balcony, under the outstretched blessing hands of the bronze statue of Pope Gregory XIII., was the signal for an outburst of enthusiastic applause.

So far I have spoken only of the hospitality of the city, of the Government—for there was an excellent dinner offered by the Prefect—and of the Crown. It is time to return to *Bononia Alma Mater Studiorum*. Seldom has there been seen such a picturesque gathering of learn-

ed men as that which met on the morning of June 12 in the courtyard of the University. Here, under the awning and around the statue of Hercules, the scarlet, blue, and black robes and trencher caps of English and Scotch doctors mingled with the yellow, buff, and brown gowns of French professors, wearing odd-looking mortar bonnets. The Russians, Rumanians, Greeks, and Portuguese were, like most of the Americans, in full evening dress, though many of them wore decorations which added a little color; the Swedes were in embroidered uniforms; the plain, prim-looking black gowns of the Dutch and Belgians contrasted strongly with the heavy robes of red and purple cloth and embroidered satin capes of their neighbors the Germans and Austrians. Of the Hungarians, one wore a violet clerical robe; another, the rich dress and jewelled chain of a Magyar noble. The Spaniards, who came late, were worth waiting to see: they wore long clerical cassocks of black silk, satin capes of brilliant red or of bright blue close up to their ears, fastened under the chin, through which protruded the crosses of their decorations; and on their heads caps shaped like a fez of the same color as their capes, surmounted by thick tassels which fell equally on every side. There was something in them both of the Arab and of the mediæval Catholic; and as they stood in the middle, with their finely cut features, they seemed to have descended from the frame of some old picture. Nor was the gathering less interesting than picturesque. Here were Jebb, Muir, and Gaston Boissier; here were Lowell and Story and Ramsay; further on were Gaston Paris and Veselofsky talking folk-lore with Crane and Meyer; in another corner stood Erskine Holland with Asser, Bar, and other noted jurists, while Holtzendorff was overheard in his inquiries about the effect of a recent statute of Pennsylvania. Unfortunately, even here there was no chance of meeting the Italian professors, for they assembled in another part of the building.

Finally, the signal was given, and the learned procession started for the Archiginnasio, which had been the seat of the University until it was removed to its present quarters by Napoleon. The march began with the Italian students, whose sole remnant of academic customs consisted in their little berettas made for the occasion according to ancient style, white, green, blue, or red, to denote the Faculty to which they belonged. Then came the foreign students—the English in gowns, the Germans and Austrians with their ribbons and their sabres, their jack-boots and their absurd little muffin-shaped caps or their spreading plumes. The Hungarians wore their native costume, almost too rich for such an occasion, for one youth was in a white satin doublet covered with rich jewels. Next followed the professors of other Italian universities; then the foreign delegates, the Americans walking first; and finally the professors of Bologna in their black togas, over which they wore hoods of the color of their faculty, arranged in a peculiar manner so that the color showed chiefly in front—some with ermine tippets, and all with lace bands the quality of which is left to the personal discretion of the wearer.

Never before have I walked through such crowded streets—at least not so much at my ease; and certainly never had I passed through streets where every window and every balcony was decorated with squares of old damask and brocades, feeling that this was done, in part at least, in my honor. On we went past the palace, where the King and Queen bowed to us from the balcony; through the Via Farini, where sprigs of oak and laurel were rained upon us from the upper windows; into the Piazza Galvani, where the students received us between two lines, waving their caps and sabres and shouting *Evviva l'America!* and saluting every other country in succession, until we were seated in the beautifully decorated court of the Archiginnasio.

The place was an historical one. Behind the throne was the pretty little chapel, the pictures in which look so fresh and untouched because it was used only for hearing confessions and giving the sacrament to students, as preliminary to their taking their degrees. Above that is the Anatomical Theatre, wainscoted in carved cedar, where Galvani demonstrated his discovery of animal magnetism. The walls and vaults are covered with the arms and names of old students in fresco or stucco—among them the name of Erasmus. Every country and nearly every large town in Europe is recorded here; for centuries Bologna was preëminently the great international university, and when a youth showed a desire for the higher learning, his father used to give him a horse and a purse, and say, "Go to Paris or Bologna."

After the King and Queen had entered and had been received by the professors, Franchetti's cantata was sung; the Rector made a short speech; the Minister of Public Instruction, Boselli, a longer one, but eloquent and well delivered; and the poet Carducci mounted the pulpit. *Conticuere omnes.* He discoursed on the origin and significance of the University of Bologna; but to this I shall recur. The representatives of foreign universities presented their addresses of congratulation on illuminated parchment scrolls, in cases of varied design and workmanship, to such a number that the light blue basket, embroidered with marguerites, overflowed upon the steps of the throne even to the feet of the Queen. The leaders of the deputations made brief addresses, among which that of Mr. W. W. Story was one of the most felicitous, accentuating the fact that America as a civilized country was but half as old as the University of Bologna, and that to Italy we owed both our discovery and our name. After a Latin welcome by Professor Gandino, of studied and impressive oratory, the ceremony came to an end, having lasted in all about five hours.

The next day, in the same place, and with the same brilliant surroundings, we witnessed the ceremony of conferring the honorary degrees on eminent foreigners. In all, 104 doctorates were given, of Philology (*i. e.*, Arts and Letters), of Mathematics or Science, of Law, and of Medicine. Of these America received but four, one in each faculty, only one-fourth of what were given both to England and to France. Over fifty degrees were divided between Germany and Austria, chiefly for medicine and the sciences. If this meant anything else than the personal proclivities of the Rector, Capellini, himself an eminent geologist, it would seem to show the high opinion which Italy has of German science and scientific methods. The American doctors are Mr. James Russell Lowell in Letters, Mr. David Dudley Field in Law, Mr. Alexander Agassiz in Science, and Dr. Weir Mitchell in Medicine. As the names of the laureates were called out, each man who was present walked to the foot of the platform, bowed to the sovereigns, had the great doctoral ring passed on and off his right forefinger, and received the congratulations of the Rector, together with his illuminated diploma, from which hung enclosed in a silver case the great wax impression of the University seal. Those whose names were best known were received with loud and long applause. Doubtless, in my own case, a tolerably familiar knowledge of Bologna itself—where I always found pleasure in spending a week at a time—acquaintances in the Italian society, and the meeting with old friends, added to the pleasure derived from the festivities themselves, which, owing to the hereditary Italian talent for improvisation, were far finer than the most hopeful expected during the confusion that marred their beginning. Two evenings not set down in the programme have left especially agreeable memories. One was passed with Jebb, Knight, Ramsay, Sir Herbert Oakley, Conway, and other English and American delegates, when the indignation of those who were, for the moment, shelterless or discontented gave way over a mug of German beer, which is rapidly usurping the place of wine in north Italian towns; the other was spent in the *birraria* Hoffmeister with Mr. Story and Guerrini, the University Librarian, who made the establishment famous, and who is better known by his poetical pseudonym of Stecchetti.

The most striking part of all the official ceremonies, apart from the splendor of the pageant, was, to many, the discourse of the poet Carducci. It was not only the matter of it, but the manner in which it was delivered. Carducci has immense influence in Italy, not only as the regenerator of Italian poetry, but as a man independent and fearless in proclaiming his beliefs and convictions. A republican and democrat by principle, he is a supporter and admirer of the House of Savoy; an innovator in rhythm and metre, he is strongly imbued with classical feeling, and throughout his professional career has devoted himself to illustrating the glories of Italian literature. He does not allow his politics or his religious views to interfere with his critical appreciations, and lately he refused the first literary honor in Italy, the professorship of Dante exegesis at Rome, lest by accepting it he should seem to favor erroneous ideas as to Dante's work. Every line that he writes, whether of verse or of prose, is eagerly read, and nowhere is he more popular than at Bologna, where he is now the crown and glory both of the University and of the town. When he mounted the tribune, nervous and excited by the scene, the audience, and the presence of royalty, he could hardly restrain his impatience at the outbursts of applause which greeted him. But at the first word all became silent. Similar outbreaks interrupted him after the most telling passages, when, trembling with impatience and excitement, he would throw his head back until his black curly hair and grizzly beard became golden in the strong sunbeam which fell on him through a rift of the awning, and each drop of perspiration shone like a diamond. If the comparison may be excused, he looked like a splendid dog tossing his head and shaking the water from him on coming out of the sea. Then he would seize a twig of oak which had been thrown to him in the procession, and would command silence with an imperious gesture, which no one dared disobey.

Carducci said just enough to impress upon us why Bologna, besides being the oldest, was the most important university of the world. The study of the Roman Law had been transferred from Rome to Ravenna, where the lamp of learning burned with but a flickering light. When, eight hundred years ago, the law books were brought to Bologna, Pepo and Irnerius studied them in a new spirit, and developed from the codes of Justinian those principles which were thereafter to be the bases of legality, of organized government, of freedom, and of civilization. The University of Bologna formed the model for others in Europe, and the statutes of two at least in the extreme north,

those of Upsala and Glasgow, are mere copies of the statutes of Bologna:

"The constitution was democratic. The fervor of liberty which warmed the Italian city had, it seems, invaded also those beyond the mountains. These Franks, these Germans, these Bohemians and Poles, coming from their feudal castles, their abbeys, and their lordly chapters, learned to subject themselves to civil order, felt the advantage of living in common, and got to desire equality. After strange journeys by sea and over the Alps, students of all Europe meeting here found again their native countries in the 'nations' which constituted the University; had their State in the University; and, in the common use of the Latin tongue, aspired to that higher unity, that civil brotherhood of peoples for good, which Rome had sent out with its law, which the Gospel had proclaimed in spiritual things, which the civilization of to-day wishes with reason. O Italy! O my country! in the torments of slavery it was pleasing to think of thee in the act of sending from the seven hills the flight of victorious eagles over all nations; but perhaps thou wert more humanely fair when, to those same nations that had oppressed thee, thou didst rise, and open with the tongue of the ancient Empire the sources of the new civilization, and, freeing them from the yoke of barbarism, didst persuade them of the glory of making themselves again Roman."

But let us not delay over the Diet of Roncaglia, the Four Doctors, the Gloss writers, Accorso, Odofredo, and the Theorists, or even Rolandino Passaggerio, whose tomb, high in air in front of St. Dominic's Church, has been covered in these days with laurel leaves by the hand of grateful votaries. Let us pass over the flourishing period of Provençal poetry at Bologna; the ancient and even the modern school of Italian poetry; Petrarch, Dante, and his earliest commentators; Erasmus, Jerome Cardan, and Copernicus; Galileo as an unsuccessful candidate for a professorship; Galvani; the famous women who taught here—let us come to the augury which Carducci draws for the future:

"We commemorate," he says, "to-day, with the origin of the University of Bologna, the first uprising of the Italian people. . . . 'All roads lead to Rome' is a proverb common to the Latin peoples, and for Italy is history as well as poetry, and the continual sigh of her eternal soul. Italy, mindful and grateful that her fair fame grew with Rome—Italy has always and by every road desired to go to Rome; in the Middle Ages with Law, in the Renaissance with Art, in our times with Politics. She desired to return to Rome, to which, thanks to independence protected and liberty guaranteed by union, she had given the force of her arms and the vigor of her thoughts; to Rome, forgetful of her and of the ancient pact in the cosmopolitanism of imperial despotism and pontifical theocracy. A man, a great man of our fathers, felt more than all others this historical necessity for Italy; in that lofty, austere intellect, in that heart of Italian hearts, the idea of the Gracchi became modern. Giuseppe Mazzini, more than any one else, had the sublime, the radiant, the resplendent vision of the third Rome—not aristocratic, not imperial, not pontifical, but Italian. And from the underground vaults of conspirators, from schools and public squares, from prisons and scaffolds, from fields of battle, from the Parliament, from the Palace, Italy, with the heads of her martyrs, with the books of philosophers and songs of poets, with the essays of diplomacy, with the sword of the Revolution, with the artillery of the King, was so obstinate in knocking at the gates of Rome that she at last reached the Quirinal and the Capitol. Of such worth was a sanctity of daring and devotion incredible in any other history: a monarchical republican, a revolutionary monarch, an obedient dictator—Victor Emmanuel conspiring to the same end with Giuseppe Mazzini and Giuseppe Garibaldi. Whence is it that to-day Bologna, on the 29th anniversary of the 12th of June, 1859, when she saw foreign lordship driven away for the last time and for ever, salutes and acclaims in its republican piazza, between the Palace of the Podestà, where she held prisoner the conquered Alemannic King, and the Church of San Petronio, which she raised in memory of the overthrow of the domestic tyranny of the Visconti, salutes and acclaims a splendid work of art not inferior to the antique, a solemn monument of love of country superior to the antique—the statue of King Victor Emmanuel fighting for the liberty of Italy? Whence is it that to-day the glorious Superga, next to the tomb of the saddest of the Kings of Savoy, waits in vain for the greatest King not only of Savoy, but of our age, the King who was invoked and saluted as the liberator of the Italian people? When Victor had brought his eagle to the fatal hill whence Romulus had looked for auspices for the foundation of the city, Rome, receiving in her divine embrace at his death the King of the Alps, placed him in the temple of all the antique gods of the Fatherland. King of Italy and of Rome. No piety or impiety of man shall ever remove Vittorio from the Pantheon, nor shall any malignity or violence of things lower that flag which from the shame of the gallows has risen to the light of the Capitol. You, Sire, faithful asserter of eight centuries of Italian history; you, august interpreter and maintainer of the wish of the whole Italian people; you, with words that sound high before the world; O, King! you have said 'Rome is an unassailable conquest.' Yes, O, King! an unassailable conquest of the Italian people for itself and for the liberty of all."

EUGENE SCHUYLER.

THE LAST OF ANCIENT FRANCE.—II.

PARIS, June 27, 1888.

THE effect produced by the battle of Fontenoy was very great in Europe; it was a resurrection of the France of the time of Louis XIV. Voltaire improvised in a few days a "Poem of Fontenoy," in which he attempted to name all those who had played a part in the terrible struggle (in 300 verses you will find as many as 57 names). Politically, the battle had not the great consequences which it ought to have had. The great question was this: Was France going to maintain the alliance with Frederick and her influence in Germany? All the effort of Louis XV. had been spent in Flanders; the army of the Prince de Conti, which operated across the Rhine, had been, so to speak, abandoned. While Louis XV. was entering the Low Countries, Prince Charles of Lorraine was entering Silesia. Frederick learned the issue of the battle of Fontenoy at Breslau, where he had concentrated all his troops. He had criticised with his usual irony the French expedition to the Low Countries; he would have preferred the smallest advantage obtained by the Prince of Conti in Germany to the French conquest of Flanders. He opened his heart to Podewils; he was fond of saying that the French were degenerate sons of their ancestors of the seventeenth century. He was rather alarmed on finding that Louis XV. was not quite the man he thought him to be; he was afraid that France would become very intractable. Speaking to Valori, the French Minister, in his tent, he told him that he was charmed with the French victory, but that it was of no use to him:

"I have no fewer enemies on my hands, and the Queen of Hungary does not consider this event as being very detrimental to her. . . . Believe me, there is but one way to reduce her to her senses: it is, to give the Prince of Conti the means of beating. . . . If he were marching on Eger, what good would it not do! Saxony would change her attitude, Hanover would tremble. . . . If you recrossed the Rhine, I should have reason to think myself abandoned, and I might succumb, whatever efforts I might make. . . . I see what it is: you are afraid, my dear friends, to enter into the German oven."

Frederick saw well his danger; what he prophesied happened, but he had first entrapped the Austrians in Silesia. "You cannot get mice," said he to Valori, "without opening the mouse-trap; if I beat the Austrians, I will follow up my victory." He did beat them at Hohenfriedberg, and he wrote at once to Louis XV.: "My armies have obtained a victory over the Austrians and the Saxons; your Majesty will see that I have not been long in following his example; now is the turn of the Prince de Conti."

Though he had promised to follow up his victory, Frederick tarried in the neighborhood of Königgrätz in Bohemia for six weeks, waiting to see what the Prince de Conti would do. Conti remained inactive; D'Argenson did not wish to interfere with Germany during the imperial election, which was to take place at Frankfort. Frederick hesitated long before cutting the last thread of the French alliance. Conti soon had the mortification of seeing two Austrian corps d'armée concentrating before Frankfort, and, fearing to have his line of retreat cut, he crossed the Rhine and abandoned Germany. Frankfort was opened to Austria, and it became evident that the imperial crown would be placed on the head of Maria Theresa.

This was too much for Frederick, and he resolved to expect nothing more from the French ministers and generals; he knew how to act rapidly, and to enter the Saxon territory in arms. "The more vigor we show," said he to the timid Podewils, "the more Hanover will feel the need she has of me, and the more will she be obliged to make efforts to obtain a peace." Podewils held up to him the interference of Russia. "Saxony," replied Frederick, "will be *cuite* (cooked) when they learn at St. Petersburg that war has begun. . . . Be sure that this blow will give us peace." The Duc de Broglie says, in speaking of this sudden resolution: "Once his resolution taken, this marvellous genius straightway found the calm and perspicacity which seemed to fail him often in the worry of deliberations." Frederick immediately made proposals to England; he asked merely for the preservation of Silesia, under the triple guarantee of England, the United Provinces, and the Empire; and, while he sent this ultimatum, he waited with his army at the door of Saxony. This proposal greatly embarrassed the Hanoverian George; he was not an absolute King, he had to count with his English ministers and with English public opinion. The pride of England had been greatly touched by the French invasion of Flanders and by the battle of Fontenoy; the ministers of George represented to him that it was impossible not to pay attention to the overtures of the King of Prussia, and not to intercede with Maria Theresa for the pacification of Germany. The triumphs of Marshal Saxe on the Scheldt and on the Meuse became the best arguments of Frederick. After Tournay, Bruges had fallen before the French arms; then Ghent, Oudenarde, Dendermonde, Ostend, and Nieuwport. England felt really alarmed, and the news from Flanders was awaited with the greatest anxiety. It was said that Louis XV. meditated an invasion of England. Belle-Isle, the prisoner of Windsor, appeared to the popular imagination as a spy. Horace Walpole, in two letters addressed to Horace Mann (July 26 and August 1, 1765), makes himself the echo of these groundless fears: "Marshal Belle-Isle said a few days ago that he thought us incapable of defending ourselves, and that, with five thousand French soldiers, he would undertake to conquer England; and this is the time chosen to set him free." Nothing in the correspondence of Belle-Isle justifies the report of Walpole.

By a strange coincidence, on the day when Belle-Isle left Dover for France, the young Stuart was arriving in Scotland, almost alone. Nobody could believe that the son of the Pretender would do such a bold thing if he had not behind him a French squadron. The peo-

ple of England did not know that D'Argenson had turned a deaf ear to all the solicitations of the Pretender. In the manifesto of Charles Edward, George was represented as considering England as a mere conquest, and as living chiefly in Hanover, and spending in his electorate all the wealth derived from India and the New World. George was so angry with the manifesto that he tore his wig and his lace ruffles. He was obliged to return to England, and to reconcile himself with Prussia, as he could not abandon his electorate to his dangerous neighbor.

The pacification of Germany required not only the reconciliation of Hanover and Prussia, it required also the consent of Maria Theresa and her final abandonment of Silesia. The English Ambassador, Sir Thomas Robinson, announced with fear and trembling to the proud Queen of Hungary the change which had taken place in the feelings and the resolutions of England; and when Charles Edward, having rallied an army round him, marched on Edinburgh, England hastened to conclude with Frederick's envoy a convention which reëstablished the treaty of Breslau, and which left Silesia to Frederick and Bohemia to Maria Theresa. In this convention, England stipulated for her allies. She promised a cessation of hostilities in Germany and a mutual guarantee of the territories of the contending parties, and on these conditions Frederick was to give his vote to the Grand Duke in the imperial election.

This diplomatic act was conceived outside of all the usual rules, but it was dictated by an imperious necessity. England had no more consulted Austria than Frederick had consulted France. Frederick had resolved to act independently of Louis XV. so soon as Conti's army had crossed the Rhine. In a letter which he prepared for the King of France, he said: "Your Majesty has not served the interests of his allies in Germany, so he has lost them one after another. I am mortified at what is going to happen, but I have my conscience clear, for, after all, my first duty is the preservation of my State. I feel that your Majesty will find these truths hard, but they must be told, and princes, however great they may be, must get accustomed to the truth." The secretary who received this piece, with order to copy, was so frightened by it that he sent it to Podewils, and, on second thought, Frederick consented to change it, and he replaced it by another, very different in tone, much more ironical than serious. "What I can tell your Majesty seems very little in comparison with what is going on in Flanders. . . . In so fine a picture there is only one spot which disfigures a part of it. I speak of the retreat of the Prince de Conti; he puts the crown on the head of the Grand Duke and places the allies of your Majesty in a violent and dangerous condition. For the present, the evil is without a remedy, and I take the election of the Grand Duke to be certain."

The irony was felt, and Louis XV. made no answer. The Duc de Broglie admits very extenuating circumstances for what the French historians have sometimes called the treason of Frederick. He condemns the weakness of the French Cabinet and the stupidity of D'Argenson, who did not know how to use his liberty and to treat with Maria Theresa. D'Argenson remained faithful in principle to the Prussian alliance, though he did nothing for Frederick; he had a great repugnance to the Austrian alliance; he lost one ally and would not find another.

Maria Theresa learned at the same moment of the election of her husband, the Grand-Duke, as Emperor, under the name of Francis I., and of the Hanover convention, which had been signed by England and Frederick. Her first feeling was one of great irritation, and she proposed to Louis XV., by the intermediary of the French ministers in Saxony and in Bavaria, to treat with her. She positively refused to adhere to the convention with Hanover. The negotiation with France had no result, chiefly on account of the ill-will of D'Argenson, who could not detach himself from the Prussian alliance even when Prussia had ceased to be an ally. Maria Theresa obstinately refused, notwithstanding the entreaties of the English Government, to treat with Prussia, and, with her usual boldness, she resolved, in concert with Saxony, to attack in a winter campaign the hereditary provinces of Frederick. She concentrated an army on the frontier of Saxony. She negotiated with Russia, who promised to help her with a timely intervention.

Frederick was informed of this plan by an indiscretion of Count Brühl, the Saxon Minister. He lost no time, placed an army of observation at Halle, and watched himself, on the frontier of Silesia and of Lusatia, the army of Prince Charles of Lorraine. The military operations were very ill-conducted on the Austrian side; as soon as Prince Charles moved he was attacked, and he immediately retreated. Frederick promptly ordered the army which was at Halle, under Prince Anhalt, to march on Leipzig and Dresden, and to treat the Saxons as enemies. Meanwhile, he sent a message to Augustus III., and offered him peace on condition of adhering to the Hanover convention. Augustus fled from Dresden and left for Prague, abandoning Saxony. Anhalt arrived before Dresden and gained a victory under its walls. Frederick entered the capital of Saxony and dictated the terms of peace, not only to the unfortunate Augustus, but also, it may be said, to Maria Theresa. She at last felt that she could no longer struggle. Frederick claimed nothing but the conditions of the treaty of Breslau, where he made a triumphant entry. His Saxon campaign won for him the admiration of all Europe. Maurice de Saxe, the conqueror of Fontenoy, wrote to him: "I cannot help, as a Saxon, sympathizing with the sufferings of Saxony; but my admiration for what took place there passes all expression. The learned and judicious manœuvres of your Majesty offer a vast subject for meditation. I cannot sufficiently admire them, and, since Alexander and Cæsar, I know nothing so great or so striking." Coming from such a man, these words were not idle expressions of adulation; the campaign of Frederick in Saxony deserved afterwards the study and the praise of Napoleon I.

Correspondence.

THE NATIONAL WEALTH.

To the Editor of The Nation:

Sir: I have before me a paper entitled 'Wealth of the Republic,' by Chas. S. Hill, read before the American Association for the Advancement of Science. In it I note a rather caustic criticism of the census estimate of the national wealth, as published in the volume on Valuation, Debt, and Taxation. Mr. Hill objects to it on the three following grounds: (1) That it does not agree with certain official State figures; (2) that several important industries are not given; and (3) "that the figures of items as specified in different parts of the census do not harmonize."

On the first count little defence can be made. The public must choose between the results of the Federal census, with its resources for information, and those figures given out under State authority. On the second count the defence is more complete. The omissions in the census estimate are presumably supplied by Mr. Hill in his own estimate of our national wealth, which he itemizes as follows:

	Millions of dollars
Real estate, urban property	15,000
Farms, assessed value	10,000
Personal property	6,000
Manufactures	8,000
Railroads	7,500
Stock and farm implements	4,000
Minerals	800
Banking	700
Insurance, life assets	400
Insurance, fire assets	200
Canals	170
Shipping	150
Forest	100
Telegraphs	100
Sundries, floating investments, etc.	2,000
Public property	5,000
	58,120 (*sic*)
From which deduct the national debt	1,700
	56,920 (*sic*)

It appears from a comparison of this table with a similar one accompanying the census estimate, that banking, life and fire insurance, and floating investments were omitted in the latter. Mr. Hill must know that these consist of real estate, mortgages, notes, and specie. The first item he has already included. The second and third have no value from a national standpoint. Specie is included in the census estimate.

The third count is as easily disposed of. Mr. Hill instances in a footnote the fact that the value of real estate, as given in the census estimate of true valuation, is largely in excess of the *assessed* value, as given elsewhere in the census report. He ignores the fact that the assessed valuation is everywhere so specified distinctly. Is it possible that he is not aware that the assessed and true values are seldom the same, and that the latter is usually greatly in excess of the former? Again, he finds a discrepancy between the value of personal property as returned by the assessors and the item of household goods, etc., in the estimate of wealth. It is not surprising that he does. They bear no relation to one another.

Concluding, I would recommend that Mr. Hill read with care the paper on the true valuation of the United States in the census report. He will learn that the national wealth consists entirely of tangible articles, excepting perhaps franchises, good will, and credit, the value of which cannot be estimated. He will learn that paper obligations do not add to the nation's wealth, any more than a note drawn by himself in his own favor increases his assets. He will learn that the national debt, so far as it is held by our own citizens, does not reduce the national wealth, and should not be deducted from it. And possibly he may discover that the estimate of wealth therein presented was made with some care, and not without intelligence.—Very respectfully, Henry Gannett.

U. S. Geological Survey,
Washington, D. C., July 10, 1888.

BEGGING ARTS OF A FAMILY PAPER.

To the Editor of The Nation:

Sir: Some of your readers may perhaps be surprised to learn that your interesting account of the manual of instructions for the use of beggars, with which the members of that fraternity can supply themselves in France, is not without a parallel in our own country, which, though somewhat different in purport, affords equally convincing evidence that "the business of begging has been reduced to an art," and that the means are not wanting for the education of sneaks.

The "instructions" have not indeed been *publicly* issued with us, but for that reason it is all the more important to warn the public against the wiles that are practised to conjure money from their pockets. I venture, therefore, to send you a literal copy of a document of which I accidentally became possessed, issued to their solicitors by the proprietors of a "family paper" in one of our principal cities. The paper had at the time, to my personal knowledge, a very wide circulation in the country, and the means by which it was obtained are made manifest in these instructions.

Each solicitor was provided with a "chromo" for exhibition, a copy of which would be furnished to every subscriber, and here are the directions for trapping the game:

INSTRUCTIONS TO AGENTS.

(Confidential.)

Never say at first that you wish to solicit a subscription.

Attract the attention and excite the interest by showing the chromo which you must always have at hand.

Presuming that you have previously ascertained the name of the party you address, you may use some such words as the following:

"Mr. ——, I have taken the liberty of calling to show you the most pleasing and artistic chromo ever made in America. It is after a painting by Sir Joshua Reynolds, one of England's famous painters. It is printed in sixteen different impressions in oil to get the coloring and shading of the original painting. It sells in the art stores for ten dollars. (This mention of the retail price rarely fails to attract attention.) *But I do not sell them.* The chromo is given to all subscribers to the paper I represent, the largest, cheapest, and most entertaining family paper in the country."

You may then go on to show the points and excellence of the chromo; what people and the press say of it, etc., etc.

Having succeeded in exciting an interest in the picture, the agent should proceed to show that the paper alone is worth the subscription, and the combination is the greatest offer ever made by a publisher to the American people.

The agent should be provided with a small book, an ordinary pass book will do, which at the proper point he should produce and show the names he has secured. Be careful never to do this in a manner that will convey an impression that you *expect* thus to influence the party you are addressing.

Answer all objections with quiet good humor.

Never argue a point. Objections are generally simply excuses for not subscribing. The best way to treat them is to go on with your story till they are forgotten.

Do not be put off by promises to subscribe at a future time. People will often say, "Perhaps I'll subscribe when you call again." This is only an excuse; urge the advantage of subscribing *now*.

Get the names of some of the leading and most influential persons of all sects belonging to the place. You can often accomplish it by frankly confessing your object in securing their names. It has great influence. Many agents keep all their old lists, as they may often secure subscribers by exhibiting them.

The grand secret of obtaining subscribers is *influence*. Get a list properly started, and men and women will subscribe because their neighbors have done so. Go first to the most influential men—clergymen, editors, etc.—and secure their names and written commendation if you can. Never disturb a man when busy. Don't talk too much.

Make a memd. of all who are out when you call, and don't fail to call again.

Study this circular carefully and keep it for future reference. The hints it contains were written by one who has had wide experience, and knows the pleasures and troubles of a canvassing agent.

It is melancholy to reflect that such widespread imbecility exists as is proved by the mere fact of the issuance of a document so obviously the result of experience in dealing with it. Perhaps its publication may have a wholesome effect upon some of those who are its intended victims. H. W. S. C.

MINNEAPOLIS, July 7, 1888.

Notes.

MACMILLAN & Co. will be the American publishers of a cheap edition of Mrs. Humphry Ward's 'Robert Elsmere.'

Our readers have already received such an inkling as we could give them of the extraordinary interest pertaining to the Wagner-Liszt correspondence lately published in Germany. With commendable diligence Dr. Franz Hueffer has completed an English version, likewise in two volumes ('Correspondence of Wagner and Liszt.' New York: Scribner & Welford). The translator's competence for his task is a very comforting assurance, and he has had the good sense to omit nothing, and to cleave closely to the style of the original, even at the expense of fire and flow which might occasionally have been attained by paraphrase. He speaks feelingly in his preface of his wrestling in certain letters with Wagner's grammatical carelessness and obscurity of diction. He promises, if the public will support him, hereafter "to supply notes and a serviceable index, to give a clue to the various persons who are hidden under initials." It is much to be regretted that the index was not prepared for the present edition. Dr. Hueffer would also have honored his aim to produce a "facsimile" by another breach with the German edition. The date-lines of the letters should have been put at the head, not the end, and a running-title or other device should have announced the writer in each case.

A selection of Mendelssohn's letters ('Briefe von F. M. Bartholdy') has been edited by Mr. James Sime for the Pitt Press Series of Cambridge University (New York: Macmillan). Mr. Sime furnishes an introduction and notes. The text is in the German character. It has been derived from the "Reisebriefe" and from the correspondence of the years 1833-1847.

A sixth edition of Mr. Sweetser's 'Maritime Provinces: A Handbook for Travellers' (Boston: Ticknor & Co.) proves that one every other year is the rule, and that the attractiveness of this part of the continent is steadily appreciated. In fact, since the first editions of this guide-book, Eastern fashion has virtually annexed one island, Campobello, adjacent to our shores. Mr. Sweetser is the best companion who has yet presented himself for the excursion tourist in this part of the Dominion.

Miss Charlotte M. Yonge has deserved well of all those who appreciate honest effort, and it is therefore with no desire to be disagreeable that we say of her 'What Books to Lend and What to Give,' recently issued in London, that it is very parochial, and distinctly inferior in breadth and in disinterestedness to Miss C. M. Hewins's 'Books for the Young,' which Miss Yonge seems never to have heard of. Perhaps the limitations of Miss Yonge's lists can best be shown by an extract or two from her pages: "The tales that have any dissenting bias, or which appear to involve false doctrine, are, of course, omitted" (p. 13). "In spite of all its peculiarities," the 'Pilgrim's Progress' "must be admitted; it is not likely that Bunyan's doctrines will do any harm (!), though for these purposes we do regret that Dr. Neale's edition, arranged for Church people, is out of print" (p. 51). Mark Twain's 'Prince and Pauper,' a "most diverting book, . . . has one grievous flaw—it marries a man to his sister-in-law, but only in the last two pages, and with so little preparation that the passages might be extirpated without any one missing them" (p. 61). We approve of the frankness with which Miss Yonge inserts the titles of her own books—an editor who is worth his salt should not be squeamish; Longfellow, who was a model editor, quoted abundantly from himself. But we do not quite see how it is that Miss Yonge omits 'The Prince of the House of David,' 'Ben-Hur,' and 'In His Name.'

Under the title 'Civics for Young Americans' (A. Lovell & Co.) Mr. W. M. Giffin undertakes to explain the forms of government in general, and to expound in particular the Constitution of the United States, with such simplicity as to insure their "easy comprehension by the youngest reader." Such a task is only possible if we use the term "comprehension" in the narrowest way, and it could even then be accomplished only by a writer much more thoroughly acquainted with political history than Mr. Giffin seems to be. He apparently supposes that true patriotism is to be aroused in children by indiscriminate laudation of our own institutions, and ignorant disparagement of those of other countries, especially England. A generation ago this conception prevailed, but we have advanced beyond it. We now have several books upon government that reflect this advance, and are yet elementary enough for such scholars as have attained a proper age for these studies, and this book is in most respects so inferior that it cannot enter into competition with them.

Pertinent to this subject is a little descriptive list of works on civil government constituting "Circular of Information, No. 1," of the Massachusetts Society for Promoting Good Citizenship. Of this organization we hear for the first time. The Rev. E. E. Hale is President; Mr. Edward Atkinson is one of the Vice-Presidents; the Secretary is C. F. Crehore, M.D., whose address is Box 1252, Boston. We owe to its Committee upon Courses of Reading and Study the pamphlet before us, whose aim is to operate directly upon the pupils in the public schools by providing lists of text-books, commentaries, and books of reference. Thus in section 1 we have Andrews's 'Manual of the U. S. Constitution,' Miss Dawes's 'How We Are Governed,' Nordhoff's 'Politics for Young Americans,' etc., etc., analyzed and rated for the teacher. The same helpful scheme is observed throughout. The Committee have in contemplation a similar service to higher institutions—a list of courses in reading, or select libraries, to be had for $10, $25, $50, $100, etc. This is all admirable, and Massachusetts cannot bound the sphere of the Society's influence.

Shakspere's 'Richard II.' and 'Henry V.' (Part I.), Plato's 'Crito and Phædo,' Coventry Patmore's Poems, and Clara Reeve's 'Old English Baron' are the latest additions to "Cassell's National Library."

'La Littérature française au moyen âge,' by M. Gaston Paris (Paris: Hachette; Boston: Schoenhof), has just appeared. This is the first of the four volumes of the "Manuel d'ancien français IX^e^—XIV^e^ siècle," which has been in preparation for some years. The three other volumes are to be a 'Grammaire sommaire de l'ancien français,' a 'Choix de textes français au moyen âge,' and a Glossary. These promise to be the most complete and valuable initiation into the old French language and literature that has ever been made. A selection from them, for use as a class-book, was issued last year under the title, 'Extraits de la Chanson de Roland et de la Vie de Saint Louis par Joinville' (Paris: Hachette; Boston: Schoenhof). This contained about 300 pages of glossaries and grammatical observations, besides valuable literary and other notes. The first volume of the complete work now published is a sketch of mediæval French literature, which will be at-

tractive, not only to the special student, but to any one interested in the study of literature.

Two years ago M. Octave Uzanne gathered together his lighter essays on books and book-making, and sent them forth as 'Nos Amis les Livres,' and he has now made a second and similar collection, 'Les Zigzags d'un Curieux: causeries sur l'art des livres et la littérature d'art' (Paris: Quantin; New York: F. W. Christern), which is almost uniform, externally and internally, with its pleasant predecessor. Most of the eight chapters have appeared in *Le Livre*, which M. Uzanne edits. There are papers about women book-lovers (of whom Mr. Lang has also written charmingly), about modern French engraving, about autograph collectors, about Balzac, about Baudelaire, and also about trifles, great and small. M. Uzanne's style is precious and yet modern; he has a touch of his own, and looks at life and at literature out of his own eyes. His attack on the papers of Paris for the enormously greater attention paid to plays than is given to books, is lacking neither in piquancy nor in verity, though it is likely to be unprofitable enough, as far as any direct result is concerned. The plea for the reconstruction aud improvement of the Hôtel Drouot, where Parisian sales by auction are chiefly held, is one which we can heartily echo. M. Uzanne's book is admirably printed on Dutch paper, in an edition limited to 665 copies.

For the thirteenth time MM. Noël and Stoullig send forth their solid 'Annales du Théâtre et de la Musique' (Paris: Charpentier; New York: F. W. Christern), and to this account of the dramatic doings of 1887 M. Jules Claretie, now the director of the Théâtre-Français, contributes an interesting preface, in which he indirectly answers the charge that the Comédie-Française is in its decadence, by an apt comparison with the stage of a century ago, and an ingenious accumulation of the pessimistic sayings of those who have seen the stage "going to the dogs" regularly every few years. The unique position of the theatre M. Claretie manages is also shown by the fourth appearance of another annual, 'Répertoire de la Comédie-Française,' by M. Charles Gueulette (Paris: Librairie de Bibliophiles; New York: F. W. Christern), a dainty little book, nearly uniform with the beautiful series of the 'Almanach des Spectacles.' The performances of what other theatre in the world would afford material for a volume every year? For M. Gueulette's books M. Abot has etched a series of admirable portraits of the actresses who now adorn the stage of the Théâtre-Français—Mmes. Bartet, Dudlay, Reichemberg, and Baretta. To the volume for 1887 M. Édouard Thierry, one of the most erudite of French dramatic critics, and himself a former manager of the Théâtre-Français, contributes a preface, in which he shows how the recent breaking down of the prejudice against the stage has brought on the boards performers in greater abundance than ever before, and from wholly different classes of society.

Dainty likewise is the *Annuaire des Traditions Populaires* (Paris: Maisonneuve, 25 Quai Voltaire), containing first the constitution and by-laws of the Popular Traditions Society; then a list of its members; then, by way of garnishing, sundry *contes* and *chansons*—one or two broad and broadly illustrated; and, finally, a "bibliothèque folklorique," by M. Loys Brueyre, which speaks for itself. An old engraving of the Temptation of Eve here reproduced is in style manifestly of German origin; and this is confirmed by the serpent's having a woman's form—Mephistopheles's "aunt" (*die berühmte Schlange*).

The American sale of Daudet's 'L'Immortel: Mœurs Parisiennes' has been bespoken by William R. Jenkins, 851 Sixth Avenue, who has ventured upon an order of 1,000 copies for this market.

We duly chronicled, on the appearance of its first issue, the new departure taken by 'Pierer's Konversations-Lexikon' in its seventh edition (Stuttgart: W. Spemann). *Pari passu* and on the same page with the customary cyclopædic matter, an added narrow external column is made to carry twelve linguistic dictionaries under one alphabet. Moreover, equivalents in the same languages are affixed to each German word in the major alphabet. The labor implied in this combination, to insure accuracy, can, as the publisher truly says, not be imagined by one who has not seen a proof-sheet of the work. Nevertheless, the price remains low and within the reach of the ordinary buyer. The first fifteen parts of the 'Lexikon' are now before us, ending with the article on Asia. There are numerous illustrations, particularly under the rubric Architecture, maps of a simple and popular sort, excellent colored plates of fruits and flowers. The engravings have for the most part the stamp of an earlier school and generation, but they are all useful and authentic, and the newest are process work and quite as good as is called for. Of the text it may be said that the new polyglot feature "on Joseph Kürschner's system," as above described, constitutes the chief distinction of the 'Lexikon' over others.

A searching but good-tempered review of Mr. Froude's 'English in the West Indies,' which originally appeared in *Timehri*, the Journal of the Royal Agricultural and Commercial Society of British Guiana, comes to us as a reprint (Demerara: The *Argosy* Press). The writer is Mr. N. Darrell Davis, and his title is sufficiently suggestive: "Mr. Froude's Negrophobia; or, Don Quixote as a Cook's Tourist." Mr. Davis holds that "the future of the West Indies belongs to the Mixed Race." So far from the mulattoes dying out, they number one to every four Africans in Jamaica. Intermarriages are increasingly numerous throughout the archipelago. This year jubilee celebrations will signalize the fiftieth anniversary of (actual) emancipation, and "promise of themselves," says Mr. Davis, "to be a refutation of Mr. Froude's cynical attempt still further to blacken the Black Man." "Froudacity" is a neat word of Mr. Davis's coinage to express the variety of error which habitually distinguishes the historian's utterances.

The imposing form of *Current Literature*, a new monthly just launched at No. 42 W. Twenty-third St., and intended "to deal with current literature in an eclectic way," is all that the projectors have achieved which is worth mentioning. A greater premium on intellectual dissipation, or a more striking example of the confusion of standards of taste, we do not remember. The compilers are most scrupulous in giving credit to the esteemed contemporaries from whom they borrow, and both writers and editors may be flattered by the compliment; but as many crimes are here committed in the name of Literature as ever were in the name of Liberty. The original contributions are very meagre.

Appearances do not belie the *Journal* of the Gypsy Lore Society, printed by the Constables in Edinburgh, and edited by Mr. David MacRitchie, at 4 Archibald Place, in that gray metropolis of the North. The aim of this new publication is to further the solution of the vexed questions relating to the gypsies, as, whence come they? when did they first set foot in England, in America, etc.? No. 1 has articles on Turkish and Catalonian Gypsies, on the Early Annals of the Gypsies in England, a specimen Rumanian-Gypsy Folk-Tale; statistics of the race in Germany; South-Austrian Romany applied to versions of Shakspere and the Bible, etc., etc. Not the least interesting portion is the Notes and Queries. The whole number has a refreshingly authoritative stamp, and is a capital beginning.

Apropos of our correspondence on another page concerning the Bologna festival, we must mention the great beauty of the special edition of the *Illustrazione Italiana* (Milan: Fratelli Treves) relating to this memorable occasion. "Bononia Docet" is its title. In the compilation of its contents and in the choice of subjects for engraving, the greatest judgment and taste have been displayed. The portraits are numerous, and include King Humbert, Rector Capellini, Boselli, Gandino, Carducci, Guerrini, Saffi, etc.; while town and University are depicted in many aspects.

—The twentieth annual meeting of the American Philological Association was held in Amherst July 10, 11, and 12, with an unusually large number of members present. The President, Prof. Isaac H. Hall of New York city, delivered the opening address on Tuesday evening on "The Legacy of the Syrian Scribes." During the session, papers were read on "A New Allegory in the First Book of 'The Faerie Queen,'" by J. Ernest Whitney; on "Changes in the Roman Constitution proposed by Cicero (De Leg. iii, 3, 6-5, 12)," by Prof. William A. Merrill; on "The Cure Inscriptions from Epidaurus," by James R. Wheeler, Ph.D.; on "English Pronunciation, how Learned," and "Volapük and the Law of Least Effort," by Prof. F. A. March; on "Theories of English Verse," by the Rev. James C. Parsons; on "Peculiarities of Affix in Latin and Greek," by Charles S. Halsey; on "A Consideration of the Method Employed in Lighting the Vestal Fire," by Morris H. Morgan, Ph.D.; on "Contamination in Latin Comedy," by Prof. F. D. Allen; on the "Tripods of Hephæstus," in Hom. Il. xiii, by Prof. Thomas D. Seymour; on "Impersonal Verbs," by Julius Goebel, Ph.D.; on "The Authorship of the Cynicus of Lucian," by Josiah Bridge, Ph.D.; on "The Identity of Words," by Prof. L. L. Patwin; on "Observations on the Fourth Eclogue of Vergil," by Prof. W. S. Scarborough; on the "*Lex Curiata de Imperio*" and "On the Locality of the *Saltus Teutoburgiensis*," by Prof. William F. Allen; on "Arbutus," by Prof. F. P. Brewer; on the "Adrasteia in Plato's Republic," by Prof. Seymour; and on "The History of the Medicean Manuscripts of Cicero's Letters," by Robert F. Leighton, Ph.D. The paper on the "Theories of English Verse" called out a spirited discussion on the essential character and beauty of English metre. On Wednesday evening the Association was given a reception by Prof. and Mrs. L. H. Elwell in one of the chapter houses. At a business meeting, Prof. Seymour of Yale University was elected President for the ensuing year.

—Never has there been such a generous output by the English Dialect Society as this year, when four volumes are issued (London: Trübner), of which one alone, Mr. F. T. Elsworthy's 'West Somerset Word-Book,' fills 876 octavo pages. The others are the third and concluding part of Mr. Robert Holland's 'Glossary of Words used in the County of Chester'—a kind of supplement; Mr. Thomas Darlington's 'Folk Speech of South Cheshire'; and Messrs. Parish and Shaw's 'Dictionary of the Kentish Dialect, and Provincialisms in use in the County of Kent.' Mr. Elsworthy's performance is almost as near to being first in quality as in bulk, and

will be found extremely readable. Thus, under the word *dowse*, 'to use the divining-rod for the purpose of finding springs of water,' we have an account of this much debated operation, beginning with the positive statement, "The faculty possessed by some individuals is truly marvellous." The editor tells of three "professional dowsers" who independently located the same spot on a high and apparently very dry spot where a sanatorium was to be built; and inasmuch as one of his daughters has the power to some extent, and asserts that she cannot twist the rod by any conscious effort, Mr. Elsworthy concludes against chicanery. Of the sixth letter of the alphabet he tells us that

"it will usually be found that words beginning with *f* which have come to us from the Latin, whether through French or not, and all imported words in *f*, keep their initial letter sharp and distinct, while archaic and Teutonic words, though written with *f*, are sounded as *v*. It is the neglect of this rule, and of the cognate one as to *s* and *z*, which has made Western dialect writers ridiculous to native ears—from Ben Jonson and Shakspere down to *Punch* and the local newspapers. Even Peter Pindar and Nathan Hogg have transgressed very frequently. On the other hand, it often happens that words in initial *v*, especially when emphasized, are pronounced as in sharp *f*."

From the side of its phonetics, we have been struck with the many resemblances of the West Somerset dialect to our own negro speech, and there is one emphatic word, *inty*, rendered 'not I,' and used after a negative assertion, curiously like the Sea Island *enty?* an interrogation of surprise. "Indeed" could be substituted for either locution. Yankeeisms also abound in this dialect. The *Athenæum* having called "*riding* in a gig" an Americanism, Mr. Elsworthy retorts that "no other phrase would be used by a Somerset native." Our very colloquial and rather vulgar "So long!" is also a familiar valediction in England. "'Well then, *zo long!*' is a very common form of saying *good bye*." It "is mostly used in West Somerset, especially about Bruton, but is heard occasionally in the West."

—The Kentish dialect is, we are told, peculiar rather in its phraseology and pronunciation than its words, yet some of these, as collected by Messrs. Parish and Shaw, are very singular. That after an elaborate glossary of the dialect of Cheshire County there should still be room for a good-sized one for South Cheshire, is proof of the wonderful wealth of the mine worked by the Society. Mr. Darlington has had the benefit of Mr. Holland's labors, and occasionally offers a criticism, as in discrediting a specimen of dialect poetry admitted by the latter to his Part III. Notable in this supplementary issue is *enoo*, a plural form of *enuf*, as "muck *enuf* for my graind, an' pratas *enoo* for set it"; but most valuable are the several lists showing the pronunciation of place and family names, the collection of proverbs, colloquial sayings, weather lore, etc., the tales, poems, and customs. We subjoin some samples of phonetic abrasion in place names: Altrincham (pronounced Awtojum, Awtridgum, Thrutchum), Cholmondeley (Chumly), Davenport (Dainpurt), Eardswick (Yarzic), Gawsworth (Gōzuth), Hough (Uf), Hough's Bank (Aoof's Bonk), Hurdsfield (Utsfilt), Macclesfield (Maxfilt, Maxilt, Max'l't), Piemondstall or Plemstall (Plimston, Plimsta), Ringway (Runja, Runjy), Tiverton (Teert'n), Wildboarclough (Wilbertluf). In personal names, take Bancroft (Banky), Greenhalgh (Grinna), Heald (Yeld), Mainwaring (Mannering), Schofield (Scowsel), Woolstencroft (Oos'ncroft). Cheshire seems also to be the home of a proverbial comparison probably losing ground in this country, though well known to the last generation. Mr. Holland gives it—"As queer as Dick's hatband, as went nine times round and would na tee at last." In South Cheshire, according to Mr. Darlington, they say—"it went nine times raind, an' wudna reach the tie"; and he declares he can make nothing of this expression. Mr. Darlington's glossary deserves very high praise for its execution. He gives the pronunciation, with outlines of the grammar, of the South Cheshire speech, which is very exclusive, so that only three per cent. of Romance words are to be found in it.

—The Society's fourteenth annual report is prefixed to Mr. Darlington's volume. Of chief interest is the part which relates to the projected English Dialect Dictionary, to be edited by the Rev. A. Smythe Palmer. Nearly one hundred workers, one-fourth being ladies, are pledged to read books for quotations, or to contribute word-lists or oral specimens. Only about one-twentieth of the sum deemed necessary for the publication ($25,000) has been raised, but the Rev. W. W. Skeat, who is acting as Treasurer of the fund, is so eager for the fruition of this great enterprise, that he assumes the burden of any deficiency on the 31st of December, 1888. But it would not be just to allow him to make this sacrifice out of his own pocket.

—The mails bring the news of the sudden and accidental death, at barely two-score years, of Edmund Gurney of London, whose essays, 'Tertium Quid,' were reviewed in our pages not many weeks ago. Mr. Gurney gave all who knew him such a sense of intellectual power that what he had already published seemed but a prelude to some certainly exceptional future philosophical achievement. As it is, his reputation will depend largely on the development of "Psychical Research." If that proves a sound movement, he will of course have the celebrity which falls to successful forerunners and founders. Pending that, he has by that monument of patience and fairness, the 'Phantasms of the Living,' at least forced a new present branch of study on the unwilling scientific world. His experiments on certain post-hypnotic states have broken ground in what promises to be an extraordinarily fruitful direction. His 'Power of Sound' is the freshest and truest book on æsthetics in English, and possibly in any language. His personal graces were rare; and such were the keenness of his demands on life, the depth of his aims, the subtlety of his intellect, and his capacity for work, that one cannot but feel as if the destroying angel had outdone even himself in heartlessness, by cutting such a man off ere he had fairly begun, as it were, to show his hand.

—A certain amount of opposition to international copyright is due to the ignorant notions of many people as to what is secured when a copyright is taken out for a book. The belief is prevalent that it is the *idea* of the book, or some novel conception of the subject-matter of the work, or some discovery that is set out in it which it is intended to protect. This confusion is no doubt partly due to the unfortunate mixing up of copyright and patent-right, due in its turn to the linking together of these two subjects in the section of the Constitution which authorizes Congress to legislate concerning them. It doubtless also partly arises from the difficulty experienced by persons who have never written a book, in realizing that to discover or think out the ideas which it is intended to illustrate in a projected work, is but the first and often the easiest step in its production. They know nothing about the difficult art of expression, and have no conception of the labor involved in properly presenting to the reader the thought in the mind of the writer, and therefore find it hard to understand that it is the product of this latter kind of labor, and this only, which is protected by the law of copyright. Mr. Henry George, in the *Standard* for June 23, in answer to a correspondent who declares that he has no belief in "any natural property in the creations of one's brains," says some pertinent things upon this point. Concerning the difference between the patent for an invention and the copyright of a book, his contention is that the former, granting rights of property in an idea, "rests on no natural right, but can only be upheld as a matter of policy," whereas the latter gives no property in ideas, but "merely recognizes the right of property in a particular form, itself a product of labor, in which ideas are made tangible; a right which, irrespective of questions of policy, is a natural right—resting on the same ground as the right of the fisherman to the fish he catches, of the farmer to the crop he raises, of the builder to the house he constructs." The true basis of the right of property in anything is that it "was produced—*i. e.*, brought forth—by human exertion." But discovery can give no right of ownership, even though "this discovery may be the result of labor," Mr. George argues, for "no man can discover anything which, so to speak, was not put there to be discovered, and which some one else might not in time have discovered"; therefore, "the expenditure of labor in the invention or discovery of the idea of a machine gives no natural right of ownership in the idea," the natural reward of labor so expended being in the "use that can be made of the discovery without interference with the right of any one else to use it."

—Coming to the protection of literary property, Mr. George says:

"Now a book—I do not mean the printed and bound volume which is the result of the labor of printers, bookbinders, and subsidiary industries, but the succession of words which is the result of the labor of the author—if not a material thing, is quite as tangible a thing as a machine. And in the labor that goes to its production there are the same two separable parts. There is what I have called the 'labor of discovery,' which goes to the idea of the book, and as to which, as in the case of the inventor of the machine, the author must draw on those who have gone before. . . . There is also the labor of production—labor of essentially the same kind, though it deals not with matter, but with immaterial things, as that which in the case of a machine is expended in bringing wood, steel, brass, etc., into certain proportions and relations. It is this labor of production, which results in a tangible identity, that gives ownership to the author as a matter of natural right. And it is this right of ownership not in ideas, but in the tangible result of labor expended in production, that copyright secures."

Mr. George enlarges upon the non-appreciation by persons not authors of the labor involved in "writing out" a book (to which we have referred above), and concludes by expressing the hope that his correspondent will, upon reflection, come to the conclusion that the recognition of the right of property in literary productions, "instead of being like that system of spoliation called protection, an impairment and denial of natural right, is but the securing to the author of the natural reward of his labor."

—*La Réforme Sociale*, the fortnightly organ of the "Société d'Économie Sociale" founded by Le Play in 1856, contains, in its number for June 16, an article by M. Henri Duquaire, on the law of inheritance in France, and its relation to the birth-rate. The subject is not a new one, having been discussed by Le Play himself in his 'L'Organisation de la Famille,' published in 1871, and, in the same year, in a

volume by M. Claudio Jannet. In another column we notice a French statistical work in which the subject recurs. M. Duquaire can hardly be said to have proved his thesis, or to have added anything novel to the discussion. He deals too much in rhetorical phrases about the true, the beautiful, and the good. The picture he draws of the rural population of France, however, has curious points of resemblance to that presented in Zola's 'La Terre,' and this corroboration from an unexpected quarter constitutes, perhaps, the chief strength of his argument. That the French laws limiting the right of bequest have worked great moral injury, and should be considerably modified, if not repealed, we are firmly persuaded. The interest of this fact for us lies in its application to the current reaction in favor of Government interference and over-legislation. The a-priori arguments in favor of the existing French laws of inheritance are as strong as can be desired, and the principal argument against them is the general contention, so forcibly put in the writings of Herbert Spencer, that the State should not meddle.

—As bearing on this general topic, another article in the same journal may be mentioned, namely, that on compulsory insurance of workingmen, and its leanings to State socialism. Here again, while the doctrine is sound and clear, the method of treatment is confused and vague. Correct economic reasoning is weakened by an incongruous admixture of religious considerations which appeal to a different class of minds. The same question is handled in a strictly scientific manner in the last two numbers of Schmoller's *Jahrbuch*, but the German writers are inclined to uphold the doctrine of State interference which the French writer attacks. A third article, on the causes of the fall of Poland, suffers from the same defects as the other two. The writer, S. Fudakowski, examines and rejects various theories that have been advanced, but when he comes to substitute one of his own, he loses himself in a cloud of rhetoric and glittering generalities. A question like this is not to be dismissed in a paragraph, but it may be said that historical authorities agree that the ancient kingdom or republic of Poland carried the seeds of destruction in its vitals. Its inherent weakness was so evident that, in a speech made to the Diet in 1661, John Casimir predicted the dismemberment of the country by Brandenburg, Austria, and Russia.

LEA'S HISTORY OF THE INQUISITION.—II.

A History of the Inquisition of the Middle Ages. By Henry Charles Lea. 3 vols. Harper & Bros. 1888.

In a former notice we spoke of the first volume of Mr. Henry C. Lea's 'History of the Inquisition of the Middle Ages.' In the first half of that volume he described the peculiar conditions of European life and thought which produced the Inquisition, and in the second he gave an account of the origin of the institution and its methods of procedure. In the two volumes now before us we have what might with more propriety be called a 'History of Religious Persecution in the Middle Ages' than a 'History of the Inquisition.'

The second volume is devoted to an account of persecution in the several countries of Europe, and also to the organization of the Inquisition as the instrument in that persecution. In many cases, however, the part played by the Holy Office was so small, or so wholly secondary to the action of local authorities, that one finds it difficult to discover the exact thread of connection. Notably is this the case in the account of heresy in Bohemia, occupying a quarter of the volume, and culminating in the recital of the trial and condemnation of John Hus by the Council of Constance. Hus, up to the time of his appearance at Constance, had been dealt with wholly by the episcopal authority in Bohemia, partly on its own account, partly as agent for the papacy. At Constance he was in the hands of the Council and its agents. The only connection of his trial and that of Jerome with the Inquisition lay in the fact that the methods employed were those which the frequent persecutions for heresy had made familiar to all Europe.

The third volume treats of special fields of inquisitorial activity, and includes under that heading the dealings of the Church with spiritual heretics, political heretics, and such as showed their heresy by pretending to practise any form of sorcery or occult art. The story of spiritual heresy is especially harrowing. The Christian world was full of ardent souls who were struggling after perfection through ways very similar to those which the orthodox Church itself had, over and over again, made use of. Their crime was, that they believed they could do better outside the Catholic fold than within it. If they succeeded in living holy lives of sacrifice and devotion, so much the worse for the institution which claimed for itself the only true source of all holy living. It must at all hazards prevent the scandal of successful rivalry. The all-sufficient excuse for action was found in the charge of heresy, and the all-powerful weapon was ready in the beautifully organized inquisitorial process. Thus the over-zealous Franciscans, the fanatical Flagellants, the pious Beghards and Beguines were all, upon one ground or another, swept into the common accusation of heresy, and the cruel machinery of inquisition set in motion.

Mr. Lea's conclusion is, that trial for heresy was invariably a mere formality. If vigorously managed, it left absolutely no loophole for escape. The only chance for the alleged criminal was in some defect in the trial. If Mr. Lea is right, the essential element in the process was, after all, the use of torture, with its inevitable effect upon the mind of the victim. No matter what resistance the inquisitor might meet in the early stages, there seems to have been scarcely ever a case in which the desired result was not reached by the use, or even by the threat, of physical torment. Thus the whole volume of evidence preserved from the inquisitorial trials loses every particle of value as an accurate record of fact.

Horrible as this view of the trial is, its awfulness becomes almost insignificant by comparison with that larger madness of the community which suffered such perversions of justice, and accepted their results as decisive of the truth in the case. This aspect of the matter becomes especially clear in the account of trial for heresy as a political weapon. Under this head we have detailed sketches of the trials of the Templars, of Joan of Arc, and of Jean Petit, as cases in which the State authority profited by the use of the Inquisition, and of Savonarola, Rienzi, and various other political offenders, as cases in which the profit came to the Church.

In all these trials the Inquisition as such does not play the leading part. It acts merely as the tool of powers anxious for their own safety, and unscrupulous as to the means of maintaining it. A hundred pages are given to "the great crime of the Middle Ages," the destruction of the Temple order, a tale often told, but never with a more careful attention to the legal points involved and a more cautious verdict. Not with any wavering, however. Mr. Lea leaves it quite clear that in his judgment the affair was a gigantic conspiracy against a body of men who, no matter how far they might have fallen from their early purity, were by no possibility guilty of the disgusting and foolish practices alleged against them. They would probably have escaped if Philip of France had not enlisted the papal interest on his side, and thus procured the use of the inquisitorial machinery. There remains but one real mystery in this case: if the papacy was really "bulldozed" into its action by the greed of the King of France, why should it have insisted upon the annihilation of the order in other lands? Again, one has to fall back upon that universal madness, begotten of ignorance and superstition, which made even the preferring of such charges possible.

We can only refer to that chapter of the book which treats of the part taken by the Inquisition in trials for sorcery and other occult arts. If the Holy Office had ever a shadow of justification, it was here. All that hideous swarm of delusions which appear under the names of magic, witchcraft, and dealings with the devil, was at least diminished in extent and violence by the action of the Church. Not that the Church took any really higher ground in these matters than any other part of the community. It believed as much as any one in the delusions which underlay the legal charges. But it was worth something that the Church insisted upon a monopoly of relations with the unknown. There should be no magic but its magic, no dealing with Satan but such as might properly be undertaken under its direction. Thus, for a time, the Church seemed to be almost on the side of reason and light. That it was not really so we know from its attitude towards every searcher after truth who ventured out of its prescribed ways.

We close our notice of this most valuable and imposing contribution to our literature with one criticism as to method. That Mr. Lea has read enormously and in the right books, no reader in his senses can for a moment doubt, but it is to be regretted that he has chosen to give us no systematic account of his sources. We have at the close of every paragraph a fatally abbreviated reference to the books upon which its statements are based, but it is seldom that we can find a full statement even of a title. Still less is there anything like criticism of the sources. In dealing with a subject so open to violent controversy as this, the author is bound to give account of himself. We do not imply that Mr. Lea has not satisfied himself as to the authenticity and value of the mass of very slippery evidence upon which such a story, for instance, as that of Joan of Arc is based. We should, however, have felt in reading his narrative a far greater sense of solidity if we could have been told, however briefly, just the process by which his conclusions were reached. If the question were wholly one of space, we could have better spared a great deal of detailed narration of matters easily found in other books, for the sake of a sounder judgment of the institution which is the nominal subject of this one.

BOOKS ABOUT THE STAGE.

Charles Dickens and the Stage; a Record of his connection with the Drama as Playwright, Actor, and Critic. By T. Edgar Pemberton. London: George Redway; New York: Scribner & Welford.

Mr. and Mrs. Bancroft on and off the Stage. Written by themselves. London: Richard Bentley & Son; New York: Scribner & Welford. 2 vols.

Cinq Anniversaires de Molière: 1874, 1875, 1877, 1881, 1886. Par Ernest d'Hervilly. Paris: Frinzine; New York: F. W. Christern.

La Vie au Théâtre. Par Pierre Giffard. Paris: Librairie Illustrée; New York: F. W. Christern.

Le Cirque à pied et à cheval. Par A. J. Dalsème. Paris: Librairie Illustrée; New York: F. W. Christern.

Pantomimes de Paul Legrand. Par Félix et Eugène Larcher. Paris: Librairie Théâtrale; New York: F. W. Christern.

It is impossible to pronounce Mr. Pemberton's book about Dickens's connection with the stage "a felt want filled," as the English advertisement put it. The subject had been well handled and at quite sufficient length by the late Dutton Cook in an article in *Longman's Magazine;* and Mr. Pemberton has been able to do little more than dilute Dutton Cook's essay. He is an extreme Dickens enthusiast, and has prepared his book for those like himself. Accordingly, it is full of remote allusions to Dickens's works, some of which might fitly have found their place in the examination paper on Dickens which the late C. S. Calverley once set, and which Mr. Walter Besant most successfully answered. Mr. Pemberton is a slovenly writer (he stumbles over many an "and which"), and he has read his proof carelessly. It is possible that the stage lost a great actor when Dickens became a novelist. His novels show his fondness for the melodramatic, and his readings revealed his powers as an impersonator. Perhaps the most interesting chapter of Mr. Pemberton's book is that describing the splendid strolling of the Guild of Literature and Art.

From Dickens's letters Mr. Pemberton fails to quote a passage of hearty and discriminating praise which the novelist bestowed on Miss Marie Wilton when she was playing in cheap burlesque at the Strand Theatre. But the letter is not omitted from the two stout volumes which Miss Wilton and her husband have recently published as a joint autobiography. Mr. and Mrs. Bancroft were the originators of the so-called school of Robertsonian comedy. For their acting Mr. T. W. Robertson wrote the chief parts in "Ours" and "Caste" and "School." After his death, the bereaved managers of the little Prince of Wales's Theatre cast about for new plays in vain, and revived old comedies most sumptuously decorated. Then they fell back on the French drama, and produced those twin marvels of inartistic insularity, the adaptations of "Nos Intimes" and "Dora," called "Peril" and "Diplomacy." All that they did was most carefully and conscientiously done. They always engaged as good a company as they could get, willingly playing small parts themselves; and, in spite of a dead failure or two—a feeble play of Mr. Edmund Yates, "Tame Cats," falling very flat, for instance—they made money. In time they took the Haymarket Theatre, redecorated it, and brought out M. Sardou's "Fédora" and Mr. Pinero's interesting "Lords and Commons." Then they retired to an honorable rest. Their influence on the English stage was good, on the whole: they improved the theatres of London both before and behind the curtain; but they raised the price of seats, and they carried to extremes the pestilent practice of overelaborate stage setting. Mr. Bancroft speaks of the extraordinary pains they took to secure exact scenic accuracy in their reproduction of the "Merchant of Venice," in which everything was excellent—scenery, costumes, music, supernumeraries—and only the acting was inferior. Since then, Mr. Irving has taken his company up to West Point, and has acted the "Merchant of Venice" before the cadets on an improvised stage, absolutely without scenery—and never more effectively. The play is the thing, and all else is of very little importance. For the rest, Mr. and Mrs. Bancroft's volumes contain much kindly and harmless gossip about themselves and others; and the student of the stage will find in them much to interest and to amuse him.

The Théâtre-Français and the Odéon Theatre in Paris have the honorable habit of keeping the birthdays of the three great French dramatists, Corneille, Molière, and Racine, by special performances of certain of their masterpieces, and by the recital of occasional poems by the younger poets of the day. Sometimes these occasional poems have the amplitude of a little play, in which some incident in the life of the great dramatist is set on the stage more or less adroitly. M. Ernest d'Hervilly is one of the most fervent of Molière's admirers, and one of the most ingenious of latter-day French lyrists, and on five anniversaries of Molière's birthday he has come forward with an original play in one act, in which the author of the "Précieuses Ridicules" took a chief part. The five little comedies are of unequal merit, of course, but even the slightest is far above the ordinary level of an occasional piece. They are all lively little plays, and they may be recommended to amateur actors who are sufficiently certain of their French accent and of their ability to deliver French verse—no easy task. There is a portrait of M. d'Hervilly by M. Félix Régamey, and there is also a little preface by M. Auguste Vitu, quite needless, but pleasantly complimentary to the French dramatist of our time, and to the French dramatist of all time.

M. Pierre Giffard, who is the special correspondent of the Paris *Figaro*, and who has written a play or two, having prepared a book about "La Vie en chemin de fer" for M. Robida to illustrate, has now followed it with a book on 'La Vie en Théâtre,' pending the production of 'La Vie aux Bains de Mer.' The present book is a piece of machine-made newspaper work, accurate enough, no doubt, but lacking in savor and in any special insight into the tendencies of the stage in France. M. Giffard's 'Tournée du Père Thomas,' which we noticed not long ago, was a superficial study of theatrical life "on the road" in France, and this is a study equally superficial of theatrical life in Paris. Both works give one a sorry idea of the joys of a histrionic career in France. As Thackeray found that the rollicking Irish stories of Lever, which seemed jolly enough externally, were at bottom profoundly melancholy, so most of the lively tales of theatrical life we read every year or two are imbued with a sadness as undeniable as it is no doubt unconscious. This book of M. Giffard's is painful rather than pleasant, for all its factitious gayety. Of the illustrations by M. Robida we do not know exactly what to say. They are rather "comic cuts" than humorous sketches. If vigorous at times, they are always hasty. On the whole, they seem to us to be distinctly unworthy of the illustrator of Rabelais.

M. Dalsème's book about the circus is not unlike M. Giffard's book about the theatre, but it is not as good. M. Giffard has been careful, and his book was conscientiously planned, whereas M. Dalsème is careless, and his pages follow one another haphazard and with numberless digressions. There is, for example, a long excursus on scene-painting in France which has no place here at all. A really well-informed account of the contemporary circus as it flourishes in Germany, in Paris, and in America would be interesting and not without value. And even more useful, perhaps, would be an historical summary of the circus through the changing centuries, from the Olympic games, the combats of the arena, the jongleurs of the Middle Ages, down to the advent of Astley and Franconi and Renz and Barnum. A book of this kind, modelled on Mr. Parton's somewhat similar sketch of the history of caricature, ought to be abundantly illustrated. M. Dalsème has given us neither of these desiderata; his sketch is very slight indeed, and it is padded with not a little irrelevant matter. It will be remembered that when the German retired to his own room and proceeded to evolve the camel out of his inner consciousness, the Frenchman went to the Jardin des Plantes and described the animal as he appeared there in its enclosure. This, it strikes us, is very much what M. Dalsème has done. He has gone to the four circuses of Paris, and he has asked a few questions; and he has inflated this personal observation and this meagre information into a book of three hundred pages.

Just now there seem to be signs of a revival of interest in France in the pantomimic art. M. Raoul de Najac, whose bright 'Retour d'Arlequin' we noticed a year or so ago, and M. Paul Marguerrite, who has succeeded in making Pierrot take part in tragedy, have organized a club for the production of their pantomimes. Thus it is that this collection of the mimic plays of M. Paul Legrand, who was for years the only surviving Pierrot, is most welcome. They are simple scenarios, for the most part, and, as might be expected, many of the incidents are familiar—"La Statue," for example, is almost exactly the same as the one we have been familiar with since the days of the Ravels. The French Pierrot is naïf and cunning; he is wholly free from the vulgar brutality of the British clown. The late George L. Fox, the best mimic of our generation, acted clown as though it were Pierrot—another instance of the American preference for a French tradition over an English. Fox gave his clown the pure white head of Pierrot, not disfigured with the red blotches of the ordinary British clown; and he played the part with a sobriety and a breadth and a recognition of the exact limits of his art, worthy of the highest praise.

THE RURAL ECONOMY OF FRANCE.

Statistique Agricole de la France: Résultats généraux de l'enquête de 1882. Paris.

Les Populations Agricoles de la France. Par H. Baudrillart. Paris. 2 vols. 1886 and 1888.

THESE two publications constitute a very complete and detailed account of the condition of the rural population of France. The official statistics are supplemented by Baudrillart's careful personal inquiry into the moral and material condition of the peasantry—an inquiry which is of a semi-official character, inasmuch as the work, of which two volumes have now been published, is being carried on under the auspices of the Académie des Sciences Morales et Politiques. The long delay in publishing the results of the decennial inquiry, which began in 1882, detracts from the interest of that part which relates to produce and prices; but the information disclosed as to the more slowly changing facts of rural economy, the distribu-

tion of property, methods of occupation, and the comparison of the condition of the people with their condition in 1862, are matters of more enduring interest. The events of 1870-71 prevented the usual inquiry from being made in 1872; the results of the present inquiry are therefore contrasted with one made twenty years before.

The sketch given by M. Tisserand, the Director of Agriculture, of attempts made before this century to collect information as to the condition of farms and farmers, and of the inquiries made in 1840, 1852, and 1862, shows that the present is, as it should be, the most complete and exact account ever taken of the state of agriculture in France. Early inquiries were necessarily inaccurate; the knowledge of necessary precedent facts did not exist, as did not the administrative organization required for the collection of facts and information. It is far more difficult to investigate the condition of a rural than of a city population: they are more widely dispersed; there are infinite varieties of condition, habit, and occupation; their lives are less open to observation, and they are less ready to give information. To obtain it, they must be disarmed of those suspicions which inquiries are sure to arouse.

The earlier reports on agricultural France were to a large extent conjectural statistics. From the examination of a small district, the inquirer extended his reasoning and conclusions to the whole country, with the result that most erroneous ideas were disseminated. This was the case even with so acute an observer as Arthur Young. A cadastral survey must be the basis of any exact inquiry into rural economy. The French survey was only commenced in 1808; nominally finished in 1847, it has only of recent years been fully availed of for statistical purposes.

The characteristic of the French land system is the great division of land ownership. Arthur Young prophesied that France would become the rabbit warren of Europe; English economists have generally followed his lead, and assumed that the division of property in France was carried to excess. The upholders of the old régime in France have done the same; and most erroneous and exaggerated ideas prevailed on this subject among well-informed but biassed Frenchmen. Not many years ago it was confidently asserted in the Senate that there were fourteen million landowners in France. Recent inquiries conducted on more scientific lines indicate that the number of landowners is about eight million. 'Le Morcellement,' by Alfred de Foville, published in 1885, is the most complete examination of this particular question; and his conclusions are confirmed—mathematical precision in such matters being, of course, unattainable—by the present official inquiry.

Statistics must not only be read, but understood, and for this the methods of compilation should be examined. The agricultural population of France is now estimated to be 18,249,209 souls; showing a diminution of nearly 5 per cent. since 1862. The method of classification places villages (*populations agglomérées*) containing over 2,000 inhabitants, among the urban population; the mere increase of a village from just below to just above 2,000 inhabitants would therefore transfer it from one class to the other. A distinct diminution, however, of the rural population is established, and is attributed to these among other less evident causes:

(1.) The increase of wages, which varies from 26 per cent. for farm laborers to 80 per cent. for women servants.

(2.) Enforced military service, during which many men acquire a dislike to the drudgery of farm labor.

(3.) The low birth-rate, which is most marked in the richest agricultural districts, where the fecundity of man appears to be in inverse ratio to the fertility of the soil. "Stérilité systématique" is an admitted fact in some of the wealthiest departments.

The great diminution in the number of women agriculturists is partly due to the frequent establishment of factories in rural districts. The number of farm laborers has diminished (allowance being made in all calculations for the loss of Alsace-Lorraine) by 25 per cent., being 1,500,000 in 1882 against 2,000,000 in 1862. Some of these have migrated into the towns. The fall in the farm profits has compelled farmers to use as little hired labor as possible, and the increased use of machinery of all kinds has enabled them to do the same work with fewer hands.

The following are the relative number of farms of different sizes in proportion to the total number:

Farms less than 2½ acres.....38 per cent.
Farms from 2½ to 25 acres....46 " "
Farms from 25 to 125 acres.... 6 " "
Farms above 125 acres.....10 " "

In Belgium the division of the soil is very much greater, for the farms containing less than 2½ acres are there 64 per cent. of the whole number.

The total number of rural proprietors is 4,035,246; but one person may own several properties, for there are no less than 12,000,000 separately rated properties (*côtes agraires*). These comprise 125,000,000 parcels, each separately described, measured, and numbered for the purposes of taxation and transfer on the communal *cadastres*, or registers of ownership. Farmers are classed according to their tenure as follows:

Owners farming their own land.79.76 per cent.
Farmers paying a money rent...13.82 " "
Métayers..... 6.42 " "

Since 1862 there has been a diminution of the two latter classes, many tenants and métayers having become proprietors, and the tendency being towards occupying ownership.

Statements of the average prices of land and of labor must not be misunderstood. The variation between different districts is very great, but as the French real-estate market differs from the English in being a retail market, and as simple ownership is the rule in France, quotations of prices rest on a more intelligible basis than in England. The prices obtained in all cases of sale are officially recorded, one object being a contemplated revision of the assessment for the land tax. The following are the average prices per acre of rural land of different qualities:

Description.	Quality.		
	1st.	2d.	3d.
Arable	$204	$168	$120
Meadow and pasture	284	256	160
Vineyard	244	172	144

Since 1852 there has been a very large increase in the letting and selling value of land, but it has not been so marked since 1862.

The average quotations for daily wages in summer of farm hands are as follows:

	With Food.	Without Food.
Men	1.98 francs.	3.11 francs.
Women	1.14 "	1.87 "
Children	74 "	1.31 "

For farm hands hired by the year, lodged, and fed, the comparative wages in 1862 and 1882 were:

	1862. Francs.	1882. Francs.	Increase since 1862.
Foremen	361	465	28.18 per ct.
Laborers and carters	256	324	26.56 "
Herdsmen	230	290	26.02 "
Women	130	235	80.00 "

Is the division of the soil among owners excessive? Does it amount to such a "pulverization" of the land as to make cultivation unprofitable? These questions have been for years hotly debated, but are satisfactorily answered by the statistics now published, as well as by De Foville in the work above mentioned. The usually accepted classification of properties is this:

Less than 5 acres.....Very small.
5 acres to 15 acres.....Small.
15 acres to 125 acres .....Medium.
125 acres to 500 acres.....Large.
Over 500 acres.....Very large.

Generally, there has been an increase in the number of properties of "medium" size. The division of agricultural lands tends to cease when it becomes unprofitable. There are parts of France where unexplained statistics indicate an excessive "morcellement," but it is not of agricultural land; it is the multiplication of house sites, and, as De Foville says, so far as it means that every man sleeps under his own rooftree, the more of such division the better. That phase of *morcellement* which is distinctly bad, viz., the existence of properties in very small and detached parcels, is shown to be diminishing.

Baudrillart's work is the result of a personal examination into the moral and material condition of the peasantry, into their habits, customs, religious and educational condition. His method has been a preliminary study of all official and statistical information bearing on the several districts, followed by thorough examination, generally travelling on foot, of the different types of families and farms. His first volume, published in 1886, deals exclusively with Normandy and Brittany, the second with some of the central departments. He is a stanch approver of "la petite propriété" as the basis of society. "Thank Heaven," he says, "there is no land question in France, nor any social question such as there is in the towns." Excessive individualism is the characteristic fault, he thinks, of the French peasant, so far as any general description is applicable.

His description of the iron-workers of Conches, and the lace-makers about Caen, who combine industrial with agricultural occupations, presents an almost ideal condition of society. The foundries of Conches provide occupation not only for the men, but also for women in the lighter work of finishing agricultural implements. Men's wages are from six to eight francs a day; nearly all own land, which they cultivate; in harvest, and at other seasons when the land requires attention, they desert the factories for their farms. Near Caen, 70,000 women are said to find employment, chiefly in their own homes, at lace-making. The men are farmers and fishermen. In Brittany, poor as the population still is in places, the present condition is far better than the past. Wrecking on the coast and faction fights between villages were once common. There are places where a man's wage, with food, is still not more than seventy-five centimes a day, and mendicancy is followed as a profession in families. Nevertheless, there is everywhere observed a distinct improvement in the material

condition of the people. In the second volume, treating of some of the wealthiest and most prosperous parts of France, Baudrillart comes to the conclusion that in morals improvement has lagged behind that made in wealth. He points out faults, but, on the whole, concludes that many of the pictures drawn of the French peasantry make them out far worse than they really are. The twenty million souls in rural France are the mainstay of the country—"Ce sont de bonnes populations."

The Ristigouche and its Salmon Fishing. With a chapter on Angling Literature. By Dean Sage. Edinburgh: David Douglas; New York: Scribner & Welford. 4to, pp. 275.

This book has every mark of being "offered on the insatiate altar of friendship," to use an expression of Joseph Crawhall's cited on page 266, rather than destined for the commercial struggle for existence. Extraordinary pains have been bestowed upon it by author and publisher, to make it the lovely thing it is externally. The page is of noble proportions, the margins broad, the print large, the paper of the solidest Holland texture. Illustrations abound—for ornament and for use: exquisite wood-engravings of flies; full-page etchings of scenery and adventure, many very charming; portraits; maps; facsimiles of old prints; vignettes, head and tail-pieces, initial letters, etc., etc. In spite of the various styles employed, good taste has prevailed to maintain a high level of excellence.

With all this luxuriousness, Mr. Sage's narrative is direct and business-like, and it is clear that he brings neither to his friends nor to the collector an unsubstantial show of apparel, conceived in mere vanity. We have, in fact, a very practical monograph on the river that forms the boundary between Lower Canada and New Brunswick, in which the discourse proceeds in this orderly fashion: The River; Canoes and Indians; Camp Harmony; The Salmon; Tackle and How to Use It; The Salmon of the Matapedia Bridge (a notable experience); Hours for Angling; The Waugan *et infra;* The Season of 1885; The Adventures of 1886; Angling Literature. The titles are suggestive of the kind of information conveyed and entertainment afforded by the several chapters. Any one desirous to know the fishing localities of this particular stream, or the habits of the salmon which frequent it (p. 70), or to settle his doubt whether salmon rise to the fly for food or for fun (p. 79), or what flies are best, the light or dark-colored ones (p. 99), will be satisfied by Mr. Sage without the necessity of his going to the spot, or of diving down under the water, like the enthusiast mentioned on p. 103, to put himself in the fish's place when viewing a fly.

All that is told on these heads, however, can be read by the layman without fatigue, and the text as a whole has the decided merit of recommending itself hardly less to those who care nothing for the sport than to its votaries. Mr. Sage's humor and love of anecdote, and an exceptional descriptive power, furnish great attractions for any one capable of appreciating these qualities, whatever the theme. His characterization of the Indians of the river is very droll—their innocent rhetorical profanity, mere flowers or lubricants of speech; their dependence upon positive orders even for routine work, etc. It is worth while quoting what is said of this trace of savage improvidence and shiftlessness:

"We had, as an example, for several years as cook, one Jim Pole. To him the knowledge never came that we expected to have three meals on any particular day simply because we had been in the habit of having them. He was always cheerful, and perfectly willing to cook a dozen dinners daily—which I do not doubt he often did for the men; but if, before going to bed, we omitted to tell him that we wanted breakfast the next morning, and to specify the hour and every item of food for the meal, he would fail to furnish anything.

"He never came for orders, nor did he ever practise his art without explicit directions. On one occasion, when we expected certain of the white natives, with their female relatives, to dinner, and wished to prepare a somewhat elaborate feast, after the menu had been settled I remembered we had some canned green corn, and, summoning the cook, said, 'Jim, you may give us some of that corn for dinner.' 'Yes, sir,' was the smiling response. But little did I think that he considered this order a constructive cancellation of the previous labored ones, and great was my dismay when, on leading a blooming girl to the table, the only dish displayed was a huge one of canned corn. Jim was standing by highly pleased with his success, and when, with a horrible suspicion of the truth, I demanded the production of the rest of the dinner, his cheerful answer was, 'Well, you say git corn, an' so I git corn an' stop make tudder dinner.' There was no use in scolding him, as the fault was mine, and the banquet was apologetically postponed for an hour.

"This necessity of giving the plainest and most definite instructions to get anything done, applies to most Indians, and has to be recognized in order to get along well with them. You can have one wake you at six every morning for a month, and the first time you omit telling him specifically to do so, you can sleep your head off without his interference, though he may know you have made every arrangement to go out half an hour later."

For specimens of Mr. Sage's graphic faculty, we will take this (p. 188):

"I hear the low talk of the Indians back of the camp, and their steps as they descend to the river, and soon the sound of the falling axe denotes their preparations for the everlasting 'bile de kittle.' Then Nat the cook audibly dons his heavy boots on the back stoop, and with yawns and grunts prepares for the labors of the day. The sun is now full on the tent, making my two heavy blankets uncomfortably warm, and gradually banishing the delicious sense of drowsy consciousness, until I begin to wonder what time it is, and, after long hesitation, rouse up enough to look at my watch, and find it half-past five. Another few moments, passed mostly in pluming myself on not being fool enough to be fishing at that time, and I crawl out of my tent to see such a morning as I believe can only be found in northern latitudes: a blue sky of unclouded brightness, the air warm and balmy, yet with a spicy undertone of freshness that makes every breath of it a luxury; the grass sparkling with the heavy dew, and, in some places yet untouched by the sun, showing the whiteness of the hoar-frost of the night; and the noble river before me, hastening along so fast and foolishly to lose its identity in the waters of the great Gulf of St. Lawrence."

And this (pp. 138, 139):

"I sometimes think the love of nature that the sportsman has is of a different order from that felt by the average mortal. Perhaps it is a lower sentiment, in that it cannot find its highest gratification in the smaller details of scenery—in one beautiful view, one rude mass of rocks, one stately tree, or one brilliant flower—but needs the entire effect. He is not moved half so much by the serene beauties of Lake George, only here and there showing the absence of man's hand, as by the sunset on some wood-surrounded, clear, and lonely lake, with the trout breaking at the edge of the lily-pads near the mouth of the cold stream which feeds it, the loon calling mournfully in the distance, the startled sheldrake and her brood half flying, half swimming at his approach, the croaking bittern, with his labored flight—the whole combination of water, forest, and animal life joining to produce a subtle charm which no frequented place, however beautiful, can yield.

"When the native animal life has been destroyed, or forced, through the proximity of man, to seek homes less disturbed, there is always a lack of that completeness of natural surrounding which makes one feel that here is a spot just as it was centuries ago. Before the memory of man, deer sought the water by this well-marked runway—not stealthily by night, but mornings and evenings; and in the warm July and August weather the heat of the day found them up to their backs in the cool stream, lazily cropping now and then a tempting full-blown water-lily close at hand, and slowly retreating before the first rare human intruder. The mud about the salt-lick at the foot of the lake has for hundreds of successive seasons been marked with their footprints, as it now is. That mink stealing along the shore to his hole in the heaped-up rocks is one of a long line which lived and fished there before him. The great owl—which begins his wild serenade shortly after the last sweet notes of the wood-pewee cease, answering the melancholy and long-drawn call of the bear from the other shore—is of a most ancient ancestry of that ilk, which has from time immemorial used yonder great beech tree, now in the last stage of decrepitude, as its nocturnal concert-hall."

In connection with the foregoing we ought, perhaps, to cite Mr. Sage's apology for the destructiveness of his craft (p. 141):

"It doubtless seems to a great many an anomaly that there should exist a love in the breast of the destroyer for the creatures he destroys; but it is a fact that the preservation of fish and game, which is due almost entirely to the efforts of sportsmen, is not by any means owing to a selfish desire for increasing their own amusement, nor to the more important economic reasons they urge, but very largely to a genuine love for the wild creatures of the woods and waters as a necessary element in the whole scheme of nature, the absence of which bereaves her, to them, of an essential part of her charm."

Notoriously, the art, whether censurable or not, has been a favorite with clergymen, whose "vocation has contributed more than any other to angling literature," and has helped latterly, we infer, to give it that scientific turn which Mr. Sage remarks (p. 261) in the books issued since 1835 and 1840. These "have been written by men who look at the amusement quite as much from the standpoint of the naturalist as that of the angler; and to these, more than to the purely scientific authors who have pursued their investigations in houses and museums, is due the greater part of what is now known about anadromous and fresh-water fishes" (p. 261).

The last chapter of this volume is consecrated to a summary bibliography of the subject, with another apology for the collector in a line not obviously useful. Mr. Sage finds fishing itself an emblem of the collector's pursuit, and justifies the one by the other. He writes pleasantly and humorously, and we are sure modestly, about the pleasures and privations and hazards of collecting; and those who are touched by a like mania in any direction will follow him sympathetically.

One might fancy that a feeling of indebtedness for sport in what were once British waters led Mr. Sage to have his book manufactured abroad. If this were so, it must have been a costly tribute, for, apart from the printer's and binder's bills, a paternal government stood ready at our Custom-house to inflict a penalty upon "the return of the native." Rather, as we perceive, a friendship between author and publisher determined a choice which the result abundantly justifies, even if the national surplus has been still further exaggerated by the tax upon American industry. In the division of the illustrations, Mr. Douglas appears to have procured the engraving of the flies by John Adam, of which we have already spoken, and which could hardly have been better done by any artist on wood. The graceful emblematic head-pieces and other ornaments by Burn-Murdoch, reproduced by phototype, are also to be set down to the credit of the fastidious publisher.

In Castle and Cabin; or, Talks in Ireland in 1887. By George Pellew, A.M., LL.B., of the Suffolk Bar. G. P. Putnam's Sons.

MR. PELLEW, armed with letters of introduction to persons of all shades of opinion, spent four months in Ireland in the fall of last year. This book chronicles his experiences. It is for the most part taken up with excerpts from records he preserved of "talks with over two hundred people, including officials, landlords, land agents, priests, farmers, professional men, merchants, shopkeepers, commercial travellers, and laborers." We do not believe the book will help readers to much clearer views than they already possess regarding the general bearings of the Irish problem; but it is an admirable exposition of the difficulty and complexity of the situation, and would be likely to have a moderating influence upon those inclined to entertain extreme views upon one side or the other. He holds the scales evenly as between his different informants. Of all the visitors to Ireland within the past few years who have recorded their experiences, he appears to us to have best kept his head and most used his own judgment.

There can be no better proof of the honesty with which he has reported the conversation of those with whom he was brought in contact than the fact that, while he is judiciously reserved in the giving of names, the personality of his informants, in the districts with which we are best acquainted, is clear. In Kerry he visited the widow of Mr. Curtin, whose case is so well known. (Her husband, President of a National League branch, was murdered in defending his house against moonlighters who sought arms. She and her family were subjected to bitter persecution, and, since Mr. Pellew's visit, have been obliged to leave the district, because one of the moonlighters was shot in the mêlée, and the Misses Curtin gave evidence upon the trial of the others.) The peasants' bitter, distorted, and wild view of the case is shown in an interview with the mothers of some of those condemned to penal servitude for complicity in the transaction.

"In the centre of a large, untidy farmyard is the high thatched hut of Mrs. Casey. She looked like an old chieftain, with pale, delicate face surrounded by the stiff frill of her white cap, as she sat by the peat fire watching the bubbles rising in an immense iron pot hanging from the crane. 'For the death of Curtin,' she said in a clear, strong voice, 'three Sullivans, two Caseys, Darley, Spring, MacMahon, Clifford, and others were arrested. The Curtins swore black, brown, and white against Darley and my sons, and laid low one of widow Sullivan's. Curtin's people had got blood-money before; his grandfather in '98 was an informer.' [This was not true.] 'If those boys did that thing, they merely went for arms; a foolish thing, but it has been done throughout Ireland, and is done to-day. As long as I am alive, and my children and their children live, we will try to root the Curtins out of the land. Now, I will, I will do it. Wasn't a young man more than equal to that old codger? Yet I am better off than she [Mrs. Curtin] is. I can go out to-day, and I won't have peelers about me, and I won't be hooted and booed. My oldest boy went insane, and I am sick, so, as long as I live, the Curtins shall have my good wishes.'"

The author's conclusions regarding the difficulties of home rule are, upon the whole, just. He, however, too much leaves out of view the sentimental side of the question, the impossibility of continuing to govern Ireland upon present lines, and the apparent necessity for immediate and radical change. We doubt whether the Irish people will, as the author expects, by the extension of local government such as that now being enacted for England, be taught "to blame themselves rather than the English Government for local discomforts." He brings out the almost universal desire in Ireland for protection, and its difficulty under any system of home rule, but he does not sufficiently dwell upon the practical abandonment of the idea by the representatives of Irish opinion in their acceptance of Mr. Gladstone's bill.

The book is not without mistakes. To a certain extent the interpretation of the courts has set aside the clause of the Land Act which enacted that "in fixing the rent, no rent is [to be] charged on improvements by him [the tenant] or his predecessors" (p. 15). We do not believe that the author's (the Government's) version of the Mitchelstown mêlée, as given at p. 95, is borne out by the testimony of independent witnesses. Nor is it correct to say (p. 297) "the proportion of paupers to the population is from three to four times greater than in England." Ireland has gone wofully behind in this matter within the last decade, but she is still, according to the Poor Law statistics, considerably before England. Upon the whole, 'In Castle and in Cabin' is an admirable work, and we desire for it a wide circulation among those who are anxious to inform themselves regarding the state of feeling among different classes in Ireland.

Roman Literature in Relation to Roman Art. By the Rev. Robert Burn, M.A., LL.D., Glas. Macmillan & Co. 1888.

THIS is a wofully dreary and empty book, upon a most interesting and fertile subject. Dreary, because of the uniformly dry and heavy style in which it is written, burdened with quotations, most of which illustrate only the author's pedantry; and empty, because, so far as we have been able to discover, its 315 pages do not contain one suggestion upon its fascinating theme which has not become a platitude by repetition on the part of every writer who has ever dealt with Roman literature or Roman art. Who, for example, does not know that Roman poetry was largely influenced by patronage, that Roman sculpture was realistic, and concerned itself more with men than with gods, that Roman architecture was stupendous when it occupied itself with the arch, and conglomerate and vulgar in its decorative features, and that a chief characteristic of both the poetry and the art of the Empire was their display of technical virtuosity? Yet these are stated as new ideas, and proved, especially on the literary side, with which the author seems to be most familiar, by quotation after quotation from the writers of the time. This is especially noticeable in the chapter on Roman Portrait Sculpture, almost the whole of which is taken up with extracts from Roman authors illustrative of their interest in the human countenance and the power of the features to express mental conditions and characteristics. This Dr. Burn apparently regards as in strong contrast to Greek feeling, and, when combined with the realistic tendencies of their portrait sculpture, as a decided and lamentable degradation of art. "Therefore it may be said that the idea underlying Roman Portrait Sculpture was the degradation of the divine to the human form, and, when further developed, would have generated a fondness for such exhibitions as Madame Tussaud's."

Another instance of this realism which is apparently noted by way of contrast to the Greek, is that Suetonius, in his 'Lives of the Cæsars,' usually gives a particular description of the Emperor whose life he is relating. "In several cases the shape of the nose and the appearance of the hair is noticed," which we confess ourselves unable to regard either as extraordinary or as in contrast with Greek writers —even the best—when we recall the vivid portraits of Teiresias, Odysseus, and the other principal performers in the 'Iliad' and 'Odyssey.' Certainly, no Roman literary portraits are more real than they.

If the book has any claim to originality, it is in the author's deductions from his comparisons between Greek and Roman art and literature, some of which strike us as masterpieces of logic in their way. We give a few specimens:

"We gather, then, that the principal influences of Roman character and circumstances upon their art may be roughly stated as follows: First, their innate *severitas* and realism produced satire in poetry, biographic tendencies in history, caricature, technical finish and excessive exactitude in art; while, secondly, their world-wide empire and wealth enlarged and confused both poetry and art, giving rise to a composite style in both, and a preference of quantity to quality, and of crowds to groups" (p. 29).

This is the close of the introduction, and it may also be considered the keynote of the book. Architecture bends to his argument as follows:

"Athena was 'full of ideas' in Homer; and we find Minerva in Ovid 'called the goddess of thousands of works.' So in like manner the Corinthian capital is the ideal of simply beautiful ornament, while the composite is rich and complicated. The Greek Ionic is simple, while the Roman Ionic is architecturally adapted in form" (p. 112).

Finally, the superiority of Homer to Virgil, in one respect, and the degrading influence of wealth upon Roman poetry, are thus summed up:

"Homer, in *Il.* ix, 213, gives a long description of the cooking of the heroes' meal, beginning with the killing of the animals, the lighting of the fire, and the spitting of the joints, while Virgil only applies, in *Æn.* v, 100, two or three lines to the cooking of the meal. This indicates the desire of the poet not to shock his patrons' aristocratic notions of a meal by going too far into particulars. Again, in the tenth book of the *Æneid*, Virgil has three lines describing the treasures offered to Æneas of works of silver and ingots of gold, while Homer, speaking of a similar offer, enumerates bronze, gold, and wrought iron generally" (p. 173).

The last, and by far the longest, chapter in the book is upon the general subject of Romano-Greek architecture, and may be of some service to those who know little about it. The illustrations, with which the book is bountifully supplied, are "process" reproductions of familiar photographs, and are of material service in filling out the volume and giving it an attractive appearance.

Practical Statistics: A Handbook for the Use of the Statistician at Work, Students in Colleges and Academies, Agents, Census Enumerators, etc. By Charles T. Pidgin. Boston: The William E. Smythe Co. 1888.

THE author of the book before us has been for fifteen years, as he tells us in his preface, engaged in statistical work, and for a large part of that time has been connected with the Massachusetts Bureau of Statistics of Labor, of which he is now the chief clerk. His duties have made him familiar with every detail of the methods employed by that bureau in the collection and compilation of statistical information. It is only natural that, when he sets out to tell how in practice statistical data can be most easily, cheaply, and accurately gathered and tabulated, he should give an account of the way in which the Massachusetts Bureau gathers and tabulates them. This he does, and for practical purposes this is all he does. We are not disposed to find fault with him for doing this and this alone.

As he remarks in his preface: "Many works

have been written relating to statistics, but, to the author's knowledge, none have been devoted exclusively to the explanation of the practical part of statistical work." The only person who is qualified to write a good book upon a new subject of an exclusively practical nature, is a man who has had a large and successful experience in dealing in practice with the problems with which the book concerns itself. When he has clearly and accurately told us the way in which his experience has convinced him that the work can be best done, he has said all he can say on the subject.

Mr. Pidgin, of course, employs, in performing his duties in connection with the Massachusetts Bureau, those methods which he thinks are most likely to yield the best results. We do not suppose that he thinks that these methods cannot be improved, but as he knows that the Massachusetts Bureau does the best statistical work in this country, he is justified in taking that Bureau as a model. Practical instruction can usually be better conveyed in the concrete than in the abstract, and accordingly the author, instead of formulating a set of rules and maxims, selects the most extensive undertaking in which the Massachusetts Bureau has ever been engaged, viz., the taking of the State census of 1885, and tells us just how the work of that census was done. He shows us how the schedules were prepared. The instructions, general and special, to enumerators and agents are reproduced. We are told how the schedules when returned were examined and tested, and the quickest and best methods of tabulating and presenting the results are considered.

To reprint a number of old schedules and instructions, and accompany them with some notes and explanations, may not appear to be either a very difficult thing to do or a very valuable thing when done. But to select from among the blanks and forms of the Bureau those which would be of use to persons engaged in other sorts of statistical work, was probably not as easy as it seems to be, and the result is a book that a person who proposes to undertake any considerable statistical investigation cannot afford to be without. It will be practically indispensable to statisticians, not because of the new or original suggestions it contains, although these are neither few nor unimportant, but because it will save them from the necessity of taxing their brains to anticipate all the contigencies which, if not anticipated and provided for in advance, will add much to the cost or detract greatly from the accuracy of the work. The amount of time and money which will be saved by a book like this, in which all the more probable of such contingencies are referred to, would not be easy to calculate.

BOOKS OF THE WEEK.

Althaus, F. Theodor Althaus: ein Lebensbild. Bonn: Emil Strauss; New York: Westermann.
Black, W. Strange Adventures of a House-Boat. Harper & Bros.
Bottone, S. R. Electrical Instrument-Making for Amateurs. D. Van Nostrand.
Clarke, W. H. The Civil-Service Law: A Defense. L. K. Strouse & Co.
Compton, A. G. First Lessons in Wood-Working. Ivison, Blakeman & Co.
Correspondence of Wagner and Liszt. Translated by Franz Hueffer. Scribner & Welford. 2 vols.
Crawford, F. M. With the Immortals. Macmillan & Co. $2.
Curtis, W. E. Russia: its People, its Palaces, its Politics. Belford, Clarke & Co.
Daudet, A. L'Immortel: Mœurs Parisiennes. New York: Wm. R. Jenkins.
Daudet, A. Thirty Years of Paris and of My Literary Life. George Routledge & Sons. $1.50.
Flagg, W. J. Woman the Stronger. Belford, Clarke & Co.
Fraternity. Macmillan & Co. 50 cents.
Gaspary, Prof. A. Die Italienische Literatur der Renaissancezeit. Berlin: R. Oppenheim; New York: Westermann.
Hark, Rev. J. M. The Unity of the Truth in Christianity and Evolution. J. B. Alden.

Princetoniana:

Charles and A. A. Hodge, with Class and Table Talk of Hodge the Younger. By a Scottish Princetonian, the Rev. Charles A. Salmond, M.A., Rothesay. With portraits, etc. Crown 8vo, cloth, $1.25.

"Chatty, anecdote-laden, and most readable. . . . In Dr. Charles Hodge was conspicuously seen how warm a heart may beat beneath what some people would regard as the cold steel of a Calvinistic coat of mail . . . The class and table talk of Hodge the Younger gives the book a permanent value as a repository of great thoughts by one of the master spirits of the New World."—*N. B. Daily Mail.*

"A very interesting work. . . . The agreeable conversational style in which the brief memoirs are written makes this part of the work pleasant to read beyond the common run of similar memorials. The collection of jottings from the lectures and table talk of Dr. A. A. Hodge is valuable for the racy vivacity and point of the various utterances, which have quite as much biographical as theological significance. . . . Will be welcomed as an interesting memorial of two memorable men, and as a vivid sketch of the manner in which theology is taught at Princeton."—*Scotsman.*

"One of the most interesting books that have come for a long time is 'Princetoniana.' "—*Phila. Press.*

"Mr. Salmond has furnished a genial volume, which will prove attractive to a large number of readers."—*N. Y. Times.*

The Hibbert Lectures, 1886.

Lectures on the Origin and Growth of Religion as illustrated by *Celtic Heathendom.* By John Rhys. 8vo, cloth, 700 pp., $3.75.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

BOOKS
FOR AN
IDLE SUMMER HOUR

Robert Louis Stevenson's Latest Romance

Is proving one of the most popular and best selling of all his works. 'The Black Arrow' is the title of the book. It is a thoroughly Stevensonian creation, a romance that glows and tingles with originality. The *Critic* says: "We have devoured it at a sitting." The 12 full-page illustrations are in both editions. Paper, 50 cents; cloth, $1.00.

A Brilliant and Daring Romance

Seems to be the unanimous verdict of the press touching Duffield Osborne's Novel, 'The Spell of Ashtaroth.' It is a story equalled by few for the vividness of its descriptions and its distinct originality. The rich coloring of scenes and rapid succession of spectacular effects have a thrilling interest. Sent free of postage anywhere for $1.00.

Stories of the Old South

Are told by a master hand in Thomas Nelson Page's book. 'In Ole Virginia.' It is a delightful series of stories, scarcely equalled in tenderness, pathos, and humor. The pictures of old Virginian life are at once beautiful and striking. Mr. Page's famous story, 'Marse Chan,' is in the collection. The price of the book is $1.25.

George W. Cable's Last Novel

Is 'Bonaventure.' It is a prose pastoral of Acadian Louisiana, and pronounced by the best writers as the most charming of all Mr. Cable's books. He has, perhaps, written nothing that is so faultless. By mail anywhere for $1.25.

For Lovers of Out-of-Door Sports

May be recommended such books as Thomas Stevens's 'Around the World on a Bicycle ($4.00); 'Lawn-Tennis as a Game of Skill (75 cents); 'How to Camp Out' (75 cents); 'The Boat-Sailer's Manual' ($2.00); 'The Sailor's Handy Book' ($3.50).

INSURE YOUR LIFE

AS YOU

INSURE YOUR PROPERTY,

each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratio of death claims and expenses. Maximum security. Minimum cost.

A few resident pupils are received.

PENNSYLVANIA, Bryn Mawr.

DAY AND BOARDING AND COL- lege Preparatory School for Girls. For prospectus, address Miss FLORENCE BALDWIN.

PENNSYLVANIA, Chester.

PENNSYLVANIA MILITARY ACA- demy. 26th year opens September 19. A MILITARY COLLEGE with four graduate courses: CIVIL ENGINEERING, CHEMISTRY, ARCHITECTURE, and ARTS. Degrees conferred in each, respectively C. E., B.S., B.AR., and A.B. A thoroughly organized Preparatory Department. For Circular, with full information, address Col. CHAS. E. HYATT, Pres't.

PENNSYLVANIA, Germantown.

MISS MARY E. STEVENS' BOARD- ing and Day School, 202 and 204 W. Chelten Ave., begins its 20th year Sept. 20, 1888. The school has been *approved* by Bryn Mawr College, and Miss Stevens is *authorized* to prepare students for the entrance examinations. Pupils pass the examinations in this school.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for Young Ladies reopens Sept. 28, 1888.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, Germantown.

FRANKLIN SCHOOL, CHARTERED 188—, offers for boys an advanced college preparation, and special training in English, English Literature, History, and Elocution. Reopens September 20. A large staff of teachers, with specialists in French, German, and music. Terms for resident pupils, $600.
Exceptionally fine building and equipments, with extensive grounds.
The Register, with full information, sent on application. GEORGE A. PERRY, A.M., Head Master.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9TH MONTH, 11TH. Thirty minutes from Broad Street Station, Philadelphia. Under the care of Friends. *Full college course for both sexes.* Classical, Scientific, and Literary. Also, a Manual Training and Preparatory School. Healthful location, large grounds, extensive buildings and apparatus. For Catalogue and full particulars, address
EDWARD H. MAGILL, LL.D., President.

RHODE ISLAND, East Greenwich.

EAST GREENWICH ACADEMY. Founded 1802. For both sexes. Steam heated. Lighted throughout by electricity. $43,000 endowment. Prepares for college or business. Advance payment of $200 covers entire cost of tuition in literary courses, including home, for the year. Opens Sept. 4. For catalogue address REV. F. D. BLAKESLEE, A.M.

RHODE ISLAND, Providence.

FRIENDS' SCHOOL FOR BOTH Sexes. Founded in 1784. Excellent home. Students from 18 States. All denominations. Thorough work in English, Science, Classics, Music, and Art. Our certificate admits to College.
Address AUGUSTINE JONES, LL.B.

VIRGINIA, Lexington.

VIRGINIA MILITARY INSTITUTE. —The fiftieth session of this well-known State Institution will open on September 12 proximo. It provides a system of thorough military training, a distinctive course of academic instruction, and technical instruction in the several branches of Applied Science, thus enabling a graduate in the Academic School to gain a professional degree as Bachelor of Science or Civil Engineer.
These advantages are secured on terms not exceeding $36 per month, as the average of the entire course, including clothing in addition to the ordinary college necessaries. For catalogue apply to
GEN. FRANCIS H. SMITH, Superintendent.

VIRGINIA, Lexington.

WASHINGTON & LEE UNIVERSI- ty. Academic Departments; Law, Engineering. Important changes in Academic degrees.
Apply for catalogue.

VIRGINIA, Norfolk, opposite Old Point Comfort.

IS YOUR DAUGHTER DELICATE? Build her up by sending her to school in this delightful, healthful winter climate. Full collegiate courses, music, art; equipment, $60,000. Attractive home school. Personal care. Address
NORFOLK COLLEGE.

Teachers, etc.

A GENTLEMAN ENGAGED IN teaching in a college town will take into his family a boy preparing for college. A pleasant home and a careful and thorough preparation for college, are what is offered. Music if desired. Refers, by permission, to Prof. W. S. Tyler and Pres. J. H. Seelye of Amherst college. For terms, etc., address
S. A. SHERMAN, Amherst, Mass.

A GENTLEMAN, HAVING LONG experience, prepares for college, civil-service, and Regents' examinations. Address PROF. MARTIN, 236 West 4th St.

A PH.D. OF THE JOHNS HOPKINS University, wishing to teach Greek and Latin exclusively, desires a change of position. Address
E. M., care of the *Nation*, New York.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 7 East 14th St., N. Y.

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.
E. O. FISK & Co., 7 Tremont Place, Boston.

CLAVERACK COLLEGE
AND HUDSON RIVER INSTITUTE,
Claverack, N. Y.

Three miles from the City of Hudson-on-the-Hudson, on the Hudson River, and eight from Catskill, commanding fine views of the Catskill Mountains.
Fits boys thoroughly for all Colleges, Professional and Scientific Schools, and business. A full College course for Girls. Legal power to confer degrees.
Thorough training, with persona care in Primary. Fourteen instructors in charge of ten departments. Physical training in Military Drill and Calisthenics.
Healthful, delightfully situated. Home comforts, parental discipline, pure air, and good cuisine. Refined manners, elevated social character, cultivated taste, and Christian morals inculcated.
A Conservatory of Music and Art. Courses in piano and vocal culture, pipe and reed organ, violin and cornet, harmony and counterpoint. 34th year opens Sept. 10. Send for Catalogue.
Rev. A. H. FLACK, A.M., Pres't.

The Pennsylvania Museum
AND
School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.
All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.
Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.
At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:
1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.
Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.
Full information will be given to any one deciding to exhibit.
If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.
The sympathy and coöperation of all interested in this Art industry are earnestly requested.
Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

A WINTER IN SOUTHERN EUROPE
A party sails DEC. 29 for the South of FRANCE, ITALY, SICILY, and other delightful resorts.
EGYPT A Second Party for the HOLY LAND, GREECE, TURKEY, The NILE, and the chief countries and cities of Europe, sails same date. Send for Circular.
E. TOURJEE, Franklin Sq., Boston.

CATALOGUE NO. 26 NOW READY. "Odds and Ends." A. S. CLARK, Bookseller, 34 Park Row, New York City.

THE "IDEAL" SERIES.

"Perhaps there is no more agreeable series than 'The Ideal Series.'"—*Athenæum*.

"At once very dainty and very serviceable."—*Academy*.

"Beautifully printed on rough paper."—*Pall Mall Gazette*.

"Nothing more dainty has been issued from the press."—*St. James's Gazette*.

"Perfectly printed, and as fit for the pocket as the drawing-room."—*Spectator*.

"Deserves loving conservation by all who prize the rare arts of excellent topography and paper-making."—*Vanity Fair*.

"Leaves nothing to be desired in the way of typographical perfection."—*Church Times*.

Each volume in Elzevir 8vo, cloth extra, gilt tops. Sold separately at $2.00.

A LIST OF VOLUMES ALREADY PUBLISHED:

LAYS OF A LAZY MINSTREL. By J. Ashby-Sterry, author of 'Boudoir Ballads,' 'Shuttlecock Papers,' etc. Small crown 8vo.

CHAUCER'S CANTERBURY TALES. 2 vols.

SHAKSPERE'S SONNETS. Edited by Edward Dowden. With a Frontispiece etched by Leopold Lowenstam, after the Death Mask.

PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock, also complete lists of Bohn's Libraries, will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Scribner's Magazine

FOR AUGUST

Is especially attractive for summer reading, containing an unusual variety of fiction in addition to its other features. Among the contributors are Sarah Orne Jewett, who writes a story entitled "Fair Day;" there is a delightful sketch—"An Epilogue to 'An Inland Voyage'"—by Robert Louis Stevenson; an entertaining story of Newport by Maria Blunt, entitled "The Fate of the Georgiana," with many illustrations by W. L. Taylor; the third part of Henny James's novelette, "A London Life;" a strong story by Octave Thanet, entitled "Otto, the Knight;" the continuation of the serial, "First Harvests;" a new paper in the

RAILWAY SERIES

on "American Locomotives and Cars," by M. N. Forney, elaborately illustrated by J. D. Woodward, Robert Blum, M. J. Burns, and others; an interesting and timely paper by Prof. N. S. Shaler, "Rivers and Valleys," with many beautiful illustrations; and poems by Helen Gray Cone, Thomas P. Conant, and A. Lampman.

25 CENTS A NUMBER; $3 00 A YEAR.

CHARLES SCRIBNER'S SONS,

743 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JULY 26, 1888.

The Week.

THE vote on the Mills bill in the House on Saturday will serve as the historical record of the transformation of the Democratic party which President Cleveland has accomplished. There could be no more forcible illustration of the value of civic courage to a nation than has been afforded by him since December last. At that time his tariff-reform message, by its boldness and utter disregard of political expediency, filled his own party with consternation and his opponents with delight. But the step, having once been taken, could not be retraced. To the surprise of Democratic leaders, who had for years been afraid to avow manfully their opinions upon the tariff question, the country recognized the force and truth of the President's position, and recognized also, as the American people have never failed to do, the honesty and patriotic courage which prompted their expression. Slowly but surely the Democratic leaders have pulled themselves up to the President's advanced position; and, after less than eight months of argument and agitation, the vote is taken which shows that the party is practically a unit behind the first leader which it has had for a quarter of a century. Only four Democrats out of a total of 169 voted against the bill and the President's policy, while two Republicans of unvarying party loyalty and three Independents joined with the Democrats in supporting it, thus more than counterbalancing the Democratic defections.

The Republicans in the Senate are in visible alarm over the presence of the Mills bill. Notwithstanding the fact that they are committed in their national platform against the surrender of "any part of the protective system," it is known that several Republican Senators not only are in favor of surrendering some part of it, but are convinced that unless they bring in a bill to that effect, they cannot hope to carry the country in November. This belief is so strong in some of their minds that there is said to be a fear that if the Mills bill were to come before the Senate, it might receive enough Republican votes to pass. Mr. Riddleberger is said to have given notice that he would vote for it, and if one other Republican Senator were to join him, the bill would pass. In view of these facts, the efforts of the *Tribune* to get up a free-trade scare by means of a *Punch* cartoon are extremely funny. The patriotic notion that this is a nation of fools seems to have taken complete possession of the "American" *Tribune*, if we may judge from its *Punch* "extra," and the following wonderful passage in its description of the scene in the House on Saturday when the Mills bill was on its final passage:

> "Of course, the gallery reserved for members and attachés of the Diplomatic Corps contained representatives of the British Embassy, and of other foreign legations from countries which stand ready to pounce upon the richest market in the world if the free-traders succeed in their schemes."

The amount of misinformation displayed in the Senate in the course of the debate on the subsidy amendment to the Post-office Appropriation Bill, will surprise only those who do not know how ignorant of the actual operations of foreign commerce many of our legislators are. Senator Platt put forward the interesting assertion, which was allowed to go uncontradicted, that England subsidizes steamers carrying the mails to South America "to the extent of something more than $3,000,000 a year." These figures are only thirty times too great, the sum actually paid by England for the year ending March 31, 1887, being a trifle over $100,000—an amount, be it remarked, proportionately less than that paid for the same service by our Government. The exaggeration is not so strange as that it should have been offered in good faith and permitted to pass without question. The great feature of the debate, however, was the final exploding of that pestiferous "barter" theory of international trade which political economists have been so stupidly teaching. This was accomplished in the Senate by Senator Chace of Rhode Island, and in the House, two days later, by Mr. Dingley of Maine. The figures of our trade with Brazil did the fatal work. Last year we imported from that country products to the value of $52,955,591, and exported in return but $8,137,794. Senator Chace took this exhibit to be a complete refutation of that "favorite theory of free-traders," and Mr. Dingley was moved by it to inquire, "What becomes of the 'barter' theory in face of the actual facts of our foreign trade?" The *Tribune* dutifully takes up the cry, and proclaims a new discomfiture of *a-priori* philosophers by remorseless facts.

Are we to infer, then, that we have been sending $40,000,000 a year in hard cash to Brazil to settle the balance against us? It would be very easy to find that out if it were a fact, and the money market would soon hear of it if it were so. Yet who but such a stickler for "facts" as the advocate of protection and subsidies imagines that this is done? What become of the "barter" theory? It stands just where it always has. We pay for the coffee we import from Brazil with the flour and cotton and meat we export to England. These reasoners seem never to have heard about what our importers call the three-cornered trade with Brazil—coffee from Rio to New Orleans or New York, cotton or wheat to Liverpool, English manufactures from Liverpool to Rio. Our importers of coffee pay for it in exchange on London, and that they buy in return for our exports of farm products to England. New York exchange, we are informed, is not even quoted in Rio. The great bulk of our trade with Brazil is done precisely in the way we have described, and the same is true, in less degree, in the case of our whole South American commerce. How else, do the protectionists suppose, does England settle her enormous adverse balance of $250,000,000 to $300,000,000 a year in her trade with the United States? She simply sets off against this her immense favorable balances in her trade with South America and elsewhere, and so squares the account. We think the "barter" theory will be able to hold its own for a while yet.

The *Tribune's* midsummer efforts at political economy continue to be very amusing. On one page on Tuesday it printed a special despatch from San Francisco saying, in connection with the Coleman failure: "The Mills bill killed the borax works, which Coleman valued at two millions." This is given as one of the reasons why Mr. Coleman can offer only 40 cents on the dollar, and of course it materially lessens the chances of Mr. Cleveland's reëlection. But on another page another special despatch, under the heading, "Confidence of the Right Sort," announces the giving out of a contract for a new Bessemer-steel plant in Pennsylvania that will give employment to 400 men, and the explanation is made: "The contract was let on the strength of Harrison being elected." Now the *Tribune* has a solemn duty to perform in this matter: either it should telegraph Mr. Coleman to hold on to his borax with the certainty of a bull market in November, or it should telegraph the Pennsylvania iron men not to give out any contracts for new works so long as there is a Democrat in the country to assert that the tariff ought to be revised.

The *Tribune* has a reporter who, when base-ball matters are dull and there are not many fires, is allowed to try his hand on the tariff. A few months ago he took up buttons, but he afforded the revenue reformers such a stock of amusement that we thought he certainly would be confined to his own field in the future. On Monday morning, however, he was allowed to discuss the tariff in connection with quinine. Now, if there is one subject in regard to which the high-tariff men ought to be more anxious to keep quiet than they are about the free-whiskey plank, it is that duty on quinine. The idea of "protecting" a product manufactured by only three or four firms in this country and used almost universally, is on its face so ridiculous that when the matter was brought to a vote in Congress in 1879, quinine was put on the free list by a vote of 125 ayes to 33 nays in the House, and without a call for a division in the Senate; of 52 Republican Representatives voting, 21 voted yea. It is a good illustration of the character of the Republican attitude on the tariff this year to find the *Tribune*

allowing a reporter to criticise the placing of this article on the free list. Some of his criticisms are very funny. What, for instance, shall be said of a writer who, in arguing that freeing quinine from the duty has destroyed the "industry" in this country, says: "To-day the article is no cheaper than it would have been if the duty of 20 per cent. had not been taken off"? This remarkable "argument" is coupled with the equally remarkable statement that quinine "has become so low as only to pay for growing (*sic*) in such countries as Java, India, and Ceylon, where laborers are paid from twelve to eighteen cents a day." Of course it is cheap labor that is ruining the home market. It always is, even when the article is "no cheaper than it would have been" with the duty retained. "Manufacturers and dealers who have given information to the *Tribune* reporter on the subject were averse to having their names mentioned," says this writer. We should think they would be. Public association with an ass is never agreeable.

The Legislature has passed the so-called Yates Prison Bill, which retains some of the minor features of the original Yates bill of last winter, without the chief and altogether objectionable provision of that measure. It is not proposed by this modified bill to relegate to the counties convicts now liable to sentence in the State prisons, as the original bill did. The pending measure provides simply the manner in which convicts shall be employed under the laws for sentencing as they now exist; the intention being, as we understand it, to reduce the competition of prison labor with outside labor to the minimum. It forbids the use of machinery altogether in all prisons in the State, whether they be under State or local control, and renews the existing prohibition of contract labor, with the further provision that no labor shall be required of convicts on which a profit shall accrue to any individual, firm, or association. In fact, the only labor allowed in these penal institutions under this bill is such as will produce articles of consumption within the institutions themselves, or within other State institutions not of a penal character, like asylums, reformatory schools, houses of refuge, and so forth. Clothing for inmates and other such necessaries which are provided by the State are included among the articles that may be manufactured in the prisons. The distribution of the products of this sort of labor is placed in control of a Board consisting of the Comptroller, the Superintendent of State Prisons, and the Chairman of the State Board of Charities. The purchasing of articles in the open market for consumption in State institutions is forbidden, except in case they cannot be had from this Board upon requisition. It is clear from the provisions of this bill that the maintenance of prisoners must be provided out of the State Treasury, except as to articles they may produce within the terms of the bill. It is a demagogic makeshift and a disgraceful avoidance of public duty. It places a heavy burden upon the taxpayers for no other reason than that the weak-kneed politicians of both parties may angle for the "labor vote."

Gov. Hill's message in reference to the amendment of the Penal Code in such a way as to legalize boycotting and other forms of trade-union tyranny, is the most audacious piece of demagogism that even he has ever perpetrated. He took the step in the hope of counteracting thereby the hostility among the laboring men which his veto of the Ballot-Reform Bill caused. The bill which Senator Reilly introduced as carrying out the Governor's suggestions, erased from the conspiracy laws the word "intimidation," which would make it impossible for the courts to punish such offences as were recently committed against the foreman, Hartt, for whose benefit the Mayor is receiving subscriptions. The Legislature was proof against this temptation, but, acting upon another of the Governor's recommendations, and taking him at his word when he least expected to be so taken, it has removed from office an Aqueduct Commission which never ought to have existed and which has failed to fulfil the trust confided to it. It has given us a plan for a new Commission which will at least be constructed on a proper basis. and which we have confidence enough in Mayor Hewitt to believe will be composed of the best material that can be found among our citizens. For this invaluable and unexpected achievement we are indebted primarily to the work of the Fassett Investigating Committee. There could be no stronger evidence of the value of public investigations than is thus afforded. Through the revelations made we have forced a Governor and a Legislature, who entered into a shameful "combine" to plunder this city in the interest of politics, to confess that they did wrong, and to unite for the undoing of that wrong. We say unite, for, however unwilling the Governor may be to sign the bill, he cannot refuse to approve it.

When one reads, as we did on Tuesday morning in the Chicago despatches, that the Brotherhood of Engineers are determined not to declare "off" the strike against the Chicago, Burlington and Quincy Railroad, but that the strikers are to keep on striking; and when we remember that striking, after the places of the strikers have been satisfactorily filled, means simply the maintenance of a system of annoyance and mischief against the persons and property of a lawful business, one naturally asks whether it is not about time for the law of the land to declare how long a strike may last. The strike against the C., B. & Q., which is now kept up at Chicago, in no respect differs from the ordinary boycott by which Hartt was prevented from earning a living. It is simply a system of organized intimidation, with occasional strokes of violence, practised on persons engaged in a legal calling. When a parcel of criminal loafers persist in such a game, under pretence that they are "on strike," should the judges or police magistrates not be empowered to declare a strike "off" themselves, and treat further persistence in it as evidence of designs against the public peace? We think they should. The present state of things is simply a modified form of the modern Greek brigandage, under which loafers were allowed to capture and hold to ransom travellers and people of property as the lawful prizes of poor men.

The *Press* the other day stated that it had received "private advices" which represented that "the Mugwumps of Massachusetts have almost entirely abandoned their organization and returned to the Republican fold"; that "men like Charles R. Codman and George Fred. Williams are now in full sympathy with the Republicans on civil-service reform, and disgusted with Democratic hypocrisy." Mr. Williams is abroad, but a letter from him has been published showing that he will heartily support Mr. Cleveland. As for Col. Codman, we can assure the *Press* that, being a tariff-reformer, he expects to support the Democratic party as long as it maintains its present attitude. As for civil-service reform, he is, of course, opposed to the spoilsmen wherever found, but he is also of the opinion that they abound among the managers of both parties, and that nothing would be gained for the cause of civil-service reform by supporting Gen. Harrison. It is true that the Mugwumps of Massachusetts have abandoned, or rather have not thought it necessary to revive, their organization, but they have by no means "returned to the Republican fold." On the contrary, it is the opinion of Col. Codman that the greater number of them will openly and aggressively support Cleveland, as they are not only civil-service reformers, but revenue reformers as well. The *Press* has evidently been the victim of some deceiver.

"Z. L. W.," a man who we once thought was sensible and careful, sends the *Press* from Washington a beautiful campaign story of a young man named Curtis, "fortunate enough to be a nephew of George William Curtis, formerly Mugwump, but now Democratic editor of *Harper's Weekly*." The young man was sent by President Cleveland—so runs the tale—to the Assistant Attorney-General, who was directed to employ Curtis at $2,000 a year, "whether he was competent or not." He proved incompetent, of course, but could not be dismissed, being a Presidential appointee, so they made a place for him in the Board of Pension Appeals, where he now is, as incompetent as ever. Perhaps, says the thoughtful and candid "Z. L. W."—

> "perhaps Mr. George William Curtis had no hand in securing his nephew's appointment, but the young man is very fortunate in having so eminent a civil-service reformer for an uncle, and it is even more fortunate for him that consistency is not one of President Cleveland's attributes."

"Z. L. W." has surely had journalistic experience enough to know that no story of this kind ought to be as perfect as this one is.

A really good campaign story ought to have flecks, flaws, or gaps in it, showing the compiler to have been careful and scrupulous. Alas for poor "Z. L. W."! Mr. G. W. Curtis has only one nephew, who is a boy at school. This being so, the other "facts" in the story are of course left in mid-air. We hope, for "Z. L. W.'s" sake, there is at least one little one that can be relied on.

We were greatly amused, but of course also pleased, on Sunday, by the announcement from our old friend, the Norfolk Squire, Mr. George Washington Smalley, that Mr. and Mrs. Cornelius Vanderbilt had passed through the ordeal of a short visit to London in the season without damage. All doors were open to them, the Squire says:

> "But they entered them under conditions so peculiar that by a little want of tact or good sense they might easily have made shipwreck of their social career. This they have omitted to do. Their London experiences have been an unbroken series of social successes. They have won the good will of those whose good will is best worth having, and I cannot hear that from the beginning to the end of their London summer they have made a single mistake."

The news that the Vanderbilts "omitted to make shipwreck of their social career," and failed "to make a single mistake" in the course of a "London summer," conceals, it is right to add, a great deal of modesty on the Squire's part. We intend no depreciation of Mr. and Mrs. Vanderbilt's social tact when we assume that they owed their salvation to the Squire's presence in London and his daily supply of house-to-house cackle. This is undoubtedly what pulled them through. Which of us likes to think of what would have happened had the Squire been detained in Norfolk by the cares of his estates, by Quarter Sessions business, or by the preparation of his preserves for the shooting season?

An amusing picture is presented by the relations of the several parts of the Austro-Hungarian empire which have followed in the train of the high-tariff legislation of the last few years. Hungary is not only the chief grain-producing region, but has also naturally developed flour-milling to the greatest degree. Nevertheless, there was a large milling industry in other parts of the empire, and especially in Bohemia, the grain which came to these mills having been imported from Russia. The duties upon grain, which were introduced in 1882, greatly checked this importation, and the raising of these duties last year cut it off altogether. The whole empire is thus almost entirely restricted to the consumption of Hungarian grain. One would think this might have satisfied the Hungarians, but it seems they have succeeded in having special features introduced into the tariff, with a view to favoring Hungarian millers at the expense of those in other divisions of the empire. The millers of Bohemia, Moravia, and Upper Austria have made an effort to get the tariff adjusted so as to enable them to hold their own, namely, by making the difference of duty between grain and flour sufficient to permit the importation of the former. The Hungarian Government has met this move in the game by lowering the rates of transportation for flour on the Hungarian railways. The Constitution of the empire forbids duties on importation from one division of the empire to another; so it seems the rest of the Austrians are at their wits' end to find indirect means of counteracting this action of the Hungarians, which, it must be admitted, seems to show uncommon greed and want of consideration for their neighbors. An immense amount of ill-feeling has been engendered, not to speak of economic disturbance and loss; and the game will probably go on until the country gets disgusted with the notion that people cannot find out for themselves whether they had better grind their own flour or make something else and buy their flour ready ground.

The suicide of Ole Richter, the Norwegian Minister Resident in Stockholm, has made a great sensation in Scandinavian politics. Next to the Premier, John Sverdrup, he held the highest position in the Ministry, and was the most conspicuous man. He had a long and honorable career behind him as a publicist and a parliamentary leader. The circumstances which led to his self-destruction are somewhat complicated. Mr. Richter, as a strict parliamentarian, had long been dissatisfied with his chief, and had criticised him somewhat recklessly in his letters to friends. He foresaw plainly that the Sverdrup Ministry, by splitting the Liberal party into the Moderate and the Extreme Left, would soon be without a working majority in the Storthing; and he desired to save himself from the wreck, by creating the impression that he disapproved of Mr. Sverdrup's opportunism. With this view he began a correspondence with Björnstjerne Björnson, with whom he had long been acquainted, furnishing him with the most tremendous ammunition for the destruction of the Ministry of which he was a member. He obviously anticipated a contingency in which he should be called upon, with M. Daae (an earlier seceder from the Sverdrup Ministry), to form a new Cabinet; nothing would, indeed, have been more probable if his underhanded proceeding could have been kept secret. But to expect Björnson, the chief opponent of Sverdrup, to refrain from availing himself of the information with which Richter voluntarily had provided him, was certainly the height of fatuity. Björnson had a long score to settle with Sverdrup, and he eagerly seized the opportunity to expose his moral obliquity. Being challenged as to the authenticity of his information, he unhesitatingly gave the name of Ole Richter, and justified himself by saying that he had made no promise of secrecy, nor had his correspondent dropped any hint that the information was confidential. It would seem, however, that, as to the use of the Minister's name, no such hint should have been needed. Of course, from the moment Richter's manœuvres were exposed, he was a discredited man, equally distrusted by both groups of his party. He went immediately, in the absence of the King, to the Crown Prince, who was acting as Regent, and offered his resignation, which was promptly accepted. It is told that afterwards he wavered, and made an attempt to induce the Crown Prince to hold his resignation in abeyance, but received a curt refusal. He then realized that he was hopelessly ruined, and, going home, shot himself in the head.

Ole Richter was born in 1829. He gained his high position in Norwegian politics by the moderation of his opinions, the clear logic of his speech, and his devotion to English parliamentarism. He had been partly educated in England, married an English wife, and was a close student of English politics. He displayed a deeper knowledge of political economy than is common with Norwegian statesmen, and was looked upon as a man uniting in a rare degree theoretical science with practical insight and ability. His wealth, his amiability, and courteous demeanor tended to increase his prestige and popularity; and he was successively elected President of the lower and the upper chamber of the Norwegian Storthing, occupying the former position from 1871 to 1876, and the latter from 1877 to 1878. He was no orator, but was regarded as an eminently safe man, and a bulwark against the radicalism of his party associates. While acting with the Left or Liberal party he formed really, with M. Daae and a few others, a group by itself, corresponding to the French group of the Centre. Nothing was, therefore, more natural than that the King, who dreads all kinds of extremism, should have turned to him and made him the representative of the Norwegian Government in Stockholm.

The cause of ballot reform has reached the Sandwich Islands, and a bill instituting changes somewhat similar to those proposed in many States in this country has been submitted to the Hawaiian Legislature. It was prepared by a special commission in whose report it is interesting to note that much space is devoted to detailing the efforts which Mr. Ivins and others have made in behalf of the reform in this city. The radical changes in the Hawaiian measure are: (1) doing away with the present tax-receipt system, which requires the exhibition of a tax receipt at the polls as the condition of voting, and the substitution of a uniform registration in its place; (2) providing for a uniform ballot, printed and distributed at the public expense; (3) providing careful methods to secure freedom and secrecy in voting; (4) giving the Supreme Court jurisdiction over all questions of fraud and corruption in elections. These changes are based largely upon the English system, which was followed in the excellent law for New York which Gov. Hill vetoed, and the equally excellent Massachusetts law which Gov. Ames signed, and which goes into effect in 1889.

WHAT IT COSTS.

PERHAPS the most extraordinary feature of the situation concerning the tariff lies in the circumstance that few people have any idea of the amount of its burden, even tariff-reformers usually confining themselves to mere generalities concerning it. We know what our military and naval establishments cost, what we pay for pensions, and what we appropriate for the improvement of rivers and harbors. It is always open to any citizen, in or out of Congress, to object to the amounts expended for any of these purposes. But the amount which we expend for the support of certain favored industries in this country is an absolutely unknown quantity. Not only are the great majority of intelligent persons utterly ignorant of this amount, but it frequently happens that writers for the press, whose special business it is to treat these questions, proceed upon an entirely false basis in estimating it.

The customs duties collected in the year ending June 30, 1887, amounted to $214,000,000. But this does not in any way measure the cost which the nation incurs in supporting its protected industries. It does not, indeed, form any part of that cost. These $214,000,000—if, for the sake of simplicity in the argument, we ignore the existence of a surplus—are expended for the general purposes of the Government. They have to be collected somehow, and whether customs duties are the best way or not, is a question of general fiscal policy. It is true that protective duties are apt to bear more heavily on the poor than on the rich, unless chiefly confined to articles of luxury; it is true, also, that they are open to the objection of being difficult to alter without disturbance to industry and trade, which is a serious objection to a tax; but these points have nothing to do—at least directly—with the question we are now considering, viz., How much is the country paying to encourage the protected industries?

It is the money which never reaches the Treasury, but is paid out by consumers in the high prices of domestic articles, that constitutes the expense of protection. Though it would be impossible to estimate the amount of this tax with any degree of accuracy, a clear recognition of its nature is sufficient to show that the aggregate must be stupendous. Let us take a single item, that of steel rails; the simplicity and uniformity of this article rendering comparison of prices and quantities comparatively easy and reliable.

The Statistical Abstract of the United States for 1887 gives the following figures of importation and of home production of steel rails for the last twelve months covered by it: importation (year ending June 30, 1887), 77,000 tons; home production (year ending December 31, 1886), 1,579,000 tons. The duty on steel rails was (and is) $17 per ton, so that the customs revenue from this article was about $1,300,000. Inasmuch as a respectable quantity of foreign rails was imported, upon which it was possible to pay the duty and still to sell them in competition with domestic rails, it is plain that the price here must have been something like $17 higher than what we should have had to pay for foreign rails in the absence of the duty. Reckoning the excess at only $15, however—and a comparison of British and American prices-current for the year shows that this is well within the mark—we have in this single item a bounty of about twenty-four million dollars paid in a single year to the steel-rail manufacturers alone. Something over a million dollars has been paid into the Treasury for the expenses of the people's Government; twenty times as much has been given away to the steel-rail men, and has entered into the cost of our railways, to be a permanent charge on farmers and merchants and the community generally.

The same item of steel rails happens to furnish opportunity for another striking commentary, and at the same time to bring out the magnitude of the bounty in a glaring light. A recent article in Mr. Robert P. Porter's organ, the *Press*, undertook to state the amount paid out in wages in the production of a ton of steel rails. The amount intended is not simply the wages paid at the steel works; the editor had undertaken to "trace back all the supplies for the steel works to their original sources, and to classify the outlays so as to show the portion that goes to the remuneration of labor from start to finish," and all that he is able to figure up is $14.85; while the duty, be it remembered, is $17. We shall take the *Press's* word for it; and the result is, that in the last twelve months recorded in the United States Statistical Abstract, we paid more in bounties to steel manufacturers than the aggregate amount of wages received for all the labor which was employed, directly or indirectly, in the making of steel rails. We do not pretend to determine how much of this bounty was profit to the manufacturers, how much was tribute paid by them to mine-owners, how much was sheer waste, or how much was used in "politics"—the fact remains that the bounty received by the manufacturers on the pretext of helping the workingmen was actually greater than the total amount the workingmen received in wages.

It must be plain from this single instance—as, indeed, it must be plain without it to any one who will look the matter straight in the face—that the expense of our protective system is many hundreds of millions annually. The peculiarity of the case lies, however, not so much in the magnitude of the expense, nor even in its indefiniteness, as in the fact that the advocates of protection have absolutely taken the ground that it does not concern us in the least how much it costs. Everything else is a matter of degree: national defences are good, grand public buildings are good, art galleries, libraries, schools, colleges — all these things are good, but for none of them has it been claimed that their friends should be permitted to draw upon the public purse to an absolutely unlimited extent. And even as regards protection, it was reserved for this last convention of the Republican party to place it alone among all the objects of human endeavor and human devotion by declaring that no consideration, either of economy or of morals, shall prevail to lighten by a feather's weight the burden we carry for its sake, however heavy that burden may become.

MANUFACTURERS AND FARMERS.

THE supporters of tariff reform are under great obligations to Mr. James P. Foster, President of the Republican League of the United States, for his invaluable services in bringing out the real issue involved in the present canvass, which is the issue between the classes and the masses; between the protected interests on the one side, and the body of the American people on the other. Nobody has ever put this quite so clearly and bluntly as Mr. Foster has done in his famous "confidential" circular.

It will be remembered that Mr. Foster declares it to be "a fact that the manufacturers of the United States are most benefited by our tariff laws." With all due respect to him, however, we must say that this statement would not carry great weight if it stood only as the opinion of the President of the Republican League of the United States. What lends importance to the circular is the quotation of the well-considered opinion on this point of Senator Edmunds or Senator Morrill of Vermont—the description of Mr. Foster's authority as "a Republican United States Senator from a State which never had a Democratic representative in either house of Congress or a Democratic State officer," rendering it certain that either Mr. Edmunds or Mr. Morrill is the man. Both are Republicans of such prominence and such familiarity with the subject of which they treat that it would be hard to decide whose words would carry the more weight.

Senator Edmunds or Senator Morrill used these "strong words and bitter, but true," as quoted by Mr. Foster: "I was solicited to contribute to a protective-tariff league, and I replied that *if the manufacturers of the United States in their associated capacity were an eleemosynary institution, I would vote to give them a pension, but that I did not propose myself to contribute money to advance the interests of men who were getting practically the sole benefit, or at least the most directly important benefits, of the tariff laws.*" Again, he spoke of "the manufacturers" as "reaping the fruits of the tariff policy." Still again, he referred to "*the manufacturers of Pennsylvania, who are more highly protected than anybody else, and who make large fortunes every year when times are prosperous.*" All of this was preliminary to the Senator's declaration that "*if I had my way about it, I would put the manufacturers of Pennsylvania under the fire and fry all the fat out of them*"; and he added in conclusion: "If the Mills Tariff Bill comes to the Senate, there will be some votes cast there which will open the eyes of some of these people who have, *while gathering their millions*, treated the Republican party as their humble servant."

In the face of such testimony from such a

source, nobody will question that the high-tariff policy is a policy in the interest of the manufacturers, who get "practically the sole benefit" of it, and who in consequence "make large fortunes every year when times are prosperous," and that the masses are taxed by this policy for the advantage of a class. It is notorious that protected manufacturers themselves admit the truth of all this when they are "talking not for publication," and it is equally notorious that the hope of Republican success in the pending campaign is based upon the theory that the manufacturers can frighten and force their employees into voting more "fat" to the employers. The yell of "Free trade!" and the threat of loss of employment are the weapons upon which most reliance is placed.

But there is another class of the American people who are left out of the account in these calculations—the farmers. The census of 1880 showed that the entire number of manufacturing establishments in the United States was but 253,852; and it is a remarkable fact that, although the population had increased during the previous decade nearly one-third, the number of manufacturing establishments had increased only 1,704, owing to the tendency towards the concentration of such industries in the hands of a few men, who "make large fortunes every year." On the other hand, the number of persons engaged in agriculture was 7,670,493. In many States more than half the whole number engaged in all occupations were employed in farming, the percentage being 51 per cent. in Minnesota, 52 per cent. in Indiana, 57 per cent. in Iowa, and 60 per cent. in Nebraska.

These farmers have been doing a good deal of thinking the past few months. President Cleveland made his message last December so short that the country papers could print it, and their subscribers could thus read the whole of it. It seems to have affected a great many of them as it did the Republican farmer in Marion County, Ind., who says: "I have read very carefully the message of Mr. Cleveland that my Republican friends are making such an 'ado' about, and I cannot for the life of me find anything wrong about it"; and the Republican farmer in Iroquois County, Ill., who says: "I read Cleveland's message last winter; it struck me favorably; I've been thinking it over ever since."

For years past these farmers have been seeking a reduction in the tariff upon the necessaries of life. They want the tax upon lumber removed, a tax of which Mr. Blaine once said in Congress, when protesting against the very idea of such a levy: "As to the article of lumber, I again remind the House that there has never been a tax upon this article. The gentleman from Ohio may talk of this question as he pleases; but I say that wherever the Western frontiersman undertakes to make for himself a home, to till the soil, to carry on the business of life, he needs lumber for his cabin, he needs lumber for his fence, he needs lumber for his wagon or cart, he needs lumber for his plough, he needs lumber for almost every purpose in his daily life." The farmers want the tax upon salt removed, agreeing with the view once expressed by Senator Hale of Maine in Congress, when he said: "I believe there is no one question about which the reflection of millions of people day by day is so decided as it is in declaring that there should be no tax upon this article of salt. I believe this article should go upon the free list; that the monopoly which has obtained heretofore for the Onondaga Salt Works—as great and complete as any monopoly ever granted by the Tudors in England's most despotic times—ought to cease."

At the same time these farmers accept the doctrine, which the Republican party used to teach so strongly, that hurtful luxuries like whiskey are the things which ought to be most heavily taxed. They agree with the Senator Edmunds of twenty years ago, who then said that "the principle of taxation has been, and always must be, that luxuries of this description ought to bear the highest possible rate of taxation." They are of the same mind with the Senator Hawley of six years ago, who then said: "Whiskey and tobacco are the legitimate plunder of the tax-collector, the legitimate plunder of the exchequer in every government of the world. They all get a large part of their revenues from them. We should be immeasurably and insufferably foolish if we abolished those taxes."

What does the Republican party in 1888 offer this class of voters? "Rather," it says, "than the surrender of any part of our protective system"—in other words, rather than the surrender of the unjust tax upon lumber or salt—"we favor the entire repeal of internal taxes," in other words, the freeing of whiskey from tax and the reduction of its price to the cheap rates which ruled before the war. To suppose that the farmers were going to swallow such doctrine as this on the ground that anything else meant "free trade," was to set them down for a pack of fools. The managers who thus "insulted their intelligence" are finding out that they made a mistake. The brief interviews with dozens of Republican farmers in Indiana and Illinois, which the *Evening Post* has recently published, furnish evidence of a revolt among the agricultural population which will give the Republican managers in more than one Western State, commonly rated as surely Republican, enough to keep them busy during the campaign.

SIGNS OF NATIONAL PROGRESS.

When Gen. Harrison was nominated, a number of Republican papers began printing reminiscences of the "Tippecanoe and Tyler too" campaign, and making predictions that we should have "1840 over again." But this sort of talk was soon found to fall flat, and has been pretty much dropped. In some places, especially out West, survivors of the Whig era who voted for Harrison the grandfather, are organizing to vote for Harrison the grandson, and occasionally an effort is made to revive the log-cabin business; but it is too evidently an effort to meet with much success.

The truth is, that another campaign of the 1840 style is impossible in this country. The Republicans suffer in the present canvass from having lost, by reason of their free-whiskey platform, the moral impulse which has always been so important to their party; but even if they had a policy which appealed to the moral sense, they could not utilize in Benjamin Harrison's behalf the methods which were all the rage when William Henry Harrison was a candidate. The reason is that the nation has grown older and wiser, and now recognizes the puerility of what in our grandfathers' day was held fit business for grown-up men.

The log-cabin and hard-cider campaign was greatly promoted by exceptional conditions due to the panic of 1837, which operated to the advantage of the Whigs, but there was a real philosophy of national development underlying it. Mr. Schurz, in his 'Life of Henry Clay,' has brought out very clearly the significance of Andrew Jackson's advent upon the national stage as illustrating a change in the condition of the public mind. "There always comes," says Mr. Schurz, "a time in the life of a democracy—and it is a critical period—when the masses grow impatient of all pretensions or admissions of superiority; when a vague distrust of professional statesmanship, of trained skill in the conduct of the Government, seizes upon them, and makes them easily believe that those who possess such trained skill will, if constantly intrusted with the management of public affairs, take some sort of advantage of those less trained; that, after all, the business of governing is no more difficult than other business; and that it would be safer to put into the highest places men more like themselves, not skilled statesmen, but 'men of the people.'" Mr. Schurz holds that this was the real strength of the Jackson movement.

The campaign of 1840 represented the same popular feeling which Mr. Schurz has so well described, and gave it even better expression than it had found in the Jackson contests. Never before had there been, and never since has there been seen, a Presidential campaign of more enthusiasm and less thought. The Whig convention adopted no platform, passed no resolutions, issued no address, put forth no programme of policy; but simply nominated a plain, blunt old man, whose "record" fitted him equally well for a Democratic candidacy. The canvass suited the absent platform and colorless candidate. It was really nothing but a prolonged popular frolic, with monster mass-meetings, genuine raccoons, actual log cabins, real hard cider. It has been said that one-half of the American people seemed to have stopped work to march in processions behind brass bands or drum and fife, to attend huge picnics, and to sing campaign doggerel about "Tippecanoe and Tyler too."

It is safe to say that there has never been a time in our history when the average man felt so sure both that he was capable of being President, and that some man like him ought to be President in a Government like ours, as when it was found that Harrison had been elected. The idea that it was a great re-

commendation for a candidate that he had been a poor, hard-working, ill-educated man in early life, was seen to have great weight twenty years later, when Abraham Lincoln was nominated, and much was made of the fact that he had been a rail-splitter in his youth. When the Illinois Republican State Convention met in May, 1860, and presented Lincoln as a "favorite son," his old associate in the days of his poverty brought in "two rails from a lot made by Abraham Lincoln and John Hanks, in the Sangamon bottom, in the year 1830," and, the historian says, "was met with wild and tumultuous cheers, prolonged through several minutes." Thereafter through the campaign "the rail-splitter" was one of the most familiar catch-words.

But by 1880 it was evident that a change for the better had come over the public mind in respect to this matter. Garfield had been a tow-boy on a canal in his youth, and, according to the Harrison and Lincoln precedents, great stress should have been laid upon this fact, as somehow furnishing evidence that he was exceptionally qualified to occupy the White House. Some efforts were made to start what might be called a tow-boy boom, and, if we remember rightly, soon after the nomination a club was formed in Washington which carried a canal-boat transparency in a procession. But the thing fell very flat, and Garfield, who was quick to discern the drift of sentiment, immediately caused it to be understood that he was running for the Presidency on his record as an adult Congressman, and not as a youthful mule-driver. Eight years have only served to strengthen the feeling which was seen to exist in 1880, and we confidently assert that such a performance as the rail incident of 1860 could not occur to-day without seriously, if not fatally, injuring the candidacy of the man in whose behalf it should be tried.

The spectacular methods of campaigning which flowered in the campaign of 1840, still survive, but are evidently steadily losing strength. The great political meetings, which once gathered the people from forty miles around at the county seat, grow rarer every four years, and in some quarters are no longer held at all. The barbecue, with its unlimited supply of roast ox for the multitude, is now unknown in many States, and grows less frequent even in such a commonwealth as Kentucky. The ridiculous torchlight procession has fewer and fewer attractions for reasoning creatures. It is no longer composed of men who eagerly embrace the supposed opportunity to "do something for the cause" by marching and carrying torches, and catching pneumonia, but is either a perfunctory sort of thing, or else represents only mercenaries who "holler" for cash, and equally loud for either side. In exceptional cases, like the business men's parades in this city four years ago, there is something of the old spirit, but probably the larger proportion of the participants in them on both sides in 1884 would have confessed that they thought both sides might better have omitted that style of argument. Indeed, we observe with much satisfaction that one party in Racine, Wis., has just made the excellent suggestion to the other that both of them give up the absurd business of torchlight processions, and substitute an intelligent discussion of the tariff. The log-cabin idea, which it is proposed to revive in some cases, will be regarded solely as a reminiscence. As for the doggerel which some Republican organs have brought out, "it won't do," to use one of Mr. Thurman's favorite expressions in the Senate. Respect for gray hairs may induce us to keep silence about the campaign poetry of 1840 when survivors of 1840 are within hearing, but the public is ready to shoot on the spot anybody who indulges the rhyming idiocy in 1888.

All these are healthy signs. They betoken national progress. They show that we have outgrown some of the weaknesses of youth—for surely every candid person must consider it a weakness to behave as though a man were qualified for the Presidency *because* he had lived in a log cabin, or split rails, or driven a canal-boat mule. We are getting beyond the point where it is vaunted as a recommendation for a candidate that he did not have a chance to get a good education. Even Indiana would hardly, we may hope, elect a man Governor in 1888, as in 1876, whose strongest claim to the office appeared to be his suit of blue jeans. We are coming, too, to see that it is no less absurd for intelligent men in a civilized country to tramp around carrying torches o' nights, than such men themselves would consider the spectacle if they saw a lot of savages in some heathen land going through the performance. No, we shall not have "1840 over again" this year, or any other year. The nomination of a Harrison for President in 1888 shows that the nation has made a long advance since another Harrison ran for the same office half-a-century ago.

THE MISSIONS CENTENARY.

The World's Conference of Missionaries, recently held in London to mark the completion of a hundred years of Protestant foreign missions, was a gathering well fitted to appeal to the imagination of Christendom. The great enlargement of missionary enterprises during the century was strikingly revealed in the reports, which showed that in place of the single pioneer, William Carey, upwards of 6,000 missionaries are now supported by Protestant churches, who are assisted by 30,000 native helpers, the whole work costing annually no less than $12,500,000. Aside, too, from the direct work of winning converts, the great results achieved by missionaries as explorers, scientists, linguists, teachers, and physicians were duly set forth, not only in written accounts, but in the living presence of men who have gained distinction in these ways. The public debates were of a high order, and altogether the Conference was really successful in vindicating for the work of missions a place among the important movements of the past hundred years, and in presenting a strong appeal for future effort.

Yet this centennial meeting did not fail to leave the same impression as that made by most missionary gatherings and a large part of missionary literature—the impression, namely, that the whole of the case is not stated. This is vividly reflected in an article by Sir W. W. Hunter, published in the last *Nineteenth Century*. He speaks in the highest terms of missions and missionaries. He gives testimony which is of the strongest sort, from his residence of twenty-five years in India, as to the work of missionaries in the East. He believes, it is true, that no Englishman will ever become the religious awakener of India, saying, "To the natives, the missionary seems to be a charitable Englishman who keeps an excellent cheap school, speaks the language well, preaches a European form of their old incarnations, and drives out his wife and little ones in a pony-carriage"; such a character, of course, being far from the Oriental idea of a religious leader. It is on this ground that he pronounces the little companies of Cambridge and Oxford High Church ascetics, in Delhi and Calcutta, to be the really most effective missionaries known to him.

What concerns him most, however, is the way missionary affairs are conducted and represented at home. He says of such conferences as the one just held: "In their eagerness to intensify enthusiasm and to prove their case, they are liable to lapse into methods not calculated to carry conviction to minds which are simply desirous to get at the facts." He instances the debate in the Conference on the moral influence of Islam, a question made unusually prominent by recent discussions. Delegates were present able to speak intelligently on all sides of this matter, but the time assigned the debate was very limited, speakers qualifiedly in favor of Mohammedanism were coldly received, and the debate was cut short by a demand, not to be resisted in Exeter Hall, that a season of prayer should take the place of discussion.

On the point of one-sidedness, Sir William says: "The really noble work done by the missionaries abroad often suffers, in the opinion of serious and candid men, from the methods employed at home. It suffers also from a vague but general impression that only a part of the evidence appears." He instances the case of Prof. Legge of Oxford, for thirty-four years a missionary, and now Professor of Chinese in the University. Prof. Legge holds positive convictions to the effect that not much is to be expected from Christian missions in the Orient, as long as missionaries carry their sectarian differences with them, and especially as long as they are known to come from nations where drunkenness and the social evil prevail. "When Prof. Legge was asked to take part in the Conference, he explained that he would have to clearly put forward his convictions—with the result that he did not take part in it at all."

This is a typical case. Undoubtedly the promoters of missions fail fully to trust the intelligence of those to whom their appeals are directed. The public, so far as it derives its knowledge from missionary addresses

and periodicals, gets only partial, and so misleading, information. The returned missionary soon finds that he is expected to speak only of the things which will "encourage" the home churches. The parts of missionary correspondence which get into print are, as a rule, only the parts which the editor can refer to as "cheering news." These practices have become the established custom with no conscious purpose of misleading—usually, we have no doubt, without a passing thought that there is anything unfair in them. But, after all, it is like feeding sugar-plums to the churches. We are far from arguing that missionary scandals should be made public. With perfect propriety they may be hushed up, as they are. But the policy of presenting only one side of the matter is certain to prove itself, in the end, a short-sighted policy. Unfavorable reports that leak out, as they are coming more and more to do, are far more disastrous than if there had been no attempt to withhold them. One frank and conscientious missionary, like Prof. Legge, is worth, in the long run, a dozen who tell but half the tale. It is absurd to suppose that intelligent supporters of missions need to be coddled with half-truths. To a thoughtful Christian, in fact, a full and fair statement of the situation, even if it revealed to him unsuspected and unpleasant facts, would really prove an argument for renewed zeal and generosity. We hope yet to see a missionary periodical conducted on the principle of giving all the information to be had on all sides of all missionary questions.

JOHN MITCHEL.

DUBLIN, July 7, 1888.

FROM towards the close of the last century, dominant British statesmen have conceived and acted upon the theory that liberty in Ireland was incompatible with the stability of the British empire; and, until Mr. Gladstone's recent overtures, large numbers of the Irish people desired the humiliation and downfall of the British empire. From time to time, devoted leading Irishmen have given vigorous expression to that reciprocal sentiment. They have entered upon the wildest emprises, thrown calculation to the winds, deluded themselves as to their resources, and blindly dashed against superior force, to the destruction of their lives and those of their followers, but to their own immortal honor in the eyes of the masses of their fellow-countrymen, who, living under intolerable conditions, always take to their heart of hearts such exponents of popular wrongs and needs. Wolfe Tone, in the coolness, mastery, and extent of his combinations, perhaps rises above the class of mind I have indicated. Lord Edward Fitzgerald and Robert Emmet are enshrined in the nation's affections as the brightest examples of such leaders in the times of the United Irishmen; and fifty years later William Smith O'Brien and John Mitchel. Let us hope the bead-roll is complete; but that is unlikely if Lord Salisbury's and Mr. Balfour's policy be carried out much longer.

'The Life of John Mitchel' has just appeared, and has created deep interest in National circles, wherein some of his nearest relatives still move. It is in two volumes, compiled and written on a Colorado ranch by William Dillon, brother of John Dillon. The brothers are sons of John Blake Dillon, one of Mitchel's coadjutors and most intimate friends in 1848. The style, at least in the early pages, is at times defective, but the reader forgets this in the admirable balance and construction of the volumes, and in the uncompromising truthfulness with which Mitchel is delineated. The memoir is that of a Unitarian who held on to doctrinal Christianity by the slightest threads; few would suppose it to be the work of a stanch Catholic. When present political passions and prejudices subside, John Mitchel will, I believe, be recognized as one of the most vigorous masters of the English language since the days of Swift. Meanwhile, it may perhaps be interesting to many who have not seen the biography, to know something of its contents.

John Mitchel, the son of a Presbyterian minister, was born in County Derry in 1815. He passed through college and entered upon the profession of a solicitor. That ungovernable impetuosity which always characterized him, was shown when he was only twenty-one by his eloping with a schoolgirl of sixteen. We are glad to know that the marriage proved a blessing through all the vicissitudes of his life. He was gradually attracted towards public affairs, became more and more interested in O'Connell's repeal agitation, and at length put aside his professional prospects for an editorial chair in the office of the *Nation*, removed with his family to Dublin, and threw himself into the then seething cauldron of Irish politics. John Mitchel's Irish political career, that which made him so beloved by his fellow-countrymen, was comprised within a period of two years and eight months. He took up his residence in Dublin in October, 1845, and in June, 1848, he left it in chains, a convicted felon. We are given delightful glimpses of his domestic and social life during that interval. With a devoted wife and children, to whom he was tenderly attached, he belonged to a charming literary circle, to whose members he was united by political sympathy; his habits were frugal —all combined to render his private life eminently happy.

Far different was it, however, outside, amidst the storms of political passion. O'Connell had raised hopes that he was unable to fulfil, his energy and power waned, and he was broken down in spirit by age and by imprisonment, almost regal though its conditions were. He was inclined to temporize with the Government and secure places for his followers. The public mind was inflamed by political disturbances on the Continent. Starvation and fever brooded over Ireland, which yet exported vast quantities of the necessaries of life. Under these circumstances, any measures hitherto considered allowable by communities in desperate emergencies were held lawful by the leaders of the Young Ireland party. Mitchel soon found even the *Nation* too moderate for the expression of his opinions, and started the short-lived *United Irishman*, which, in burning language, declared the abasement of the British empire essential for the welfare of Ireland, and inculcated the duty of armed insurrection. Mr. Dillon endeavors to show that Mitchel recommended preparation for revolt rather than immediate revolt. His actual words may not express the latter, but their undoubted drift when written was to that effect.

To understand this period in Mitchel's life and in Irish history, the reader should turn to the accurate and sober narrative contained in Jonathan Pim's 'Transactions of the Central Relief Committee of the Society of Friends during the Famine in Ireland.' Things were indeed then at an awful pass—thousands dying of fever, many of starvation, emigrants crowding into "coffin ships," at one time nearly half the population in receipt of relief. Mitchel and his friends believed the decimation of the Irish people was deliberately favored by the Government. Many bitter passages (never forgotten by Irishmen) in the *Times* and other papers favored such an impression. At least, such measures were not taken as would have been if a similar calamity had fallen upon England. Looking back, however, we must remember that the rights of the masses were not as fully acknowledged as they are at present, and in no country did their cry then press so immediately upon Government. And of the very time when the Young Irelanders deemed the Government most to blame, the above report says :

"The Legislature had made sufficient provision against actual starvation, and the energy and skill of the Executive had brought this enactment into operation. The untiring liberality of America had furnished us with surplus funds to a considerable amount. The continuation of an extensive system of alms-giving was not only in itself objectionable, but, by interfering with the legal arrangements for the support of the poor, was likely to defeat its own object."

If the Friends' Report may be taken as a corrective to the bitter feelings likely to be aroused by John Mitchel's writings and biography, its neglected warnings and suggestions regarding the Irish land system are in themselves an explanation and justification of subsequent disturbances here. British statesmen of the time hoped to degrade Irish agitation by treating as felons, instead of honorable opponents guilty of high treason, those Irishmen who resisted the law. The Treason-Felony Act was accordingly passed, and John Mitchel left Ireland a felon in chains. Conviction had been impossible with a fairly constituted jury, and for his trial a jury had been shamelessly packed. Britons were, however, new at such work. No sooner was he on board the *Shearwater* than his fetters were removed, and he was asked down to the cabin by the captain to take a glass of wine. Mitchel and others convicted in 1848 were in the main treated as honorable opponents—felons only in name. Through the horrors of the Fenian imprisonment the contest has since then considerably hardened. At one end of the chain we have John Mitchel in 1848, tried by the pretence, at least, of a jury, and invited by his jailer to a friendly chat over a bottle of wine; at the other we have his associate's son, John Dillon, in 1888, tried without judge or jury by police-magistrates, and dressed in prison clothes and herded with common malefactors in jail.

Would that we could close the life of Mitchel on his own farm, amid the lovely scenery of Tasmania, surrounded by his wife and family, and in the congenial society of brother exiles! Hitherto it had been consistent, at least in the eyes of the majority of his fellow-countrymen. It had been, if not always wise, uniformly actuated by a lofty purpose which led him to sacrifice himself for the good of others. It is interesting all through—varied, full of striking incidents, lit by brilliant thought. If unhappy to him in its unrest (in a letter he says that wherever he is, is perhaps the most miserable place in the world), it is deeply interesting in his overmastering love for Ireland, and in his family affections and power of acquiring and keeping friends. But with his departure from Tasmania the interest flags. His escape was secured by what most readers would consider a breach of parole, and, chafing under captivity in its most lenient form ("disguise itself as it will, slavery is a bitter draught," he writes to a friend), he freed himself to assist in extend-

ing and consolidating the most execrable system of bondage that the modern world has seen. John Mitchel was an honorable man. Some of those who endorsed his plan of evading parole were among the most honorable men I have known. None the less will that plan be condemned by most unbiassed readers. Intense desire for freedom, friendship, above all political friendship, led men to actions and approval of actions which cannot be condoned by those outside the circle of their influence. If John Mitchel's ethics regarding parole were generally accepted, parole would have little weight or significance.

Again, we cannot excuse his action regarding slavery and the slave trade. His love for the classics and classic models, his friendship with Carlyle and sympathy with most sides of his character except that turned to Ireland, may be pleaded. One cause may have been that at that period England was, in name at least, anti-slavery. Hatred of "cant" is dwelt upon as a cause—the intolerable cant of the abolitionists and good people generally. But we think the cant was entirely on the other side. To his vehement and narrow nature no wrongs signified which did not come within the immediate circle of his sympathy, and all denunciation of injustice that lay outside of it was contemptible and canting.

John Mitchel suffered for his principles in the United States as in Ireland. He lost two sons in the war, his means of living were destroyed, his family broken up. The severity with which he was treated in Fortress Monroe appears unjustifiable.

Let us turn from all this to his last days in his beloved Ireland in 1875, in sight of the familiar Mourne Mountains, with their ferny dells and clear, rushing brooks, to which he had turned with an aching longing during twenty-six years of exile. He died far away from wife and surviving children, but among near relatives, and, above all, with his comrade, John Martin, and he was buried in Irish soil. The touching friendship between Mitchel and Martin, such different men, is fully recorded in Mr. Dillon's work. Companions in youth, they were together in imprisonment and exile, and continued the closest friends, although Martin did not share his friend's views of slavery, and Mitchel affected to despise the home-rule principles and constitutional methods of Martin's later life. They died in the same house, and within a few days of each other.

This 'Life of John Mitchel' will, I believe, take and hold a place in Irish literature beside Wolfe Tone's autobiography. D. B.

DAUDET'S "IMMORTAL."

PARIS, July 12.

ALPHONSE DAUDET'S 'L'Immortel' appeared in numbers in an illustrated paper called the *Illustration*. It is now before me in the shape of a volume, and I read on its cover "quarantième mille"—for we no longer say first, second, third edition, but first, second, third, etc., thousand; and our authors in renown are not satisfied if the sale does not go as high as 100,000, just as our dramatists are not contented if they have not their hundred representations.

'L'Immortel' attracts much curiosity; it is a satire on the famous company of the "Immortals," the French Academy, and everybody is trying to place the real names under the names of the persons who appear in the novel. The same thing was done when La Bruyère published his 'Characters,' and I have several copies which bear the names (written in the margins) of the various persons who were supposed to have been the models of the great moralist. It is hardly necessary to say that Alphonse Daudet is a marvellous photographer, that his memory is very retentive, that his powers of description are extraordinary. He can bring life into any subject, he is never dull. His heroes and heroines seem really to move before our eyes, they have life, and they carry us with them into the turmoil of their agitated existence. In the case of this new book, I must, however, make immediately a remark: Daudet has deprived himself (and he has done so voluntarily) of one of the greatest elements of success in an artistic work. Afraid of being libellous, he borrowed traits from various characters and combined them in one. Every one of his Academical heroes is really a collection of several characters, and for this very reason they are wanting in unity, and therefore are not real creatures. Daudet himself said to a journalist who interviewed him, and asked if he was right in recognizing in Desminières M. Camille Doucet, the present perpetual secretary of the Academy: "No, you can say that there is only one man whom I have remembered completely in painting Védrine (the artist who despises all conventionalities, all the Academic coteries, who is thoroughly independent, and lives only for his art and for his family), and that is the sculptor, Zacharie Astruc." (I must confess here, incidentally, that this Zacharie Astruc was unknown to me.)

The conversation between Daudet and the journalist proceeds, and the journalist says: "You must confess that your Danjou resembles Pailleron in his turn of mind and even in his person." "Evidently," answers Daudet, "as I said to you, there are reflections more or less strong. But, in reality, you cannot give a precise name, in an absolute manner, to a single one of my personages." It is true that whoever should amuse himself by taking all the personages of the story and making a list of them, and then writing opposite the names of the living models, would give an inexact account of the reality; what ought to be done is to write against each name of the novel two, if not three, names of real persons. But is not this a severe criticism of 'L'Immortel'? Can you make living people out of pieces? And is not a novel composed in this fashion a mere collection of anecdotes, thrown together without any order? The impression left on the mind is a sort of confusion; there is no unity in the design, and no logic in the development of the story.

Strangely enough, the real hero, if there is one, of 'L'Immortel,' in which you might have expected an Academician to be the central figure, is not an "Immortal." He is, to be sure, the son of one; a man who has the most utter contempt for all the vanities of the Academical world, a young architect, called Paul Astier, who believes in nothing but money, and all that money can give. Paul Astier is not a bad type. Daudet calls him amusingly a "struggle-for-lifer," in one word; he intends under this name a new race of ferocious young men, for whom the Darwinian invention of the struggle for existence becomes a sort of a scientific excuse for all sorts of infamies, great and small. Daudet says that their name has become legion. These precocious monsters have completely abolished all the old notions of duty; they consider that they have duties only towards themselves, and enter on life like young gladiators, believing that they have a right to cut their way across our civilization as they would across armed legions.

Paul Astier is a rising architect; he can build a fine hôtel for you, he began by building one for himself. He lives in great style and has got into debt; from time to time, he remembers that he has a father, Léonard Astier, an "Immortal" who spends all his money in collecting historical autographs, and a mother who is willing to do anything for him. Madame Astier deprives herself of everything for her son; she has been very handsome, and still has traces of beauty, but she wears old gowns. All her ambitions, all her hopes, are centred in the wicked and egoistical Paul. She despises her husband, who married her merely because her father was an Academician. Her beauty, her grace, were to him a stepping-stone; now she has become a stepping-stone for her son.

The young and embarrassed "struggle-for-lifer" wants to marry the rich Colette de Rosen. Readers of the 'Rois en exil' know Colette: she is the wicked young woman who married Herbert, the son of the devoted Rosen. Herbert was killed in an insurrection in Illyria, and Colette is the inconsolable widow, who parades her widowhood. She has a magnificent monument built at Père-Lachaise for Herbert, for the hero whom she has lost. But she thinks of marrying again, and Madame Astier suggests to her the Prince d'Athis, an old beau, devoted for many years to the Duchess Padovani (one of the great Egerias of the Academical world). The Prince is tired of the Duchess; he has accepted a post as Ambassador, and the world learns that he is going to marry Colette. Paul learns it from his mother, who was ignorant of his own designs on Colette; she did not know that the latter had once taken him to the mausoleum, on a fine evening, on the hill overhanging Paris—a scene not very dissimilar to the famous scene in the 'Matron of Ephesus.'

Paul Astier hears of the impending marriage of Colette with the Prince, and he goes to join his mother, who is at the Théâtre-Français in the box of a lady who is one of the stars of the Academical society. He takes his mother a moment aside. "'Speak quick,' he begins. 'Is Samy going to marry?' [Samy is the familiar name of the Prince]. 'Yes, the Duchess has known it since yesterday; but she has come here nevertheless. They are so proud, these Corsicans.' 'And the name of the woman, can you tell it now?' 'Colette. Of course you must have suspected it.' 'Not in the least. . . . What are you going to get for that?' Triumphantly she whispered: 'Two hundred thousand—' 'Your intrigues cost me twenty millions—twenty millions and the woman,' and, wringing her wrists with rage, he threw in her face the word 'Gaffeuse!'" (*Faire une gaffe* is a slang term for making a mistake.)

Nice manners, nice people! Young Astier, who calls his mother "gaffeuse" (a mother who has just taken autographs from her husband's collection and sold them secretly to pay one of her son's bills), is not a man to submit at once to the decision of the wicked Colette. He will struggle first. He picks a quarrel with the Prince of Athis, with the full determination to kill him if he can. The scene of the duel is among the best in the book. The Prince ought to be killed. Paul is a good swordsman, and he feels that he owes it to himself to get rid of his enemy; but fate will not have it so—he is badly wounded himself. For a moment he gives up the struggle, and then remembers the Duchess Padovani, whom the Prince has left with great *éclat*, and from his bed he sends her a card, telling her that he has fought the duel in order to avenge her. The Duchess, who

is thought to be inconsolable for the loss of the Prince, is in her country-house. As usual, she extends her hospitality to many Academical celebrities. They all come, and we hear their conversations, and are let into the secret of their intrigues. One room is empty, the room which used to be occupied by the Prince; but it remains not always empty, for the young architect, still pale, and hardly recovered from his wound, arrives, and is lodged in it, and becomes the shining star of the place.

The love scenes between the young man and the Duchess are very well drawn; they are a struggle, indeed, for the young and calculating Astier is determined to force the Duchess to marry him. He will not be contented with less; and we see the combat between her pride and the passion which she feels for the first time with a degree of violence she has not known before. She succumbs, pride is vanquished by love, and the young architect becomes Count Astier. He has no prejudices; the woman whom he marries is much older than he. When the new Roman Count informs his father of his marriage, the father says: "'You are going to marry? Whom?' 'The Duchess Padovani.' 'You are mad. The Duchess is twenty-five years older than you—and then—and then.' He hesitated, trying to find a respectful formula, and then brutally ejaculated, 'One does not marry a woman who, to everybody's knowledge, has belonged to another man for years.' 'This has never hindered us from dining regularly with her and incurring a thousand obligations to her,' said Mme. Astier." The father interferes too late; the marriage of his son is the last blow to his pride, and he has received already so many other blows: all his autographs have been found to be forgeries. He has been for years the prey of an impostor, and now all the world knows it and laughs at his credulity. The river is not far from the Institute; he has only a few steps to take to throw himself in the Seine—a very tragical end for a ridiculous "Immortal," and for which nothing has prepared us.

Léonard Astier-Réhu, Perpetual Secretary of the French Academy, who ends in this way, is a very improbable character. The incident of the spurious autographs was taken by Daudet from the life of the famous Chasles, the mathematician, who never belonged to the French Academy. He has also borrowed another of his heroes from the Academy of Sciences. If Léonard Astier-Réhu is really M. Chasles, who has acquired a high renown by his 'Higher Geometry,' Réhu, the centenarian, the grandfather of Mme. Astier, is no other than our Chevreul, who celebrated two years ago his centenary, and who is now 102 years old. Chevreul is not an "Immortal"; he is only the oldest member of the Academy of Sciences. It seems as if Daudet had been afraid to enter the holy precincts of the forty "Immortals"; and though he desired to describe the vanities and follies of the literary Olympus, he takes us constantly out of it. Daudet has only alluded in the most distant manner to the great majority of the present members of the French Academy. Some of them are even intentionally ignored. The "Dukes" are only mentioned once or twice; in short, 'L'Immortel' has only the Academy as a sort of *cadre;* and the reader who expects to be taken into all the mysteries of Academical life will be somewhat disappointed.

LOCAL COLOR IN SEVILLE.

GRANADA, June 19.

SPAIN is doubtless the only country in the world where one can on the same day—within six hours—admire and study two of the greatest masterpieces of Christian and Mohammedan architecture. I left the Cordovan Mosque one morning at ten o'clock for the railway station, and at four o'clock I was in the Seville Cathedral, thus having an excellent opportunity for comparison. In speaking of the Cordovan Mosque I ventured to question the appositeness of Gautier's comparison of the interior of that building to a marble forest. The *coro* which was stupidly built in the centre of the old mosque in 1523, militates against such an impression, and the red and yellow arches which were put up in 1713 in place of the original ornamented Moorish ceiling, are extremely unsuggestive of forest trees and their branches. To my mind this comparison to a forest seemed much more natural in the Seville Cathedral. Vast height, dim light, gloom and awe are the characteristics of a primitive forest, and all these, absent in Cordova, are to be found in the Cathedral of Seville. But if this Cathedral be compared to a petrified forest, it must be to a forest of giant trees, such as those in the Yosemite Valley. There is something supremely massive, colossal, mammoth, in the huge high pillars of this building — something which makes one wonder, as do the pyramids of Egypt, that human might should have sufficed to place these monstrous stones in an upright position and in symmetrical rows. The Cordovan pillars are mere walking-sticks in comparison, and the ceiling which they support only one-quarter as high as that in the Seville Cathedral, which is the largest—and its tower the highest—in Spain. So vast is its interior space that, notwithstanding its 93 windows, a dim, mysterious twilight pervades every part all day long. Yet, although Seville is the warmest and sunniest place in Spain, and this Cathedral its coolest spot, the flock of worshippers is very small indeed. The number of priests who officiate at the 30 chapels and 82 altars has been reduced from 133 to 97; but it seems as if to-day one-quarter that number would suffice for all needful purposes.

After seeing the Cathedral, the most important thing to do is to ascend its tower, the famous Giralda, and get a bird's-eye view of the city and its surroundings. A glance suffices to show why Seville is such a warm place. The immediate surroundings are flat and marshy, and the encircling mountains, although they make a fine picture, are too far off to benefit the city with their breezes. But, as the roofs of the houses are mostly flat and of a Moorish character, the inhabitants can, on warm nights, wrap themselves in sheets and sleep in the open air. The belfry, near the top of the Giralda, has 22 bells, of which Ford remarks that "they are almost treated as persons, being all duly baptized, before they are suspended, with a peculiar oil, and they are christened after saints." Nevertheless they are subjected to the undignified treatment of being tied bottom side up—a somewhat risky arrangement, for if one of the ropes should break, a visitor standing underneath might suddenly find himself reduced to the alternative of following his head down into the street, or doing without one. The Spaniards have a peculiar way of ringing their church bells. They not only ring them as fast as fire bells, but, instead of moving them simply to and fro, they make them turn complete somersaults. The bell-ringers have to look out for their heads, under these circumstances, and I was told that a few years ago one of them was fatally injured.

Although the Giralda is 350 feet in height, it is so easy to ascend that one arrives at the top before one is aware, and without the slightest fatigue or necessity of pausing. The ascent has even been made with horses, for there are no steps, but a series of moderately inclined planes winding along the sides of the tower—an arrangement which ought to be adopted in other towers. It is not till one leaves Seville, and notes how the Cathedral, with its tower, looms up more and more above the houses, that one realizes the height of the Giralda. In the city itself the streets are so tortuous and narrow that one constantly loses sight of it, so that it does not serve so much as a useful guide-post as one might imagine and hope. Nevertheless, after Toledo and Cordova, some of the streets of Seville appear neither narrow nor labyrinthian, but almost modern and metropolitan. The most interesting of them is the Calle de Sierpes, which no wagon is allowed to enter, and which is lined with cafés, club-houses, and elegant shops. Many of the shops are semi-Moorish; for although you do not see a turbaned Mohammedan squatting on his hind legs in a small booth open to the street, where customers, without leaving the street, bargain for the goods stored round about him, you *do* see no end of shops which are practically in the street, the whole front wall (consisting of doors) being removed in the daytime, so that the clerks can look up and down the street without getting from behind the counters. To the clerks, no less than the customers, it is a great boon to be thus all day long in the open air, instead of being cooped up, as elsewhere, in close, hot, stuffy rooms. Additional comfort and coolness is provided by stretching awnings across some of the streets, so that one can walk comfortably even in the early afternoon. But as this is done only in the principal streets, few of the natives go out at that hour. Everybody takes his *siesta* either in the house or in the street, and one has to take care in turning a corner not to stumble across men, or sometimes even women, fast asleep in a shady spot. Even the street-cars, which were built some months ago—by foreign enterprise, of course—are empty at that hour, though otherwise a paying investment. To an American it is difficult to realize that a city which once had 400,000 inhabitants, and still has 135,000, covering a very large territory, only just making up its mind to have means of cheap and rapid transit. But time is not money in Spain. If it were, the Spaniards would all be rich, for they have plenty of it.

What surprised me most in the streets of Seville was that even towards evening and at night they were by no means as crowded as I had been led to expect, nor was the evening promenade at all well attended, except on Sunday. Yet it is the orthodox thing for tourists who come to Seville from Cordova to contrast the bustle and animation of the first-named city with the tomb-like solitude of Cordova. I appealed to a resident Englishman for an explanation, and he said that the writers had not misrepresented the state of affairs, but that Seville was for the moment in an apathetic, comatose condition, because quite recently two leading banks, containing the savings of thousands, had failed. "However," he added, "the Andalusian never indulges long in any feeling, whether depressed or joyous, and in a few weeks Seville will probably be as gay as ever." Nevertheless, various indications led me to believe that Seville will never again be what it was in the times of the famous "Barber," even though its commercial activity is said to have been greatly stimulated by the improvements in the Guadalquivir which have made Seville accessible to the largest steamers.

My attention having been attracted by some

peculiarly lugubrious music, I followed it to its source and came across a funeral procession. Its head was formed by a dozen boys bearing long candles. Then came the coffin, carried by four men whose heads and bodies were buried under the cloth which covered the coffin, leaving only their legs visible, so that at the first moment I actually mistook the group for a huge animal. Priests followed, arrayed in black robes with red stripes, and the rear was brought up by the music, consisting of an oboe and two bassoons—a peculiarly melancholy combination—accompanying the solemn chant of the priests. The procession stopped in front of a house, and, with the bystanders, formed a group around the coffin, which was opened and the features of the corpse once more exposed to daylight. The crowd then dispersed, and the ecclesiastics returned to their haunts.

Half an hour later I came across a different procession, but quite as characteristic of the city and the country. A cow, gayly decked with flowers, was slowly led along the street by a girl, the rear being brought up by a blind man blowing a flageolet and beating a drum incessantly. A crowd of children followed, of course, and on inquiry I discovered that the cow was to be raffled for, any one paying a trifle and taking his chances. In the course of ten days I saw several of these processions in Seville. The lottery is, next to bull-fights, the great passion of the Spaniards.

The public lotteries are innumerable and on a large scale. If you sit in a café near a window, you will be annoyed every five minutes by a man or woman offering lottery tickets. They sell them at cost price, but expect a small gratuity. As Spaniards, at least the lower classes, rarely read a newspaper, the prizes are not printed in them, but are loudly proclaimed in the street by men who make a business of it, and who also expect a gratuity if they give you welcome news. But perhaps the most peculiar thing about Spanish lotteries is that the numbers immediately preceding or following the great prizes are also winning numbers. For instance, in one case where the highest prize was 200,000 francs, and five others were 40,000 each, the contiguous numbers above and below were worth 5,000 each. This is shrewd philosophy, for it is well known that the bitterest disappointment comes to those who get within one number of winning.

The lottery tickets are not sold in cigar-stores, as in most other countries, but in special shops which are almost as numerous as wine houses. To atone for this, the cigar-stores have a monopoly of a kind which strikes every foreigner as by far the oddest thing in Spain: the sale of postage stamps. You cannot get a stamp at a Spanish post-office for love or money. You get it at the nearest cigar-store, where also you will find a letter-box, and nowhere else except at the post-office. A strange story was told me by an English chaplain at Malaga. Casually strolling into a café one day, he noticed a number of letters stuck up on the wall, and to his supreme astonishment found that several of them were for him. On investigating the matter, he discovered that a postal clerk had entered into an arrangement with the cafetier to send him letters addressed to foreigners, the understanding being that the latter probably would pay him a fee for his trouble, or, at any rate, frequent the café! The chaplain referred the matter to the Consul, and the little game was stopped. Among the letters in the café were several addressed to parties, known to the chaplain, who had left weeks before. The moral would seem to be, don't address your letters *poste restante*, but send them to the Consul or the banker named in your letter of credit.

Registered letters appear to be safe, on the other hand, but the extraordinary precautions taken to make them safe appear like an accusation of general dishonesty. If you receive a registered letter, you have to return the envelope with the signature of your receipt. This is simple enough. The difficulty lies in knowing how to send off a registered letter. I shall never forget my first experience in that line. When I handed in my letter it was returned, with the remark that it must be sealed. I took it to a cigar-store and had a seal put on it, but again it was handed back. "There must be *five* seals," said the clerk. Not wishing to expose my ignorance to the black-eyed beauty in the cigar-store, I went to a stationer's and bought a bar of sealing-wax, but, having no stamp, used a coin instead. Once more the letter was returned: "The stamps on the sealing-wax must be all the same." In despair I took it back to the black-eyed girl and explained my difficulties. She put on the five seals, and then at last the letter was accepted. The most absurd part of the story is, that although Seville swarms with foreigners in spring, there are no directions regarding this matter posted up anywhere. Indeed, not even the time (three or four hours a day) when the post-office is open, is announced at the window. Obviously, the Spaniards are not much in need of postal facilities, and for a very good reason, since not much more than 25 per cent. of the population can write and read.

However, one can afford to put up with such little annoyances at Seville, which richly compensates them by its novel sights and inexhaustible art treasures. Seville is a city of historic contrasts. Having been successively a Phœnician, Greek, Roman, Gothic, Moorish, and Catholic city, it preserves traces and monuments of almost all these dynasties. At the suburb Italica, the birthplace of three Roman emperors, the ruins of an ancient amphitheatre, with the various subterranean divisions for the gladiators and the wild beasts, may still be seen. The city itself is Moorish in the arrangement of the streets and the houses, and the Alcazar is the best preserved specimen of Moorish architecture in Spain. Adjoining it is the Christian Cathedral. In the streets the mediæval donkey grazes the modern horse-car. In the windows of the book-stores the latest French novels, and photographs of pictures from the last Salon, are exposed side by side with the omnipresent Murillos; and at the hotel sits an Englishman in a Moorish patio reading the last number of the London *Times*. These Moorish patios are, of all the sights in Seville, the most interesting. One finds imperfect specimens of them further north, at Cordova and even Toledo, and a few also at Malaga and Granada and elsewhere, but Seville is the place where the delightful Moorish courtyard is seen at its best. There are patios of all sizes and degrees of splendor, but always patios, in every house, and one never tires of peeping into them on walking along the streets. This is easily done, for even if the iron gate which leads to the patio is not open, one can look through the interstices left by its elegantly wrought and painted configurations. In the finest of these square courtyards the floor is of marble, and the walls inlaid with elegant mosaic. In the centre is a flower plot, or a fountain surrounded with flowers, or statuary. Marble columns on each side support the inside projection of the upper story, which is sometimes provided with windows, while the patio itself is open above to the sky at night, and covered in the daytime with an awning, so that it serves at all hours as a refrigerator for the house and its inhabitants. Here the Sevillans hold their morning and afternoon receptions, and here they breathe the fresh air, which accounts for the plump figures and the sparkling eyes of the women. On warm afternoons it is 8 to 10 degrees cooler in the patio and the adjoining rooms than in the upper story of the house; a fact which tourists will do well to remember. I see no reason why these patios should not be universally introduced in warm climates, and I believe they will be as soon as some one sets the fashion. I met a California millionaire who vowed he was going to build a house in the Moorish style, and who was busy at the time getting the prices of some elegant tiles, which he pronounced very cheap.

By far the most sumptuous patios are of course to be found in the Alcazar. I must confess that I was more impressed and thrilled by the marvels of this palace than subsequently by the Alhambra itself, for the simple reason that the Alcazar, having so long been used as a royal residence, is in a better state of preservation. The charms of this palace are bewildering, and can no more be described in words than the love-duo from "Tristan und Isolde." I always thought the comparison of architecture to "frozen music" (attributed sometimes to Goethe, sometimes to Mme. de Staël) rather far-fetched, until the moment I saw this Alcazar. Here, as in an opera, one can yield himself merely to the general impression of the situation, or else one can pursue the details attentively, and ever discover new beauties and unsuspected relationships. The variety of patterns on the walls and ceilings is incredible, and more than kaleidoscopic. There are geometric figures, stars, leaves, flowers, lions, birds, and creatures half fish, half plant, besides Arabic letters and proverbs, and all these as subtly interwoven and endlessly varied as the harmonies in a modern orchestral score. And the instrumentation of all this—the coloring—is truly Wagnerian. No two rooms are alike, a different tint prevailing in each—red in one, blue, green, or gold in others. And most beautiful of all are the black squares, whose glazed surface is iridescent, reflecting all the colors of the rainbow. At the moment I felt as if I would rather be the creator or owner of this building than of all the Gothic cathedrals I had ever seen. A delightful solitude reigns throughout the Alcazar. I saw no living being except an artist copying a ceiling. The wind was whistling dismally through the empty spaces, and I could not help thinking how these sounds, so romantic to a modern visitor, must have harassed and haunted Don Pedro the Cruel after he had caused his brother to be murdered in one of these apartments.

The Sevillans are obviously proud of their Moorish patios and their belongings, for they still build their new houses in the same style. The leading hotel has two fine patios, with a fish-pond, flowers, and fountain, where one can always find a comfortable temperature. At night the perfume in this patio is so rich and overpowering that one almost hesitates to admit the air from it into one's bedroom. But it must be done, for to open the window looking on the street is to bid good-bye to all chances of sleep, not only on account of the belated revellers who wend their way home noisily at intervals till four or five o'clock, but chiefly on account of the watchman, the *sereno*. This lugubrious individual, armed with a spear and a lantern, perambulates the streets all night long, endowed with a threefold function, his first duty being to preserve order, his second to open doors, his third to sing out the hour of the night. As in Berlin, so in Spanish

cities, persons living in apartment-houses carry no keys, but are dependent at night for admission on the watchman, who appears with his bunch of keys and unlocks the door, after he has heard them yell "Sereno" at the top of their voice. This is bad enough, but his song is worse. Every half-hour he sings his Ave Maria at every corner, *fortissimo*, winding up by stating the condition of the weather. As this is almost always "serene" in Spain, his name is plausibly accounted for. Possibly an audacious philologist might also trace the word serenade to this source.

Notwithstanding the *sereno* nuisance, I prolonged my stay in Seville three days in order to see what is considered its most interesting festival, the Corpus Christi procession. Great preparations are made for this, and thousands flock to see it from the country and neighboring towns. Five days before the great day, workmen began to put awnings over all the streets and squares along which the procession was to pass, and chairs were placed in every available corner, with flowers in the background. In the cathedral the columns were wrapped in gorgeous velvet cloths, and in every part of the town, even in the remotest suburbs, women and children were busy the day before the festival in sweeping the streets clean. The procession itself was hardly worth seeing, its principal feature being a number of images of saints carried along by priests on their shoulders. Much more interesting was it, after seeing the slow procession, to get ahead of it some distance and observe the Andalusians, in all their glory, who lined the whole way, sitting on rows of chairs on both sides, and occupying all the windows and balconies, some of which were gayly draped like opera boxes. It was a beauty show such as I had never before seen; and hardly less interesting was the sight of the soldiers who were placed along the whole route in two lines, either on foot or mounted on Andalusian steeds, proud as their masters and graceful as the señoritas who looked on them with their big black eyes.

Before the procession had formed, I witnessed the most unique incident of the Festival—the *ballet in the Cathedral*. This was not so startling as its name implies. A dozen beautiful boys went through various simple evolutions, singing an air which sounded like a Mozart minuet, and accompanied by flutes and violins. Twice, in the concluding measures, the castanets were used, and these, associated with dance halls, did have an odd effect in the echoing cathedral. The musical effect of the performance was delicious, and none but the most bigoted could have taken offence at the dancing, which was, after all, but a slight exaggeration of the processions that can be witnessed in other cathedrals.

In the evening another and quite unexpected musical treat awaited me, which was also a delightful bit of local color. As we were at dinner, at the Hôtel de Madrid, enter suddenly a dozen students in the old-fashioned Salamanca costume, with picturesque cloaks and hats. They marched around the table twice, playing a gay march, and then took seats arranged for them on one side, where they played for us over an hour. The band comprised violins, flutes, a 'cello, tambourine, and several guitars, and the effect was very Spanish and very enjoyable. When dessert came on the table, they marched out again, and subsequently played another hour in the picturesque patio, being assisted by a lovely young girl, who played the castanets and danced with bewitching grace. And, strange to say, no collection was taken up. The host had evidently arranged all this as a treat for his guests. Was there ever host so generous? After all, Spain remains the land of romance.

HENRY T. FINCK.

Correspondence.

DR. VON HOLST AND HIS CRITICS.

TO THE EDITOR OF THE NATION:

SIR: Although I think that, in the opinion of every fair-minded person, I might claim as my right to be heard once more in self-defence, since I am exposed to a regular onset from correspondents of the *Nation*, yet I would keep silent if I was but personally concerned in these attacks. The fact that my writings have been for a number of years pretty extensively used in several American colleges forbids this course, because silence might be interpreted as a confession of having been proved to be such an utterly unreliable and worthless guide as those correspondents assert. To refute their general and sweeping statements in a few lines is, in the nature of the case, impossible. All I can do is, to show that anybody who cares to know what Dr. von Holst says and thinks, has to take the trouble to read his writings, and not to go to "N. Z.," "G. B.," or Wm. M. Meigs. For this purpose two exemplifications are sufficient.

Is it fair of "N. Z." (*Nation*, June 14) to prove the injustice of my complaint, that he has misstated my assertion, by referring the reader to a letter of "A. B. H." published several weeks before in the *Nation*? What he ought to have done I shall do now, viz., put "N. Z.'s" statement and "A. B. H.'s" translation side by side. According to "N. Z.'s" first letter, I said in the incriminated article, "that Senators rather than members of the lower house are regarded by the masses of the people as their genuine representatives." "A. B. H." translates the decisive sentence of the original thus: "The people of a State *as a whole* (*Gesammtbevoelkerung*) recognize the Senators as their representatives rather than the Congressional delegation of the State, *taken as a whole* (*die Gesammtheit der Repraesentanten*)." I do not deem it necessary to add a single word to point out the enormous difference between this assertion and the idea conveyed by "N. Z.'s" version; but I cannot help declaring that it is beyond my power of conception how any thinking person, having read the whole preceding argument, of which this sentence is but the culmination, *can* fail to grasp this difference.

What I said in my former letter about distinguishing between a *fact* and *the theory of the law* may not have been sufficiently clear to those who have not read the article; but "N. Z." ought to have had no difficulty in understanding what I meant. I have tried to prove in my article that, although the President exercises a great INFLUENCE *on* legislation—*as a fact* AND *by right*—yet the Constitution does not give him any SHARE *in the legislative power* ("*Einfluss auf* die Gesetzgebung, aber nicht ANTHEIL *an der gesetzgebenden Gewalt*"). How much the arguments adduced for this opinion may be worth, everybody has to decide for himself; but it rests on *arguments*, and arguments require refutation by arguments. Neither the fact that I have been inconsistent with regard to some other question—as Mr. Meigs asserts, but I flatly deny, so far as the example adduced by him is concerned—nor that I am a foreigner and my opponent, "N. Z.," "to the manner born," nor, finally, "G. B.'s" accusation that I am an enemy of republican institutions, or even a broad hint that I might be a bought tool of Bismarck, can I acknowledge to be such arguments.

That is my last word in this controversy. So far as depends upon myself, everybody shall have henceforth a perfectly unencumbered field to tear to pieces not only the scholar, but also the man who has proved his hatred of and contempt for the United States in the singular way of making the study of their history and institutions his life-task, and who, in his own country, is at every opportunity run down on account of the taints his mind has received by contact with transatlantic republicanism. Whenever my critics—I beg to assure them—attack me with facts or arguments from which I can derive some instruction (as I have done from many a letter of "G. B.'s" to the *Nation*), I shall thank them most sincerely, no matter how much my vanity may have to suffer by it. But for such wounds as they have inflicted this time, a plaster is furnished by such a generous letter as that of my former pupil, "A. B. H.," and the encouragement just received from another younger American scholar of acknowledged ability and promise: "Though many Americans wince under your criticism of our vanity and sentimentality, I hope you will long continue to tell us what 999 of every 1,000 are too vain to recognize of their own account."

Very respectfully, H. VON HOLST.

FREIBURG IM BR., July 8, 1888.

THE PEOPLE'S PALACE AGAIN.

TO THE EDITOR OF THE NATION:

SIR: Mr. Walter Besant writes to the *Nation* that, in my paper on the People's Palace, I made a grave mistake in supposing that the audience at the Sunday organ recital is not an audience of genuine workmen. But the mistake I really made was to suppose that the Palace, opened by the Queen, patronized by the Drapers' Company—a title for its clerk being the price of their patronage—and managed by a select committee from the West End, was designed for the class of workpeople who figure in Mr. Besant's novels, and who certainly cannot afford to wear broadcloth and a white collar on Sunday, to waste much money on drink, or, for that matter, to pay even the smallest initiation fee at the Palace. According to Mr. Besant's letter, the great majority with whose misery he has elsewhere asked us to sympathize, have no right to whatever amusements and privileges the Palace affords. The well-to-do workman who, in East End language, wears a 'igh 'at on a Sunday, is provided with another club and library; the men and women who starve on from four to thirteen shillings a week can, as heretofore, seek their recreation and improvement on the streets. But I find there is a great difference between the American and the English idea of a workman. School-teachers, small tradesmen, and clerks, who at home establish their own institutes and clubs, are here included in the working class, and become objects of benevolence for St. Jude's Church missions and People's Palaces.

N. N.

LONDON, July 10, 1888.

PROF. LE CONTE'S EVOLUTION AND THEOLOGY.

TO THE EDITOR OF THE NATION:

SIR: In the interesting notice of Prof. Le Conte's 'Evolution, and its Relations to Religious Thought,' in the *Nation* of July 12, it is stated that, according to the author, the spirit of man was developed out of the anima or conscious principle of animals, and that this again was developed out of the lower forms

of life force, and this in its turn out of the chemical and physical forces of nature. This appears sufficiently clear and emphatic. But, in a subsequent paragraph, Prof. Le Conte is credited with maintaining that between the different planes of existence there is "a very distinct break." The passage from one plane to another is said to be "not a gradual passage by sliding scale, but at one bound." An "irruption of the Universal Energy into a higher plane" is spoken of. May I ask what consistent scientific meaning the word development (or evolution) can have when it is no longer antithetical to "distinct breaks," "bounds," and "irruptions"? The whole effort of the evolutionary theory is to do away with breaks and leaps. To the extent that one admits them, does not one practically go into the old camp? I ask simply in the interest of clear thinking and honest expression.

"Old things need not be therefore true,
O brother men, nor yet the new;
Ah! still awhile the old thought retain,
And yet consider it again."

To one reader it looks as if Prof. Le Conte's scheme were simply one more "repetition of the nauseating incongruities which have so often been put forward under the guise of a 'reconciliation of science and religion.'"

W. M. S.

CHICAGO, ILL., July 19, 1888.

THE WIRE-ROD INDUSTRY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of June 28, p. 519, you published that the ad-valorem duty on the raw material of fence wire is about 70 per cent., when it is exactly 45 per cent. You published that there were less than six rod mills here, whereas there are 33 in all. You published that there were less in the aggregate than 100 men employed. I am far within the mark when I say there are more than 1,500 men on rod-mill pay-rolls, and more than 10,000 men, besides, making iron and steel for these rod mills. Last year the domestic rod mills made fully 180,000 gross tons (2,240 lbs.) of rods. This year we know the ten leading manufacturers will make 273,000 gross tons. The money value of these 273,000 tons will, at least, be $11,193,000. A minute's reflection will satisfy you that more than ten thousand men are needed to make eleven million dollars' worth of rods, although not all directly rolling them. The cause of the large increase in American production is, that nearly all the foreign rods are made in Germany, and are marketed by a pool at about £5 12s. 0d., f.o.b. Antwerp, while they sell to their home consumers at from £5 17s. 6d., to £6 0s. 0d.

JOHN STEVENSON, JR.,
President New Castle Wire Nail Co.

NEW CASTLE, PA., July 11, 1888.

[We have abridged our correspondent's communication, deeming the censure with which he accompanied his correction quite uncalled for. We simply summarized a letter to the protectionist *Iron Age* which passed the scrutiny of the editor of that journal, and in which the writer pleaded for a lower duty on steel-wire rods as an aid to American industry engaged in the manufacture of fence wire. We did not adopt his statistics, or base any conclusions upon them.—ED. NATION.]

Notes.

A SERIES entitled "Romantic Tales" is projected by Brentano, embracing "the best works of the day," and such as have never before been translated. Balzac, Féval, and Sardou will furnish the material of the first volume.

'Almost,' a novel by John S. Shriver of the Baltimore *American*, is in the press of Lombard, Druid & Co., Baltimore.

The Semitic Seminary of the Johns Hopkins University, under the lead of Prof. Paul Haupt and with foreign coöperation, intends to publish a complete edition of the works of Edward Hincks, "the greatest of all cuneiformists." Dr. Cyrus Adler communicated this purpose to the American Oriental Society, with a tentative list of Hincks's writings, which is printed in the May volume of the Society's Proceedings. The earliest dates back to 1838; the latest to 1866. This undertaking will be an important preparation for the Seminary's proposed Assyrian-English glossary.

Two volumes of correspondence of the historian Motley are announced to be published in London by John Murray.

The Plays of Wycherley have been added to the "Mermaid Series" (London: Vizetelly & Co., 1888), under the editorial care of W. C. Ward. Macaulay's fragment upon the dramatist, from the essay upon the 'Comic Dramatists of the Restoration,' is reprinted, with notes to correct its inaccuracies, and a few footnotes to the text appear at the bottom of the pages. Mr. Ward's Introduction enters into a somewhat labored defence of Wycherley's literary immoralities, which had perhaps better be accepted as a part of the inevitable of history, without too much remark. The edition is a very convenient one, unexpurgated, and supplies a want of the libraries.

Routledge & Sons have published a translation of Alphonse Daudet's 'Trente ans de Paris,' with the original illustrations. 'Thirty Years of Paris' gives a very fair impression of the fragmentary but interesting volume which this popular writer made up last winter from scattered articles, in which he had formerly related some of the experiences of his first hard years in Paris, when he was serving his apprenticeship to the trade of writing. These articles originally saw the light in various periodicals and newspapers, not only of Paris, but of places as foreign to the writer as St. Petersburg and New York. Most of them appeared eight or ten years ago, and none are new, which makes the title something of a misnomer, for when the latest of the articles were written it was but little more than twenty years from the day, in 1857, when Daudet, then a boy of seventeen, first went up to Paris, with a prospective volume of poems in his pocket, to conquer a place, which he has since made so large, in the literary world of the capital.

The eleventh volume of the *Overland Monthly* (Jan.–June, 1888) is before us. This California magazine has always preserved a local flavor, and the recent resort to illustrations has intensified this quality. As memoranda at least, the "process" cuts from photographs will grow in value with time. There are many of them in this volume. Akin in interest are such facsimiles as accompany the article on "Pioneer Illustration in California," and sundry antiquarian tail-pieces.

It seems odd, with the first volume of the *Legislative Record* for the State of New York before us, to be told that the publication is absolutely new. The wisely drawn statute ordering it prescribed that the stenographers should set down everything pertaining to the course of business, except the debates. We have here, therefore, the actual proceedings of the Senate and Assembly during the one-hundred-and-eleventh session, from day to day. At the end of the volume are lists of members, of committees, of laws passed, of Senators and Assemblymen, 1872–1888 (by district), and of "Assemblymen who have become prominent, 1872–1888" (it is enough to have been promoted to the upper chamber to become "prominent"). The General Index is scanty, and indeed an index to such a document presents great difficulties. The publishers are James B. Lyon & Co., Albany.

'John Greenleaf, Minister; or, the Full Stature of a Man,' by Julian Warth, just published by the D. Lothrop Co. of Boston, in their "Lothrop's Summer Series," is an old book with a new name. It was first published in 1886 with the title, 'The Full Stature of a Man.' No notice of this change of name is given in the book.

Mr. Waters's "Genealogical Gleanings in England," in the July number of the *New England Historical and Genealogical Register*, concern an Ames family of Massachusetts, of which an early member is commemorated in Sibley's 'Harvard Graduates,' and collaterally the posterity of Ezekiel Cheever, the famous master of the Boston Latin School; the Fawkner family, and collaterally Hancocks and Buckleys; and Rogerses, in the John Harvard connection. Elizabeth Fawkner, whose will is given, bequeathed in 1720 the remainder of her books to "some public place or library either in New England or where else they [her executors] shall think most proper."

We observe that Mr. S. S. Rider, in his *Book-Notes* (Providence, R. I.), thinks he has identified the book referred to in the will of Dr. John Clarke, one of the early Rhode Island worthies, when he speaks of "my Concordance, and Lexicon to it belonging, written by myself, being the fruit of several years' study." The library of Harvard University possesses two copies of "Holy Oyle for the Lampes of the Sanctuaries; or, Scripture Phrases Alphabetically Disposed for the Use and Benefit of such as desire to speake the Language of Canaan, more especially the sonnes of the prophets who would attain elegancie and sublimity of expressions, by John Clarke, Master of Arts" (London, 1630). The author says of it that "I never hitherto sawe or heard of any of this nature in any language now extant"; *i. e.*, a concordance, commentary, and well-spring of Scriptural phraseology. The work implies a classical training which the Rhode Islander is not known to have had.

In the July number of the Lincolnshire *Notes and Queries* (Horncastle, Eng.), inquiry is made concerning Roger Williams in a rather slighting way. "This erratic person may, possibly, in some respects, have little claim to remembrance"—the invention of "soul liberty" notwithstanding. The writer, "A. C.," intimates that an authentic life of Williams is likely to be forthcoming, and asks what evidence there is of him in Lincolnshire, where notoriously he spent some portion of the years 1625–1631, at Sempringham, though, so far as known, not as vicar or curate.

Prof. A. S. Packard contributes an interesting historical sketch on "The Geographical Evolution of Labrador" to the June *Bulletin* of the American Geographical Society. The ordinary knowledge of this land, he says, is as vague and indefinite as in the times of Cabot." Its shores are very imperfectly charted, its po-

pulation is dying out; yet "its unexplored bays and rivers will always remain full of interest to our adventurous yachtsmen, as well as to the naturalist and traveller." Mr. William Butler Ogden's "Four Days in Petra" is illustrated in an interesting manner from photographs. Mr. George C. Hurlbut, in his "Origin of the Name America," shows little mercy to Prof. Jules Marcou's theory.

A very lucid address to the American Institute of Mining Engineers on the "Geological History of the Yellowstone National Park," by Arnold Hague, of the United States Geological Survey, is printed in the Transactions of the Institute. Mr. Hague is the highest authority on the subject of the Park, has interceded with Congress to give it more exact and natural boundaries, and will in time produce a survey of this great reservation which will leave nothing to be desired. He establishes very clearly its volcanic character, eruptions having ceased at a remote period; describes the all-covering flow of rhyolite which glacial, atmospheric, and aqueous erosion has been at work upon ever since without laying bare the underlying rock; shows how the ice-sheets from the western and eastern mountain-rims made joint deposit of their freight of bowlders in the Lower Yellowstone Valley; discusses the cause of the geysers and the rate of deposit, from which a period of at least 25,000 years is determinable; intimates that the arsenical waters may yet vie in curative attractiveness with those of La Bourboule in France. "No hot springs with which I am acquainted," says Mr. Hague, "prove so delightful for bathing purposes and so agreeable in their action upon the skin."

A subject of much complexity and no little political significance is dealt with by Mr. Reuben G. Thwaites in his essay on the "Boundaries of Wisconsin," printed in vol. xi of the Wisconsin Historical Collections. Step by step, and with the aid of maps, the breaking up of the Northwest Territory into Territories and States is described, and due emphasis is laid on the indifference paid by Congress to the stipulations of the Northwest Ordinance relating to boundaries. In all these enactments, too, we have the most irrefragable proof of the complete authority asserted and exercised by Congress over the Territories before the Slave Power found it convenient to deny the right.

A little pamphlet comes to us from Winston, N. C., prepared by President Battle of the University of North Carolina. It undertakes to account for the names of the several counties of the State, and to give "the history involved in them." These divisions are very numerous, have been two hundred years in forming (1672–1872), and present the usual variety of aboriginal, old-country, local and national, military and partisan nomenclature.

In discussing "British Interests in Africa" in the July *Contemporary*, Mr. J. Scott Keltie contends that in the recent "scramble" by the European Powers for that continent Great Britain has secured the "choicest fragments." She has practically the whole of Southern Africa, that part best suited for European colonization; the greater part of the Niger, giving easy access to the rich and flourishing provinces of the central Sudan, while the fertile Lake country and the vast grazing region of Somali-Land have been brought under her "sphere of influence." He advocates the federation of the South African States, the extension of British territory to the Zambesi, repudiating Portugal's claim to Matebele-Land, and the purchase of Delagoa Bay, the natural and only port of he Transvaal and Bechuana-Land. While the free navigation of the Zambesi, still refused by Portugal, is insisted upon, the Nyassa territory, though exploited solely by British capital, must be relinquished, as it is completely hemmed in by the possessions of Portugal and Germany.

The *Art Review* for July-August (New York: Geo. F. Kelly) is, as usual, more attractive by reason of its illustrations than of its text. The article on the Boston Museum of Fine Arts, by E. H. Greenleaf, is, of course, authoritative; the art of Mr. Wm. Hamilton Gibson receives a tribute from Chas. M. Skinner, and the "Picturesque Adirondacks" are described by George Forbes, with the aid of a number of photogravures after photographs from nature in that region — of varying excellence. The chief full-page plates are the jaunty "Passing Glance," etched after Carroll Beckwith by F. W. Freer; Walter Shirlaw's "Spirit of the Lily," Kenyon Cox's "Painting" (an allegorical figure), George Hitchcock's clever "Tulip Culture," and a "Portrait of a Lady," by Wm. M. Chase. Mr. Kelly, having thus launched the *Review* on its third volume, announces that in September he will begin to issue the fortnightly *Art Courier*, a journal of current news, accompanied regularly by a supplemental photogravure. Thirty of the plates made by this process for vols. i and ii of the *Review*, now out of print, will be shortly issued in an *édition de luxe* as the first series of the 'American Art Portfolio.' The prints will be on soft Japanese paper.

The *Portfolio* for July (Macmillan) is an exceptionally entertaining and profitable number. The frontispiece is (we are assured) a fairly good photogravure after D. G. Rossetti's famous panel, "Ecce Ancilla Domini." The head of Mary was studied from the artist's sister, Miss Christina Rossetti, whose admirers have in this print, therefore, "a true and just likeness, with hardly any alteration," of her. The sculptor Woolner is portrayed, less closely, in the face of Gabriel. There is a third "conversation" on book illustrations, in which Mr. Hamerton, so far as we may identify him with the Critic of this group, indulges in the rather startling dictum that "in fact, a pure photograph from nature is out of place in any book whatever." This would exclude portraits as well as landscapes. Another conversation is promised. Accompanying pen-and-ink views of Charlecote House and park is a paper by Sidney L. Lee, examining the tradition of Shakspere's relations to Sir Thomas Lucy, and giving some account of this personage and his descendants.

We congratulate the Geological Survey of New Jersey on the completion of its great Atlas of the State by the publication of the relief map, the last of the series. We are here shown at a glance, by delicate conventional tints, a diversified surface that ranges from ocean's level to heights little exceeding 1,500 feet. Contour lines, numbered, give the exact elevation from point to point. On this map, also, the railroad systems are delineated to great advantage, being broadly divisible into two groups—the constant lines seeking the metropolis of the country, and running parallel with the Appalachian axis; the others, at right angles to the foregoing, whose heaviest business is in summer, and whose function is to bring sweltering humanity to the salt water. There are also lines on the outermost coast for nearly two-thirds the entire length of it. The mechanical execution of this sheet is fully up to the standard of Mr. Bien's establishment, to which we owe the present high standing of American cartography.

The Canadian Institute, 46 Richmond Street East, Toronto, has put out a "Sociological Circular," soliciting coöperation in the task of collecting reliable data concerning the political and social institutions, customs, ceremonies, etc., of the Indian people of the Dominion. Suitable papers upon the topics indicated will be published in the Institute's Proceedings. The Canadian Pacific Railway carries free of charge packages intended for the Institute's Museum, which is open daily.

—The August *Atlantic* brings to us President Eliot's Washington address before the National Education Association last February, in which he compares the work done by the French and the American schoolboy, not to the latter's advantage. He argues in favor of an intelligent effort to shorten and enrich the present school programmes, but he does not specify desirable changes so much as indicate them by a general criticism. He protests against the very common idea that a child should "master" one study of an allied group or one topic of a study before proceeding to the next, and equally against the notion that exact accuracy is to be required of a child, and reviews, examinations, and tests enforced to this end. In other words, his criticism relates to the method as much as to the substance of study. He observes that a child's mind is tried by lack of interest in its work quite as often as by over-exertion in study, and in some cases the tedium that arises when a quick mind is not fully occupied must also count in reckoning up the causes which are usually lumped together as "overwork." He advises, also, a larger employment of male teachers, on the ground that better instruction will result from the more permanent tenure and less frequent interruption in labor which may be expected from men. The most effective portion of the address, however, consists less in such suggestions than in the showing made of the inferiority of our schools as compared with French schools for the same years; and the effect of this is enhanced by the further statement that students are so held back that the printed schedules for children entering at eleven years in fact apply to children who enter at an average age of thirteen years and three months, in the case of a school of such rank as the Boston Latin School. There are other educational and literary articles of considerable interest in the number, among which the sketch of Sidonius Apollinaris and a first paper on the "Prometheus" of Æschylus give a strong classical tone. Mr. Edmund Noble's description of Moscow is one of the best papers of travel that we have recently seen; the account of the priests is especially interesting and fresh.

—The eighth volume of Franklin's Works as edited by Mr. John Bigelow and published by the Messrs. Putnam relates to the years 1782-84, while the American Minister was still domiciled at Passy. Gout and the gravel were greatly diminishing the pleasure of existence without affecting his intellect or his disposition. Upwards of a hundred pages are devoted to his journal of the negotiations for peace, and there is much correspondence touching the same subject. A manifest sense of relief when the treaty was beyond peradventure, marks the letters to his old friends whom he had somewhat neglected for state affairs. It was his privilege to witness the second balloon ascension by means of rarefied air as devised by the Montgolfiers, and the first and second in which men were carried up. Both he and Sir Joseph Banks, to whom he sent minute reports of his observations, entertained the idea that the attachment of the balloon to wagons might enable carters to dispense with just so much horse power. No other scientific topic in this

volume possesses an equal interest. Pithy sayings abound, and in especial the attainment of peace permits Franklin freely to give to war the bad character it deserves. He reiterates his opinion in the proverbial form, "There never was a good war or a bad peace." "All wars," he says again, "are follies, very expensive, and very mischievous ones. When will mankind be convinced of this, and agree to settle their differences by arbitration? Were they to do it even by the cast of a die, it would be better than by fighting and destroying each other." He greatly preferred the peaceable turkey as the emblem of the United States to the bald eagle—"a bird of bad moral character," lazy, piratical, and cowardly. Medallists then, he observed, made the eagle more like a turkey; in our day, the type has been likened to the turkey-buzzard. In line with the foregoing are Franklin's remarks on practical goodness. "If we may estimate the goodness of a man by his disposition to do good, and his constant endeavors and success in doing it, I can hardly conceive," he said, speaking of the late Dr. Fothergill, "that a better man has ever existed." And of Thomas Hollis: "It is prodigious the quantity of good that may be done by one man, *if he will make a business of it.*" Expressing his indebtedness to Cotton Mather's 'Essays to do Good,' he said it had caused him always to "set a greater value on the character of a *doer of good* than on any other kind of reputation."

—In the paper correcting the amusing foreign misconceptions of American conditions, he speaks of the cold shoulder given by the State governments to clamor for bounties and protective duties, "on this principle, that if the country is ripe for the manufacture, it may be carried on by private persons to advantage; and if not, it is a folly to think of forcing nature."

"The manufacture of silk, they [the governments] say, is natural in France, as that of cloth in England, because each country produces in plenty the first material; but if England will have a manufacture of silk as well as that of cloth, and France of cloth as well as that of silk, these unnatural operations must be supported by mutual prohibitions, or high duties on the importation of each other's goods; by which means the workmen are enabled to tax the home consumer by greater prices, while the higher wages they receive make them neither happier nor richer, since they only drink more and work less."

On another occasion he says, both tersely and truly:

"In general, I would only observe that commerce, consisting in a mutual exchange of the necessaries and conveniences of life, the more free and unrestrained it is, the more it flourishes, and the happier are all the nations concerned in it. Most of the restraints put upon it in different countries seem to have been the projects of particulars for their private interest, under pretence of public good."

—At the Marietta Centennial last week relics made a notable figure. But none of those in the relic-hall had any connection with the Northwest running backward further than the year 1788, when Marietta, first-born of Ohio towns, was founded. Hence, a Wisconsin relic exhibited by Prof. J. D. Butler, in his speech as Commissioner representing that State, excited special interest. That relic had to do with Wisconsin more than a century before the forefathers of Ohio landed at Marietta. It was the most hallowed article used in the mass of the Catholic Church—the case in which the host is raised for popular veneration—called in French *soleil*, as a circlet like the solar orb, and in English *monstrance*, as demonstrating the sacramental wafer, or, for a like reason, *ostensory*. The specimen exhibited by Prof. Butler bears beneath its base, in letters rudely cut but perfectly legible, the following legend: "+ *ce soleil a este donne par Mr Nicolas Perrot a la mission de St. Francois Xavier en la Baye des Puants + 1686.*" A literal translation of this old French is: "This *soleil* has been given by Monsieur Nicolas Perrot to the Mission of St. Francis Xavier at the Bay of the Puans [Green Bay] in the year 1686." Nicholas Perrot came to Green Bay in 1685, as Governor of the French Northwest. As fur-trader and Indian Agent, Perrot had been acquainted with the Green Bay Mission from the outset. He had seen there, as Marquette did, two thousand proselytes in 1673. But the monstrance he saw there was rude, being beaten out of native copper by the goldsmith of the Mission. It was natural, therefore, that he should have brought to the mission church where he had been wont to worship a more artistic article for its most sacred rite.

—Perrot's ostensory is all of silver repoussé work, surmounted by a cross, and fifteen inches high. From the circular shrine of the host twenty-four points, half rayonnant, half flamboyant, shoot out. On the whole, this survival is as elegant as it is sacred. But as a unique historic memorial of the early Northwest its interest is preëminent. After years of research in this line Prof. Butler has discovered nothing in the Northwest, or indeed in the Southwest, which approaches the antiquity of it—no dated remain which attests such an antiquity as the monstrance figures. In fact, such a discovery seems impossible in view of historic records. The Iroquois, masters of all the region south of the Lakes and east of Lake Michigan, effectually repelled the French from their domains. Accordingly, there were no civilized pioneers of the seventeenth century established in Ohio, or Indiana, or the lower peninsula of Michigan. The first French in Illinois came thither through Wisconsin. The mission in Ontario, east of Lake Huron, was destroyed in 1649 by the Iroquois. The fugitive converts found no secure asylum till they arrived at Green Bay, west of Lake Michigan. Shepherds follow the sheep, and so the first Wisconsin missions came into existence. One result was, that we have good maps of Lakes Superior and Michigan made before the lower lakes were explored. The fathers built blockhouses and chapels, not without spectacular display; they introduced garden products, fowls, sheep, swine; they brought in blacksmiths and other artisans. In view of these historic details, Prof. Butler held that Wisconsin, though admitted into the Union long after all other States of the old Northwest, was in truth the oldest of them all, being able to show an organized, civilized, and Christianized community earlier than any of them.

—Among our younger meteorologists, no one is more worthy of the reputation he is making than Prof. Winslow Upton of Brown University. As Secretary of the New England Meteorological Society, he has been conducting an investigation of the great storm of the 11th-14th March last, aided by a grant from the Trustees of the Elizabeth Thompson Science Fund. While the storm possessed an exceptional interest for the general public, it is found to have not less for the meteorologist also. Its peculiar characteristics were (1) the rapidity with which its energy was developed, (2) the excessive precipitation, chiefly in the form of snow, and (3) the fact that its maximum intensity was limited to a relatively small area. This lay in the south of New England, where, fortunately, there were abundant observers. Prof. Upton's discussion is based upon more than 500 reports, about one-half of which were furnished by the regular observers of the Society, thirteen being Observers of the United States Signal Service, while about one-tenth came from vessels off the coasts, through Commander Bartlett, the Hydrographer of the Navy. On the morning of the 10th of March an elliptical depression extended from Arkansas northerly, and during the day the double cyclone moved easterly, the southern centre advancing in the course of twenty-four hours from a point near St. Louis to Georgia. The two centres were now well defined as separate cyclones, the northern one lying over Ontario, and the precipitation being light snow or rain. During the 11th the northern cyclone passed beyond the region of the reports, and was followed by a cold wave, with temperatures 10° to 30° lower than that of the cyclone itself, and which advanced over the Lake Region towards New England. Meantime, the northeasterly advance of the southern cyclone was attended with heavy rains, and rapidly increased in intensity. Rain and snow began to fall in New England, winds of increasing violence prevailed on the coast, and on the night of the 12th the storm centre was near Nantucket. Here it ceased its northeasterly course, and advanced slowly towards the west, over Rhode Island and Connecticut, and losing its intensity, until the morning of the 14th, when the cyclone was no longer well defined. This storm thus affords an example of a well-developed cyclone changing its course and ceasing to exist over southern New England.

—Prof. Upton's charts, reproduced in the *American Meteorological Journal*, fully illustrate all the observational data. Maximum wind-velocities were recorded at coast stations on the 12th-13th, reaching as high as seventy-two miles, and resulting in great damage, as the wind's direction lay towards the shore. The precipitation, everywhere excessive, was almost wholly snow to the west of the meridian of New London, and piled in immense drifts, making even its approximate measurement impossible. In central Connecticut and a large part of eastern New York, the average fall of snow appears to have exceeded forty inches, while in the western half of Massachusetts and nearly the whole of Connecticut, the average depth of unmelted snow was above thirty inches. In the southeast of Massachusetts the fall was almost wholly rain. Snowdrifts actually measured showed astonishing depths—from fifteen to forty feet in Dutchess County, New York, and thirty-eight feet near New Haven. Middletown, in the same State, reported the maximum precipitation of 5.78 inches. In the history of the progress of the temperatures during this storm Prof. Upton finds an explanation of several of its remarkable features. As a cold wave advances, anti-cyclonic conditions are usual; but the fall in temperature on this occasion was attended with strong southerly wind, due to cyclonic circulation. The arrival of the cold area from the west probably caused the deflection of the cyclone from its original track, a relatively rare occurrence. In this case the deflection exceeded 90°, and the cyclone was drawn directly towards the cold area. Thus the cyclone and the cold wave met in mortal combat, and fought a tragic duel, in which both combatants came to an untimely end.

—Besides an essay on Hegel, an article on the light-armed soldiery of the Romans, and the customary book reviews, the fifth number of Sybel's *Historische Zeitschrift* contains two very interesting contributions to German history. The first is entitled "The Regensburg Diet and the War of Devolution." The author, Fr. Meinecke, by a careful examination of the

despatches of the ambassadors and of other contemporary sources, shows how it came about that the Holy Roman Empire took no part in a war prosecuted by Louis XIV. with the avowed object of wresting one of its members from that empire. The Spanish Netherlands, under the rule of the King of Spain, was included within the Burgundian circle of the Empire. Under the plea that it was a personal estate of the Spanish Hapsburgs, and hence was governed by the local "droit de dévolution," whereby, on the dissolution of a marriage by death, the survivor enjoyed the usufruct only of the property, the ownership vesting in the children, Louis XIV. claimed the Spanish Netherlands as the heritage of his wife, on the death of her father in 1667. He expected to keep the Empire neutral while it was being thus despoiled, by insisting on a strict adherence to the letter of the Treaty of Westphalia, in which the Empire promised to aid neither belligerent in any future war between France and Spain. He relied on the friendship of the French party in the Empire, and on the skill of his ambassador, Gravel, in fanning the jealousies of their opponents, who were led by Lüneburg and Brandenburg. Austria was habitually sluggish, and the Emperor was further hampered by the Catholic party in Vienna, who already began to look up to Louis as their champion. The author of this article unfolds a pitiful picture of the intestine bickerings of the princes, the formality of the proceedings of the Diet, and the illegitimate influence wielded by France, which together kept Germany quiet during the war. Cardinal von Thun, the Imperial Commissioner, succeeded in passing through the Council of Princes a resolution to the effect that the Burgundian circle was an integral part of the Empire, and that both belligerents should be requested to lay down their arms, a resolution which distinctly foreshadowed war in case Louis should fail to comply; but the French ambassador, by skilfully applying the three instruments mentioned above, prevented this resolution from being acted upon in the College of Electors and the Council of Cities. Louis XIV. was foiled, as is well known, by the Triple Alliance; but the imbecility of Germany and the selfishness of her rulers are inconceivable to one who has not read this learned and well-written article.

—The content of "Two Political Testaments and the Commencement of an Historical Work, by Frederick the Great," is sufficiently indicated by the title. The testaments were written in 1782 and 1784 respectively, the historical essay in 1784—all in French, of course—and are now published for the first time. The first and last are political; the second treats of finance. In 1782 Frederick feared that the good understanding between Joseph II. and Catherine II. boded the destruction of Prussia and the conversion of Germany into an absolute monarchy after his death. The result of his search for allies was the conclusion that the German princes were dominated by Austrian influence, France was embarrassed by her enormous debt, and England was worn out by the American war; the only hope lay in a triple alliance between Prussia, England, and Turkey. These gloomy views are set down in the first document. By 1784 the clouds had blown over, owing chiefly to Joseph's propensity to take the second step before the first. By far the most interesting paper is the "Reflections on the Financial Administration of Prussia." The revenues of Prussia amounted to 21,730,000 écus ($24,446,250), one-third of which was surplus and was laid away as a war fund, according to the financial policy pursued by the Hohenzollerns from Frederick William I.'s day down to the present time. Frederick remarks that by this means the necessity of imposing extra taxes during war times, when the people are least able to bear them, is obviated. He is opposed to a national debt. He has a very high conception of the duties of a prince. He insists on the separation of the revenues of the state and of the prince, and that the former be consecrated to the benefit of the citizens—to enriching the soil, the encouragement of manufactures, and to rendering every one, from noble to peasant, more at his ease. In financial matters, a prince must bridle his fancies, for the revenues of the state are not his property, and his slightest error may bring untold misfortunes upon his subjects. A prince who does otherwise is a highway robber and a fool. In finance, Frederick was a mercantilist, and altogether uninfluenced by the doctrines of Quesnay, Gournay, and Adam Smith.

—The June number of *Petermann's Mitteilungen* is devoted to a single article, entitled a "Century of African Exploration," by the editor, Dr. A. Supan. It is intended as a centennial memorial of the founding of the first geographical society. This was the "Association for Promoting the Discovery of the Interior Parts of Africa," known commonly as the African Association, and formed June 9, 1788, out of the members of the Saturday Club of London, mainly by the efforts of Sir Joseph Banks. An American, John Ledyard, was immediately sent out by it to cross the continent from east to west, with the view of tracing the course of the Niger, but he unfortunately died soon after reaching Cairo. Mungo Park was the most distinguished of the explorers employed by this Association, which continued its activity, publishing several volumes and memoirs, until July 23, 1831, when it was merged in the Royal Geographical Society, which had been founded the previous year. The article begins with a rapid review of what had been done in Africa up to 1788, and a sketch of the extent of our knowledge of the continent at that time, which Swift cleverly summed up in the well-known lines :

> "So geographers in Afric maps
> With savage pictures fill their gaps,
> And o'er unhabitable downs
> Place elephants for want of towns."

Next, the progress of discovery in the different parts of Africa is traced, beginning with the Niger, the exploration of which was the principal object of the African Association's efforts. Dr. Supan closes his paper, which bristles with facts, with a notice of the tasks still left uncompleted. These are the exploration of three great regions, all of which lie north of the Equator—Mandingo Land on the north of the Guinea coast, the country to the east of the Cameroons, and the Galla-Somali Land. A series of thirteen excellent maps is given, the first ten so colored as to show the progress of discovery by decades from 1790 to 1880. The eleventh, a large map, represents Africa in 1888. In another an attempt is made to show the various districts of exploration, with the point of departure of each. The final map reproduces the important parts of Maj. Rennell's map of the supposed course of the Niger, first published in 1798 (not in 1790, as Dr. Supan asserts), and republished in 1802 and again in vol. i of the African Association's Proceedings in 1810. A supplementary number of the *Mitteilungen* is also devoted to Africa, being the first part of a geological description of the continent by Dr. Max Blanckenhorn. The whole work is to consist of four parts, this being upon the Atlas Mountains, with a map.

JAMES'S PARTIAL PORTRAITS.

Partial Portraits. By Henry James. Macmillan & Co. 1888.

Mr. JAMES'S criticism is of a very composite order. It is partly made up of very agreeable talk, familiar in tone, intellectual, and full of digressions; and in the remainder there is much reviewing, with a great deal of the novelist's preoccupation with his own art. On every page one is sensible of close contact with a cultivated mind, and feels the influence of the modern spirit; and yet in the pleasure of all this, notwithstanding the alertness and openness of the author's intelligence and the frequent grace of his literary manners, there is an element of discontent which steals upon one and grows with the reading. There is a sense of being baffled by the critic, so great that one doubts at the end whether he is a whit wiser than before. That trait which belongs to some phases of modern culture, indecision of judgment, is strongly marked in these essays; it is responsible for the disappointment of which we have spoken. It is not judgment that is pronounced, but the impressions of Mr. James are described, and one is thrown back for their justification upon Mr. James's taste. This personal element, which is justly ruled out of court in general criticism, is the basis of the volume. It gives liveliness and warmth to the style, but it does not bring conviction to the reader, who, while he knows the author to be highly cultivated, does not know whether he forms just judgments; for the two qualities do not go together in all cases. At the end of the charming essay upon Daudet, for example, after the jewel has been flashed in a dozen lights, each rivalling the other in radiance, what do we find as the sum of the matter? Daudet's is a famous name, and stands upon volumes enough to allow of some decision with regard to his literary quality, his talent for entertainment, for reality, and for style. What do we find as Mr. James's last word?

> "Determinations of rank are a delicate matter, and it is sufficient priority for an author that one likes him immensely. Daudet is bright, vivid, tender; he has an intense artistic life. And then he is so free. For the spirit that moves slowly, going carefully from point to point, not sure whether this or that or the other will 'do,' the sight of such freedom is delightful."

This is well rounded off; but Daudet with his qualities is parenthetical. What stands out is, that "one likes him immensely," and the sight of him is "delightful." So, earlier in the essay, Mr. James regrets that he cannot write French and "say that Alphonse Daudet is adorable, and have done with it," but must resort to circumlocutions to express his "personal fondness" for him. These are interesting confidences of Mr. James respecting his tastes, since he is both an eminent novelist and a man of high cultivation, as we have said; but it is not surprising that disappointment arises when one is looking for criticism and finds that Mr. James "likes him immensely."

In the essay upon Guy de Maupassant, the critic has occasion to refer to that author's opinion that "the particular way we see the world is our particular illusion about it"—one illusion being just as good as another, of course. Mr. James does not assent to this view; but he seems to hold that, whether or not this is true of real life, it is true of criticism. Criticism, apparently, is our particular illusion about the author, and one point of view is as good as another. This, at least, is the impression produced by the volume, in which the judgments are cleverly made innocuous, and fame and shame blend in the unity they have to

Emerson's Buddha. This is not explicitly stated, certainly—the critic has unrivalled facility in being always clear, but never explicit. His indirectness of expression is a miracle of apparent straightforwardness; but as soon as one seeks to find out just what is meant, he finds that Mr. James's birds are all in the bush. He describes their colors, he almost seems to stroke their wings with his velvet compliment, but when one stops to look, the bird is out of hand. This evasiveness of the court is naturally annoying, but its crafty felicity almost atones to the reader who is a lover of literary fence. Criticism is our particular illusion about the author—that is the motto of the author; necessarily such a view of his business impairs the critic's value.

That we do not overstate this matter, which is at the root of Mr. James's ineffectiveness, this passage at the end of the essay upon Guy de Maupassant will show:

> "Let us then leave this magnificent art of the novelist to itself and its perfect freedom, in the faith that one example is as good as another, and that our fiction will always be decent enough if it be sufficiently general. Let us not be alarmed at this prodigy (though prodigies are alarming) of M. de Maupassant, who is at once so licentious and so impeccable, but gird ourselves up with the conviction that another point of view will yield another perfection."

If "one example is as good as another," if everything has a perfection when looked at from some point of view, is not the trade of critic a vain thing? The complete justification for our opinion that criticism is illusory, however, in Mr. James's view, is in his practice of it in general; this is no more than his account of the play of his personal tastes.

Tolerance, we are told, is a result of culture, and this is indubitable; and out of this tolerance arises, it would seem, the faith which Mr. James invokes, that in all cases "another point of view will yield another perfection." This leads directly, if it be allowed, to moral indifferentism in literature. This is where it does lead Mr. James in the essay, much the most important in the volume, upon Guy de Maupassant. The "freedom" which he proclaims for "this magnificent art," is liberty for the imagination in the case of the most conspicuous of the elegant writers of modern licentious tales. Mr. James does not disguise the character of his critical protégé. He owns up. He does not blink. He only puts in this word of defence, warning the crude Anglo-Saxon that "another point of view will yield another perfection"—as elsewhere, so in these Milesian anecdotes. We do not press the subject, except to say that the length to which a high-trained literary enjoyment of style has tempted Mr. James to go in advocacy of the Parisian storyteller, has brought home to us distinctly the double nature of his criticism. He has really, to adopt his own phraseology, two points of view. He is always cosmopolitan, but in reading this volume, with strongly marked division of English and French subjects, one foresees that he looks up and down—down to England and up to France. In treating of Daudet and Guy de Maupassant, there is not merely "personal fondness" to be observed in his manner; there is a warmth, a hospitality, a willingness to be pleased, a disposition to give censure to the winds, which contrasts with his temper towards the English. Only in the case of his tribute of compliment to Stevenson is there anything like the same delightfulness of appreciation, breathing "the sweet south" in every word.

This mood of cordiality reaches its highest temperature in the recollections he gives us of Turgeneff, a truly exquisite essay, frankly personal, full of detail and color, the art of the novelist blending with the devotion of friendship, and all as fresh and natural as fireside talk. In this he takes us to the private meeting-place of the young French authors, "the grandsons of Balzac," and there we see near at hand the attraction that France has for him. There is the room where "it would have been late in the day to propose among them any discussion of the relation of art to morality, any question as to the degree in which a novel might or might not concern itself with the teaching of a lesson. They had settled these preliminaries long ago." There it was that "the subscriber, as a type of human imbecility, received a wonderful dressing, and the Philistine in general was roughly handled," on the occasion of 'L'Assommoir' being discontinued in the journal through which it had been running. Towards the Paris of "ces messieurs" Mr. James has a great friendliness, and the reader easily understands why that is, and does not question its propriety.

On the other hand, turning westward, what does Mr. James see? For the most part he sees the imperfections. He exhibits here the obverse of his Parisian mind. Instead of expansiveness there is reserve; instead of regretting the absence of "adorable" from the English vocabulary, he seems to indulge in a humor but half betrayed; instead of "a new perfection," the point of view yields to him an old perfection in a state of collapse. To pass by the essay upon George Eliot, with its expression of wonder that "this quiet, anxious, sedentary, serious, invalidical English lady, without animal spirits, without adventures or sensations, should have made us believe that nothing in the world was alien to her," and the other essay upon Trollope, with its praise of him for his perception of "the value of the usual," we come to the essay upon Emerson, one of the most brilliant in handling that the volume contains. It is full of interesting remarks, admirable innuendo, and has a kind of masterliness which we do not find elsewhere except in the paper upon Turgeneff. At the same time it is constantly provoking a smile. We know what Mr. James has said frankly and pitilessly about the civilization of Concord and Salem, the intellectual poverty, the fanatic mediocrity, the parochialism of it all; and it is nothing new that he finds first and foremost that Emerson was "pale," and proceeds to regret that the Concord group was not sketched, amusing as he is sure it would be, and at last declares that Miss Mary Emerson—"Aunt Mary"—"grim, intellectual virgin and daughter of a hundred ministers, with her local traditions, and her combined love of empire and speculation, would have been an inspiration for a novelist." What kind of a novel Mr. James would make of these worthies of the forties, with Salem for an episode, fortunately is only matter for guessing; but what is noticeable in all this is his temper towards the community, which is one of pitying amusement, dashed with high respect for high personages. It is not meant that this essay upon Emerson, and the other English essays, are not entirely kind and appreciative, overflowing with felicitous phrases of regard and praise; they are as fluent in compliment and as sincere, no doubt, as are the French essays; but their mood is the precise opposite of that in the latter—the critic condescends; he looks down, and not up. Specifically, he accepts France, tolerating it even to the point of moral indifferentism; he is merciless to New England parochialism in Emerson's day. Whether he is right in either or in both of these attitudes, need not now be considered.

Enough has been adduced to illustrate what was said at the start, that Mr. James's criticism has a purely personal basis, and is to be explained by the special culture he possesses and the cosmopolitan experience in which it has been developed. The grace of the essays and all their charm, in which qualities they excel, are due to this personal element finding expression through a highly trained literary style. It is true that they seem to us inconclusive judgments in general, and that in detail, when the reviewing of innumerable characters and plots and situations comes in, there is much confusion for one not so familiar with the heterogeneous population of fiction as is the author. It is not seldom that the text reads like the catalogue of a picture gallery with explanatory notes; and this mode of reviewing, where many volumes are dealt with, is dull, though to the novelist such close and minute observation of the persons put on the scene by his fellow-craftsmen has a professional interest. In Mr. James's work it is relieved by many suggestive remarks, and occasionally by surprising statements, such as that five-sixths of 'Kidnapped' "deserves to stand by 'Henry Esmond' as a fiction autobiography in archaic form," and that it is "a gallant companion to Thackeray's *tour de force*." Such instances of criticism are fortunately rare, and of course this one is to be attributed to that element of personal feeling which is the characteristic of the volume. It is impossible to regard what Mr. James writes of Stevenson as quite serious. That paper is no more than a memento of friendship. It is, nevertheless, an excellent example of Mr. James's method in building compliments into the semblance of the old temple of fame. There is, altogether, a great deal of information in the volume with respect to novels and novel-making, and the literary flavor of the style has already been spoken of; it is, first and last, a striking example of the work of modern culture in one of its forms; and if it should seem to some that moral concessions are made to the Gallic spirit which will not commend Paris above Concord, even little Concord—that, doubtless, is something for which the author is entirely prepared.

PRESTWICH'S GEOLOGY.

Geology, Chemical, Physical, and Stratigraphical. By Joseph Prestwich, M.A., F. R.S., F.G.S., Correspondent of the Institute of France, Professor of Geology in the University of Oxford. 2 vols. Oxford: Clarendon Press; New York: Macmillan.

It has come to be the fashion of geologists to crown their active life with a work of a synoptical sort on the matter of their science. For some years his fellow-workers in the geological field have been awaiting with much interest a work of this nature from the pen of Professor Prestwich. A recognized master in several departments of the science, a teacher of the subject in the chair formerly occupied by John Phillips, one of the distinguished founders of this branch of learning, they felt sure that they should have much to learn from his greatest work. The first volume of this contribution was published in the early part of last year; the second and more important part has lately come from the press.

The present condition of geological science gives a value to these synoptic works which cannot belong to any other branch of learning. This science consists, indeed, in a large measure of undetermined matters, as to which individual opinion based on broad experience has a value. Its younger votaries, therefore, are

always glad to know what the older and more experienced men believe concerning unsolved problems. In undertaking a synoptical work on geology, the essayist has either of two methods open to him, one of which he must follow if he would keep his treatise within readable bounds. He may limit himself to the presentation of all the important observations which seem to him well verified, neglecting in this task the matters of theoretical interpretation of phenomena; or he may undertake to present the theoretical side of geology, bringing forward as illustration such body of fact as may seem necessary to afford a basis of the discussion. The former of these methods is that adopted first by Dana and afterwards by Geikie, and many others who have followed in the footsteps of our American Nestor in geology. The second is that pursued by Lyell in his 'Principles of Geology,' and in a measure by De la Beche in his admirable works.

In the main, Prestwich follows the method of presentation adopted by Dana, the first volume being devoted to setting forth the more essential facts of physical and chemical geology. In twenty-four well-constructed chapters, the author gives an excellent presentation of this division of the subject. The criticisms to be brought against the treatment of these matters are in the main those which can be directed against all works of the same nature. The second and third chapters are, as it seems to us, unhappily devoted to setting forth, in great (though for the purpose insufficient) detail, the usual synoptic statements concerning the minerals which are most common in rocks. With much ingenuity and by an abundant use of tables, the author has packed a good deal of information into a small space; but anything like a satisfactory mineralogy cannot be compressed into thirty pages. It would have been far better to remit this subject to an appendix, or to leave it to a better place in treatises of pure mineralogy. Scarce any of this information is necessary for the larger discussions which are hereafter to occupy the reader, and the sight of a great array of tables bristling with formidable chemical symbols is not likely to prove a pleasant introduction to the student of geology.

The chapter on the decomposition of rocks is, on the whole, an excellent summary of what is known on this subject. Unfortunately, however, it does not lead the writer to the consideration of soils. Now, the soil coating of the earth, though much neglected by geologists, is in several ways the key to its most important functions. In it mainly is accomplished the work of solution which feeds the seas; from it springs all the nutrition which supports the land life; from it also comes that carbonation of the waters which is the source of so many influences that meteoric water exercises upon the rocks of the land. In this treatise all matters concerning soil are dismissed with mere chance mention. The word does not even find a place in the index.

In general, the effect of water as a geological agent appears to be insufficiently treated. The essay on rivers is, on the whole, good, containing much matter which has not previously found a place in works of this nature. The underground movements of water, however, are imperfectly set forth. Caverns are considered not with reference to water action, but with respect to the fossils they contain, and the whole matter of subterranean erosion is briefly dismissed with a few incidental remarks. This omission is the more striking for the reason that, in the tenth chapter, there is a very good essay on underground water in relation to springs, which takes account of phenomena that might well have introduced us to the study of subterranean erosion.

The chapter on glaciation does not satisfactorily present the reader with the more important opinions concerning that important field of science. The question of continental glaciers does not there or elsewhere in the book receive the treatment which glaciologists think it deserves. The subject is recurred to in the second volume in its proper place, under the division of Quaternary geology. The detail of fact is doubtless sufficient, but the important theoretical considerations which have been adduced in explanation of the facts do not appear to receive their due weight.

So, too, in the twelfth chapter, which treats of volcanoes, we find the phenomenal side of the question well treated, but the student is left without a due sense of the theories which have been advanced to explain them. At the beginning of his exposition, the author states that "volcanoes are mountains or hills with a spreading base, but always more or less conical at top, ejecting from time to time vapors, ashes, and lavas, from a central opening called a crater." This is by no means a satisfactory definition with which to begin the discussion of a great class of facts. Further on we have the statement that "volcanic eruptions are attended by the escape of an enormous mass of elastic fluids, consisting principally of the vapor of water," the fact being that in substantially all cases the eruption is caused by the escape of such gases. The author fails to set forth the regional distribution of volcanoes, which is of the utmost importance in determining the cause of their production. The fact that they are common on the sea-floor, and only occur in an active state on the lands at a slight distance from regions where sedimentation has been going on for geological ages, clearly indicates that the rise of heat in the strata is the prime agent in the production of volcanic explosions. Prof. Prestwich's own opinion is as follows:

"As for the primary cause of volcanic eruptions, I think we may look to another and independent force, viz., that arising from the slight shrinking and contraction of the earth's crust caused by the small but still measurable secular refrigeration, and its consequent pressure upon a viscous or plastic magma or layer beneath. That this molten matter is in some places nearer the surface than at others is possible, and that its depth is not great is probable. From time to time a state of tension of the crust finds relief in the extrusion of some of this molten matter, and then follows a state of equilibrium of longer or shorter duration. Cordier calculated that a radial contraction so minute and imperceptible as one millimetre (0.0397 inch) would suffice to supply matter for 500 of the greatest known volcanic eruptions."

It will be observed that this view requires us to suppose the existence of a plastic or molten magma beneath the earth's crust, of which there is as yet no sufficient evidence.

The chapter on disturbed and faulted strata gives a more complete statement of the facts than has been set forth in any other text-book known to the present writer. Here again, however, the theory of mountain growth is insufficiently treated. The disproved hypothesis of De Beaumont receives an undue prominence. Although geological science owes certain clear conceptions concerning mountains to the distinguished author of the 'Systems of Mountains,' his work is of great interest only from the point of view of the historian.

The chapters on mineral veins are on the whole good, better than those in any other text-book; so, too, are those concerning igneous rocks a very satisfactory presentation of the phenomena.

The second volume is mainly devoted to a description of the successive geological deposits from the Laurentian Period to the present day. On the whole, this part of the work is as satisfactory as is possible in a treatise of this description. It is most open to criticism from the fact that it does not bring some of the latest and most important discoveries of fossils to the knowledge of the reader. Thus, the fossil scorpions of Scandinavia and Scotland and elsewhere which have been found in the Upper Silurian rocks are not mentioned by the author save in an obscure tabulated list of species, though these finds are to the geologist (and the biologist as well) by far the most important discoveries which have been made in the present decade. The author assumes that the Eozoon is an organic structure, though he notes the fact that some geologists "contend that the structure is of mineral and not of animal origin, and is due to a sort of incipient crystallization of metamorphic rock." He nowhere refers to the critical studies of Möbius, which go far to prove that the structure is not of an organic nature.

In considering the atmosphere of the coal-period, our author holds to the ancient doctrine that the atmosphere of that time contained all the carbon which was, during the subsequent stages of that period, buried in the coal measures. He fails to see the magnitude of the question concerning the deposition of carbon in the earth's crust. A little calculation would show him, as it has done others, that we cannot dispose of the question in this simple way. If we are to assume that the atmosphere at the beginning of the coal measures contained this large amount of carbon, we must begin by proving that the insects of that time could live in such an atmosphere as we are required to suppose. Moreover, it is a well-known fact that about the northern Pacific there are extensive deposits of Mesozoic coal, the carbon of which has been drawn from the atmosphere as was that of the coal measures, and that during the Mesozoic period we had life which was, as far as the needs of oxygen and intolerance of carbonic acid are concerned, the same as the life of to-day. These considerations have brought other geologists to the conviction that carbon is in some way fed into the air in the form of carbon dioxide, and is thence removed in a gradual manner by the organic remains which are built into strata. Dr. T. Sterry Hunt's discussion of this problem in his 'Mineral Physiology and Physiography,' published in 1886, had apparently not met the eye of the author.

In the discussion concerning the glacial period, Professor Prestwich has failed to avail himself of much of the work which has been done by recent writers on that subject. The extensive contributions of Chamberlain and others in this country are apparently unknown to him. He quotes without criticism Thomas Belt's notion of extensive glacial deposits existing in Nicaraugua, not recognizing the fact that Belt, though a man of genius, was an untrustworthy geologist.

Despite these criticisms, which pertain only to the detail of this extensive work, Professor Prestwich's treatise must be accounted one of the most important contributions which have been made to the encyclopædic side of geology. It has not the admirable condensation of Dana's and Geikie's works. We miss in it the wide range of knowledge and the literary quality of Sir Charles Lyell's classic 'Principles'; nevertheless, as the record of the opinions of one to whom the science owes much in the way of contribution, it is of very great value. It is probable that no other work of this description has ever appeared which in its first edition was

so clear of serious defects either in matter of fact or in the form of presentation. The few grammatical and rhetorical errors are not conspicuous; the proof-reading has on the whole been excellent; the defects of fact are so inconsiderable that they may be readily remedied in a second edition.

The book abounds in admirable illustrations. No synoptic work of this description has ever been so well cared for in this respect. The presswork is very well done, as is all which comes from the Clarendon Press. The indexes, though hardly as complete as could be desired, are on the whole satisfactory.

SKETCHES OF INDIAN LIFE.

Gujarát and the Gujarátis: Pictures of Men and Women taken from Life. By Behramji M. Malabari. Bombay: Education Society's Press.

Travels and Voyages in Bengal. By Sambhu C. Mookerjee. Calcutta. 1887.

HAS the world ever witnessed a more daring political experiment than the diffusion, broadcast, of English education among the various races and creeds of British India? We think not; and the development of this experiment is as full of interest to the philosophical observer of human nature as to the politician. Western ideals of life and conduct do not simply differ from those of Hindu or Moslem; they are their exact antipodes. It is not possible for either Brahminism or Islam to assimilate, so to speak, the new knowledge, retaining still its life and identity. The two are as incapable of combination as oil and water; and this, which might be inferred from the considerations of the respective ideals solely, is confirmed by the results of English education so far. The more intelligent and active-minded among the native population have applied themselves with a species of passion to the acquisition of the language, the literature, the thoughts of their far-off conquerors. The Moslems held out against this attraction longer than did the Hindus, but their rigid conservatism has at last been sapped, and the desire for an English education is rapidly extending among them. But all over the continent the spread of religious scepticism advances *pari passu* with the spread of English education.

The mental condition of the English-speaking natives is singular, and, we are inclined to think, without precedent. They constitute a class without ideals. Faith in the old sanctions has been obliterated, without faith in any others being substituted for them. A few of them endeavor in a weak way to manufacture new beliefs by affecting to make believe in such phrases as "the idea of nationality," "the unification of India," and the like; but, as Carlyle would have said, they use these phrases from the teeth outwards. They have found them ready-made in Western books; they are not the expression of any deep or genuine conviction of their own. In truth, the national ideal is itself the child of the religious ideal. It is common to the countries of Christendom, because they have been nurtured and brought up upon the old Jewish faith that a nation is a living organic unity created for some special purpose by the Deity himself. But the ideal disappears as soon as we pass beyond the boundaries of Christianity; and by no conceivable process of reasoning can such an ideal be engrafted upon the theocracy of either Hindus or Mohammedans. In the case of the Hindu it is his "caste" which determines his relations to the rest of humanity; with the follower of the Prophet it is his creed; and the idea of national unity, as something deeper than either "caste" or creed, could not enter into, could not be understood by, Hindu or Moslem, so long as he retained his faith intact.

The English-speaking natives are, therefore, almost as much an exotic in the land of their birth as the British themselves—that is to say, they represent a class which could not survive the downfall of the Power which has called them into existence. It is well known that the Anglo-Indian officials regard with unconcealed dislike these Frankensteins of their own creating, nor is this greatly to be wondered at. The services are incalculable which an educated native might render to his country and the Government if he zealously set to work to become acquainted with the one and to act as the interpreter to the other of its genuine wants and wishes. But as far as matters have yet gone, the educated natives have done next to no work of this kind. Their great ambition is to set up a newspaper, from the columns of which to keep up a ceaseless fire of criticism against the Government and its officials. The attitude which they like to adopt towards the western world, its beliefs, its manners, and modes of action, is one of affable patronage and easy condescension. If judged by a low material standard, they will allow that western civilization is more successful than Brahminical, but if by the graces of the mind and heart, then there can be no question that India bears off the palm. In short, the English-speaking native is a cause of exasperation to his British manufacturer, because he is so intolerably well contented with himself.

He has as yet done absolutely nothing to justify this self-esteem. On the strength, merely, of his knowledge of English, he assumes that he is on a par, in all respects, with the race which built up the Indian Empire by sheer courage, endurance, and governing capacity—nay, he not unfrequently looks down upon it from a superior altitude. He talks as if he were capable of sustaining, on his sole, unassisted shoulders, the entire burden of government. There is, however, a great deal more of assumption than genuine conviction in this parade of superiority; and it must honestly be confessed that the easy, idiomatic command which the natives of India acquire over the intricacies of the English language is a really considerable achievement. The two books under review are remarkable instances of this, and remarkable, also, in reference to the foregoing observations, as showing the complete detachment of both writers from the beliefs still held in reverence among their less educated countrymen. Thus the author of 'Gujarát and the Gujarátis'—himself a Parsi—does not scruple to draw the following sarcastic picture of "the orthodox Parsi at prayer":

"The minute he is out of bed the orthodox Parsi shakes himself free from all idle reveries, the remnants of the night's dreaming; and unfolding the triple cord round his waist, turns his face to where the sun has just risen, and, giving the sacred badge three vigorous flaps, he cries out in choice Persian, 'Defeat, defeat to Satan!' so that the author of evil may not venture, later on, to molest the pious man on his path of duty. Shortly after he takes his bath, and then commences his regular prayer business. He has his prayer-book in Zend text and Gujaráti character, out of which he recites an appropriate prayer or two, either before the kitchen fire, before the blazing censer in the drawing-room, before the sacred fire in the neighboring temple, and even in one of the central fire temples—this according to his circumstances or the degree of devotion he possesses. At other times he prays before the sun, the moon, the stars, the well, the river, the sea, the plant, the tree, the mountain. . . . Very often there is a long piece of quiet reading and meditation, which the pious Zoroastrian drawls out line by line with well-executed ejaculation and the approved nasal twang, but without the vaguest notion of what he is doing. This is a sorry exhibition, and to the younger generation it is becoming a farce."

The author of 'Travels in Bengal' is a high-caste Brahmin, and the following is his sportive account of the manner in which he evaded a religious difficulty:

"In going to Dacca I wished to avoid, if possible, the crowd and bustle of the daily despatch from Goalundo. I set my heart upon the good *Princess Alice*, Capt. Atkinson, in which large steamer I had many a time voyaged. I learned that she left Goalundo on Friday mornings. I must, therefore, start by the Thursday evening train to catch her. But Thursday was out of the question for the good Hindu. The old Rishis had set their faces against it, and the dutiful son of Bharadwaj could not think of it, on pain of the combined hostility of all the heavenly powers. Not even to win a kingdom—so the law runs—should anybody venture out on a Thursday evening. But as modern lawyers can laugh at the most elaborate precautions of the legislators of the day, so there are ways, thoroughly orthodox, of cheating the Rishis and gods. The preceding day was a most auspicious one, and I took advantage of it to make my ceremonial exit, making the stars believe I left on Wednesday. The affair was simple enough, though not without its inconveniences. Within the specified hour of that Wednesday—for the whole day was not blessed—I abandoned one apartment of my residence (not before passing through the prescribed forms), not to enter it again till my return from the contemplated journey, and was supposed to be on my travels. The start *de facto*—the material start—took place the next day."

This is amusing enough. The mischief is, that the educated natives, speaking generally, are as sedulous to perform these inane ceremonies as if they had not detected their inanity—are as vigilant to preserve their caste as if their religious orthodoxy had never felt the chilling breath of European thought. And thus their superior education literally becomes their greatest misfortune. It converts them into a species of hybrid, belonging neither to the West nor the East, or (as a well-known Hindustani proverb has it) they resemble the washerman's dog, which belongs neither to the house nor the washing-place. They would, if the British were to be expelled from India, doubtless be extinguished in a few years.

The speculation which baffles conjecture is the part they are destined to play in the history of the country, supposing the British Government to continue. Every year the ranks of these sham Hindus, sham Parsis, sham Mohammedans, are increased by several thousand new recruits. The manufacture of these people is beyond all question the most productive industry carried on in the empire, but it cannot in our judgment be regarded as either healthy or promising.

Meanwhile, in the two books under review, we have the English-speaking native exhibited to us at his best. They are both written in admirable English, and with a vein of humor running through them which makes them no less entertaining than as pictures of native life and society they are instructive. 'Gujarát and the Gujarátis' gives, indeed, the best delineation of a British Indian province of the present time with which we are acquainted. The 'Travels in Bengal' are the record of sundry journeys along the vast river-ways of eastern Bengal. The author has an eye to observe the changing face of Nature, and a ready pen to transfer the impression to paper; but, as with 'Gujarát and the Gujarátis,' that which gives his book its special value is the racy descriptions of native life and character.

Four Oxford Lectures: 1887. Fifty Years of European History. Teutonic Conquest in Gaul and Britain. By Edward A. Freeman, M.A. Macmillan. 1888. 8vo, pp. 112.

SINCE Mr. Freeman took his chair at Oxford, we have been accustomed to welcome every year a volume of lectures from his pen, placing before us a special phase of historical research which has occupied his mind during the year. In this way, without prejudice to the *magnum opus* which we may expect some day, we have from time to time definite portions of the preliminary work completed and the results placed on record; so much has been accomplished. The last published volume, for 1887, is considerably thinner than the average, consisting of only four lectures, forming two short courses.

The first of these courses is entitled "Fifty Years of European History"—of course *the* fifty years which were in the mind of every Englishman in the year 1887. It is not easy to point out any important particular in which just these fifty years of Queen Victoria's reign should be set apart as marking an epoch in human history. As a period of strong and significant influence in the development of free institutions, assuredly; but here we have only the more rapid working out of forces already vigorously operative. Indeed, a less ingenious man than Mr. Freeman, or one less familiar with the details of historical events, would have found it hard to distinguish these fifty years, except by an enumeration and analysis of their leading events. He has, however, succeeded in finding a reason for regarding the year 1837 as really a decisive turning-point in English history; by the accession of a woman to the throne of England, the kingdom of Hanover, which was governed by the Salic law, was separated from Great Britain.

"It is literally true that Elizabeth and Victoria are the only sovereigns, since Harold, son of Godwine, who never held any dominion other than that which came to them by virtue of the crown received at Westminster. And as Elizabeth, strangely enough, bore the title of Queen of France, we may say that Victoria is the first sovereign of England who has not even claimed any such dominion. We may further add that it was under Mary that the last relics of Edward the Third's French kingdom passed away, that it was under Anne that the other kingdom within the isle of Britain lost all traces of foreign character. Victoria alone has mounted the throne of the British islands free from all possessions, from all claims and titles, besides those of her British kingdom and its dependencies. We see then that, after all, the year 1837 is a memorable year, as marking an epoch in the formal relations of the British crown" (p. 6).

This loss of Continental possessions is not an insignificant trifle; in the case of King John it was an event of decisive importance.

These two lectures, as is natural, are occupied, not with a chronicle of the events of these fifty years, but with a discussion of their relations to the general course of history. In this point of view they will be found very interesting and suggestive.

The other course of two lectures is wholly disconnected from the first. Mr. Freeman has been goaded by the criticisms of those who misunderstood and therefore misrepresented his theory of English ethnology into anticipating his line of discussion, and taking up the consideration of this point earlier than he had intended.

"I had not designed," he says (p. 69), "to speak of Britain till I had done with Gaul. . . . When we see how Teutonic invasion worked in these lands, in which it really was no more than some tell us that it was in Britain, then, and not till then, shall we see how different a thing it really was in Britain. Such was the path which I had chalked out, a path which I had hoped to plod along steadily and in peace. But it hardly does to wait in this way, it may be for years and it may be for ever, under the present circumstances of the case."

There is no doubt that the plan sketched for himself by Mr. Freeman is the only way of presenting his view graphically and convincingly. As long as it is a question merely as to the "displacement" or "extermination" of the British nationality, it is easy enough to criticise his theory in detail, and to argue very plausibly—whether from the point of view of language or complexion or skulls or isolated historical events—whether from the point of view of Roman survival or Celtic persistence or Iberian remnant—that the English people are not prevailingly Teutonic, but are a mixture of races, with perhaps no controlling element. But he who carefully compares the process and the results of the Teutonic conquest of Gaul with the Teutonic conquest of Britain, cannot help seeing a fundamental contrast between the two. We expected, from the title of the lectures, to find such a comparison here. This seems, however, to be reserved for a future time, when the preliminary work shall have been completed. Meanwhile, we have a more careful and elaborate statement of what Mr. Freeman and the writers of his school really mean by speaking of the displacement of the Celtic race in Britain by the Teutonic. The lectures deserve, therefore, to be read carefully by those who would understand the question in controversy. We do not see that exception can fairly be taken to his theory as here stated. At the same time it must be confessed that some of the statements in his earlier writings were less cautiously worded than his present utterances, and that part of the misunderstanding was not unreasonable.

A few extracts will give his idea;

"When we speak of Greeks, English, or any other nation, we do not mean, we have never meant, to assert anything about physical purity of blood, because absolute physical purity of blood is unlikely in itself, and in any case it cannot be proved. By Greeks or English or any other such name, we mean that company of men, however formed, to which the name of Greek or English historically belongs. We cannot prove any original community of blood; but the practical likelihood always is that such a company did at first start from real community of blood. The nation began as a real family or collection of families. . . . The science even of skulls is still in its infancy; it is perhaps better not to be over-positive about it; but let it be as the most zealous votary of skulls may wish. Let it be that many so-called Englishmen, many who are Englishmen for all historical and all practical purposes, have British or even Iberian skulls. What follows? The whole thing is merely a question of degree. The discovery at the outside comes to this, that while we have all along said that there was some foreign mixture in the Greek, the English, or any other nation, that foreign mixture is now shown to be somewhat greater than we had thought. . . . But what follows? Surely that the original mass that absorbed and assimilated those foreign elements must have had even greater strength than we had thought it had. If after adopting so many Britons, so many Iberians, we remain Englishmen none the less, surely a new witness is brought to the strength of the English life within us, a life which can thus do the work of the alchymist and change every foreign element into its own English being."

Animal Magnetism. By Alfred Binet and Charles Féré. [International Scientific Series.] D. Appleton & Co. 1888. 12mo, pp. 378.

PSYCHOLOGY has latterly taken to the study of "unexplored remainders," and none have been more fruitful of interest, and even of very puzzling problems, than the phenomenon of hypnotism. Putting chickens to sleep, and performing apparent feats of magic by turning a fellow-being into an automaton, may not seem, at first sight, to be very good science; but experiment has shown that it may contain a secret which would make us exclaim, with the terrific oracle of Œdipus,

"May'st thou ne'er know the truth of what thou art."

The title of the present work is misleading. The only justification of it is a brief history of those speculations which were rife in the past century under that name, and which were started by the discoveries of Galvani and Volta. It is not apparent that the authors have any theory of "animal magnetism" to defend. Although electricity still figures occasionally as the philosopher's stone in the problem of vital forces, scientists generally fight shy of it, and look at it with much caution or scepticism. But there is one incident in the present work which indicates some predisposition on the part of the authors to favor the existence of "animal magnetism." It is the very singular use they affirm to have made of the magnet in producing and modifying hypnotic states. They profess to have modified hallucinations merely by application of the magnet, and they proceed with their inquiries as if the trustworthiness of this experiment were not to be questioned. But the general reader must be warned against credulity here. Charcot and Delbœuf investigated this matter very carefully, and found that a piece of wood was quite as good as a magnet for the purpose. The effect seemed to require nothing more than either suggestion or a change of stimulus. Their experiments with the magnet, and the gravity with which the present authors assume and discuss the effects, are in danger of giving an air of charlatanry to the work, and might weaken the value of studies that experts could recognize as eminently trustworthy.

The work, however, is almost entirely an examination of hypnotism, and this outside of the general question of "animal magnetism." It is remarkably free from theorizing. Not even are the several theories to explain the hypnotic state given a notice. These and the relations of hypnotic phenomena to personality and responsibility are the chief objects of interest excited by the subject. Of personality it is enough to remark that nearly all of the experiments, and especially those of post-hypnotic suggestion, far from lending any support to the doctrine of "multiplex personality," prove the very opposite by showing a connecting link between the hypnotic and the conscious state.

We cannot discuss any theories of hypnotism, but we may suggest something which all experimenters within our knowledge have neglected. The theory that regards the hypnotic state as a form of sleep has much to support it. First, its phenomena greatly resemble those of somnambulism. Second, it has been proved by experiments, including those of our authors, that the entire unconsciousness of the events during the hypnotic state may be like that of sleep; for, on the one hand, in ordinary dreaming we often either forget the dreams very easily, or forget that we have dreamed at all, and that a few moments after waking; and, on the other hand, the same ignorance of what goes on in the hypnotic state occurs, but some remember a dream-like state, and others, who ordinarily do not recall the memory of anything, *will do so if a general suggestion is made at the moment of waking.* This would make the failure to remember anything about the hypnotic state an effect of forgetfulness, while it might suggest the doctrine that during sleep man is conscious, but has no memory—the doctrine of Leibnitz and Hamilton. But the particular point we wish to suggest is, that, to decide more adequately the relation of hypnotism to sleep, we ought to have experiments

upon the same subjects in their ordinary sleep, in order to compare results with hypnotic phenomena. This might be a crucial case, and yet we have not been able to ascertain whether it has ever been tried, or even thought of.

The relation of the subject to the question of responsibility is interesting, because patients may be induced by post-hypnotic suggestion to commit various acts of crime, which they immediately forget. The fact will extend the leniency of legal penalties, if its significance proves to be more general than at present supposed. All the experiments relating to this aspect of the question, however, are not altogether complete or satisfactory. A more careful analysis and more crucial experiments are required.

A Guide to the Conduct of Meetings: being Models of Parliamentary Practice for Young and Old. By George T. Fisk. Harper & Bros. 1888. 16mo, pp. 189.

THE 'American Manual of Parliamentary Law,' published by the same author in 1879, did not seem to be a very valuable contribution to the subject. It went over the same grounds as Cushing's standard 'Manual,' and sought novelty in arrangement by various intricate devices. The present 'Guide' must find its welcome in a class of readers concerning whom we can form no ideas. The plan is a series of dialogues showing the method of organizing a club, and the decision of the ordinary parliamentary questions. It is so rudimentary that only children could need it, and they could not understand it. It appears to be entirely unnecessary, and merely the crotchet of an enthusiast on a rather unimportant subject.

My Wonder Story. By Anne Kendrick Benedict. Boston: D. Lothrop Co. [1888.] 172 pp. sq. 8vo. Ills.

A PRIMER of anatomy and physiology in simple language for the use of children under judicious guidance would be a useful and welcome addition to educational literature. It is hardly necessary to say that it should be the work of some one who understands these subjects, and not cribbed by a hack writer from a medical dictionary. The author should have common sense enough to avoid silly paraphrases of ordinary technical terms, such as "bone man" for "skeleton," and the like. He should also secure illustrations directly adapted to the text, with nothing superfluous and nothing obscure.

The present book is a model of everything which should be avoided in such a case. It is apparently intended to utilize some old anatomical cuts. The author attempts to combine, in the framework of a story, some elementary facts of human anatomy and physiology with sundry pious ejaculations and reflections. The story is flat and mechanical, the piety is goody-goody and perfunctory. It does not seem possible that the total combination can be of use to anybody.

BOOKS OF THE WEEK.

A Typical American; or, Incidents in the Life of Dr. John Swinburne. Albany: *Citizen* Office.
Autobiography of a New England Farm-House. Boston: Cupples & Hurd.
Ball, J. T. Historical Review of the Legislative Systems Operative in Ireland (1172–1800). Longmans, Green & Co. $2.25.
Bosanquet, B. Logic; or, the Morphology of Language. Oxford: Clarendon Press; New York: Macmillan & Co. 2 vols.
Bullen, A. H. The Works of George Peele. 2 vols. Boston: Houghton, Mifflin & Co. $6.
Howell, W. H. Dissection of the Dog as a Basis for the Study of Physiology. Henry Holt & Co.
Krause, A. Das nachgelassene Werk Immanuel Kant's. B. Westermann & Co.
Landau, Baron W. von. Travels in Asia, Australia, and America. New York: George Landau.
Launce, L. Descriptive Geometry. Boston: Ginn & Co. $1.35.
Lee, Gen. A. E. The Battle of Gettysburg. Columbus, O.: A. H. Smythe.
Loomis, G. B. Progressive Music Lessons for Public Schools. Fifth Book. Ivison, Blakeman & Co.
Monteith, J. Living Creatures of Water, Land, and Air. Fourth Reader. Cincinnati: Van Antwerp, Bragg & Co.
Parry, E. A. Letters from Dorothy Osborne to Sir William Temple. Dodd, Mead & Co. $2.50.
Pendleton, E. A Virginia Inheritance. D. Appleton & Co.
Pictures at Play; or, Dialogues of the Galleries. Longmans, Green & Co. 35 cents.
Rellye, J. Dictionary of the English Volapük. Chicago: L. Schick.
Rolfe, W. J. Tales from English History, in Prose and Verse. Harper & Bros.
Scomp, Prof. H. A. King Alcohol in the Realm of King Cotton. Oxford, Georgia.
Sharp, Dr. W. Therapeutics Founded upon Organopathy and Antipraxy. London: Geo. Bell & Sons.
Steel, A. G., and Lyttelton, R. H. Cricket. (Badminton Series). Boston: Little, Brown & Co.
Stephen, L. Dictionary of National Biography. Vol. XV. Diamond—Drake. Macmillan & Co. $3.75.
Sterrett, J. R. S. An Epigraphical Journey in Asia Minor. Boston: Damrell & Upham.
Sweetser, M. F. Chisholm's Mount Desert Guide Book. Portland: Chisholm Bros.
Symonds, Col. H. C. Report of a Commissary of Subsistence. 1861–65. The Baker & Taylor Co.
Taussig, Prof. F. W. Tariff History of the United States. G. P. Putnam's Sons. $1.25.
The Gray Guest Chamber. A. D. F. Randolph & Co. 20 cents.
The Legislative Record of the State of New York, Session of 1888. Albany: J. B. Lyon & Co.

Leisure Hour Series.

A WINTER PICNIC.

The story of a four months' outing in Nassau, told in the letters, journals, and talk of four picnickers. By J. and E. E. Dickinson and S. E. Dowd. 16mo, Leisure Hour Series, $1.00.

Extract from one of the "Talks" in the book:

"Think, too, how new a field it is. . . . As far as I can learn, there are only two books on the subject, . . . and they have given us the masculine side—the fishing, boating, smoking, and drinking (of cocoanut water). . . . Why cannot we give the feminine side—the housekeeping, the costumes, the flowers, the hundred dainty bits that a man would never think of touching upon?"

And they have done it delightfully.

NOW ON SALE.

RUSSIA:

THE LAND OF THE NIHILIST.

By W. E. Curtis. 200 Illustrations. 12mo, cloth, $1.00; paper covers, 50 cents.

This is not only a well-written description of the scenery and manners of the people of Russia, but also a faithful guide-book to the "Land of the Nihilist." The book is written by an American journalist, who specially travelled over Russia to gather the data and take sketches from nature for this book. It is unquestionably the only reliable work on Russia.

Mr. Henry James's New Novel,

THE REVERBERATOR.

By HENRY JAMES, author of 'The American,' 'The Europeans,' etc., etc. 12mo, $1.25.

"Mr. James is here at his best; his canvas is not too large and he fills it to perfection."—*London Globe.*

"The public will be glad to find Mr. James in his best vein. . . . The book is thoroughly readable, and one is thankful again that there is so brilliant an American author to give us entertaining sketches of life."—*Boston Sunday Herald.*

A New Book by F. Marion Crawford.

WITH THE IMMORTALS.

By F. MARION CRAWFORD, author of 'Mr. Isaacs,' 'Dr. Claudius,' etc. Globe 8vo, $2.00.

"The book will be found to have a fascination entirely new for the habitual reader of novels. . . . Altogether this is a book which has such peculiar wit-sharpening qualities that it would be a distinct loss not to read it."—*Boston Daily Advertiser.*

"There is nothing in current serials so full of thought and of suggestion as is this curious story. It is almost packed with historic knowledge, and brilliant in wit, allusion, and epigram."—*Boston Traveller.*

This number contains the opening chapter of a short story by Mr. Henry James.

Price, 15 Cents.; Annual Subscription, $1.75.

VIRGINIA MILITARY INSTITUTE. —The fiftieth session of this well-known State Institution will open on September 12 proximo. It provides a system of thorough military training, a distinctive course of academic instruction, and technical instruction in the several branches of Applied Science, thus enabling a graduate in the Academic School to gain a professional degree as Bachelor of Science or Civil Engineer.
These advantages are secured on terms not exceeding $36 per month, as the average of the entire course, including clothing in addition to the ordinary college necessaries. For catalogue apply to
GEN. FRANCIS H. SMITH, Superintendent.

VIRGINIA, Norfolk, opposite Old Point Comfort.

IS YOUR DAUGHTER DELICATE? Build her up by sending her to school in this delightful, healthful winter climate. Full collegiate courses, music, art; equipment, $60,000. Attractive home school. Personal care. Address
NORFOLK COLLEGE.

JAMAICA, Potsdam School, Sta. Cruz Mts.

THE REV. W. D. PEARMAN, M.A. (Cambridge), prepares for Business and Universities. In the Cambridge University Local Exams., 1884, a Potsdam boy stood 2d in Greek and 10th in Latin, of all England. For terms apply as above.

Teachers, etc.

A GENTLEMAN ENGAGED IN teaching in a college town will take into his family a boy preparing for college. A pleasant home and a careful and thorough preparation for college, are what is offered. Music if desired. Refers, by permission, to Prof. W. S. Tyler and Pres. J. H. Seelye of Amherst college. For terms, etc., address
S. A. SHERMAN, Amherst, Mass.

A PH.D. OF THE JOHNS HOPKINS University, wishing to teach Greek and Latin exclusively, desires a change of position. Address
E. M., care of the *Nation*, New York.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

THE POSITION OF PRINCIPAL OF Frederick College, located at Frederick, Md., is vacant, and the Board of Visitors solicit prompt applications for the same. The institution is academic in character and for the education of males exclusively. For further information address FAIRFAX SCHLEY, C. V. S. LEVY, JOHN J. KUNKEL, Committee.

TUTOR WANTED.—IN A PRIVATE family. State qualifications and experience, also salary expected.
Give references. Address
W. F. KAY, Philipsburg, Quebec, Canada.

WANTED.—INSTRUCTOR IN Latin and Mathematics for preparatory work. Experience necessary. Address XYZ, care Nation.

School Agencies.

BARDEEN'S SCHOOL BULLETIN Agency, Syracuse, N. Y., may be depended on to furnish suitable teachers *and to inform no others.*

N. E. BUREAU OF EDUCATION does business in every State and Territory. HIRAM ORCUTT, Manager, 3 Somerset St., Boston, Mass.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

THE BOSTON TEACHERS' AGENCY supplies Teachers to Schools, positions to Teachers. Circular free.
E. O. FISK & Co., 7 Tremont Place, Boston.

CLAVERACK COLLEGE
AND HUDSON RIVER INSTITUTE,
Claverack, N. Y.
Rev. A. H. FLACK, A.M., President.

Affords superior advantages for thorough and systematic education to young men and women.
Unsurpassed for healthfulness and beauty of location. Large and commodious buildings, recently improved and refitted.
A strong faculty of experienced professors and teachers.
Careful attention given to social, moral, and physical culture. Ten graduating courses.
Physical training in Military Drill and Calisthenics.
Conservatory of Music and Art. Courses in piano, voice culture, organ, violin, cornet, and harmony.
Normal course for music teachers. Weekly lectures and musicales.
Recitals by distinguished artists. Individual lessons only. All practice under supervision.
Classes in chorus drill and vocal sight reading.
Painting, modelling in clay, crayoning, and drawing are thoroughly developed by the most modern theories of teaching. Thirty-fifth year opens Sept. 10.
Send for Illustrated Catalogue. Please mention this paper.

Roanoke College,
IN THE VIRGINIA MOUNTAINS.

Several Courses for Degrees. Also, a Business Department. Special attention to English, French and German spoken. Large library. Best moral and religious influences. Students from 16 States and Territories and Mexico. Graduates in 28 States. Expenses for nine months $149, $176, or $204 (including College fees, board, &c.). THIRTY-SIXTH SESSION BEGINS SEPT. 12TH.
For Catalogue, &c., address
JULIUS D. DREHER, President,
Sa.em, Virginia.

DICKINSON SEMINARY,
WILLIAMSPORT, PA.

A thoroughly equipped Classical and Scientific School for both sexes. 15 teachers. Degrees conferred. Elective studies when desired. Rare facilities in Music and Art. Steam, water, ventilation, fire escapes. $183 per year for board, washing, heat, light, and room. Tuition according to studies. Discounts to preachers, teachers, and two from the same family. Fall term opens Sept. 3. Catalogue free. E. J. GRAY, D.D., Pres't.

F. W. CHRISTERN,
254 Fifth Avenue, between 28th and 29th Sts., New York.
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

Germany.

PROF. A. FLEISCHMANN, *Eldena, Pommern.* Thorough study of German, etc. Summer resort for seabathing. Fine surroundings. Isle of Rügen. University of Greifswald. For circulars address Prof. J. M. Crow, Ph.D., Grinnell, Iowa, or Prof. A. Fleischmann.

The Nation.

NEW YORK, THURSDAY, AUGUST 2, 1888.

The Week.

WAS ever a great party in such an absurd position as the Republican within a month after its ticket was nominated, and before its candidates have formally accepted? Before the Convention adjourned, it was found necessary to patch one plank of the platform, and before the campaign is fairly opened it is found necessary to say that another plank does not mean what it has been interpreted by the Republicans of the House to mean. Both these planks relate to the absorbing issue of the canvass, which, it was perfectly apparent, when the Convention assembled, was to be the issue that would decide the election; yet the assembled wisdom of the party deliberately adopts a declaration of faith on that issue which cannot endure the strain of the first month of campaign discussion. The cause of the trouble is obvious enough. The Republican party has fallen into the control of men who have lost all faith in sincerity in politics, or in the intellectual capacity of the people to distinguish between humbug and honesty in party professions. These men firmly believe that trickery and appeals to ignorance and prejudice are the most powerful agencies in politics. Their bad luck with their platform must make them suspect that something is wrong in their calculations. If they search far enough, they will find the cause of all their failures in the sincerity and fearlessness of the leader of the Democratic party.

The Philadelphia *Ledger*, a newspaper which mingles independence and candor with its support of the Republican party, reviews the course of Mr. Cleveland's Administration regarding civil-service reform in a noteworthy editorial article. The *Ledger* thinks that the friends of this reform were unwarrantably sanguine as to what might and would be accomplished, but holds that "it must be conceded by every fair-minded observer of the Administration of President Cleveland that, since it began, the reform of the civil service has not only not gone backwards, but has made certain advance to a higher plane of official excellence." The *Ledger* thinks that Mr. Cleveland meant to sweep away the spoils system, and tried to do it, but that it was too much to expect that a political system which ancient custom was considered to have almost made law, if it had not made it respectable, could be at once got rid of. It considers it "probably true that faithful and efficient Republican incumbents were removed without cause in contravention of what the civil-service reformers understood to be the pledge made by Mr. Cleveland in his Christmas Day letter to Mr. Curtis, but it must be frankly acknowledged that, in making appointments to the vacant places, the President did not disregard the qualification of merit." As a rule the *Ledger* thinks that Mr. Cleveland's appointments have been "conspicuously meritorious," declaring that "his appointees to important offices have been, with most rare exceptions, men of high character, illustrations of the kind of which are to be found in the distinguished character of the citizens appointed to the heads of executive offices in Philadelphia." As regards the reform generally, our contemporary thinks it demonstrated that it has made decided progress during the past three years; that it "has not gone backward, but distinctly forward, under the Administration of President Cleveland."

The meeting of a convention of colored voters to endorse a Democratic Administration, and pledge support to the party which seeks to continue it in power, is an event full of significance and encouragement. The gathering at Indianapolis last week had its disorderly features at first, due apparently to the attempt of "Matt" Quay to capture control of it through a body of Republican negroes whom he had forwarded; but it settled down into a deliberative body which evidently represented in its attitude a considerable percentage of the race. The keynote of the Convention was struck by the Permanent Chairman, Peter H. Clark of Cincinnati, in his address advocating a split in the negro vote. Mr. Clark is a man of marked ability and excellent character. He was formerly principal of the colored high school in Cincinnati, and, by the way, was turned out of that position by the Republicans solely because he ceased to be a Republican. He said that a careful study of the principles set forth in the Democratic and Republican platforms will convince any man that the contest for the Presidency is to be carried on this year on lines of thought new to this generation. The Republicans, he said, declare in favor of a free ballot and a fair count, but they know full well that the evils of which they complain are such as cannot be controlled by Federal action, as the decisions of the Supreme Court have repeatedly shown that fact. Mr. Clark took the sound position that even if the order of government could be changed, and the Federal Government could be made supreme in all things, it would not be a good thing to do, and proceeded to preach equally sound doctrine when he said: "Politics is not the universal panacea for the ills that beset the negro race. The truth is, few of the evils of which complaint is made are political in nature, and not many can be cured by political action. The average of morality, intelligence, industrial skill, wealth, and manliness of the negro must be raised, and as they rise, prejudice against them will decline." He said that the interests of the colored people are as safe in the hands of President Cleveland as in those of any man who had ever occupied the office of Chief Magistrate, and the resolutions adopted endorse the ticket and platform of the St. Louis Convention.

The Boston *Transcript* makes this observation: "The *Journal* is right in describing the Scandinavians of the Northwest, whom it poetically calls 'the descendants of the Vikings,' as a pretty sagacious lot of men. They are Republicans in politics almost to a man, and likely to remain so." The Scandinavian vote is to have an important influence in the coming Presidential election, and may not improbably, in the future, make doubtful States of some which the Republicans now count as certain to remain in their column. A close observer of this body of our adopted citizens and their children predicted, before Cleveland's Administration was two years old, that a large part of them would range themselves with the Administration party in the next Presidential election. His argument was, that the reason why the Scandinavians who have settled in the Northwest in the last twenty-five years have been so generally Republicans, is, that at home they have always been used to looking up to the ruling power as right, finding their government economical and popular. Coming to this country, in regard to which they had received such glowing ideas, it was as natural for them to support the party in power—looking to that party as the source of the country's prosperity—as it was for the "Pat" of the anecdote to reply, when asked on landing which party he belonged to: "I'm ag'in' the gover'mint." The Republicans, in sacrificing their power to Blaineism, gave the Democrats a chance to show such citizens as the Scandinavians that prosperity is not dependent on the rule of any one organization, and President Cleveland has given a tone to his Administration which has made it affirmatively popular with all citizens of independent thought. Add to all this the tariff policy laid down in the Chicago platform—a policy totally at variance with the home system of the Scandanavians and with their own interests here—and it is easy to see why all political students, in forming their opinions of this year's results, will do well to keep an eye on the Northwest.

Republicans who want a newspaper which heartily believes in the free-whiskey platform of the Republican party, and enthusiastically advocates it, cannot do better than subscribe to the *Press* of this city. The more the *Press* reflects upon the proposed emancipation of whiskey from its present despotism, the more does its heart burn within it to hasten the accomplishment of this most beneficent reform. New arguments occur to it every week. In one article on Sunday it urged the change in behalf of the now down-trodden agriculturists. "The whiskey tax," it says, "operates to bar honest farmers from the legitimate industry of turning their corn into a fluid to be used for the most necessary che-

mical, mechanical, and medicinal purposes." In another article it pleaded for the reform in the interest of the drunkard's family. A drinker will drink so much any way, the argument runs; "if the price of drink be high, the proportion of his income needed to procure the customary indulgence will be large, and the family will get less; if the price of drink be low, this proportion will be less, and the family will get more." The conclusion, therefore, is that "the tax bears chiefly upon those who most of all should be free from the injustice of government, and those who are least able to resist its injustice—the women and children of the intemperate." The *Press* might profitably carry this argument a little further, and ask voters to support Harrison on the free-whiskey platform in the interest of the churches and Sunday-schools. It is notorious that the wives and children of many drunkards cannot attend worship for lack of suitable clothes. This lack is plainly due to the fact that the tax of 90 cents a gallon on whiskey puts up the price of his "customary indulgence" so high that the husband and father has not money enough left to fit out wife and children. Remove the tax, and thus make whiskey cheap, and this obstacle to the spread of religion would immediately be overcome. Well may the *Press* call the salient feature of its party's platform "this sensible and enlightened Republican policy."

Some of the suppressed wrath which the Republican leaders and newspapers feel towards James P. Foster, President of the Republican League of the United States, is coming to the surface. The Boston *Advertiser* says the League would indeed have to be a splendid organization not to have all its influence brought to naught by such conduct as "Mr. Foster has been guilty of, in sending out his ridiculous circulars appealing for campaign funds." The Burlington *Free Press*, while trying to relieve Senators Edmunds and Morrill from the burden of the "strong words and bitter, but true," on the subject of "fat" in the tariff, says:

> "Why President Foster of the National League permits the Nestor of the Senate or either of our honorable Senators to be thus accused, both of gross inconsistency and of a remarkable indiscretion, without a word of denial, we do not understand. Probably he thinks that the less that is said about such an inexcusable blunder as the issuing of such a circular and the printing of such a quotation from a confidential letter, the better."

It is not our fault that Foster keeps silent. We have offered him any reasonable space in our columns for a full explanation of the identity of the Senator whom he quoted with such telling effect, but he has failed to avail himself of the opportunity.

The first attempt which we have seen to deny that either Mr. Edmunds or Mr. Morrill was the Republican United States Senator quoted by Mr. Foster in his "fat" circular, appears in the *Free Press*, of Burlington, Vt. In commenting upon Foster's statement that the Senator in question was "from a State which never had a Democratic representative in either house of Congress, or a Democratic State officer," the *Free Press* says that this could not be Vermont, because that State had four Democratic Representatives in Congress between 1823 and 1853, and a Democratic Governor in 1853. True, but perhaps Mr. Foster forgot all this. The *Free Press* adds: "Neither of the Vermont Senators could possibly have been the author of the letter quoted by the author of the circular, and in point of fact neither of them was aware of the existence of such a letter till it appeared in print." What is the authority for that statement? The only competent authority would be a personal denial by both the Vermont Senators. If the *Free Press* has it, it fails to say so. Then, too, why not get Foster to say who the Senator was? We have tried in vain. He was in Burlington last week, and the *Free Press* could have made a great hit by publishing an interview with him on the subject.

The *Iron Age* for July 26 copies from the Pittsburgh *Despatch*, without comment, a tabular comparison of the wages paid in the steel works of the Edgar Thomson Company at Braddock, Pennsylvania, and those of the Union Steel Company in Chicago. The figures are interesting in more respects than one. In the first place, they show that the average wages paid in Chicago are more than 50 per cent. higher than those paid at Mr. Andrew Carnegie's establishment, the Edgar Thomson Works. Secondly, the showing is very different with different classes of workmen. For example, a blower in the convertor department gets at Braddock $1.08 per 100 tons, and at Chicago $2.34, an excess of more than 100 per cent., while a keeper in the blast-furnace department gets at Braddock $2.23 per day, and at Chicago $3.25, an excess of less than 50 per cent. But the most interesting point to be noticed is the absurdity of making comparisons between wages in one country and another, when such differences as this exist in different parts of the same country under the same tariff.

A correspondent who is himself interested in iron-ore mines, but who considers the cost of ore a hindrance to the general interests of iron manufacture, calls our attention to an account, given in the *Iron Age* for July 19, of the operations at the Cornwall ore banks, in Pennsylvania. We quote a few passages from this account:

> "Magnificent though the mineral properties of this country may be, none thus far discovered outside of the exhausted Comstock lode approaches in present or prospective value that of the Cornwall ore banks. . . . The cost of putting the ore on cars is 20 cents a ton. As it carries considerable sulphur, it must be roasted, which is usually estimated to cost 40 cents a ton, the kilns being at the furnaces. Adding as a liberal figure 15 cents a ton for transportation to the furnaces in the immediate vicinity of Lebanon, a total cost is reached of 75 cents a ton, roasted, at the furnace. . . . It is probably within the bounds of truth when we state that the owners of the ore banks realize fully $2 a ton, if not more, on every ton quarried. In 1887 the output was 667,210 gross tons, and in 1886 it reached 688,000 tons."

Thus we find the owners of these great ore banks making a clear profit of $1.25 per ton—that is, an annual profit of nearly a million dollars! And yet mine-owners clamor for an increase of the present duty of 75 cents per ton, which is left unaltered by the Mills bill. Our correspondent adds that there are other mines, not so well known, that are doing nearly as well as the one of which the *Iron Age* gives the above account. Evidently there is plenty of margin for poorer mines at a less duty than 75 cents per ton.

It will be hard for protectionists to explain the enormous increase of the cotton manufacture of India in recent years. We have no statistics of the amount manufactured by Indian mills previous to the year ending June 30, 1879, but since that time the Bombay Millowners' Association have issued an annual report of production. The amounts of cotton consumed by the mills in successive years, beginning with the above date, are as follows, in thousands of bales: 268, 308, 379, 398, 457, 531, 597, 643, 726, 815—the figure for the year just closed being estimated, but sufficiently accurate. We have thus in nine years a rise from 268,000 bales to 815,000 bales manufactured in Indian mills, the latter amount being more than triple the former. All this has been accomplished in the face of the rivalry of British manufacturers, the most powerful in the world, with splendid means of communication due to the political dependence of India upon England. Since 1882 there has been no duty on cotton goods, and before that time native manufacturers were protected by a duty of 5 per cent.! And is it not worth mentioning, too, that the stability of this industry is not dependent on the whims of politicians or on the exigencies of parties, or even on the fluctuations of governmental income and expenditure? Is it not pleasant to contemplate a growth like this, which is the reward of energy and enterprise alone, and which nobody can regard as "fat" to be justly "fried out" of its possessors by their political guardians? Is it not humiliating to one's national pride to listen to the piteous howls set up on every side in our own country at the bare prospect that a little of the gratuity which we have been dispensing to our tender young manufacturers may possibly be withheld?

By a lucky coincidence, we find in the *Tribune* of Thursday a very appropriate parallel to the foregoing statistics. That journal points with pride to the increase of paper manufacture in this country in the last eight years, as presented in the speeches made at the meeting of the American Paper Manufacturers' Association. The paper industry has, under protection, "nearly doubled in value" in this period of eight years; whereas we have seen that the cotton manufacture in India has tripled its dimensions in nine years, under free trade. Few things could better illustrate the fatuity of the reasoning which attributes the growth of every industry to

the operation of the tariff. There is another point mentioned by one of the speakers and adopted by the *Tribune* which is, if anything, even more illustrative of this absurdity. "Under protection," says the *Tribune*, "the paper industry in eight years has advanced from No. 21 (among our manufacturing industries) in the census classification to No. 14." Now, we wonder whether the seven manufacturing industries which this paper industry has outstripped have not been protected. We wonder whether they have not been more highly protected than paper has, seeing that the duty on paper is only from 15 to 20 per cent., while the duties on nearly all of our manufactures exceed 40 per cent. It is curious, indeed, that any one should see a triumph for protection in the fact that one protected industry has outstripped another. But this absurdity is only more palpable, not more real, than that which protectionists are continually committing when they show that a certain industry is benefited by a duty, without making any inquiry as to whether other industries are injured by it.

A millionaire named Palmer from Michigan, who joined "the pleasantest club in the country," otherwise known as the United States Senate, six years ago, has surprised everybody by the announcement that he is going to let his membership lapse, although it is universally conceded that he could retain his place by simply meeting his regular dues. A millionaire named McMillan stands ready to pay the entrance fee, and will doubtless succeed to the seat.

The exigencies of conducting a newspaper upon the severe "American" plan which is followed in the *Tribune* office, are very trying, but the editor of that journal appears to be equal to them. There was a banquet given in London last week by the Incorporated Society of English Authors to American authors in London. As the *World's* special cable account explained, "the ostensible purpose of the banquet was to celebrate the progress of the International Copyright Bill in America, but a scarcely secondary purpose was to welcome Mr. Phelps's predecessor, James Russell Lowell, on his first public appearance in London since his recent illness." An account of the banquet was sent out by the Associated Press agent in London, the larger part of which was devoted to the reception which was accorded Mr. Lowell, and to a synopsis of his speech. It was said in this that "Mr. Lowell was received with the greatest enthusiasm upon rising to speak," and it was perfectly plain that he was the most conspicuous as well as the most highly honored guest of the evening. This Associated Press account was published in the same form in the *Sun*, *Times*, and *Herald*, but the *Tribune* "edited" it by cutting out all mention of the reception to Mr. Lowell, every word of the synopsis of his speech, and all mention even of the fact that he made a speech. His name was allowed to creep in at the end of the list of people who were present, which must have been a severe strain upon the magnanimity of this wonderful editor.

There has been no more curious episode in English politics than the attempt now pending to find out whether the "Parnell letters" produced by the *Times* are genuine. The commission of judges proposed by the Government is itself an absolute novelty. No such tribunal has ever been organized in England for any purpose. There have been commissions of judges in Ireland, but their function was the punishment of crime under the forms of law. The function of the present Commission is simply that of a Parliamentary committee—to inquire and report whether certain persons, some of them members of Parliament, have or have not been guilty of complicity in certain crimes. The Attorney-General has maintained in open court that Parnell has been an accomplice of assassins, and that it can be proved by Parnell's own letters, and the whole Tory party profess to believe it. But if this be true, it is of course the duty of the Government to have Parnell arrested, indicted, and tried. The offence with which he is charged is the well-known one of being an accessory before the fact. But instead of putting him on trial, the Ministers taunt him with not bringing a suit for libel against the newspaper which published the accusation—perhaps the oddest treatment of a criminal on record. Moreover, they refuse to confine the limits of the judicial inquiry to the genuineness of the Parnell letters, although, of course, if the judges found the letters to be genuine, everything else alleged against Parnell would be taken as true as a matter of course; while if the letters were pronounced forgeries, the other charges would not be worth inquiring into.

The exceedingly queer condition of the Liberal Unionist mind on the subject is well exemplified in the last number of the *Economist*, which is nothing if not judicial. It gravely says that what has most impressed the public mind in the *Times's* charges about the letters is its refusal to tell where it got them. Of course this ought to cause it to be laughed out of court; but it converts this radical weakness into strength in the eyes of the *Economist*, by alleging that if the editor told where he got the letters, the traitor or thief who supplied them would be murdered. This sounds farcical enough. The *Times* could of course always tell the story to the judges in private. If the concoctors of forged letters could get off in this way, no man's peace or reputation would be safe.

Americans are so accustomed to seeing the reports of Congressional proceedings and of political speeches "edited" to suit the purposes of organ-grinders, that they cannot easily understand the shock which has been caused in England by the recent discovery that the London *Times* has become so infected with "journalism" as to adopt this practice. Hitherto the reader could be absolutely sure of finding in its columns complete and accurate reports even of speeches which advocated policies diametrically opposed to the newspaper's convictions, and the reputation thus attained was one of its most valuable possessions; but during the past week it has been convicted of suppressing portions of speeches in Parliament and of testimony in an inquest, because they militated against the side which it supports. It is a melancholy sign of degeneracy.

M. de Molinari, editor of the *Journal des Économistes*, subjects the propositions of the State Socialists concerning workingmen's insurance, pensions, etc., to some acute economic and other criticism in the July number of that journal. There are two propositions now before the Chamber of Deputies, both of which will probably be adopted. One is designed to compel employers in industries classified as dangerous to make compensations to their workmen in cases of accident. The other has reference to the regulation of women's and children's labor. M. de Molinari points out in regard to the former that it may be expected to have a secondary consequence, in addition to the primary one of tending to reduce wages in the industries affected to the level of wages in non-dangerous industries. The proposed law provides for pensions to widows of men killed by accident, the amount of this pension being 15 per cent. if there is one child, 25 per cent. if there are two, 35 per cent. if three, and 40 per cent. if four or more. These pensions are calculated to cause a preference on the part of employers for workmen who are unmarried or who have few children, so that the law will operate to a notable degree in preventing the workmen in the affected occupations from marrying and from raising families. M. de Molinari points out that no corresponding provision is made in the case of occupations classed as unhealthy, although it is accurately known from statistics by how many years and months these occupations shorten the lives of the men engaged in them. In regard to women's and children's labor, M. de Molinari admits the desirability of governmental protection in these cases, or, at least, in that of children, but regrets the inefficacy of the measures usually adopted for this purpose. His concluding remarks relate to an interesting instance of the superstitious belief of the Socialists in the existence of a latent supply of wisdom and virtue which "the State" can somehow or other command, provided only that the Socialists can have their way. "*Le Cri du Peuple*, for example, does not hesitate to declare that the law for the protection of women and children will have for its chief result 'the creation of inspectorships for the friends or cousins of Deputies.' With the Socialist State, this would be different. In that model State the Deputies would have neither friends nor cousins. And even—who knows?—perhaps the women and children would be protected without inspectors."

THE REMEDY FOR "OFFENSIVE PARTISANSHIP."

THE Washington correspondent of the New York *Times* reports that the Civil-Service Commissioners in Washington are much and naturally pleased with the approval of their work contained in the President's recent message accompanying their annual report. Their satisfaction, he says, with the following passage was peculiarly great:

"Besides all these difficulties, those responsible for the administration of the Government in its executive branches have been and still are often annoyed and irritated by the disloyalty to the service, and the insolence, of employees who remain in place as the beneficiaries and the relics and reminders of the old vicious system of appointment which civil-service reform was intended to displace."

And on this he reports one of the Commissioners as having made the following comment:

"The full significance of that sentence will hardly be appreciated by the average reader. It is a warning. The President is weary of the attacks upon his civil-service policy by people whose retention in service would have been impossible under the old system. Their original appointments were the rewards for political service rendered in the interest of the under party, yet are they retained in office by the victors—a strong proof that the Civil-Service Law is enforced. I know of a number of these men who have recently secured leaves of absence from their Democratic chiefs, which they are spending at their homes, where they attack the President and his reform policy, affording unique samples of ingratitude to the man and his system which have provided them with bread for nominal services during the years since Republicanism ceased to prevail. I am sure the President has his eye on these ingrates, and hope they will soon receive merited punishment. I have reason to believe the sentence I refer to is a forerunner of what is to come. I think a goodly number of those now attacking the Administration secretly, as well as openly, will be turned loose to be supported by the party of which they are such ardent members."

There is no doubt that there is still a very considerable body of the kind of officers the Commissioner here describes in nearly all the lower grades of the service—men who cannot forget the means by which they originally obtained their places, cannot understand the aim of the Civil-Service Law, or appreciate the President's motives in refraining from "a clean sweep," and in whom partisanship is so ingrained that they cannot get the partisan wag out of their tongues, although they know it endangers their bread and butter. In fact, it would be demanding almost too much of human nature to expect the men who have been bred in the official traditions of the last forty years, to exhibit in their own persons, as the result of one election, examples of what public servants under the new merit régime ought to be. Doubtless hundreds of them still continue to rail privately at the Administration—that is, at their official superiors—and enjoy seeing it discredited by cases of dishonesty and inefficiency, and are not unwilling to lend a hand in bringing it to shame, if the opportunity offers. There is no such leopard in politics as an old Republican office-holder who got his place through "influence" in the grand old days of Conkling and Morton and Carpenter and Anthony. His spots are his pride and boast.

We know all this, but we know also that the remedy which has been applied to this deep-rooted evil by the present Administration has not always been the true one. Of course disloyalty to the service, and insolence, in employees who "remain in the service as the beneficiaries and relics of the old vicious system of appointment," ought to be punished. "They ought," as the Commissioner says, "to be turned loose to be supported by the party of which they are such ardent members." But this does nothing for the reform of the civil service if their places are filled by Democrats appointed for the same reasons, animated by the same principles, and ready to act in precisely the same manner when the occasion serves.

Of course, this remark does not apply to cases in which vacancies are filled from the eligible list under the civil-service regulations; but the moral effect of these regulations has notoriously been greatly lessened, and in some places wholly destroyed, by the way in which vacancies not covered by the regulations have been filled. There is no good lesson, in other words, in dismissing a blatant Republican for being blatant, or a disloyal Republican for disloyalty, if you put in his place a Democrat whose only merit is his partisanship, whose activity is sure to be as "pernicious" as that of his predecessor, and who, if Harrison should be elected and left him in office, would be sure to be as insolent and insubordinate towards Harrison as some of the Republicans now are towards Cleveland. It is not in this way that the great parties are to be educated in the use of a non-partisan service, or the voters are to be brought to support the reform with that expectation of success on which all popular support must be based in order to be successful. We shall never see the merit system thoroughly rooted in American political manners, until each party has learned to take its medicine without making wry faces.

COLLAPSE OF "THE FREE-TRADE SCARE."

IN order to grasp the full meaning of the decision of the Republicans of the Senate to prepare a tariff bill of their own as a substitute for the Mills bill, let us go back and make a rapid survey of developments since President Cleveland sent his tariff-reform message to Congress in December last. Previous to the delivery of that message, the reëlection of the President was conceded on all sides, provided he lived and accepted a renomination. When the message appeared, the Democrats as a party were filled with consternation. They, and many Independents as well, regarded the step as a political blunder, as reckless as it was unnecessary. We recollect hearing one distinguished Independent saying of it that "Grover Cleveland had tossed the Presidency as a gift into the lap of James G. Blaine." The Republicans took the same view, because they were entirely confident that they could carry the country by claiming that the message was in the interest of free trade. All their old "scares" about the "payment of the rebel debt" and the "restoring of the negro to slavery" had been put aside as useless, but here was a new one with which they firmly believed they could conquer.

Faith in this free-trade "scare" lasted, however, for only a few weeks at that time. The Democrats discovered that the President was a far more sagacious as well as a far more courageous man than almost anybody else in his party. They discovered that the country was much less alarmed by his words than they had been, and a month after the message appeared the Democratic party was almost entirely united behind the President, and surprised and delighted to find that it had discovered a leader who gave it something worth fighting for. The consolidation of the party went on steadily until the St. Louis Convention met and renominated the President without a dissenting voice. So unanimous and courageous had the party become that even when the news came that Oregon had been carried by the Republicans on the tariff issue by a greatly increased majority, the Democratic Convention was not stampeded, but went straight ahead and adopted its platform of cordial approval of the President's policy and of its expression in the Mills bill.

But while the news from Oregon did not stampede the Democrats, it completely turned the heads of the Republicans by convincing them beyond a doubt that they could win with the free-trade "scare." They met in convention, fairly intoxicated with this belief, and adopted a platform declaring "uncompromisingly in favor of protection," favoring nearly every kind of extravagant expenditures—pension bills, river and harbor bills, fortification bills, navy bills, national aid to State education—and making no other proposition for the relief of the people from the burden of unnecessary taxation than the repeal of the taxes upon tobacco and upon spirits used in the arts; and if "there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of internal taxes [that is, free whiskey] rather than the surrender of any part of our protective system." This was adopted with shouts of delight by the Convention, and was hailed with warm approval by the leading organs of the party. A more shameless platform was never adopted by any convention of a respectable political party. It was simply a menace to the peace and welfare of the country, and was so regarded by every thinking man. It was interpreted by the Republicans of Congress to mean that they should formulate no measure looking towards a reduction of the surplus and a relief from taxation, but should take the position that the Mills bill was a free-trade measure, and should oppose its passage solidly on that ground. They took that position, which was simply that any revision of the tariff, or any attempt to reduce the surplus, was "in the interest of British free trade."

The Democrats of the House stood manfully by their colors, and passed their bill, all the Republican members save three voting against it, though it provided for only a 5 per cent. reduction on a tariff of 47 per cent. On Saturday week the Mills bill went to the Senate, the Republican party still

holding to its position that revision of the tariff and reduction of the surplus meant free trade. On Sunday, rumors were heard that there were Republican Senators who doubted the strength of this position. These rumors assumed more definite form on Monday, and it was declared that there was likelihood of a Republican tariff bill in the Senate, reducing the surplus and revising tariff inequalities. These so alarmed the leading Republican organ that it came out in bold warning against such a bill, declaring it would be a "bill for buncombe," and that the safest course for the party was to stand by the position which the Republicans of the House had taken.

This was the situation when the Republicans of the Senate held a caucus on Wednesday night, about one month from the date of the promulgation of the Chicago platform. They had before them a formal request from the Home Market Club, an organization of the most heavily protected manufacturers of the country, begging them to "formulate and pass a tariff bill reducing the surplus and simplifying the tariff in the interest of protection," and imploring them not to go on record as merely opposing the Mills bill, but to originate "legislation that will render service to the business and the industrial interests of the country." Similar demands had been made by the Boston *Advertiser*, the Hartford *Courant*, the Worcester *Spy*, and other loyal Republican organs in New England. They were repeated with increased emphasis in the caucus by Senator Allison of Iowa, Senator Hiscock of New York, and Senator Aldrich of Rhode Island. What was the cause of all these appeals for action, instead of passive opposition? Nothing more nor less than the discovery by the newspapers, manufacturers, and Senators making them that the free-trade "scare" was not working. If they had not made that discovery, they would not have reversed the campaign policy of the party so suddenly as to catch the party's leading organ with a denunciation of the new policy as "buncombe" in the editorial columns of the same issue in which the news of that policy's adoption was published.

There is not the slightest doubt that this Senate decision is a complete surrender of position. The *Tribune's* utterances are only a part of the proof on this point. There was a grand Republican ratification meeting at Burlington, Vt., on Thursday, at which Senators Edmunds and Warner Miller and Representative Butterworth made speeches. Mr. Butterworth had evidently not heard the news from the Republican Senatorial caucus, for he made a personal appeal to Mr. Edmunds to stand firm against precisely such a course as the caucus only a few hours before had unanimously agreed upon.

> "You have," he said, "never helped the Democrats out of a scrape, and you are not going to do it now. But the Democrats are praying that the Senate will in some way aid them. Don't you do it. We are holding all the trumps now, and the Democrats want you Senators to give them another deal. Don't you do it."

But the Republicans of the Senate have decided "to give the Democrats another deal," and they have reached that decision because they have discovered that the American people are too intelligent to be "scared" into electing any candidate to the Presidency. Henceforth the Republicans must stand or fall in their new position. They must present their measure of tariff revision and surplus reduction, and appeal to the intelligence and reason of the country to decide between their plan and that of the Democrats. They cannot cry "free trade" or cite the utterances of the British press with any hope of winning in that childish fashion. The country, thanks to the courageous leadership and true Americanism of President Cleveland, has passed the point where nursery methods of that sort exercise a controlling influence.

"THE FAT IN THE FIRE."

BEFORE the meeting of the Republican Convention, we ventured to predict that if Blaine could not be nominated, the Blaineites would either dictate the nomination or insist on its being given to some one who would acknowledge Blaine's supremacy, and give him the chief place in the Cabinet. When we said this, however, we did not anticipate the desperate intrigue by which they tried to impose him on the Convention, nor the thoroughly implacable temper in which the nomination left them. We supposed, in fact, that the result would be at least brought about by a bargain which, if it did not give them all they wanted, would leave them in a moderately good humor, and secure from them some sort of coöperation in the canvass, with at least outward demonstrations of respect for the nominee. What actually happened, as we all now know, was that they were defeated without negotiation, that no terms were offered them and no arrangement made with them, and that they left the Convention in a thoroughly bad temper. The consequence is, that they are to-day apparently as full of mischief towards the Republican Presidential ticket as they were towards the Republican ticket in this State in 1885, when, out of pure hatred of the Mugwumps, they defeated Davenport and gave the Governorship to David B. Hill.

Any one who doubts all this can hardly have been a diligent reader of the Blaineite newspapers since the nomination. We venture to assert that there has been no precedent for the indifference with which they are treating Harrison, and the ostentation with which they throw cold water on the ticket and repress any signs of zeal among its supporters. The exhortations in its favor almost invariably take the form of warnings as to the enormous amount of work which will be necessary to elect it, and the danger of supposing that it has any momentum of its own. Harrison's name is rarely mentioned. The customary glorification of the candidate's character and career is thus far wholly wanting. In fact, the leading organ of the party, the New York *Tribune*, seldom speaks of him, and nothing has been done, or apparently is to be done, to excite the imagination of the voters about him. Gen. Harrison's friends are told, as plainly as is possible without putting it into words, that, as they have nominated him, they must now elect him the best way they can.

This is not all, however. They do not content themselves with neglecting Harrison. They are making every preparation to give Blaine all the honors and éclat which they would have given him had he been nominated, and which are, they know very well, the due of the man who has been nominated. They are arranging to offer him precisely the kind of reception when he arrives here, which they would have offered him had their intrigues on his behalf at Chicago been successful. The more pompous and noisy it is, of course, the more will Harrison be thrown in the shade, and the more thoroughly will he be given to understand that, if he is elected, he will be expected to occupy the kind of place at his own Cabinet meetings which Mr. Seward tried, at the outset of the war, to assign to Mr. Lincoln, in that famous letter reproduced in the *Century* magazine the other day.

How Gen. Harrison and his backers, if he has any backers—for they have not shown themselves yet—feel about all this, and how they will deal with it as the canvass goes on, we of course have no means of knowing. What he can do about it, no matter what his feelings may be, it is hard to see. If he had to do with people who really desired to win the election, he might frighten them into good behavior by threatening them with defeat; but he has every reason to believe that they would as lief see him defeated as not, and in fact that a very large proportion of them seek his defeat as a "vindication" for themselves and their idol. They have for a long time made no concealment of the fact that a Republican administration under Blaine is the only one which has any attractions for them. The secret of this is, as we have so often pointed out since 1884, that they are for the most part commercial politicians—that is, moneyed men who seek wide opportunities for investment or speculation which can only be secured under a "brilliant" (that is, turbulent and reckless) administration such as Blaine's would be sure to be. Few, if any of them, are men of ideas on any subject but money-making, or are capable of respect for any policy which does not promise "large returns" of the pecuniary sort.

How this very curious situation will end, he would be a wise man who should predict. We may be quite sure, however, that the coming "welcome to Blaine" will not help, and is not intended to help, Harrison, and that the more brilliant it is, the worse off will the Republican ticket be. The voters are not yet prepared for such a novelty as electing one man President by running another. If the canvass should end in a Republican defeat under such conditions, it would at least have the merit of putting an end to an organization which has ceased to have any real strength, and is dependent for even a show of vitality on the "fat" supplied by protected manufacturers.

QUACK LEGISLATION.

If a man takes medicine without much knowledge either of the nature of his disease or the character of the remedy he uses, we regard him as a fool. If he prescribes it to others under such circumstances, we call him a quack. But such folly and quackery are not confined to medicines. In matters of legislation they are still more universal. For diseases of the body politic, men prescribe remedies at haphazard, and those who know the least of the dangers involved, are the loudest in urging their favorite legislative nostrum. Early in the century Sir Walter Scott said that the law was like physic—easier to use as a quack than as a skilled practitioner. Had he lived in these days of over-legislation, amid the various attempts to make the world righteous by act of Congress, he would have found daily illustrations of the truth of his statement.

Of all the patent legal medicines, the favorite one for diseases of the locomotive organs is the Inter-State Commerce Law. Confused in its composition and uncertain in its effects, it is nevertheless extolled as "good for most everything." It will in all probability be applied to express companies and to water routes; it is proposed to extend it to telegraph companies; and if hack-drivers were only engaged in inter-State commerce, it would surely be urged as an infallible means of checking their extortions.

The Inter-State Commerce Law, as far as it had any definite design, was framed to meet the conditions of railroad business, and especially the evils of railroad discrimination. People might differ, and did in fact differ very widely, in their opinions as to what constituted an unjust discrimination, or how far it was wise for Congress to interfere with the liberty of action on the part of the railroads; but there was an evil distinctly seen which gave the law a specific purpose. There were differences in railroad rates not based on any obvious principle. Some shipments had to pay an enormous share of the fixed charges, while others were carried for the movement expenses, or even less. Competition, so far from furnishing a remedy, had tended to intensify the evil, because it forced rates down at some points without affecting others. To attempt to prescribe a schedule of rates by law, had proved impossible. To leave uncontrolled power in the hands of the railroad officials, was out of the question. As a compromise, a somewhat vague law was passed, and its execution intrusted to the hands of a Commission which might have the special experience to apply it discreetly. The Commission was a skilful one; the law, as administered by it, gave tolerable satisfaction. The result is, that people are clamoring to have it extended to other agencies than railroads.

There seems to be no objection to applying it to express companies. It is not improbable that the law in its original form was intended to reach them; and in any event the express business is little else than a department of railroading, and subject to much the same laws and conditions. If the present law is right for railroads, it is presumably right for express companies.

With water routes the case is different. It is true that the evils of discrimination exist to some extent; but the special conditions which have given rise to railroad discrimination, and have justified special legislation on the subject, do not apply to water routes. There is no such distinction of fixed charges and operating expenses as there is in the case of a railroad. In those water routes which are controlling factors in the trade of the country, the track is practically free. Even on a great and costly work like the Erie Canal, the attempt to charge tolls is not maintained. The expenses of water carriage are operating expenses. Water rates afford a legitimate field for the action of free competition. Unless this is artificially interfered with, rates will be to a great extent based on cost of service. Discriminations in charge by water are due, not to the special conditions of the business, but to violations of the principles of common law.

The law of common carriers, as applied by the courts, was largely developed to suit the conditions of water carriage. The introduction of steam as a mode of water propulsion has modified these conditions, but has not radically altered them. As a business agency, the steamship has far more in common with the sailing vessel than with the railroad. It was because the railroad furnished a distinct set of facts to which the traditional law did not apply, that special railroad legislation was demanded. To try to apply the special legislation to water routes, is to ignore these differences of fact. At the very best, this attempt will be useless; in all probability it will do some positive harm. If we say that water routes and railroads are controlled by the same laws, when really they are not, it will lead us to practical mistakes. A transportation agency which has to pay for its track is in very different circumstances from one which does not. Long - and - short - haul principles which apply to the former may not apply to the latter. The effort to make the two fit into the same schedule will only blind our eyes to the real facts in the case. The effect of water competition on railroads would be nearly the same, whether water routes were subject to the control of the act or not. Even if their nominal status were made forcibly to conform to that of railroads, the practical difference of not having to pay fixed charges would continue, and would be a disturbing element in all competition between the two.

Still worse in some respects is the crude proposal to apply the Inter-State Commerce Law to telegraph business. It is true that the conditions in this case are somewhat like those of railroads, but the particular evils and abuses complained of are totally different. There is public dissatisfaction—we do not now say whether it is well grounded or not—with the general scale of telegraph charges. It is believed that they are so high as to prevent the natural development of business, and that it is the shortsightedness of the management which is keeping them at abnormally high figures. Now, no one who knows anything about the case would make these charges against our railroads. Their average rates are extremely low. They have developed their business in a way which is almost incredible. They have shown the utmost enterprise in reductions of charge which to conservative spirits seemed almost suicidal. The complaint against railroads is on account of their inequalities in charge. It was against this that the provisions of the Inter-State Commerce Law were largely directed. But with telegraphs this is a secondary matter. It is the absolute and not the relative rate which the man who uses the telegraph cares about. It is not felt as a hardship by the sender of private messages that the press receives special rates so much lower than his own. Whether press rates really are unfairly low or not, or how far the inequality of telegraph rates for different places is an arbitrary one, matters not. This is not the main point at issue; and legislation which is aimed at the wrong target is not likely to produce the result demanded.

Whatever result it might produce would probably be attained at a disproportionate cost. A law like the Inter-State Commerce Law would miss its essential feature unless it were administered by a body like the Inter-State Commerce Commission. It could not properly be intrusted to that body itself, for the simple reason that the Commission has on its hands at present all the work which it can possibly do. We are surprised that a man of so much judgment as Senator Platt should not have seen this difficulty with a bill which he has recently introduced. To master the technical details necessary to a proper appreciation of a vague railroad law is enough to tax a man's best energies to the utmost. To learn at the same time another set of technical details with regard to the telegraph is quite out of the question. Either the added work would be neglected, in which case the new law would fail of its intended effect, or each of the two lines of work would be somewhat slighted, to the manifest detriment of both. If the telegraph law were intrusted to the hands of a totally distinct commission, this evil would be avoided; but in that case it would surely be far better to cut loose from the model of the railroad law, and give the new commission power to cope directly, as far as they could, with those evils which are specially complained of in the telegraph business itself.

In any event, it is the height of folly to suppose that because special legislation worked well in one business the same thing will probably work well in another. The presumption is the other way. If special legislation was really required, it was because that business was subject to special conditions of its own distinct from those contemplated in the common law. As far as another business shares in those special conditions, we are justified in extending the law in question. Further than this, there is every reason to suppose that it will be unwise to apply it. To assume that because a law has proved useful in one particular set of conditions it ought, therefore, to be applied universally, is mere legislative quackery.

A CHAPTER IN EUROPEAN PROTECTION.

If the several nations of Europe were as eager to contribute each its due share to the world's stock of "sweetness and light" as they are to furnish their full quota or more of its supply of sugar, the world would be in a fair way of being a very satisfactory sort of place. M. Léon Poinsard devotes eleven closely printed pages of the *Journal des Économistes* to an account of the endeavors which European governments have been making in the course of the past five and twenty years to curb each other's enthusiastic pursuit of the sweets of this most petted and coddled of all industries. It makes very interesting reading, though one finds it difficult at times to avoid a sense of the ridiculous. As one reads of conference after conference, each as futile as its predecessor, one would think these had to do with the attainment of some ideal and boundless blessing like universal peace, or at least of some economic panacea like bimetallism; but no, the *summum bonum* which all these diplomatic efforts have not yet been able to compass, is an arrangement by which each government shall bind itself not to pay its sugar-refiners a bonus to enable them to sell sugar abnormally cheap to foreigners. M. Poinsard takes his subject far too seriously to see a joke in it anywhere, at least so far as the action of France is concerned; though he does say that "certain countries, like Austria and Germany, which have committed veritable absurdities (*folies*) in this regard, have literally offered to the British tea-drinker, as a free gift, a good part of their sugar. Mr. Giffen has estimated the annual gift thus presented to England by other countries at upwards of fifty million francs." M. Poinsard, we say, does not acknowledge that there is anything humorous in the whole story, nor does he press any opinion of his own; he tells a plain, unvarnished tale, of which we shall endeavor to give some of the principal points.

The origin of the whole trouble is the system of "drawbacks" on sugar. Crude cane-sugar, being considered an especially convenient subject of taxation, as it was all imported by sea, had rather heavy duties imposed upon it by European governments; duties which, by the way, discriminated in favor of colonies of the taxing country, so as to encourage the sugar-growers there. But it was held even more important to encourage the sugar-refiners at home; and this was effected by securing to them the home market through heavy duties on refined sugar, and by giving them a full opportunity for exportation through the remission, on all refined sugars exported, of the duties which had been paid on the crude material. Now it is just here that all the trouble has arisen; for the legal estimate of the amount of raw sugar which went to the making of a given amount of refined sugar was always far above what a well-conducted refinery needed. The consequence was that the refiners obtained as a remission of duty a considerably larger sum than they had paid on the raw sugar imported; in other words, they were the recipients of a handsome bounty on exportation.

When beet sugar began to be produced on a considerable scale, the desire of each of the principal nations of the Continent to take a large share in this new and important industry was so strong that "some of them erected the practice of the drawback into an economic system, designed to assure to their refiners an insuperable advantage in the greater part of the markets of Europe. The others were led into the same path by the fear of the destruction among them of an important branch of industry."

The enormous bounties which were paid out in consequence—again to quote M. Poinsard—of "this thoroughly artificial movement, which led to an absurd overproduction," pushed the sugar-refiners of England to the wall; it was, of course, not an easy matter for her to make an exception, even in this extraordinary case, to her general policy of free trade, and, besides, she was hindered by commercial treaties from taking any immediate steps in the matter. Nevertheless, the situation was causing much uneasiness in England, in spite of the fact that her consumers were getting the sole benefit of the low price of sugar, while the consumers of the bounty-paying countries were not only paying high prices for their sugar, but actually adding to their heavy loads of general taxation in order that certain sugar-refiners at home might undersell the English in their own market.

France seems to have been the first country to get restless under this state of things. In 1863 she proposed a general conference of sugar-producing nations which should adopt a common system that would suppress export bounties, direct and indirect. It would be tedious to go into any details upon the various complications that prevented this conference and many following it from effecting any result. No less than eight international conferences have been held, at intervals of a few years, the last of them having concluded its labors not many weeks ago—labors which will not improbably be as futile as those of its predecessors. In point of fact, the details are merely incidental; the root of the trouble is the enormous difficulty that always attends the removal of an artificial stimulus under which special industries have been unnaturally inflated. "The delegates [to the recent Convention] unanimously declared that the system of bounties was detestable, and its suppression imperative. But each one added that the others must commence and organize their systems in such a way as to faithfully suppress any legislative advantage." There can be no doubt that the principal protective nations of Europe are heartily sick of this ridiculous war of bounties which has so reduced the price—that is, the foreign price only—that the consumers in free-trade countries have, according to our author, gained even more than the bounty-receiving manufacturers, while of course the taxpayers of the protective countries pay the costs all round. Even this sort of protection, made ridiculous by being turned inside out, holds its own stubbornly, each nation being justly afraid that the others will ruin its refineries by keeping up this pleasant game of bounties after it has itself stopped spending the hard-earned money of its taxpayers on this favorite child of protection.

EXIT BOULANGER.

M. Hervé, the editor of the Paris *Soleil*, a Monarchist, but an excellent authority on French politics, has predicted that Boulanger will be defeated at the approaching election in the Department of the Nord, to fill the vacancy caused by his own resignation, and will then disappear from French politics. That this consummation could not be very long delayed has been the conviction of all rational observers ever since Boulanger produced his "programme." As long as he kept it secret, as he at first proposed, he kept alive public curiosity and to some extent public expectation; but when he revealed it, and it was found to be something so commonplace as "dissolution and revision," and something which could not be carried out without the consent of the Chambers, of course every one knew the end was not far off. It was hastened by the exhibition he made of himself in the Chamber in the debate with M. Floquet, and by the subsequent duel, in which he ran his throat on the point of his adversary's sword. To be handled in this way by an elderly civilian made him ridiculous and finished him.

When he disappears there will be no one, as M. Hervé points out, prominently before the public eye in French politics, and no politician with whom the French public particularly occupies itself. In other words, Boulanger has shared the fate of a score of other politicians far weightier and more respectable than he, which was impending over Gambetta himself, and from which the latter was only saved by death. Every man, in short, who has come to the front since 1870, no matter how great his talents or how high his character, has been used up before very long—that is, has gradually lost his hold on the public and on the Chambers, and has disappeared more or less completely from the public view. Gambetta tried to avoid this for a good while by refusing to take office. When he did take it, and found himself wasting away, he slipped out in a hurry, but he would surely have undergone extinction, like his forerunners, if death, as we have said, had not saved him.

It was really this immense slaughter of the civilians which brought Boulanger on the scene. As one after another disappeared under votes of the Chamber, and as the process of extinction became more rapid, the popular mind, naturally enough, became prepared for that appearance of the man on horseback which is one of the strong traditions of French "parliamentarism." That the man on horseback happened on this occasion to be a fool as well as a charlatan, is one of those wonderful pieces of luck of which so many have befallen the present Republic. All her leading enemies, from the Prince Imperial down, have been made harmless by some species of folly. That the Minister of War, a popular hero when the country first began to tire of parliamentary institutions, should have been a weak dema-

gogue instead of an astute, vigorous, determined, and successful soldier, looks like a special providence. Harmless as he has proved, however, Boulanger's career seems to have thoroughly frightened the Republicans of all shades of opinion, for they have stopped turning ministers out of office. Floquet is enjoying a security of tenure such as has not been accorded to any of his predecessors for three years, and he owes it to Boulanger. It will soon be the only trace of Boulanger left.

Why is it that no more leaders are to be found in French politics? No prize the Academy of Moral and Political Sciences could offer would secure an answer to this question. All attempts to answer it have only removed the mystery one degree further back. Any one who says it is "parlementarisme" simply offers to solve one problem by presenting another. The discussion about parliamentary institutions got up by Boulanger, unfortunately for him, is the old one which preceded the *Coup d'État* in 1851; and the reproduction of the arguments which Persigny, De Morny, and the rest used against parliamentary government at that period has probably had the largest part in killing his pretensions. They brought home to everybody's mind the ugly fact that if you will not put up with tongue government, you must have sword government, and that if you insist on having great men, you can hardly avoid having one so great that he will shoot you for being saucy. In fact, government by discussion is at last receiving that final and greatest of sanctions, the impossibility of finding any substitute for it.

PARLIAMENTARY GOVERNMENT AND GOVERNMENT BY PARLIAMENT.—II.

LONDON, July 12, 1888.

PARLIAMENTS exist in every civilized State. Parliamentary constitutionalism has produced all the benefits anticipated from its adoption by the constitutionalists of the last century. Yet Parliamentary government is falling into discredit. "Parliamentarism" is denounced by democrats as vehemently as by reactionists. The explanation of the paradox may be given in one sentence: "Parliamentary government" is turning into "government by Parliament," and government by Parliament never can command, as it never has commanded, lasting popularity.

A phrase, however, explains nothing. Whoever wishes to understand the discredit attaching to the rule of representative assemblies should first discriminate between "Parliamentary government" and "government by Parliament," and next consider with care what are the weak sides of government by Parliament. Parliamentary government meant in the last century a constitution which provided that the wishes of the nation should be made known through its representatives, and that the nation's representatives should take a considerable or even a predominant part in the work of legislation. The function of Parliament, as understood by constitutionalists, was in the first place to give utterance to public opinion, and in the next to legislate in conformity with the will of the nation. The transcendent merit of the English Parliament, in the eyes of foreign critics such as Montesquieu, was that the houses of Parliament as a whole (and especially the House of Commons) gave expression to the sentiment of the English people, and insured that no Englishman could be ruled by laws, and especially be made to pay taxes, to which the majority of electors had not given their assent. The House of Commons then secured for Englishmen free expression of opinion and the supremacy of the law, and, in doing this, secured for them blessings not enjoyed under any of the monarchs or aristocracies that ruled the continent of Europe. No doubt the English Parliament in fact both fell short of and exceeded the functions which admiring theorists ascribed to it. The unreformed House imperfectly represented the wishes of the nation. The House, unreformed though it was, did not by any means confine its activity to legislation. Its will went a great way in determining national policy. It did not appoint, but it controlled the appointment of, Ministers. The theory, however, and to a great extent the practice, of the Constitution forbade Parliament to interpose in matters relating to the Executive. The "King's Ministry" was no mere empty phrase. Till 1832 the Crown exerted in England a marked influence on all administrative concerns, and, what has scarcely been sufficiently noted, decline in the authority of the Crown did not immediately involve the weakening of the Executive. Ministerial responsibility implies ministerial power, and Parliamentary government was never intended by its eulogists to be a system under which a cabinet should be the servants of the House of Commons.

That this was the idea of foreigners who tried to imitate English constitutionalism is certain. It is equally certain that, up to the end of the last century, Englishmen themselves did not realize the extent to which even then the House of Commons was becoming part of the Government, and they had no idea that the King's government ought to be carried on under the direction of the House. The statesmen who built up the Constitution of the United States, or who at Dublin and at Westminster criticised the treaty of union between England and Ireland, certainly supposed that they knew something of the English Constitution. Their language and their acts alike show that they considered the Executive as a power in the State, standing almost as independent of the direct control of Parliament as at the present day do the body of judges. No doubt any Whig, or any Tory, for that matter, would a century ago have conceded that in matters of national policy Parliament must have the last word. So, at the present day, any rational man would concede that the law administered or interpreted by the judges must ultimately be determined by the will of Parliament. But no sensible politician supposes that Parliament ought to interfere with the judgments of the court.

Parliamentary government, in short, meant originally a polity under which a representative assembly played a leading part. It did not mean, either in England or elsewhere, a polity in which a representative assembly administered the government of the country. Government by Parliament, on the other hand, means a system under which a representative assembly appoints at its own will the national executive, and assumes more or less openly the direct administration of affairs. In no European State, it is true, does government by Parliament in its extreme form as yet avowedly exist. The Crown in England, the President in France, and other authorities in other countries, put more or less effective restraint on the immediate intervention of the legislative assembly in the duties of administration. It is, however, plain to any observer that both in England and in France the Parliamentary system tends towards the production of what I have called government by Parliament.

Take, for instance, the English House of Commons, which does not constitute the English Parliament, but is by far the most important member of it. Can any one doubt that within, say, the period of Mr. Gladstone's political lifetime, the House has assumed to itself new powers? During the session of Parliament it directly supervises every act of the Administration. If a policeman exceeds, or is supposed to exceed, his duty; if a magistrate gives an erroneous interpretation of the law; if a rumor spreads that the Crown is contemplating alliance with a foreign Power—if, in short, anything, great or small, interests any portion of the British public, some member, by means of a motion or a question, brings the matter under the cognizance of the House. By one of those strange inconsistencies which constantly prevent any theory of politics from being carried to its extreme length in England, people have hitherto acquiesced in the arrangement which sanctions the direct interference by Parliament for half the year in matters which during the other half are left to the unfettered decision of the Ministry. How long this singular compromise between the old and new conception of representative government will endure, no one can tell. It cannot last for ever. If it be desirable that every minister be cross-examined about all his actions, great and small, for half the year, it cannot be desirable that, with regard to the very same matters, he should have what the political slang of the day denominates "a free hand" for the other six months. If, on the other hand, it is desirable that, say, Mr. Balfour should be uncontrolled by Parliament from the middle of August to the middle of February, it cannot be desirable that he should be pulled up by Parliament at every moment between the middle of February and the middle of August. The present system cannot last. Parliament, and especially the House of Commons, will sooner or later be compelled to assume more or to be content with less than its present authority. The immediate outlook suggests that the House will every year intervene more and more actively in the discharge of duties still left to the Executive or to the judges. Already, "the Opposition," as I see stated in to-day's papers, "are anxious that a portion of supply should be left over till the autumn sitting. They believe that by this means the House will retain a greater control over the Executive government."

English Liberals, in short, desire that the transformation of representative government into government by Parliament should attain its completion. In France this result has all but been reached. The Assembly, which in practice means the Chamber of Deputies, not only can but does at any moment displace the Ministry according to the Assembly's will or caprice. The supposed independence of the President has gone. M. Grévy was blamed because he hesitated to retire from office. From the point of view of a constitutionalist, he was open to juster censure because he did not fight for his post as a matter of life or death. M. Grévy's retirement was the breakdown of the Republican Constitution. It is no accident that the fall of the President gave life to Boulangism, which means, if it means anything, an expression of popular dislike to government by Parliament.

Government by an Assembly cannot long command popularity, and this for more reasons than one. An Assembly can represent public sentiment and can destroy patent abuses.

But an Assembly—at any rate such an Assembly as the English House of Commons or the French Chamber of Deputies—cannot govern. It is an absolute impossibility for three hundred, and *a fortiori* for six hundred and odd, gentlemen to carry on the administration of the State. An Assembly may reign, it cannot in reality govern. An Assembly, again, can sanction good legislation, but it cannot really legislate; an Assembly may choose the Government, but, except under favorable circumstances, it cannot insure the permanent existence of a strong executive. The incompatibility between government by Parliament and the existence of a really strong cabinet has only of recent times become apparent. And this is natural because it is only of recent date that Parliamentary assemblies have been anywhere really free to appoint and remove a ministry at their pleasure. In England, indeed, custom and habit still place a certain restraint on the caprices of the House of Commons, yet even in England the authority and independence of the Executive are in constant danger of diminution. In France an elected Assembly is in truth at liberty to follow the dictates of its fancies or passions. The result is patent to the world. Ministry succeeds ministry, until every man with the least capacity for leadership will soon, it is anticipated, have been discredited by the futile attempt to exercise what is ridiculously called power. Nor does this result spring from the supposed mutability of Frenchmen; it arises from the inherent vice of modern Parliaments—the tendency to break up into groups or factions, which can always unite to destroy a cabinet, and can never unite to maintain one.

The defects of government by Parliament would of themselves be enough to account for the general outcry against so-called "Parliamentarism." But these defects, many of which necessarily belong to representative government, give rise at the present day to far more censure than they could have occasioned a hundred or even fifty years ago. From the habits, in the first place, of modern life, every error or folly of a public assembly is blazoned forth to the whole world. It was a true instinct which led the English Parliament of the last century to dread the publication of its debates. The assertion were rash that the legislators who refused a hearing to Burke, or who all but hooted down Chatham when he was the aged and revered idol of the nation, showed more dignity or self-restraint than the members of the existing English Parliament. But it is not rash to assert that the Parliaments of George the Third appeared far more dignified bodies than the Parliaments of Victoria. The maxim *Ignotum pro magnifico* is of wide application. When an Assembly's debates are not reported, it is easy for the public to believe that the Assembly always debates with calmness and dignity.

The sentiment and the convictions of the age, in the second place, demand a strong government. Modern Democrats hold (whether wisely or not need not here be discussed) that the State may be greatly benefited by the action of the Executive. Every day the sphere of government is extended; every day there are new demands for constructive legislation. But Parliament, as already pointed out, is not itself a competent legislator, and finds it most difficult to maintain the strength of the Executive. The tasks demanded of a Parliamentary sovereign are exactly the tasks which such a sovereign is least competent to perform. We can hardly wonder that Parliamentary sovereignty should, under such circumstances, cease to be an object of general admiration. It is no accident that the English Constitution was most admired when, in England at least, there was little demand for constructive legislation, and when the best thinkers of the day desired nothing but freedom from the trammels imposed on individual action by laws and institutions which had ceased to meet the wants of the time. It is certainly no accident that from men who, like Carlyle, detested the doctrine of laissez-faire, came the first attacks upon representative government. Nor does history suggest that the rule of an assembly, even where efficient, is likely to conciliate affection or respect. The Long Parliament was first hated and then contemned, and no despot has accumulated on his head the mass of hatred which still loads the memory of the detested Convention.

AN OBSERVER.

AN ITALIAN BATH.

CASTROCARO, July 9, 1888.

THIS is one of the smallest and least known baths in Italy, although its waters are for certain complaints among the most efficacious in Europe. According to the official analysis, there are nearly 42 grammes of mineral constituents in a kilogramme of the water, of which 0.1754 are iodine and 0.1029 bromine. An analysis by Prof. Roberto Castellucci is as follows :

	Grammes.
Iodide of magnesium	0.1905
Bromide of magnesium	0.1162
Chloride of magnesium	3.1703
Chloride of sodium	35.9252
Chloride of potassium	0.0510
Chloride of calcium	2.2388
Sulphate of lime	0.1587
Oxide of iron	0.0416
Silicic acid	0.0265
Organic matter	0.0721
	41.9909
Water	958.0091
Total	1,000.0000

In the richness of its compounds of iodine and bromine, Castrocaro can therefore be compared favorably with Salso-Maggiore in Italy; is superior to Bad-Hall and Kreuznach; and can be equalled only by some of the iodine springs in the Carpathians of Transylvania which are only locally known.

The village is small; situated about three-quarters of an hour's drive from the railway station of Forli, and about one and one-half hours from Faenza, on the lowest spurs of the Apennines, in the mouth of a valley through which the highroad runs from Forli to Florence with a daily diligence. The country about is fertile and well cultivated, producing grain, silk, and the best of that excellent wine called San Giovese, which was celebrated, according to Varro, even in Roman times. From the old Castle, and certainly from the hill above it, can be seen Bertinoro, Forli, Ravenna, and, on a clear morning, the Adriatic. Besides the rooms to be had in private houses, there are two fairly good establishments of baths, Liverini and Conti, where, though there is no luxury, everything is clean and comfortable, and where (especially at the former) the food is substantial and good and the attendance excellent.

Italy, delightful at all times, is most beautiful in summer. But of this most foreigners, who arrive and disappear with the cool weather, have little idea. The neighborhood of Castrocaro is particularly charming. I do not speak so much of the hillsides, which, in spite of the frequent ravines in the clay soil, were green and beautiful until now that the harvest is finished, nor of the stretch of gardens and orchards down to the river, and of the fringe of poplars on their edge, as of the country roads bordered by hedges of hawthorn and Christ's thorn, interwoven with dark purple clematis, the small pinkish convolvulus, and the large white calystegia, and of the fields of grain, maize, and hemp which extend over the fertile plain quite to the shore of the Adriatic. The large proprietors complain that there are too many trees, to the injury of the crops; but there must be poplars to shade the roads, and the mulberry, and the cut-leaved maple—whose roots go straight down—are necessary for the silk worms and for supporting the garlands of vines, as was the custom in Virgil's days. Everywhere are pleasant walks; and as for longer excursions, it is easy to drive—especially in the light country carts, where your feet rest on a bottom of netted rope—to Forli or Faenza, or to Cesena or Ravenna, or up the valleys to the ruined castles and picturesque hill-towns, or even to the cascade of San Benedetto, told of by Dante.

Italy has one great advantage over Greece, in its continuous chain of historical tradition. Even the children in a village like this, clustered round the ruins of an ancient castle, know that they are the descendants of the men once the vassals of the lord of that castle, who had often fought for his defence, or who under his leadership had made hostile excursions against the neighboring towers and towns. Nearly every high hill is crowned with a ruin; and although the lords have disappeared, yet fragments of tradition remain. There are houses called by the same name given to them centuries ago, some of them still inhabited by the descendants of their builders. There are peasants working farms which their forefathers have held for hundreds of years from the same family; and often the proprietor will forego a loss of rent rather than change the tenant. Castrocaro, about two hundred years ago, was annexed to the Commune of Terra del Sole, and the inhabitants have never forgiven it. Although the populations of the two towns are personally on good terms with each other, the traditional enmity of centuries—seen in many little things—is not to be cured so quickly. In Greece, on the other hand, the grinding tyranny of the Turks, the extermination of the old families of the upper class, and the immigration of new elements of population have almost completely destroyed local traditions. The peasants there know nothing whatever about the old mediæval castles except that some of them were used as strongholds during the war of Independence; and the civilized Greeks are almost forced to skip the intervening ages, and to connect themselves directly with the Greeks of the age of Pericles and Alexander. There is scarcely a village in Italy the local history of which will not interest a traveller who stops for more than a day, and who cares for something more than the mere sights.

Castrocaro was called by the Romans Salsubium, thus showing that they were acquainted with the properties of the waters, of which they doubtless made use, although no Roman remains seem to have been found here. The origin of the present name is a puzzle; the first part is clearly Latin, and the termination (*caro*) would seem to point to the times when the Goths were masters of Ravenna and of all the country round about, although it may come from still earlier times when the Gauls occupied these hillsides. The first lords of whom we know belong to the Berengari family, from whom came that Duke of Friuli who was consecrated Emperor in 916 by Pope John X. The countship passed afterwards into other families. In 1118, the same year in which the Countess Matilda, daughter of an English Henry, gave the parish church of Sta. Reparata to an abbey at Faenza, the Count of Castrocaro was a certain Boniface, a rich magnate of

Faenza, whose descendants in 1160 gave hospitality here to the Emperor Frederick Barbarossa. During the next two centuries there were constant struggles between the two important families of Calboli and Ordelaffi, and the country was rarely at peace. The Counts of Castrocaro generally sided with Forli against Faenza, and once besieged and took the fortress of Imola, from which the efforts of the Pope could not dislodge them for years. Sometimes they were hard pressed themselves, especially when the Ordelaffi built the strong fort on the hill of Sadurano across the river Montone, which completely commanded them. But in spite of their quarrels as neighbors, all used to join in opposition to the extortionate demands of the Papal generals. Dante passed this way at the end of 1302, or the beginning of 1303, on his road from Arezzo to Forli; but it was probably party feeling rather than their innate wickedness which made him inveigh against the Counts of Castrocaro in the lines:

> "Ben fa Bagnacaval, che non rifiglia,
> E mal fa Castrocaro, e peggio Conio,
> Che di figliar tai conti più s'impiglia."
> —*Purgatorio, xiv, 116.*

Indeed, Fulcieri de' Calboli, who had been soundly abused in the preceding lines, and who was then Podestà of Florence, was a member of that family, and subsequently held the castle successfully against Dante's friends, the Ordelaffi. Five years later, in 1339, he sold the place for 6,000 gold florins to Francesco Manfredi, Lord of Faenza, but it proved impossible to carry out the bargain, and it came into the possession of the Ordelaffi as feudatories of the Pope. Three times the Popes sold Castrocaro to Florence, in 1364, in 1395, and 1403; but it was only in the last year that the Florentine Commissaries succeeded in getting possession of it, when the Chronicler observes: "Et fuit in decto Castro gaudium magnum et non de Forlivio." Its possession was greatly desired by the Florentines, because it secured to them the entire control of an excellent pass over the Apennines to the coast of the Adriatic.

Although, from this time on, the castle remained in the possession of Florence, that did not prevent the valley from being disturbed by wars in the neighborhood. In 1494 the French General d'Aubigny, marching through here to join Charles VIII. at Florence, was obliged, on account of the narrow mountain roads, to abandon his artillery, which was soon taken possession of by Caterina Sforza, who then ruled Forli. D'Aubigny passed Castrocaro again in 1501, when taking part in Louis XII.'s expedition against Naples. A few years afterwards, fear of the French caused the entire abandonment of Forli by its inhabitants, who all took refuge in Castrocaro, Dovadola, and the towns above. In 1537, a certain Achille del Bello, whose house still exists here, in order to revenge himself on some of his private enemies, formed a conspiracy to deliver the town to Piero Strozzi, but failed; and Cosmo I., for the greater surety of the frontier—especially as Castrocaro was ill disposed to the Medici—constructed the fortress of Terra del Sole, a little over a mile down the valley. A century later, in 1676, the fort of Castrocaro, which had probably already greatly suffered from an earthquake, was dismantled, and its garrison stationed in Terra del Sole, to which place all the Government offices were subsequently transferred.

Among the well-known personages of whose stay at Castrocaro we have some account, were Pope Martin V., who stopped here in 1418, while riding from Forli to Florence; Pope Julius II., who chose this route to go to Imola, as he did not wish to pass through Faenza, which was then held by the Venetians; and Macchiavelli, who (as may be seen from the dates of his letters) remained here for over a week in 1499, when on his embassy to Caterina Sforza. St. Anthony of Padua, in going from the Hermitage of Monte Paolo to Forli, to be present at a council of his monastic order, passed a night here at the house of the Corbici family; this was in Lent, 1222. While saying his prayers before going to bed, he had a vision of Christ as a boy, surrounded with a halo of heavenly light. A servant, terrified by the unusual glimmer which came through the cracks of the door, and fearing lest the house might be on fire, looked through the keyhole and saw the prodigy, on which he hastily ran down stairs to awaken his master.

As Castrocaro is mentioned in few guide-books, I was at first in doubt how to get here. I vainly questioned a number of Italians whom I met one evening in society, until an old judge admitted that he knew the place, since he had lived many years at Forli as Royal Procurator. He then entreated me, whatever I might do, never to pass through the village of Terra del Sole after dark; but his discretion was such that, to the amusement of all, he absolutely refused to explain why. When I had arrived here, the reasons became obvious. After Italy had become peaceful, it was found that a great benefit had been conferred on this valley by its annexation to Tuscany, and especially by the establishment of a free port at Leghorn. This region formed a narrow tongue of land stretching into the heart of the Papal States—a tongue so narrow that in some places the boundaries ran along the crest of low hills on each side of the river Montone. Each of the towns in the valley became the centre of a great contraband trade. Stalwart *spalloni* (as they were called) could easily take large packages of valuable goods on their broad shoulders, and within an hour or so deposit them in some safe place within the Papal territory. The buildings in all these villages bear witness to the wealth of their former owners. But smuggling had its necessary concomitant in brigandage, where the frontier of the Papal States could be so easily crossed; and, after the absorption of both Tuscany and Romagna into the kingdom of Italy, when the smuggling necessarily ceased, many of the old smugglers naturally turned brigands. At the time when my friend the Judge was living at Forli, brigandage was still rife, and his special annoyances were probably increased by the fact that his jurisdiction ceased before reaching the walls of Terra del Sole.

The most celebrated bandit of this region was Stefano Pelloni—called *il Passatore* from having been a ferryman near Faenza—who was noted through all the Romagna thirty years ago. The account of his life and adventures forms an often printed chapter of that cheap popular literature which, patronized by the extreme radicals, is doing so much harm among the half-educated Italian lower class. The *Passatore* is a very popular character, because a legend has grown up that he was the son of Pope Pius IX. and some duchess; and his career is therefore used to show the immorality of the Church and of the upper classes. He is credited with many remarkable exploits—some of them probably fictitious—such as the arrest of the Cardinal Legate at Bologna in his own house and the extortion of a large sum of money, and his capture of the Pope at Castel Gondolfo, through which he discovered his relationship and obtained a perpetual pardon for whatever crimes he might commit. One of his adventures, however, is undoubtedly true in the main, though some of the details are probably inaccurate, and is still the great story of these parts. The niece of the Austrian Field-Marshal Radetzky married an officer of high rank, and took a villa for the season not very far from here, in the neighborhood of the little town of Forlimpopoli. The Legate and other high personages from Bologna came on a visit; and it is even said that, in order to do honor to the Austrians, Cardinal Antonelli came on from Rome. The opera troupe then playing at Forli was induced to give a special representation in the theatre at Forlimpopoli, and as there were rumors of the presence of foreign princes incognito, all the great people of Forli drove out for the opera. The house was crammed. In the middle of "Lucia" the *Passatore* and some of his comrades suddenly appeared on the stage, and demanded not only all the money and jewels then in the theatre, but large sums besides. The alarm was general, but every door was shut and guarded by brigands, and people were obliged to return to their seats. More than this, all the gendarmes in the place had been arrested and confined in their barracks, and the city gates were guarded so that no messengers could be sent to other towns. After the harvest was reaped, the *Passatore* bade a polite good-night and disappeared, but it was not till early in the morning that the audience was allowed to disperse. This was the *Passatore's* last great achievement: soon after that he was tracked and killed. Portions of his band lingered on for a long time, making the roads unsafe, and in the first years after the unification of the country there was a temporary revival of brigandage, as I have said, on account of the cessation of smuggling. The last bandit of any note flourished for a few months in 1868 or 1869, a boy of nineteen of Ravenna called Gagino; a good-natured youth who cared only for the money he took, was always polite and civil—as I was assured by one of his victims—and paid the peasants whenever he found it necessary to levy their horses or carts. Since he was shot, brigandage has ceased, and the roads here are safer by night as by day than in the vicinity of most of our large towns.

Castrocaro abounds in dogs, of every breed, size, and color; and, on complaining of them one morning on account of their barking in the night, I was told that they were most important to the prosperity of the place, as they were all truffle-dogs. Not long after we were asked to subscribe for the benefit of a poor widow who had lost her only resource, a truffle dog, which she had refused to sell for twenty dollars, as he had brought her in more by being let out during the season. Here the breed of a dog counts for nothing, as it is simply a question of education. This is to a great extent true also in France, where truffles are collected more systematically and regularly, although pigs—and especially sows—are preferred in many regions. The pig hunts for the truffle with all the love of an epicure, and will eat it himself unless taught otherwise. With the dog, who would not think of eating the truffle, this is simply one kind of sport like another. Pigs, however, are so very sagacious and so easily taught to come to a point after they have uprooted the truffle, that it is easy to understand the preference given to them, for with a dog who can only indicate the place where the truffle is concealed it is necessary to dig until it be found, and this injures the root fibres of the oaks and other trees, among which the tubers are found, and has an effect on the crop for the next year. In this region truffles are chiefly found under old oak trees, and, as these are not too common here, in young oak plantations. No attempt has yet been made here to cultivate them artificially, and the methods of preserving this delicate fungus are so imperfect—olive oil being chiefly

used, and there being no regular provincial truffle-markets as in France—that in a good year a considerable portion of the crop is spoilt. The prevailing truffle is the *Tuber melanosporum*, the black truffle of Périgord, the great favorite in cookery. The summer truffle, the *Tuber Aestivum*, so common in France and not unknown in England, is rarely found here. Far more common is the white truffle, *Tuber magnatum*, the great delicacy of Piedmont and north Italy, which has a mingled odor of garlic, onions, high game, and old cheese.*

Correspondence.

THE COLORED VOTE IN THE SOUTH.

To the Editor of The Nation:

Sir: In the *Forum* for July, Senator (or, as you would say, Bill) Chandler reminds the people of the North of the suspension of the Constitution (or at least of its Fifteenth Amendment) in the States of the Solid South. He has not yet found a remedy for the evil; but, as he may find one hereafter, and in a certain contingency may induce the Fifty-first Congress to adopt it, I take the liberty of suggesting one phase of the question to him which he and most of his friends seem to have heretofore overlooked.

There is no doubt that in seven or eight of the Southern States enough of the negro vote to affect the result of State or Congressional elections is deliberately suppressed, not now by direct force, but by impressing the minds of colored voters and politicians that there is force in reserve when needed; and that organization, an active canvass, and full vote on the part of the colored men will not be permitted. Supposing, now, that a Republican majority should be returned to both houses of the next Congress, measures would undoubtedly be pressed to secure a full and free vote and "a fair count" to the Southern blacks. In the light of former experience we know that such measures would be futile; but let that pass. Let us suppose that force, intimidation, and bold frauds can be prevented by Federal law. What will you do about bribery?

In Kentucky there are about 50,000 or 60,000 colored voters. Nearly all of them claim to be Republicans. Outside of the three counties of Fayette, Jessamine, and Woodford, not the slightest attempt is made to suppress their votes or to count them out. At Presidential and State elections nearly all of them are polled for the Republican candidates. Nowhere do they vote more freely than in the city of Louisville. Two out of the seven Assembly districts regularly give Republican majorities *on the State ticket*. But they never do so when it comes to elect Assemblymen or city or county officials. And the reason is well understood. As the Democrats have never carried the State by less than 17,000 majority, they never spend a cent of money on their State or Electoral ticket. But as the Democratic candidates for the Assembly or the Council are "needed" by some of the great local corporations (for instance, the Gas Company), enough colored voters are bought up to secure the return of these candidates; the candidates for county offices do their own buying, hoping to be recouped out of the fees.

Now, should Senator Chandler succeed in what Senator Morton tried in vain to contrive—an effective Federal law for the prevention of "bulldozing" and of "tissue ballots"—he would still be confronted with a new difficulty: for not much more than two dollars apiece (to judge by Louisville prices) the Democrats of the cotton States could buy enough negro votes to secure themselves in the retention of their State governments. By introducing the secret "Australian ballot" in Congressional elections (which ought to be done anyhow), the use of bribery in the choice of Congressmen might be discouraged to some extent; but still it would be very easy to bribe the colored voter into withholding his ballot altogether. Here is a nut for Senator Chandler to crack.

Very truly, L. N. D.

Louisville, Ky., July 24, 1888.

THE DUTY ON NON-ENGLISH LITERATURE.

To the Editor of The Nation:

Sir: If there is one duty in the present tariff more absurd and unjust than another, it is the duty on books printed in foreign languages. Twenty-five per cent. is charged on all foreign books alike, whether they be in the English language, in German, French, Chinese, or Hottentot. From the point of view of protection, this duty protects nothing and nobody. We cannot foster a French literature, for instance, in this country by any amount of protection. There are no publishers or writers to be protected by any tariff of this kind.

As a measure for revenue, this tax is an imposition on all advanced science and learning in this country. The specialist, who is but too often a teacher dependent on a meagre salary, must buy French and German books in order to maintain his standing and keep up with his specialty; and, in addition to the regular cost of importation, he is required to pay a tax which is often prohibitive. Further, this tax falls heavily upon the increasing class of cultured people with short purses who take an interest in contemporary foreign literature. For a book whose *list price* in France is 3⅓ francs (67 cents), one must pay a dealer in this country $1.25. If the book were free of duty, the dealer, who can buy it in France at 40 per cent. discount, should make a fair profit by charging the American buyer about the equivalent of the foreign list price.

It is certainly worth while for legislators who desire to favor science, learning, and general culture to see that, if the duty on all books be not remitted, at least the books printed in foreign languages be allowed to enter this country free of duty. H. M. Stanley.

Lake Forest University, Lake Forest, Ill., July 26, 1888.

THE FENCE-WIRE INDUSTRY.

To the Editor of The Nation:

Sir: I have just read Mr. Stevenson's attempted defence of the duty on the raw material of fence wire. I have read it sitting in a farmhouse whose owner (the father of the writer) would be glad to use thousands of yards of wire fencing if it could be had at reasonable prices—say present rates minus 45 per cent., the amount of duty, according to Mr. Stevenson's figures. This farm is not an exception. There is scarcely a farm in the community which could not profitably use much more wire fencing if it were not so expensive. There is no one even superficially informed as to the condition of agriculture who does not know how severely the farming portion of our population is taxed to keep its fields well fenced.

Are 10,000 men engaged in making iron and steel for fencing? If Mr. Stevenson will take the pains to ride over such regions as eastern Ohio, Virginia, and West Virginia, he will find visible evidence that there is a much greater number engaged in futile attempts to preserve the growing crops from the depredations of unruly live stock by piling brush upon worn-out Virginia worm fences. The wearisome cry of "Cattle in the cornfield!" has come to the writer's ears more times than the moon has changed within the last six weeks. Give the farmers cheap fencing wire, and many more than 10,000 men will be put to work constructing fences. J. H. W.

LE CONTE'S EVOLUTION AND THEOLOGY.

To the Editor of The Nation:

Sir: Your correspondent, "W. M. S.," in his communication criticising Prof. Le Conte's recognition of the inequality in the rate of change which is perceptible at times in the progressive order of nature, asks "what consistent scientific meaning the word development (or evolution) can have when it is no longer antithetical" to such inequalities, asserts that "the whole effort of the evolutionary theory is to do away with breaks and leaps," and stigmatizes their recognition as going "into the old camp."

There are many theories of evolution, of varied quality, good and bad, but the passages cited indicate that the writer has something else in his mind than the theory of evolution accepted by scientific men. When, under certain conditions, gases form water, though the time of evolution is practically instantaneous and the physical properties of the product totally new, scientific evolutionists see no solution of continuity in the order of nature, nor does their theory receive a shock. That theory endeavors to offer an harmonious explanation of facts as they are observed, not to do away with inconvenient truth, and it knows nothing of "camps." A careful perusal of Prof. Le Conte's book, which a review can only very inadequately summarize, will probably assist "W. M. S." more effectually to the desired "clear thinking" than any explanations which might be offered by the Reviewer.

Notes.

G. P. Putnam's Sons will publish this fall the second and concluding volume of Prof. Chas. F. Richardson's 'American Literature (1607-1885)'; 'Essays on Practical Politics,' by Theodore Roosevelt; Moncure D. Conway's 'Omitted Chapters in History,' already announced; 'Christian Doctrine Harmonized,' by Prof. J. S. Kedney; 'Behind Closed Doors,' by Anna Katherine Green: 'The Story of Media, Babylon, and Persia,' by Z. A. Ragozin; 'The Story of Mediæval France,' by Gustav Masson; and 'The Story of Mexico,' by Miss Susan Hale.

Ticknor & Co. will shortly issue 'A Sea Change; or, Love's Stowaway,' a lyricated farce, by W. D. Howells; a new and enlarged edition of Edward Stanwood's valuable 'History of Presidential Elections'; 'Newspaper Libel: a Handbook for the Press,' by Samuel Merrill of the Boston *Globe;* and 'A Mexican Girl,' by Frederick Thickstun.

We learn from the *Library Journal* that Houghton, Mifflin & Co. expect to issue the five years' supplement to 'Poole's Index to Periodical Literature' in the latter part of September. It covers the years 1882–1886. Few persons have any adequate conception of the wide-

* For those who are interested in truffles I can recommend a very instructive and entertaining book, published among the recent issues of the "Bibliothèque Scientifique Contemporaine" (Paris: J. B. Baillière & Fils. 1888), 'La Truffe,' by Dr. C. de Ferry de la Bellone.

spread use of this invaluable work, or of the extent to which the trade in back numbers of periodicals has been revived by it and given stability.

Wm. S. Gottsberger publishes this week 'An Iceland Fisherman,' from the French of "Pierre Loti" by Clara Cadiot.

Worthington Co. have nearly ready 'Studies in Criticism,' by Florence Trail.

A 'Life of Grover Cleveland,' by Wm. O. Stoddard, is in the press of Frederick A. Stokes & Brother.

George Sherwood & Co., Chicago, publish directly 'The Virtues and their Reasons: a System of Ethics for Society and Schools,' by Austin Bierbower.

A school or home edition, for children, of Franklin's Autobiography, prepared by D. H. Montgomery, who has added notes and continued the life to the end, has been published by Ginn & Co., Boston. It is a pity that no mention is made of Franklin's closing efforts to effect the abolition of slavery through the Pennsylvania Society of which he became president.

The fourth volume of Browning's latest own edition of his 'Poetical Works' (Macmillan) contains a "A Blot in the 'Scutcheon," "Colombe's Birthday," and "Men and Women."

The Bancroft Co., San Francisco, publishes a little book by H. C. Sawyer, M.D., describing in popular language the condition known as 'Nerve-Waste.' It is loosely written, but without exaggeration, and, unlike so many professional books for the laity, it has no injurious tendency. The drift of its advice to the invalid is to seek advice—which is good counsel when wisely followed.

The sixth American edition of Tanner's 'Memoranda of Poisons,' a standard work, is well printed and conveniently arranged for physicians, to whom chiefly it is useful. A late edition should have some reference to the bad effects of cocaine when too long administered, and an American book might properly note the action of gelsemium (yellow jessamine) when accidentally administered.

"Two Art Critics" have published a skit under the title 'Pictures at Play' (Longmans, Green & Co.), with illustrations by Harry Furniss. It makes a pamphlet volume, and is the vehicle of satire on artists and statesmen, especially Mr. Gladstone, which is often more rollicking than pointed. It is a product of the London climate, true-blue, and of more interest to young British artists who are also Tories, than to any others.

Perhaps there is something in the present political condition of France to increase the popular interest in caricature, for half-a-dozen books about comic art have recently appeared in Paris. There is M. J. Grand-Carteret's substantial volume on 'Les Mœurs et la Caricature en France,' with its eight colored plates and its five hundred cuts scattered through the text. There is a new edition of the Goncourts' life of Gavarni, and there is a new life of Henri Daumier, the only French comic draughtsman of the century worthy to stand beside Gavarni. There is M. Champfleury's 'Musée Secret de la Caricature,' apparently the final volume of his series of books on comic art; and there is also 'Les Maîtres de la Caricature Française au XIXe siècle,' which the *Figaro* has patronized, and which Quantin has published almost simultaneously with the holding, in the spacious halls of the École des Beaux-Arts in Paris, of a loan exhibition of the works of the later French humorous artists. In this loan exhibition, as in the Quantin book, the honors are all with Gavarni and with Daumier. Many of the most interesting sketches shown at the Beaux-Arts are reproduced in the 'Maîtres de la Caricature': in each there were drawings by Victor Hugo, Gustave Doré, André Gill (a very funny Thiers as the 'Fille de Mme. Angot'), Cham, É. de Beaumont, and Traviès de Villers. There are reproductions of Daumier's four sketches likening Louis Philippe to a pear—although no single caricature of the French artist is quite as funny as Thackeray's drawing of the *décès-poire*. To the 'Maîtres de la Caricature Française' M. Armand Dayot contributes a prefatory notice of French caricature in this century—a notice both inadequate and stiff.

Everything from the pen of Dr. von Döllinger is welcome. The first volume of his 'Akademische Vorträge,' just published (Nördlingen, 1888), contains a dozen discourses delivered before the Akademie der Wissenschaften of Munich on various occasions between 1875 and 1887. Of some of them only condensed reports have hitherto been printed; others the author has expanded into essays, and the reader of history will be glad to have them collected and preserved in their present attractive shape. The subjects show the wide extent of Döllinger's intellectual range. The Importance of Dynasties in the World's History; The House of Wittelsbach and its Importance in German History; The Relations between the City of Rome and Mediæval Germany; Dante as a Prophet; The Struggle of Germany under Ludwig of Bavaria with the Papacy; Aventinus and his Age; The Influence of Greek Literature and Culture on Mediæval Europe; The Origin of the Eastern Question; The Jews in Europe; The Political and Spiritual Development of Spain; The Policy of Louis XIV.; Madame de Maintenon — these are nearly all subjects of first-rate importance, and worthy of the author's vast and accurate learning. His clearness of vision and honest impartiality secure the reader's fullest confidence, while his simple and straightforward style renders the discourses most agreeable reading.

From A. H. Smythe, Columbus, Ohio, we have a pamphlet description of 'The Battle of Gettysburg,' by Alfred E. Lee. What gives this publication any special distinction is the twenty full-page nature prints of the Ohio memorials on the great battle-field. A more extraordinary collection of bad monuments it would be hard to find—except, perhaps, on other parts of the same field. Barely one or two are tolerable to an eye not wholly blind to beauty.

'The Tariff Question' brochure which issues from the office of *Puck*, and which combines cartoons (reduced in scale) and the habitually sensible and forcible editorial accompaniment, is well calculated to further that journal's steady propaganda on behalf of good government. It is free from anything objectionable on the score of taste, and deserves to be widely circulated.

Mr. Lowell's address on "The Independent in Politics" is now accessible in a variety of forms—first in the bound volume of his political essays just issued by Houghton, Mifflin & Co., then separately, as one of the Messrs. Putnam's "Questions of the Day" series (No. 48), and finally as the first of the Reform Club Series of this city.

The Reform Club has begun, at 52 William St., the publication of a semi-monthly journal of handy dimensions called *Tariff Reform*.

The *Public Service Review*, whose publication office is 83 Nassau St., having completed its first year as a weekly newspaper, now turns monthly, and presents in its first (July) number a model of typographical comeliness embalming much interesting matter.

The *Journal of Pedagogy*, published at Athens, O., is to be enlarged in its second volume, and appears to have justified its foundation.

"An American Statesman" is the title of a sketch of Henry Clay contributed to the *Deutsche Rundschau* for July by Anton E. Schönbach. It is an intelligent and interesting, though necessarily brief, review of the principal political questions of Clay's times, showing his position on each of them. The writer exhibits a familiarity not merely with his subject, but with our current American politics. He closes, for instance, a paragraph on Clay's part in the division of the surplus among the States with a warning against those politicians (he carefully distinguishes between politicians and statesmen) who, notwithstanding the fact that "those unfortunate financial operations serve clearly and distinctly as a frightful example," wish, for the sake of winning the favor of the masses, to carry now the same measures. The article gives no personal incidents in Clay's life, but confines itself to his political career, closing with a warm eulogium of his latest biographer, Carl Schurz, who by this work has a new claim upon the gratitude of "his second fatherland." While regretting his loss to Germany, the writer consoles himself with the reflection that it is her mission and destiny to send forth men "who have devoted their highest powers to the upbuilding of a foreign State."

The principal paper in the *Scottish Geographical Magazine* for July is by Dr. John Murray, "On the Effects of Winds on the Distribution of Temperature in the Sea and Fresh-Water Lochs of the West of Scotland." It is accompanied by numerous tables of observations and charts so colored as to show the temperature at various depths in the different seasons, and is intended to uphold the theory that the prevailing winds of the globe, together with temperature and evaporation, "are chiefly concerned in the production of ocean currents." He calls attention, however, to the fact that Mr. Alexander Agassiz, in his 'Three Cruises of the *Blake*,' does not consider the winds a sufficient cause for existing currents. Incidentally, he strongly opposes the proposed prohibition of certain kinds of fishing, especially beam-trawling, on the ground that it has not been proved to be so destructive to the fish as has been claimed, and that many men, therefore, would be thrown out of work "because it pleases the State to make an idle experiment." Mr. Henry M. Cadell treats of the "Utilization of Waste Lands," having especial reference to Scotland. The causes for this condition he classifies as follows: human improvidence, poverty of soil, dense vegetation, slight submergence, drifting sand, and want of soil; and suggests remedies in all cases, naturally excepting the last.

Dr. Heinrich Kiepert has compiled a map of Asia Minor in twenty-four sheets, which he withholds from publication pending a contemplated journey to that region for the sake of final revisions. He complains with justice of the refusal of the British War Office to allow him the use of its military topographical reconnoissances in the eastern part of the peninsula, which were to see the light "in due time." He intimates that the secrecy observed has reference to some future collision with Russia, who, Dr. Kiepert remarks, is probably by no means dependent for her knowledge of Asia Minor on British information. The large map in question has been used as the basis (by reduction) of a wall-map of ancient Asia Minor in six sheets (Berlin: Dietrich Reimer). It is needless to say that the latter becomes at once of the highest authority. Every known resource has been availed of in its preparation, down to the

travels of Ramsay and Sterrett. Ramsay's discoveries have enabled Dr. Kiepert to lay down the whole of Cn. Manlius Vulso's campaigns against the Galatians in 189 B. C., in elucidation of Livy's narrative. Only the beginnings of the Anabases of Cyrus the younger and Alexander are shown.

The same eminent geographer and publisher have produced a wall-map of ancient Latium, in four sheets, with a side-map of the territory contiguous to Rome. Here the modern names accompany the ancient. Assistance in the study of Livy has been especially kept in view. Curiously enough, this publication has been induced by the fact that a similar map of Kiepert's, compiled forty years ago, is still marketed, and his only method of suppressing is by supplanting it. The physical groundwork is of course vastly improved. Elevations are everywhere indicated.

—*Scribner's* for August continues the railroad papers, which are its leading feature, with a fully illustrated article upon Locomotives and Cars, in which that branch of the business is treated with more adequacy than the narrow limits of the writer would have led one to expect. The history of the development of the modern engine and car out of such rude originals as these cuts show us once in use on the old Baltimore road, is followed out with some lack of system, but with sufficient continuity, and the exhibition of the different kinds of locomotives now made and of the methods of their construction is altogether admirable. On the whole, Mr. Forney has grappled with a difficult subject very successfully, and he has been much aided by the many admirable illustrations accompanying the text. Prof. Shaler contributes a new chapter of the "Earth's Surface," dealing this time with the character and history of river valleys in his accustomed graphic vein, and with the outlook he always keeps upon practical matters. He utilizes his present opportunity by urging once more on public attention the plan of regulating the overflow of the flood-waters by means of a system of a very large number of small reservoirs to receive the spring surplus, and to release it slowly through the summer months; the project has been fully explained before. The remainder of the number is occupied with summer fiction of a kind to pass the time without too much weariness of the intellect. Mr. Stevenson winds up with a well-told adventure of his tramping days in France, in which he has free play for the most entertaining and attractive qualities of his style.

—*Harper's* is not remarkable for any special feature in this month's issue. There is a falling-off, even, in Mr. Warner's studies of Western cities, the sketches of Cincinnati and Louisville being destitute of color and of that larger interest, beyond the specifications of the guide-book, which was noticeable in the author's writings about the Northwest. Mr. Conway's "Chiswick Ramble" is most agreeable to read, but the ground is a well-beaten one, and Hogarth is a name that has been used to conjure with very often. The paper on the Montagnais, a tribe of Indians not far from the Saguenay, is also excellent in its own way; this tribe, however, has no special character to make it an object of unusual curiosity. In the lack of literary matter, Mr. Abbey's illustrations of the ballad of "The Leather Bottel" rise to the dignity of an article. Both he and Mr. Parsons, in his illustrations of Wordsworth's sonnets, have struck inexhaustible veins. Mr. Hoxie's account of the Holstein-Frisian cattle appeals to a somewhat narrow audience. The conclusion of Rider Haggard's novelette shows, happily, how near he is getting to the end of his run; but it is rather the second "West Indies" paper of Lafcadio Hearn, with its color-symphonies, its smouldering sensualism, and its other affectations and incompetencies, that touches low-water mark. Having mentioned so many second-rate or worse contributions, we will not be so unfair as to leave Mr. Childs's sketch of Botticelli unnamed. In fact, this number is abandoned to "the magazinist" to an unusual degree.

—The Lick Observatory is soon to have a rival nearly 1,000 feet higher than Mount Hamilton, and situated in Colorado, at an elevation of 5,000 feet above sea level. Mr. H. B. Chamberlin, of Denver, provides the funds for its erection; and the main instrument will be a twenty-inch telescope, a size quite sufficient for nineteen-twentieths of all astronomical work, and much less unwieldy than the great Lick telescope with a thirty-six-inch lens, and a tube nearly sixty feet long. The new observatory will be attached to the University of Denver, and its director will be Prof. H. A. Howe, formerly of Cincinnati, who is now in the Eastern States on a tour of inspection of the principal observatories before building his own. It is to be hoped that the provision of ample endowment for its maintenance has engaged the attention of the University, since there is no end to the excellent work which good observers can do in a climate astronomically so fine as that in the mountains of Colorado. Men cannot, however, even for the sake of a favorite science, live up in the mountains year in and year out with little or nothing. Provision for active maintenance is of equal importance with the building and equipment of such an institution.

—On June 1, the Lick Trustees formally made over their Observatory to the University of California, in accordance with the provision of the will of the donor. The President of the Trustees, Capt. Floyd, being necessarily absent on the occasion, through ill health, it was a fitting time to recount the great service he has rendered to American astronomy in his wise management of the affairs of the Observatory for a period of twelve years. To him more than to any other is due the successful realization of the first mountain observatory. It is most unfortunate that so little of the original bequest should remain for a permanent endowment; but it would seem that the management of the institution is not thereby to be greatly hampered, as the State apparently fully appreciates the gift of Mr. Lick, and is abundantly able to care for it properly. Great preparations have been made for visitors to the Observatory, and freer access is allowed than to any like institution in the world, it is said. The buildings are opened to visitors during office hours every day in the year, and on Saturday nights, between the hours of seven and ten, views of the heavenly bodies through the great telescope will be permitted. It is to be hoped that the Director's request to be allowed the uninterrupted use of the telescopes at all other times will be strictly regarded.

—'The Early History of the English Woollen Industry,' by W. J. Ashley (Publications of the American Economic Association, vol. ii, No. 4) "deals with a strictly limited subject: it does not, save incidentally, touch the history of the raw material, its production, quality, and price; nor that of the finished article after it has passed into the hands of the dealers. It is with the intermediate stages that we are here concerned —the position, organization, relations among themselves of those actually engaged in the manufacture." On the whole, the author has done his work very well. He deserves particular credit for his skilful grouping of well-known facts regarding the development of English industry in general; and, above all, for his clear exposition of the relations between the various bodies of artisans and merchants engaged in the English woollen trade and industry of the Middle Ages. His most serious error is the acceptance of Brentano's theory that the banding together of craftsmen in English towns was a revolutionary movement; frequent conflicts occurring between them and a "burgher oligarchy," from whose privileges they were excluded (pp. 18-25). The fact is, that in the twelfth and thirteenth centuries the government of most English towns was in the hands of the burgesses at large, who consisted, in no small part, of craftsmen. Mr. Ashley is also guilty of a sin of omission in not speaking, even incidentally, of the decay of many large towns in the fifteenth and sixteenth centuries, owing, in great part, to the transfer of the woollen industry from the old privileged boroughs to the open country and to smaller "free-trade" towns.

—Mr. Ashley's 'Introduction to English Economic History and Theory' (London: Rivingtons. 1888. Pp. xiii, 227) is divided into three chapters—The Manor and the Village Community, Merchant and Craft Guilds, Economic Theories and Legislation—each chapter being preceded by a brief account of the authorities consulted. The volume before us deals with the period extending from the eleventh to the fourteenth century, and constitutes Book I. of the whole work. Each chapter by itself forms a distinct essay. Nevertheless, all three chapters are organically connected, representing three stages of economic development. The first deals with the agricultural or village economy; the second, with the trade or town economy; the third, with the preparations for a national economy through the teachings of the Church and the regulative measures of the State. Hence in this last chapter such subjects as the history of currency, usury, weights and measures, etc., are discussed. In the first two chapters the "spontaneous" economic development of the village and the town is traced; the third chapter shows "how the forces of Church and State took hold of the growing society, and attempted to control its activity." As in his 'Early History of the Woollen Industry,' so in this volume, Mr. Ashley's central idea concerning the general development of municipal government is erroneous. Generally speaking, English towns were not, as he asserts in chapter ii, governed by an oligarchic Gild Merchant, which excluded the plebeian craftsmen from participation in the municipal privileges until they threw off the yoke of their oppressors. The whole of this chapter would have been greatly improved if the author had consulted more of the literature relating to particular towns. Among his sources, those pertaining to London figure too prominently, while those pertaining to provincial towns are not conspicuous enough—a prevailing weakness of writers on English economic history. But the purely economic portions of his work are excellent. The author's reading is extensive, and the presentation of his facts is always lucid. He has brought together in this small volume a large amount of information hitherto not easily accessible.

—The recent celebration of the eighth centenary of the University of Bologna has, according to Italian papers, been followed in Pisa by a postlude of strangely mediæval character. The fancy of the student delegates from Pisa was struck, it seems, by the histori-

cal red, blue, and green Faculty caps worn by the Bolognese students during the festival, and superinduced a transplantation of the academic "colors," in this form, to Pisa. This innovation, for some reason, engendered the animosity of the Pisan populace. A secret and formal garrote was organized to suppress the offensive distinction between town and gown, and injuries of the students by the midnight dagger of the conspirators became a common occurrence. Latterly, the narrow escape from stabbing of a student named Fori provoked the agitation of a wholesale exodus on the part of the objects of the inexplicable popular feeling. Such an outcome of the inefficiency of the municipal authorities, besides threatening the Philistine world of Pisa with a serious loss of income, began to endanger the future of the University itself. Luckily, Minister of Instruction Coppino was induced by a telegram from the University authorities to bring about the adoption of special measures not unlike the "small state of siege" which is occasionally decreed in Continental cities. Nocturnal patrols by the military, and the so far fruitless activity of a corps of Government detectives, are its chief features. The students have been authorized to carry arms until quiet reigns again. Actually, however, large numbers of the students have shaken the dust of Pisa from their indignant feet, and betaken themselves to other schools where they have reason to believe they can wear their colored *birette* free from molestation. They go mainly, of course, to Bologna.

—The principal literary article of the current number of the *Revue des Deux Mondes* is an essay by P. de Nolhac on Erasmus's sojourn in Italy, 1506–1509, based upon a number of inedited letters of his discovered by chance in the Vatican. In 1506, Erasmus, now in his fortieth year, was residing in London. Of his great works, only the first edition of the 'Adagia' had appeared. Thrice he had been on the point of going to Italy to study Greek, but each time circumstances had interfered. In 1506, Baptista Boyer, the Genoese physician of Henry VII., wishing to send his two sons to Italy to complete their education, offered the position of tutor to Erasmus. He accepted, and his journey was fraught with the most important consequences. After a brief sojourn at the University of Bologna, he was obliged, by the advance of the army of Pope Julius II., to take refuge in Florence, where he met Machiavelli. On his return to Bologna, he was again compelled to flee—this time by the outbreak of the pestilence. By this date he had revised and enlarged the 'Adagia.' In 1508, he went to Venice at the invitation of his publisher, Aldus, who promised to show him new manuscripts and to introduce him to the greatest Greek scholars of Italy. Venice was then in its glory. At the end of eight months, Erasmus went to Padua as tutor to Alexander Stewart, the natural son of James IV. of Scotland. Soon the League of Cambray drove the student thence, and after a brief sojourn at Ferrara, the court of Lucrezia Borgia, Erasmus arrived at Rome in the early part of 1509. Here he met Egidio di Viterbo, general of the Augustinian order, Tomasso Inghirami, "the Cicero of his age," Cardinal Giovanni de' Medici, afterwards Pope Leo X., whom Erasmus always regarded with esteem, and perhaps Raphael. He saw the foundation of the Church of St. Peter, the bull-fights, which he stigmatizes as a relic of barbarism, and the Laocoon, lately unearthed at the baths of Titus. In 1509, declining a tempting offer from Cardinal Grimani, Erasmus returned to England by way of the Splügen, the Rhine Valley, and Flanders. Henry VIII., his patron, had just ascended the throne. The result of his Italian journey is evident in the 'Praise of Folly.' The refinement of his satire and the excellence of his Latin style are the fruits of a three years' sojourn among the most cultured people of Europe. But there was a still more important result: the near and clear view of the Italian clergy which he had taken, satisfied him that they were not as corrupt as Luther painted them. This fact, and the close relations with prominent Italians which he maintained through life, kept Erasmus from joining the great Protestant when the latter passed out of the Roman Catholic fold.

HENRY H. RICHARDSON.

Henry Hobson Richardson and His Works. By Mrs. Schuyler Van Rensselaer. With a portrait and illustrations of the architect's designs. Houghton, Mifflin & Co. 1888.

It is difficult to judge how far the reputation of a professional man extends outside the circle of his profession and clients; but in Richardson's case it is clear that his work carried his name with it far beyond this circle, and that his reputation may fairly be called national. This is an entirely new phenomenon with us, and the wonder is that any architect should have won such a reputation; for Americans, though they build a great many buildings, have on the whole very little interest in their architectural quality. But Richardson's uncommon personality so embodied itself in his works that they will not be overlooked any more than would his own presence. We have heard a friend who made the tour of Europe with him say that wherever he was, he seemed to pervade and possess his whole surrounding, not by arrogance or a domineering instinct, but simply by virtue of the fulness of the life in him. This life showed itself in an inexhaustible energy, in an enthusiasm more genial than combative, not headlong, but sustained, so abounding and at times vehement that few men and few bodies of men could resist it. Add to this, unfaltering convictions, with a mental grasp which seized instinctively the essentials of the matter before him, and an unlimited power of work, and we have a man admirably efficient for the open field of his profession. It was first as a man among men that his personal power asserted itself. It would have made him conspicuous as a politician or an advocate, no less than as an architect. We have heard him say that the famous students' rebellion against Viollet-le-Duc in the Ecole des Beaux-Arts was planned in his rooms at Paris, though it is likely enough that as a foreigner he took no active part in it. Without these gifts of character and the power they gave him, neither talent nor training would have secured him the success he won, but, having all together, he was irresistible. A public official once exclaimed, after Richardson had battled tenaciously half a day for some unacceptable project: "Mr. Richardson, I do not know whether it is conviction or fascination, but I yield to you."

As with the man, so with his work; wherever it is, it challenges notice, and not because it is designed in a style which was new in this country, but because of its largeness, singleness of effect, and vigor. The general impression of Richardson probably is that he had an enormous practice, and that almost all his buildings were large and important; but plenty of architects in the country have in this respect far outdone him. The list of his works given by Mrs. Van Rensselaer, which she believes to be complete, counts only eighty buildings, distributed over twenty years of practice. A few of these were actually designed by Mr. Gambrill during their partnership, and nearly twenty were left for Richardson's successors to finish—some not fairly begun. It was not till the last six years of his practice that commissions came to him in any considerable number, and even then only half as fast as to some of his fellows. There are among his works half-a-dozen churches, but only one on a conspicuous scale. There are a number of libraries, railway stations, and municipal buildings, but, with one or two exceptions, they are not large. Hundreds of such buildings are going up all over the country without attracting attention. Among the whole eighty, the only buildings which by their own conditions are of noteworthy importance, are Trinity Church (Boston), the Capitol at Albany, the Albany City Hall, the Pittsburgh county buildings, and the Cincinnati Chamber of Commerce. Among these, only fragments of the Capitol are from Richardson's designs; he did not live to see the Pittsburgh buildings finished, nor the Chamber of Commerce begun. This is not a large showing. There are architects among us who build public buildings by the dozen and churches by the score. The importance of Richardson's works is the importance which he has put into them, not that of their number or of their size.

It is likely that their small number enhanced the quality of his designs, for the work of the very busy architect is apt to deteriorate. It is easy to point out architects whose early successes showed great promise, but whose talent has been swamped in the multitude of its creations. In no art is facility more dangerous; but there is nothing facile in Richardson's work. He was apparently one of the artists who, as Hamerton says, produce work of the best quality, but have not the power of improvisation. The faculty of instantaneous execution, which has so great a charm in painting that many painters value it above all others, is more convenient than vital in architectural design. Instead of it, Richardson had what are far more valuable to the architect—unusual strength of conception, and a critical faculty that never tired. Starting from a clear idea, tenaciously held, his designs evolved their form through a series of approximations. On the other hand, if facility is dangerous to an architect, fumbling is fatal; but Richardson did not fumble. The final result usually had the decision and the unity of an idea spontaneously expressed, added to the quiet strength of deliberate conviction. The process was often laborious: he never spared labor. It had its inconvenience for his client, and would have been dangerous, perhaps fatal, to his practice but for his rare power of commanding the client's trust and patience. He spent thrice the strength on his work that an average architect would have given it, and often thrice the time; but the result was apt to be three times as good.

The outcome of all this was extreme independence of architectural fashion. Every undertaking was to him a new problem, to be solved at first hand. If the solutions were not always happy, they were always direct, consistent, and interesting. When they failed, it was because some elements of the problem were overlooked. A man of less power would have failed disastrously in this independent effort; a man of less training would have run into every extravagance of design. Pupilage in the French school and some years of work in the offices of Hittorff and Labrouste had taught him what design was, and given him the power to use

architectural forms safely. When he came to his own work, and, like almost all Americans who have studied architecture in Paris, abjured the style in which he had been trained, he had to find a style—that is to say, a harmonious mode of expression for his ideas. How lame his first utterance was for want of this, his first church at Springfield shows, in which, though the composition is excellent, the details are not only ungrammatical, but inelegant and inharmonious. He once said, we are told, that if he could arrange the massing of a design, any one might arrange the detail. To this he never could really have consented, yet his earlier works show more or less in their detail the handling of the clever assistants who worked under him, and with some detriment to the unity of the whole. But as his style shaped itself, his control extended through the whole work, and Mrs. Van Rensselaer's story shows how he wrought it out to the end through the hands and brains of others.

Richardson was eclectic, but with the eclecticism of a man in whom the sense of style was always dominant, whose convictions were positive and permanent. He found a Romanesque style which was peculiarly suited to his mode of design—a style in which the detail was most definitely subordinated to mass and surface. Simple forms underlay his designs. He never forgot the value of a right angle or a round curve—elements of design which he found almost contemptuously neglected: the square and the circle, the most vigorous of elementary motives, were his favorites. He delighted in broad surface, subdued richness, and restrained emphasis. His use of these things was a revelation to younger architects. He found American architecture in the *Sturm und Drang* period, given over in great part to violent striving—restless, incoherent, and exuberant. His example has gone far to turn it back to simplicity and quiet design, an influence for which we cannot be too thankful. It is not easy to imitate the best qualities of Richardson's work, to repeat its vigor, its restrained animation, the beauty of its proportion and adjustment, the artistic charm of its ornamental handling; but the experience of many imitators shows how easily its obvious qualities can be caught. He had his excesses, and his imitators have no difficulty in outdoing him in a baldness or uncouth roughness which were his occasional faults, but not his characteristics. Indeed, there is some color for the complaint of a brother architect that if Richardson's influence should last for a generation, there would not be a man left in the country who could design a moulding. But Richardson was always an artist, and his decorative feeling, preferring surface ornament to lines and mouldings, asserted itself in a refinement in which only an artist could follow him, and which gained as he developed.

Mrs. Van Rensselaer's biography has the qualities which come from a bright mind and a practised pen. It is rather sisterly than judicial in tone; and this makes her presentation of the man himself none the less interesting or valuable. The account of his works is full and long — too long, we should think, for the average reader, and not precise enough or detailed enough for the professional. The criticism is that of the intelligent layman, somewhat tinctured with the doctrinaire maxims of the day, and accented here and there with a technical phrase. The book is issued from the Riverside Press in an *édition de luxe* quite in keeping with its subject—a large quarto, or perhaps folio, of heavy paper, ample margin, and abundant illustrations—of which only five hundred copies are printed. The illustrations are heliotypes from the buildings themselves, or reproductions of the drawings in Richardson's office, and are very well executed. Naturally, the selection is limited by what was available, and we miss some things that we should have liked to see, especially plans and sections to illustrate the heliotypes; but enough are given to show well Richardson's characteristics. The work, we are told, is a memorial of personal regard, not a publisher's venture, and it is one to be grateful for, though it cannot reach a large circle of readers. Now that it has once been issued, it would be possible to republish it in simpler form at a quarter of the cost, and in that way it might come into the hands of the younger generation of architects, to whom it would be most valuable.

A Teacher of the Violin, and Other Tales. By J. H. Shorthouse. Macmillan & Co.

In the history of American fiction nothing is more interesting than the appearance within half-a-dozen years of a host of Southern writers. They have not worked slowly upward from the rank and file, but rushed to the front and won the prize of public favor almost without a struggle. Uncritical readers have devoured everything descriptive of distinctively Southern scenes, life, and character, and professed critics seem to have agreed to declare each new-born Southern story-teller to be the greatest living master of his art. One need not go far to find an explanation of this spontaneous movement towards expression in fiction extending over a third of the Union, nor to arrive at the cause of equally spontaneous homage. The Southerners of this generation have innumerable stories to tell, and the public never fails to detect the presence or absence of that fundamental requirement for good story-telling. It needs but little imagination for a Southerner to tell a tale of hearts broken and homes laid waste, thus securing for an audience the whole comfortable world, ever eager to share through the emotions those tragic experiences in which it has no actual part. But the tenderness of the critics is decidedly more mysterious. Perhaps it may be accounted for most easily by supposing that they were getting tired of abetting the Northern realists in their efforts to show how, in fiction at least, something can be made out of nothing, and shamelessly seized the first chance offering to stand for opinions more rationally tenable. It is questionable whether either a chorus of condemnation or columns of discriminating analysis would have greatly benefited the young Southern writers; but there is no doubt that injudicious, extravagant praise has done them much harm.

The author of 'Monsieur Motte,' we hasten to say, has learned to write with the force, precision, and grace which make style, and which are qualities indispensable for the attainment of rank in the literature of any language. She lapses occasionally into floridity and extravagance, but, for the most part, her language is singularly pure, conveying her thought with perfect lucidity, and describing her scenes with the least effort and the greatest vividness. She totally discards the dialects, verbal corruptions, jargon, which have been reproduced or invented by her confrères with such astonishing facility. She sketches phases of creole life in Louisiana in easily intelligible English, relying for her local color on careful description, and on a thoughtful and sympathetic interpretation of the spirit of a race which she thoroughly understands. Her people speak an English which is French in idiom and incisive brevity, but which, instead of tormenting the reader, enables him to realize their passion, their piquancy, their folly and simplicity, as formal English never could. It helps him to love them and their surroundings, as one cannot read 'Monsieur Motte' without feeling that the author does with all her heart. The book has a personality, and a rarely versatile and charming one. It is strong and tender, merry and sad, refined, yet not falsely delicate or squeamish. It has, above all, that preëminent feminine grace which women so seldom bear with them into the kingdom of letters. The whole story of the quadroon Marcilite's devotion to Marie Motte quivers with passion. It is the passion of half-savage humanity unrestrained by reason. Yet it is womanly to the depths. Nourrice, who recognizes her young master at a ball, and claims his protection, is a hag, yet instinctive loathing for her personality disappears before a compassion, excited by the author's profound tenderness, for a woman born with a social system against her and literally predestined to degradation. Both of these women are drawn with a man's courage, and with that understanding of her own sex which, when possessed at all by a woman, is infinitely more searching than the cleverest man's guesswork. They are women *au fond* as well as superficially, and so are all their sisters of higher degree with whom, as the story progresses, we become more or less intimate. Marie Modeste Motte and her friends, old or young, are not the women of the North, of the colleges, of a generation or two of intellectual cultivation and of struggle with life. They are whimsical, impulsive, fine-mannered gentlewomen. Their only conception of woman's mission is to make herself agreeable, to say enough prayers to save the souls of the men of her family, and, without undue exertion, to "give birth to the mercy of Heaven descending on earth." Not the smallest part of Miss King's success is to have shown them fulfilling this mission so charmingly that it assumes positive dignity and unparalleled importance.

The South has not been permitted to monopolize the attraction of jargon in fiction. The West competes closely, and is, indeed, the land of the "dialect story's" birth. Besides, the West has the advantage of the cowboy, who seems to talk and to behave with a boundless liberty of coarseness, which, by comparison, makes the negro or poor white appear a person of some culture and elegance. It has come to pass that the cowboy spirit pervades Western fiction, and that in most of it the degradation of life is reflected in that of language. 'A Nymph of the West' is a poetical title. It suggests the sweetness and fairness of the flowering meads of May; its sound invites fine fancies like the

> "—noise of a hidden brook
> In the leafy month of June,
> That to the sleeping woods all night
> Singeth a quiet tune."

Several descriptions of Texan scenery occurring in the volume are not without poetical quality, but, for the rest, it is a triumphant specimen of the cowboy school of fiction. The cowboy, in his palmy days, the days of his remoteness and blessed unfamiliarity, was a most picturesque figure. Riding straight in his stir-

rups, chasing down an horizon ever retreating, slinging his lariat with free grace and exquisite precision, he stirred a thrill of admiration in the tamest breast. If we cared to reflect on him at all, there was no reason why we should not endow him with every heroic virtue. But the realistic novelists have changed all that. They have brought him into nearer view, and made cowboy synonymous with a bar-room loafer who swaggers detestably, and always keeps his six-shooter cocked. All the people in 'A Nymph of the West' are latter-day cowboys. The Nymph herself is one not in the least disguised by petticoats; her wretched old father is another, temporarily incapacitated for active business by excessive drinking of whiskey. In this sort of fiction, it may be remarked that the only daughter is always lovely and innocent in proportion to the debasement of the parents. The Nymph's tenderfoot lover, Bruce, is, in the beginning, a sort of cowboy page, but soon wins his spurs by shooting his man at sight. The early chapters are comparatively devoid of incident, so we have leisure thoroughly to familiarize ourselves with the Nymph's domestic life, and with the grammatical eccentricities of herself, her family, and visitors. At the ball given after a round-up, the fun begins. Pistols are more plentiful than fans, and the Sheriff's arrest of a horse-thief warms up the revel. The ball brings in its train several events which show how ruinous to military discipline is residence within the cowboy belt, and how fatally it affects the legal mind and the methods of administering justice laid down by statute.

It is just after this ball that Bruce shoots an irreclaimable blackguard, who is also a captain in the United States Army. Conscious of dazzling rectitude, the murderer delivers himself to justice, and is confined in the jail at the post. The soldiers of the defunct captain's company assault the jail, demanding the body of the tenderfoot, and incidentally shooting a horse-thief. None of the officers pay any attention to this apparently trifling infringement of discipline, and Bruce, the Sheriff, and the jail are saved from annihilation only by the opportune arrival of an irresponsible band, whooped on to the rescue by the Nymph, mounted on a cow-pony. Escaping from an infuriated soldiery, Bruce faces the majesty of the civil law. With an unlimited quantity of free whiskey, his friends proceed to corrupt the whole town from which a jury is to be impanelled, and in this transaction Bruce, the impeccable, is not idle. The trial being fairly begun, the prisoner's counsel rises and submits: "That the gravity of the indictment necessitates that this court adjourn and take a drink." The proposition is at once acceded to, and when all concerned are more drunk than sober, the trial moves rapidly on to an acquittal. The only reason for referring at length to such episodes is, that so many people are apparently blind to their essential coarseness and depravity, and find them profoundly humorous. The author's attitude towards them is decidedly hilarious. There is no evidence that he perceives the shamefulness of life where such scenes are possible, but every indication of delight in its shamelessness.

To comprehend what a wonderful, baffling, and big subject for contemplation American society really is, one need only make a leap from Texas to New York, from 'A Nymph of the West' to 'A Débutante in New York Society.' Generalization becomes an awful impossibility, and preconceived opinions are scattered to the winds. The 'Débutante' is a serious and instructive work. It is revolutionary, too. Hitherto, our novelists have led us to believe that the existence of a rich, American young girl is comparable for happiness only to that of a Peri in Paradise. In the 'Débutante' we discover what rank nonsense the novelists have been treating us to. The author speaks with so much authority, and displays such knowledge of her subject in detail, that there is nothing to do but to denounce her predecessors as empirical, and to pledge ourselves to the cause of the oppressed young girl. A philanthropist out of employment could not do better than originate a society for the relief of our débutantes from the slavery of social usages, more especially from the thraldom of mothers. The extinction of mothers might be advocated, with exception in favor of mothers who are not "bornées." Being *bornée* was the head and front of the Débutante's mother's offending. If the Débutante had been Althea to whom Lovelace sang:

> "Stone walls do not a prison make,
> Nor iron bars a cage,"

she would have answered cordially: "No indeed. At least, not in comparison with my mother's palatial residence on Fifth Avenue. How could the innocent and quiet mind 'take such a dungeon as this for its heritage'? It is exactly on the innocent and quiet mind that all the tortures are brought to bear. That is just what I had when my unnatural mother 'brought me out.' And now, stop singing, Lovelace, and listen while I try to recount my woes unutterable."

The Débutante pours out her lamentations in forty-five letters. She takes herself for a person of rare qualities, stunted—almost blighted—by the frightful conditions of her birth. She knows that, in spite of her mother, she has exalted virtues, hers by inheritance from an excellent and adorable father who always addresses his wife as "Madam." It is a pity that she could not have been more explicit about the virtues, for they were splendid capital. They brought every man whom she met to her feet, and finally provided her with a husband of that incomparable pattern which Nature makes but once, then throws away the mould. To the critical it appears that the gods surely denied the Débutante the gift of seeing herself as others see her. She is inordinately vain and superficial, knowing nothing of human nature from experience and having no intuitions; her judgments are harsh and false. The object of her lengthy recital is obviously not to entertain, for who, except a *bornée* mother, could enjoy endless iteration of miseries? We cannot get rid of the suspicion that the underlying motive is to instruct outer barbarians in matters of etiquette and deportment, and to let the world know how thoroughly a few New Yorkers understand "what's what and who's who," socially speaking. The vulgarest person who studies the volume can hereafter make no mistake about so serious a matter as the meaning of a bouquet sent by a young man to a young woman every Sunday morning; he will invariably speak of a very rich man as *richissime;* he will perceive that there is a distinction somewhere in the use of the words "present" and "introduce," though he can't help sharing the author's uncertainty; but he will continue for ever to say that he "is pleased" when he means that he "is glad." There is no kind of fiction so silly or so profitless as this. Most of the kind are at once offensive and ridiculous, but the 'Débutante' is only tiresome, crude, and very "fresh."

It is said that 'The Manuscript Found in a Copper Cylinder' was written long before Rider Haggard's star rose on the literary horizon. The author is therefore exonerated from suspicion of plagiarism. Yet the adventures of the sailor cast away near the Antarctic circle have a close resemblance to those of Mr. Haggard's heroes. His boat is borne through a crevasse in the ice-wall, swept by a swift, black current past violently eruptive volcanoes, past desolate shores, and, at last, through that invaluable underground river, into an open sea surrounded by cultivated lands. This is necessarily the home of a strange people, and there is considerably more originality and humor in their strangeness than in any of Mr. Haggard's inventions. They live in caverns, loving the six months of darkness, and shunning the equal period of light. To be a pauper among them is to be great, and the severest punishment is to have riches and honors lavished on one. A man who will take all he can get is punished without cessation. Life is a curse to the Kosekin, and death a joy. It is extremely difficult to get any one to consent to live to maturity. They told the castaway plainly that since he protested that he loved riches and life and requited love, he was a person of no intellect whatever. When he had accepted everything they had to give, they became so fond of him that they decided to bestow the final boon of death. The device by which the sailor escaped this supreme honor, and became King of the Kosekin, makes the catastrophe. The story is ingenious and well written, and the evident satire on the ideas and guiding principles of known races gives it some intellectual interest. No novelist can describe an unknown race without referring to the lost tribes, and the insinuated identification of the Kosekin with the wandering Israelites is quite in order. These lost tribes have such a fascination for imaginative theorists that all earthly glory and distinction seems insignificant beside that of being descended from them. If all things are predestined from the beginning, there is no doubt that the tribes were lost, or went and lost themselves, on purpose to torment the speculative for all futurity.

The stories included under the title, 'A Teacher of the Violin,' have to do with the fine flower of nobility. The few characters introduced of lowly birth are all but ennobled by association with the many born to greatness. Thus the teacher of the violin, who is attached to a German prince's court, and his pupil, who is adopted by a countess. Thus, too, the actor who tells the tale of "Helena von Saarfeld," and who had many a bad quarter of an hour while refusing the persistently proffered hand of that distinguished lady. The incidents are devised chiefly to give the characters a chance to show their breeding, and that they all do punctiliously, without any talk or fuss about it. They are very simple incidents of love misplaced or unfortunate, and, as befits the people interested, are more dignified than exciting. The people preserve external coolness and a certain formality, even in moments of intense agitation, and, excepting in the case of the Marquis de St.-Palaye, their courtesy does not appear unnatural or exaggerated. With all deference to the high honor and chivalry of the Marquis, he certainly bears a family likeness to Turveydrop. The style in which the stories are written is as scrupulous and polished as are the manners of the characters. As it is agreeable to come in contact with such models of courtesy, even if they do lack warmth, so it is agreeable to read stories about them, written in an appropriately flowing and elegant manner—one that expresses fire and life chiefly by artistic repression.

Names and Portraits of Birds which Interest Gunners, with descriptions in language understanded of the people. By Gurdon Trumbull. New York: Harper & Brothers. 1 vol., 8vo, cloth, pp. viii, 222, cuts.

A HANDSOMELY made book on the publishers' side, and on the part of the author a novel and genuine piece of work, made up mostly of information not to be had elsewhere. It will not fail to take and hold its own place; and for no small part of the bird-loving public it will answer all the purpose of the more systematic treatises like Coues's 'Key' or Ridgway's 'Manual.' It treats of all the recognized game-birds of Eastern North America, sixty-one in number according to the author's count, belonging to the goose and duck family, the gallinaceous order, and the plover, snipe, and rail families; and the subject is handled in such a way that no one can fail to identify his bird at a moment's notice. For we have here, strange to say, descriptions "in language understanded of the people"; and lest even this may not suffice, a good "portrait" of each species, clear as a professor's blackboard diagram of a proposition in Euclid—and, we may add, equally artistic. We assent with a sigh of resignation to our bold author's thesis, to wit: "Few, even among our most intelligent college-bred sportsmen, can form a very clear idea of a bird's appearance from the 'shop-talk' of scientists, even though provided with a glossary; and it may be broadly stated, with quite a showing of truth, that the descriptions commonly encountered in ornithological works (particularly of to-day) are only intelligible to those who do not need them."

But what of these "names" of birds, standing at the head of the book's title? Mr. Trumbull's descriptions and figures are but a means to his end of giving us the names by which our game is known—known to the people—to our gunners, "a class of men who earn a livelihood by shooting birds"—known to "that helpless but interesting creature, the true sportsman," as our author styles him—but mostly unknown to the compilers of technical synonymy. It is no unusual thing for a bird to have half-a-dozen generic names, a dozen specific names, and several dozen binominal designations variously compounded of these two terms, according to the letter of the law of ornithological nomenclature. Our author, with a fine instinct of self-preservation, selects that one of them which the American Ornithologists' Union has stamped with orthodoxy; provided with which, with his description, and with his figure, as a trigonometrical basis, he proceeds to survey the whole field. He seeks literally the "winged words"; the living and spoken vernacular names are his game; and the number of these that he brings to book are simply astounding.

We cannot count them; but a little ciphering over the eleven pages of triple-column index shows considerably more than a thousand names for three-score birds. They certainly average over sixteen apiece, and sometimes run up to forty, fifty, or more. Comparatively few of these are variants of one another, or among the ἅπαξ λεγόμενα; the great majority are straight-out distinctive names, in which single nouns, as distinguished from descriptive phrases or compounded epithets, are conspicuously numerous. It would be a pretty liberal education in the genesis of language to con over the list Mr. Trumbull gives, and see how this or that "point" about a bird has been seized upon and made a name of. Onomatopœia finds great scope, as would be expected, and the "bow-wow" theorists in philology might take great comfort from Mr. Trumbull's labors; but, after all, what a bird *looks like*, in the first place, and, secondly, what a bird *does*, rather than what it says when it opens its mouth, are, mainly, the seeds of this strange crop of nicknames and bye-words. The names, too, have to a notable extent the quality of spontaneity, naïveness or innocence, so to speak, which vouches for their originality and authenticity; they are such as any son of Adam out of Eden should apply if he were set to the task said to have been given his first parent; and how next to nothing he is indebted to the ornithologists or their books is vouched by the rarity, nearly the absence, of the regular English book-names. Even such common names as "hooded merganser," "Hudsonian godwit," and "pectoral sandpiper" are almost entirely wanting, showing that these terms, though English, are read and not spoken names, except to the literary few. They are, in fact, almost as seldom heard out of library and museum doors as the corresponding technicalities, *Lophodytes cucullatus*, *Limosa hæmastica*, and *Actodromas maculata*.

Let us see the actual genesis of the names. Take the case of a very common duck of our Atlantic coast, whose Latin technical name is *Erismatura rubida*, whose regular book-name is "ruddy duck," from the prevailing color of the adult male, translating *rubida*. The generic name, *Erismatura*, referring to a peculiarity of the shape and texture of the tail-feathers, has been rendered by the persons who never heard of it as 'stiff-tail,' 'quill-tail,' 'pintail,' 'bristle-tail,' 'stick-tail,' 'spinetail,' 'dip-tail,' and 'heavy-tail'—all pat enough terms. 'Leatherback' appears as the equivalent of *rubida* or ruddy: the bird is the duck with a back the color of tanned sole leather. The bird has a broad blue bill; straightway it is called 'blue-bill,' 'broad-bill,' and 'spoonbill.' It has a dark steel-blue crown: it is a 'steelhead.' It is a fat, chunky little fowl; therefore is it a 'butter-duck,' 'butter-ball,' 'butter-bowl,' and 'dumpling-duck.' Its activity makes it a 'blatherskite,' 'bladderscoot,' 'blatherscoot,' 'batterscoot,' and 'bumblebee-coot.' Is it ever inactive, stupid, or tame? Then it becomes a 'sleepy coot,' 'sleepy duck,' 'sleepyhead,' and even a 'sleepy brother'; likewise a 'booby-coot,' a 'noddy,' a 'fool-duck,' and a 'deaf-duck.' But not always thus; when alarmed it can dive like a flash, and it is then a 'dipper,' a 'dapper,' a 'dopper'; even a 'mud-dipper,' and a 'broad-billed dipper,' yea, and a 'diptail diver,' a 'dun diver,' and a 'brown diving-teal.' Then it is hard to kill? Certainly, a very 'tough-head,' a 'hard-head,' a 'hickory-head,' 'hard-tack,' a 'lightwood knot,' a 'shot-pouch,' a 'stub-and-twist.' When it flusters over the water it is a 'dinkey' or a 'dickey'; and, for the same reason, perhaps, it is a 'paddy-whack,' or a plain 'paddy.' Do the people, after all, have some trouble in classifying the bird systematically? It would seem so, for it is not only a 'duck' and a 'diver' of several kinds, but some kind of a 'goose,' 'widgeon,' 'teal,' and 'coot,' and a 'water-partridge,' and a 'rock.' "Just think of it," exclaims our author in his rich embarrassment and consternation; "a duck called a rook under the very shadow of the Smithsonian!"

To mention a locality reminds us how careful our author is to give a local habitation to these airy nothings. Provincialism is rife in such word-building; the name changes with the times and places of its usage. Few of these designations are wide in geographical range; many are confined to a single locality, even to some class of persons in such locality; and such facts are always set forth with particularity. Some of the names once heard are already dead or dying; others are continually entering the current of our speech. With exceptions, the field chiefly gleaned has been our Atlantic coast region; and everybody has been laid under contribution, from the Down-East fishermen to the Crackers of Carolina and the negroes of Florida.

Perhaps the ruddy duck, with its fifty or sixty names, all outside of books, is a little exceptional; but the process and result of name-making are the same in all cases, *mutatis mutandis*. And now we begin to see what a very interesting book Mr. Trumbull has made. It is far from a mere list of names, and our author takes us by the hand through the mazes of myrionymy safely, surely, and pleasantly, if not also swiftly. It is a scholarly, leisurely, bookish book, smelling of the library shelves and the easy-chair, after the muddy boots and shooting-iron have been put away. Well-known faces greet us among those who have stood sponsors at the christenings of our birds, from Catesby and Edwards, Lawson and that old thief, John Brickell, Bartram and Barton, President Jefferson and others of generations gone, to the "Frank Foresters" of yesterday, and the Charles Hallocks of to-day. The ensemble is a charming picture, especially as it is lighted up with the author's own gleams of never-failing good-humor and quiet fun. How many times he laughed outright in writing it we may never know, but the gloomiest reviewer may not be exempt from a certain contagion. Take this, for example, a perennial Joe Miller, as good to-day as ever:

"Wilson relates a funny anecdote connected with the passage of a New York game law in 1791. 'The bill was entitled "An Act for the Preservation of Heath-hen, and other game." The honest chairman of the Assembly—no sportsman, I suppose—read the title "An Act for the Preservation of *heathen* and other Game," which seemed to astonish the Northern members, who could not see the propriety of preserving Indians, or any other heathen.'"

We should never end if we tried the comic aspects of the names in this book, as in the Rev. J. H. Linsley's reverential handling of the name 'godwit.' "The good old preacher, in speaking of these birds, could not take his Lord's name in vain on so slight a provocation, hence he called them 'good wits.'"

How to Judge of a Picture; Familiar Talks with the Uncritical Lovers of Art. By John C. Van Dyke. Chautauqua Press.

THE author of 'Principles of Art' seems to require a good deal of discouragement from pursuing his unintelligent way. For if ever a writer on art gave clear evidence of not having touched bottom in his study, and of having no perception of the fundamental distinctions of sound criticism, it is he. It is a clear case of a blind man leading the blind across a country full of the most disastrous ditches. Take the following from Mr. Van Dyke's chapter on "Tone and Gradation":

"Tone is a word often used out of place as synonymous with harmony, but you will not so confuse the terms, for they are quite distinct in meaning. Harmony is the relation of qualities; tone the relation of quantities. To be sure, they have very much to do with one another, and it is very doubtful if tone may be produced without harmony, or harmony without tone. The distinction between them may be made plainer, perhaps, by saying that harmony has more particularly to do with the problem of whether one color is congenial or well suited to another, while tone involves the degrees of different colors used and their proportionate relationships to one another. If you have had little experience among pictures (and I am addressing only the inexperienced), tone will be something of which you have heard much and seen but little—that is to say,

you may have seen it but have not recognized it."

It is probably only with relation to art that the idea seems to obtain with the general public, that the best person to teach it to those who know nothing of it is one who himself knows very little—*i. e.*, the first principles which are the necessary foundation of any learning, but are the last to be arrived at by the professor, may be dispensed with by the student until the later phases of his education; while the truth is, that the education which is not begun with the first principles is education thrown away. "Harmony is the relation of qualities; tone the relation of quantities" is antithetical, but the most concentrated attention that we are able to bring to bear on it wrings nothing but nonsense out of it. So far as there is a meaning to be conjectured in it, it is our impression that it is not true; but it is not safe to say that a thing one does not understand is untrue, and Mr. Van Dyke's further attempt to elucidate his meaning "by saying that harmony has more particularly to do with the problem of whether one color is congenial or well suited to another, while tone involves the degrees of different colors used and their *proportionate* relationships to one another," does not clear up the mud in the least. We give it up. If this be primary education in art, the less we have of it the better, for the higher stages must give rise to some gruesome reading.

The definition of "values" is another curious case of wisdom confounded:

"If you will hold out your open hand before you, partially close your eyes, and look, not for the outline or shape of a hand, but for patches of light and shade, you will see that the palm which is directly before you has the highest light upon it, and that there is a gradation of light into shadow in the spaces between the fingers, and around the ball of the thumb and the sides of the hand where they lead to the edges. Those gradations of light and shade which necessarily involve gradations of flesh-color and possibly the reflections from side lights, are *values*." "It will be understood, then, that what are known in art parlance as values are the variations of light, the effect of intervening atmosphere, and the reflections from surrounding objects or colors, all combined. Properly speaking, values are nothing more or less than the relations of light and shade."

This is simply stupefying. The author goes on to say that "there is no great unanimity of opinion among artists and critics regarding the meaning of the term and what it includes. A number of writers have tried at various times to define it properly, but it has such a loose meaning that definition is quite impossible"! At the risk of attempting the impossible, we are willing to enlighten the author on the subject, by telling him what values are as understood by one of the greatest masters of them in our day—J. F. Millet. If you throw a black coat on the snow, either in the sunshine or in diffused light, there will be a difference in the pitch of the local color quite independent of the light and shade, and this difference will be substantially the same in either case. The mass of the coat will tell as a dark mass on the snow, and the difference, which has nothing to do with light and shade, is the difference in the values. It is exactly the quality furthest removed from that given it by our auther.

"The word *textures* is not used in connection with silks, satins, and embroideries alone, but is an art term, *referring to the peculiar qualities of any and all objects that are shown in a painting.*" Here is another riddle—we give it up as well.

We have waded through Mr. Van Dyke's book, but conceive the above enough for a fair, if severe, exposition of its merits as a treatise on art. It contains, however, the evidence that the author has a fairly cultivated appreciation of painting in the concrete, and does know the difference, within narrow limits, between good and bad art; but we must offer him the advice of the Scotch judge to a tyro, not to give the reasons for his opinions, but to content himself with pronouncing his judgment, for his enunciation of principles is great nonsense, and the world is too full of nonsense on art already.

Review of the New York Musical Season, 1887-1888. By H. E. Krehbiel. Novello, Ewer & Co.

THIS is the third issue of this useful handbook, and if Mr. Krehbiel, as is to be hoped, will continue to issue one annually, the task of some future historian of music in America will be remarkably facilitated. The present volume begins with the concerts of the unfortunate but charming Italian violinist, Teresina Tua, and ends with the production of Verdi's last opera, "Otello," by the Campanini Company. Among the more important articles are criticisms of the Josef Hofmann concerts, Wagner's symphony, and the operas brought out for the first time at the Metropolitan — "Siegfried," "Götterdämmerung," "Cortez," "Euryanthe," and "The Trumpeter of Säkkingen." Of many of the concerts only the programmes are recorded, but even this part of the book has its value, for since all the important concerts given in New York are included, provincial conductors may use Mr. Krehbiel's 'Review' as a valuable text-book in programme-making, under the guidance of such masters as Thomas, Seidl, etc. The consecutive arrangement of musical events, according to dates, is doubtless preferable to any other; but it would be convenient if the index discriminated, by different sizes of figures, the pages occupied with comment on certain compositions, and those on which the same works are merely recorded as parts of a programme. It would not do to leave these latter altogether out of the index, for their presence allows one to see at a glance how often a given composer figured on the programmes of the season. Thus, in the operatic line, it is significant to find only five entries under Bellini, and 126 under Wagner; and it is encouraging to see so many references to Bach, Schumann, Chopin, Liszt, and Rubinstein, showing that the musical world moves. Four pages are taken up by a letter addressed by Herr Seidl to the New York *Tribune*, regarding Wagner's early symphony, concerning which no one is so well qualified to speak, since it was Herr Seidl who was called upon by Wagner himself, when the long-missing parts had been found, to make the score out of them. Wagner also wanted Seidl to conduct the symphony at Venice, as he dreaded the fatigue involved in the rehearsals, but Seidl was prevented by his engagements from going. "Two months after his death," he writes, "when I was conducting the Nibelung cycle in Venice, I was told personally by the concertmeister, who had played in the symphony performances, that when Wagner had finished, he laid down his bâton with the words: 'Now I have conducted for the last time.'"

The last twenty-three pages are devoted to statistics of the novelties produced at the opera and in the concert-halls and to a general retrospect, in which the operatic problem is discussed in a very sensible manner. The ignorant journalists who prophesied that German opera was coming to grief, are met by the retort that "the Wagnerian dramas throughout the season were worth $750 a night more than the rest of the list." The statistics concerning the receipts and expenditures at the opera, being derived from official sources, are as instructive as they are trustworthy. Fourteen operas were given, involving 451 rehearsals, and ranking, as regards their financial value, in the following order: "Götterdämmerung," "Siegfried," "Walküre," "Prophet," "Tristan," "Lohengrin," "Faust," "Tannhäuser," "Meistersinger," "Euryanthe," "Trumpeter," "Jewess," "Cortez," "Fidelio." Among the curiosities of this list, as illustrating the fickleness and uncertainty of popular patronage, are the facts that "Fidelio," which headed the list last season, foots it this year, and that "Cortez," on which more than half the money given out for *mise-en-scène* this year was expended, is last but one. As regards Italian opera, Mr. Krehbiel thinks "it will not utterly die until the public adopts a nobler attitude towards music than they occupy towards literature and the drama." But "we are in an era of change in art ideals. To cling to the sweets of Italian melody and live in the memories of Mario and Grisi is folly. So young an art as music cannot stand still for half a century, and Roman tastes, though they may clog for a time, cannot permanently bind a people Teutonic in their origin." The following also is worth pondering as showing the change which has come over audiences: "We all know that when Italian opera was in its glory, the public were perfectly willing to accept a listless performance from any one of its great interpreters if he or she would but thrill them with a single air or a single note in an air. Mario was wont to save himself for one glorious outburst, and with it his admirers were satisfied. This would now be impossible."

To the general public who do not care for musical problems, the most remarkable statement in Mr. Krehbiel's book is that, "of the money paid for royalties [at the Metropolitan], nearly $9,100 went to the estate of Richard Wagner, Director Stanton having assumed the *purely moral obligation* of paying royalties on all the Wagnerian works produced." This is certainly extremely honorable on the part of Mr. Stanton and the stockholders, and ought to be held up as an example to our piratic music and book publishers.

Corinne; or, Italy. By Mme. de Staël. Translated by Emily Baldwin and Pauline Driver. [Bohn's Novelists' Library.] London: Geo. Bell & Sons; New York: Scribner & Welford. Pp. 394.

SAINTE-BEUVE, fifty years ago, writing of this book (then a generation old), said: "As time advances, the interest that attaches to such works, which have been recognized to have a real and lasting existence, may change in character, but is not less great. Their very faults become representative, and are not without charm, as the once-admired expression of a taste that has given place to another, which in its turn will likewise pass away." It is this enduringness of interest that makes any adequate study of these works, whether in the form of criticism or of the commentary which an able translation furnishes by its very nature, always timely and welcome. But of an inadequate translation of classics precisely the opposite is true; it is untimely and unwelcome. We regret to say this is the case in the present instance. The publisher of Bohn's Libraries has been unfortunate again, as too often before, in his choice of translators. Their work is a paraphrase rather than a reproduction of the original, and is pervaded by a dulness of perception that turns the abundant flow of phrase in the original into stiff and stupid sentences. The translation is everywhere unsuccessful and

unjust, whether in passages of description, of conversation, or of moral observation, and frequently entirely mistakes the meaning of the text. These assertions may be strengthened by examples. Of the frequent mistakes the following is characteristic: "Lucile avait tort de ne pas exprimer ses craintes," "Lucille was careful not to express her fears." "Dominiquin" is translated "Dominican." The Italian verse,

A pena si può dir: questa fu rosa;

is given as

A pena si suo die fu rosa.

The downrightness and hasty clumsiness of this phrase, "Conscience sometimes becomes morbid under the pressure of sorrow, and one easily accuses oneself of guilt," is no worthy rendering of the delicate harmony in the thoughtful saying: "Quand on souffre, on se persuade aisément que l'on est coupable, et les violents chagrins portent le trouble jusque dans la conscience." When Lord Nelvil says: "La délicatesse avec laquelle vous vous êtes conduit pour monsieur votre oncle, inspire pour vous, M. le comte, la plus profonde estime," it is something very different from "The way you behaved to your uncle, Count, makes me esteem you highly."

This for description: "Ils virent ensemble Pompéia, la ruine la plus curieuse de l'antiquité. À Rome, l'on ne trouve guère que les débris de monuments publics, et ces monuments ne retracent que l'histoire politique des siècles écoulés: mais à Pompéia, c'est la vie privée des anciens qui s'offre à vous telle qu'elle étoit." "They saw Pompeii, the most curious ruins of antiquity. In Rome you simply find relics of antiquity, and in these you just trace the political history of past ages; but at Pompeii the private life of the ancients offers itself to your reflection."

Condemnation must fall on such disrespect shown to a great writer—a writer who gave the most attentive care to the details of this monumental work, and who (in Sainte-Beuve's phrase again) therein "attained to art, to sustained majesty, to harmony."

Sphinx Locuta Est: Goethe's Faust und die Resultate einer rationellen Methode der Forschung. Von Ferdinand August Louvier. Berlin: Georg & Fiedler. 2 vols.

Is this treatise a joke? Is it, like the famous book of 'Allegoriowitch Mystifizinski,' a *jeu d'esprit* at the expense of a certain kind of expounders of 'Faust'? So one is certainly tempted to think at first. But the work is in two good-sized octavo volumes, containing together a thousand pages. The paper and printing are excellent, and there is nowhere a suggestion of intentional humor. To make the text must have required years; to see it through the press was, at any rate, no trifling matter; in short, all indications point to the conclusion that we have to do here with a seriously meant contribution to exegetical literature.

Herr Louvier has discovered that 'Faust' is a mine of riddles, the key to which he has, after infinite perplexity, at last found out. He begins his revelations in a very familiar way by reducing the poem to an allegory: *Faust* is the Understanding; *Wagner*, Scholasticism; *Gretchen*, Naïveté: *Mephistopheles*, Egoism; the *Witch*, Anility; the *Poodle*, Negative Proof, and so on. The poem consists, at every point, of three strands skilfully woven together by the poet, but capable of being separated by the cunning reader: first, there is the poetic 'Faust,' in which the characters are what they seem to be and what people in general suppose them to be; then there is the philosophical 'Faust,' in which the same characters stand for abstractions of the mind; and, finally, there is the historical (*culturgeschichtlicher*) 'Faust,' in which they and their language have mysterious reference to important facts of history, as, for example, the Prologue to Freemasonry, the Easter Holiday scene to Grammar, and the Earth-Spirit scene to Swedenborg and the Rosicrucians.

Thus far, perhaps, the revelations of the Sphinx are not so very remarkable. A reader who is at home among the expounders of 'Faust' has heard, if not the same thing, yet the same sort of thing before. But the Sphinx proceeds, and proceeds in a way to arrest the attention of the most phlegmatic passer-by. Not only is Goethe's poem a triplicate tangle as regards its characters and its dramatic economy, but its ordinary language is not what it seems to be. There is a special "Faust language," consisting of symbolical meanings for familiar words; and this symbolism, we learn, is consistently adhered to everywhere. Thus, when the poet says "sun," he always means *knowledge;* "moon" means *the ideal;* "kettle," *the head;* "city," *the brain;* "wood," *stupidity;* "gold," *thought;* and "to spin," *to meditate.* These definitions are taken from a fragmentary "Faust dictionary," found in vol. i, p. 20. The list there given closes with an "et cetera," which implies, we suppose, that the other words in 'Faust' also have their own meanings, which the reader can readily supply for himself. It is only necessary that the Sphinx should put him on the right track.

Thus equipped for his work, Herr Louvier rides boldly into the fray, and what execution he does among the received opinions of the literary public can be neither described nor imagined. The tragedy of *Gretchen* is the destruction of Naïveté by the Speculative Understanding; *Valentine*, *Gretchen's* brother, is, of course, Common Sense, which perishes at the hands of Speculative Understanding, aided by Egoism (*Mephistopheles*). But what of *Gretchen's* continual *singing?* Ay, there's the rub—that is, there *has been* the rub, says our author. But in the Faust language, "to sing" is *to speak*, and *Gretchen* in her songs is simply bodying forth in words the gradual decadence of the *Meistergesang.* But the beauty of a system is seen always in its applicability to details that are apparently insignificant. It will be recollected that *Gretchen* in frolic hides herself behind the door of a summer-house, where *Faust* afterwards finds her. But now, in the Faust language, all things "wooden" allude to stupidity. So, then: Naïveté takes refuge behind Stupidity, but Understanding recognizes it even in such a hiding-place.

But the *chef d'œuvre* of Louvier's exegesis is to be found in vol. i, p. 165. Readers of Goethe will recall the poodle scene, and the fact that *Mephistopheles*, after his first colloquy with *Faust*, finds himself a prisoner. He explains that he cannot get out of the room on account of the "witch's foot," or pentagram, upon the threshold; which, being imperfectly made and having its outer angle a little open, allowed him to come *in*, though he cannot now get *out.* Hereupon *Faust* congratulates himself upon the lucky accident which has put the devil in his power. After this, *Mephistopheles* causes *Faust* to be lulled to sleep, whereupon he puts oil upon the pentagram and orders one of his minions in the shape of a rat to break the spell by gnawing off the inner point of the pentagram. The hocus-pocus of the scene requires none but historical commentary, and that is sufficiently furnished by any good editor.

But now listen to the Sphinx. This of the witch's foot, we are assured, is one of the most surprising allegories in the whole drama. It must be something more than a mere geometrical figure—probably the learned word "pentagram" should give the needed clue. Now, "pentagram" means "five letters," and since one corner, and that the outer one, of the figure is "a little open," we have evidently to look for a word of six letters of which the last one is wanting. Further, this word, when found, should, if read forwards, indicate something that *lures Egoism in*, and if read backwards, something that *keeps Egoism from getting away.* The needed word is obviously *Gewin(n)*, which read backwards is *Ni(e) weg.* Here, to be sure, a superfluous "e" appears, but the Sphinx disposes of that in this wise: "'That is a lucky accident,' thus does the poet himself excuse this innocent anagram which is not even orthographically correct." The exposition of the Sphinx continues: The inner corner which is gnawed by the rat is the letter "n" (in "Nie weg"); there remains then *-ie weg* and the "oil" means that the pronunciation of this -ie is to be "softened" into *jeh.* But *jeh weg* passes readily (especially in Berlin) for *geh weg.* Thus is the charm broken and the prohibitive "never away" is softened by oil into the permissive "go away."

"Such screech owls there must also be," observes *Faust* to *Gretchen* in endeavoring to persuade her not to think all too harshly of his friend the devil. It might appear as if this philosophy were too simple to be of great practical use—as if it must be too frail a protection against the varied forms of mental inadequacy which we are all continually discovering in our fellow-passengers on the voyage of life. But really there are emergencies to which no other philosophy seems so well adapted. What other resource, to illustrate, is there for him who in these days endeavors, for whatever reason, to keep abreast of what all kinds of people are printing about Goethe's 'Faust'? There are men of the present epoch who hold that the high-water mark of religious civilization was reached when the Romans built their temple to "all the gods." Others look forward to a temple of all Humanity hereafter. The subject is too broad and deep to be treated just here, but we will at least express the hope in passing, that when the disciples of Comte get ready to build the great Pananthropeion of the future, they may not forget to put in a few comfortable niches for cranks. *Es muss auch solche Käuze geben.*

A Trip to England. By Goldwin Smith. Macmillan & Co.

To a vast number of American readers the subject of this little book is one of peculiar interest. Some of them have made the trip, and will be curious to see what Mr. Goldwin Smith may have to say about it; others are looking forward to it with the keen pleasure of anticipation, and will be attracted by the title; while to others the subject is full of deep interest although they have never seen, nor ever expect to see, the land of their ancestors. It is proper to warn those who might buy the book for such reasons that they will in all probability be disappointed. Knowing something of Mr. Goldwin Smith's reputation, they will be prepared to find in it a certain amount of curious doctrine, both social and political—to find him, for instance, abusing "democratic agrarianism," which is about to do away with fox-hunting and to demolish the parks of the aristocracy with its "equalizing plough," and in the next breath hoping that the same plough will destroy all the race-courses! They will not be

very much surprised to find him making light of the terrible misery of London on the ground that it has been "exaggerated for purposes of literary sensation"; nor to learn that in his opinion the true *bel vivere* is the terribly uninteresting life of an English country town as described by Miss Mitford. But they will at least expect a very superior kind of guide-book, and even in this they will be disappointed. It is, in fact, surprising that so able a writer should have thought it worth while to take up the subject at all unless he intended to do it full justice, and to say that scant justice is done to it is to state the case mildly. The matter of this book first appeared in the shape of letters to the Toronto *Week*.

Tenting at Stony Beach. By Maria Louise Pool. Boston: Houghton, Mifflin & Co. 1888.

THIS is the second volume of summer travel, in the form of the vacation tour, which the author has given us. Two women and a mastiff camp out on the sands, and naturally have some mild adventures with the natives, and make some observations on their fellows of the boarding-out class. The volume is remarkable for the absence of any appreciation of the aspects of nature. It is scarcely credible that an outdoor book should have so little of the outdoor flavor, in these days when nature, as seen in the quiet of summer, is a literary cult. The interest of the author is almost wholly in the characters of the neighborhood. These are all oddities, and most of them are too odd to be entirely believed in. The method of characterization is that of Dickens and Miss Phelps. There is a large element of the farcical in the story, and the touch of pathos when the incorrigibly lazy man is struck by lightning, just as he has saved a child from being caught in her boat in the storm, is of the crudest description; such a mixture of the sentimental and the theatrical could only be condoned on the ground that the incident was a fact. The very candidness of the volume goes to show that its basis is reality, but the omission of the softening touches of nature, and of any noble or essentially humane elements whatever, gives a wrong perspective. It is the sort of realism which represents a New England village by its shanties of the ne'er-do-weels, and then tells us that is the "dreary" life of the country people.

BOOKS OF THE WEEK.

Allen, Dr. N. Physical Development; or the Laws Governing the Human System. Boston: Lee & Shepard.
Amory, T. C. Siege of Newport: a Poem. Cambridge, Mass.

INSURE YOUR LIFE
AS YOU
INSURE YOUR PROPERTY,
each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratios of death claims and expenses. Maximum security. Minimum cost.
WM. E. STEVENS, Secretary. SHEPPARD HOMANS, President and Actuary.

The Pennsylvania Museum AND School of Industrial Art.

This Institution intends to hold an Exhibition at the Museum in Memorial Hall, Fairmount Park, Philadelphia, of Pottery and Porcelain made in the United States. The Exhibition will be opened on October 16, 1888, and closed on the 13th of the following month.

All firms and individuals are invited to compete for prizes in money, offered under the terms of the Joseph E. Temple Trust, and all intending to compete should inform the committee as soon as possible.

Those who do not wish to compete are invited to exhibit some of their best productions, with the view of bringing this branch of art before the public.

At least Seven Hundred and Fifty Dollars will be given in prizes for the three best objects of American Art exhibited, the following being considered:

1st. Beauty of Form.
2d. Excellence of Workmanship.
3d. Appropriateness of Decoration.

Any object awarded a prize becomes the property of the Museum, to be always exhibited and labelled as a piece bought by the Joseph E. Temple Fund, in the year of its purchase.

Full information will be given to any one deciding to exhibit.

If desired and claimed, transportation both ways will be paid by the Museum, but the packing must be done by the Exhibitor or some one appointed by the Exhibitor.

The sympathy and coöperation of all interested in this Art Industry are earnestly requested.

Address "Committee on Pottery and Porcelain Exhibition," 205 South 6th St., Philadelphia, Penna.

Degrees conferred in each, respectively C. E., B.S., B.AR., and A.B. A thoroughly organized Preparatory Department. For Circular, with full information, address Col. CHAS. E. HYATT, Pres't.

PENNSYLVANIA, Germantown.

MISS MARY E. STEVENS' BOARD- ing and Day School, 202 and 204 W. Chelten Ave., begins its 20th year Sept. 20, 1888. The school has been *approved* by Bryn Mawr College, and Miss Stevens is *authorized* to prepare students for the entrance examinations. Pupils pass the examinations in this school.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for Young Ladies reopens Sept. 28, 1888.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, Germantown.

FRANKLIN SCHOOL, CHARTERED 1887, offers for boys an advanced college preparation, and special training in English, English Literature, History, and Elocution. Reopens September 20. A large staff of teachers, with specialists in French, German, and music. Terms for resident pupils, $600.
Exceptionally fine building and equipments, with extensive grounds.
The Register, with full information, sent on application. GEORGE A. PERRY, A.M., Head Master.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Swarthmore,

SWARTHMORE COLLEGE OPENS 9TH MONTH, 11TH. Thirty minutes from Broad Street Station, Philadelphia. Under the care of Friends. *Full college course for both sexes.* Classical, Scientific, and Literary. Also, a Manual Training and Preparatory School. Healthful location, large grounds, extensive buildings and apparatus. For Catalogue and full particulars, address
EDWARD H. MAGILL, LL.D., President.

RHODE ISLAND, East Greenwich.

EAST GREENWICH ACADEMY. Founded 1802. For both sexes. Steam heated. Lighted throughout by electricity. $43,000 endowment. Prepares for college or business. Advance payment of $200 covers entire cost of tuition in literary courses, including home, for the year. Opens Sept. 4. For catalogue address REV. F. D. BLAKESLEE, A.M.

RHODE ISLAND, Providence.

FRIENDS' SCHOOL FOR BOTH Sexes. Founded in 1784. Excellent home. Students from 18 States. All denominations. Thorough work in English, Science, Classics, Music, and Art. Our certificate admits to College.
Address AUGUSTINE JONES, LL.B.

RHODE ISLAND, Providence, 60 Barnes St.

THOMAS CHASE, LL.D., WILL PRE- pare one or two students for any college. With board. Half-country site.

VIRGINIA, Lexington.

VIRGINIA MILITARY INSTITUTE. —The fiftieth session of this well-known State Institution will open on September 12 proximo. It provides a system of thorough military training, a distinctive course of academic instruction, and technical instruction in the several branches of Applied Science, thus enabling a graduate in the Academic School to gain a professional degree as Bachelor of Science or Civil Engineer.
These advantages are secured on terms not exceeding $36 per month, as the average of the entire course, including clothing in addition to the ordinary college necessaries. For catalogue apply to
GEN. FRANCIS H. SMITH, Superintendent.

VIRGINIA, Norfolk, opposite Old Point Comfort.

IS YOUR DAUGHTER DELICATE? Build her up by sending her to school in this delightful, healthful winter climate. Full collegiate courses, music, art; equipment, $60,000. Attractive home school. Personal care. Address
NORFOLK COLLEGE.

VIRGINIA, P. O. University of Va.

UNIVERSITY OF VIRGINIA— (Founded by Thomas Jefferson)—Session of nine months begins Oct. 1st. There are 19 schools giving instruction in Literature, Science, Agriculture, Engineering, Pharmacy, Medicine, and Law. Departments all thoroughly equipped. Healthy location. For catalogue apply to WM. M. THORNTON, Chairman of Faculty.

CANADA, Toronto, 142 Bloor St., West.

MRS. FLETCHER'S BOARDING AND Day School for Young Ladies. Building is large and comfortable, and the grounds are spacious. A thorough course of study for pupils of all grades. Instruction by experienced teachers in English, Mathematics, Bookkeeping, Science, Modern Languages, Classics (if desired), Music, and Art. Resident French and German governesses. Fall term begins Sept. 10, 1888. For all information apply to MRS. FLETCHER.

GERMANY, Wiesbaden.

EDUCATION IN GERMANY, WIES- baden College. Thorough German and French. Preparation for University. Boys can be met at New York. Refers to Prof. M. L. D'Ooge, Ann Arbor, Mich., Mr. L. Cushing of Yale College, Mr. A. Loeb, 204 La Salle St., Chicago. For circulars apply to BRENTANO'S, 5 Union Square, New York; 101 State St., Chicago; 1015 Pennsylvania Ave., Washington, D. C.

Teachers, etc.

A GRADUATE OF THE HARVARD Annex, full course, who has taught one year, desires a situation as teacher. Address A. C., care of Rev. C. T. Canfield, Cambridge, Mass.

A GRADUATE OF THE MASSA- chusetts Institute of Technology of some years' standing would like to teach in a preparatory or other scientific school. Address G. F. R., 10 Jay St., Cambridgeport, Mass.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., PRI- vate Tutor, 19 Ware St., Cambridge, Mass.

THE POSITION OF PRINCIPAL OF Frederick College, located at Frederick, Md., is vacant, and the Board of Visitors solicit prompt applications for the same. The institution is academic in character and for the education of males exclusively. For further information address FAIRFAX SCHLEY, C. V. S. LEVY, JOHN J. KUNKEL, Committee.

WANTED.—INSTRUCTOR IN Latin and Mathematics for preparatory work. Experience necessary. Address XYZ, care Nation.

Scribner & Welford's

NEW BOOKS.

Volume IV. of the Henry Irving Shakespeare.

The Complete Works of William Shakespeare.

Edited by Henry Irving and Frank Marshall. With Notes and Introductions to each Play by F. A. Marshall and other Shakespearean scholars, and over 600 Illustrations by Gordon Browne. To be completed in 8 vols., square royal 8vo, decorated cloth, price per vol., $3.00. Vol. III. includes Richard III., King John, Merchant of Venice, and Henry IV. Parts I. and II. Edited by Oscar Fay Adams. Vols. I. and II. already published. *And the other volumes will follow at intervals of three months.*

The chief features of the Henry Irving Shakespeare are a general introduction by Henry Irving; prefaces to each play, consisting of literary history, stage history, and critical remarks by Mr. Marshall and other Shakespearean scholars; numerous and important notes, etc., etc., and over 600 illustrations by Gordon Browne, a son of "Phiz."

Pen and Pencil in Asia Minor.

Or, NOTES FROM THE LEVANT. By William Cochran, Member of the Society of Arts, and formerly of the Asiatic Society, London and Shanghai. Illustrated with Eighty-nine Engravings, made chiefly from Water-Color Sketches by the author. Demy 8vo, cloth extra, $6.75.

Records of Shelley, Byron, and the Author.

By Edward John Trelawny. New edition, with two Portraits. 12mo, vellum cloth, $1.75.

Correspondence Between Wagner and Liszt

(1841-1861).

Translated from the German by Dr. Francis Hueffer. Two vols., large crown 8vo, cloth, $5.00.

This Correspondence gives us a deeper insight into the character and aspirations of Wagner than any other existing biography of the master. These letters take the same rank of importance in Music as those of Goethe and Schiller in Literature, and will be of permanent value.

By the Author of 'Handley Cross,' etc.

Hillingdon Hall;

Or, THE COCKNEY SQUIRE. A Tale of Country Life. By R. S. Surtees, author of 'Handley Cross,' 'Jorrock's Jaunts and Jollities,' etc. 12 full-page illustrations by Wildrake, Heath, Jellicoe, printed on Whatman paper and colored by hand. Demy 8vo, 520 pp., cloth, net, $4.00.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

The Nation.

NEW YORK, THURSDAY, AUGUST 9, 1888.

The Week.

THE Presidential campaign of 1888 is the briefest in our history. It is less than three months from to-day to election, but Mr. Cleveland has not yet written his letter of acceptance of the Democratic nomination, while as for the Republicans, "the leader of the party" has not arrived in the country, and is not expected to sound "the keynote of the campaign" until he makes his long-advertised speech at Portland, Me., on the 15th inst., which will leave but a trifle over two months and a-half before the day for voting. It was very different in 1840, when the grandfather of the present Republican candidate for care-taker of the White House was running for the Presidency. William Henry Harrison was nominated in December, 1839, and the campaign was well under way before the end of the winter. This year, for the first time, there are no "October States"—that is to say, none that count, for Georgia, which still elects her Governor in that month, is too one-sided to carry any weight. Pennsylvania held its last October election in a Presidential year in 1872, Indiana in 1880, and Ohio in 1884. It is a tremendous gain to the cause of good politics to get rid of the demoralizing influence caused by the attempt of both parties to secure the "moral effect" of a preliminary victory by such tactics as the notorious "soap" campaign of 1880 in Indiana. Vermont and Maine still hold State elections in September; but as the result in each case is a foregone conclusion, they do not count. The same thing is true, not only of the Georgia election in October, but of the Arkansas in September, and of the Alabama last Monday.

The Republican policy becomes more clear every day. It is now openly admitted that, if the Republicans carry the election, the Nominal Candidate is to be merely care-taker of the White House, while the Greatest Living Statesman is to be the real Head of the Administration from 1889 to 1893, and then run for President in name as well as in fact. The programme is thus authoritatively stated in a Washington despatch to the Lewiston (Me.) *Journal*, Congressman Dingley's paper: "It is a part of the Republican writ that Mr. Blaine shall be Harrison's Secretary of State; and further, that after Harrison's day will come Blaine's in the Presidential chair. The call for Blaine's nomination as the next Republican leader will be irresistible."

Senator Edmunds of Vermont is not the "Republican United States Senator" quoted by Mr. Foster in his famous "fat" circular as authority for the statement that "the manufacturers get practically the sole benefit of the tariff laws." The St. Louis *Republic* states that he has denied the authorship in a letter addressed to a Missouri friend, which has been published by a local paper in that State. The *Republic* adds that "he denied not only for himself but for Senator Morrill," and it makes this further important statement: "The *Republic* is informed on excellent authority that the real author is Senator Plumb of Kansas." Mr. Foster described his Senatorial correspondent as "a Republican United States Senator from a State which never had a Democratic representative in either house of Congress, or a Democratic State officer." A strict interpretation of this language would rule out both Senators from Kansas, as that State had a Democratic Governor a few years ago. But Mr. Foster is not a second Horace Greeley in the matter of election returns, and he has very likely seen in the *Tribune* under its present management a reference to Kansas as a State that always goes Republican, which he blindly followed. At the same time the necessity for further speculation as to the identity of the Senator would be removed if Mr. Foster would accept our invitation, now again renewed, to send this paper an authorized statement as to the matter.

The lengths to which protectionists will go in attributing all benefits to the operation of their fetish it is impossible to tell. We have been sufficiently accustomed to that kind of thing, but we confess to a little feeling of surprise on finding that Judge Kelley, in the August *Forum*, claims that one of the causes of the lowering of transportation charges for Western grain in the last twenty years has been the encouragement given by Congress to the production of steel rails in America. By what possible process of reasoning Mr. Kelley arrives at the conclusion, that our railroads have been aided in the substitution of steel for iron rails by being compelled to pay $17 a ton more for them than they might have imported them for, is a mystery. In former years protectionists contented themselves with saying that it was a good thing to make all our own commodities, even if it made them somewhat dearer; that we should in time be able to make them without protection, and so forth. But now it has become the fashion to say that things are all the cheaper for having protective duties laid upon them; and probably Mr. Kelley had in mind this new and misty doctrine when he spoke of freight rates having been reduced by the facilities which a 75 or 100 per cent. duty affords for the purchase of steel rails.

We called attention the other day to various signs that the workingmen are mastering the great lesson taught by the Foster circular, that "the manufacturers get practically the sole benefit of the tariff laws," such as the hearty support of the Mills bill by Congressman Smith of Milwaukee, sole representative of the Labor party in the House, and by others, like Mr. Weaver of Iowa, who were elected in part by labor votes; the change of Congressman Lawler of Chicago from an opponent of the Morrison bill two years ago to a supporter of the Mills bill now, with the hearty approval of his constituents, 95 per cent. of whom he estimates to be wage-workers in the greatest manufacturing district of his city; and the vigorous opposition not only to Gen. Harrison personally, but also and much more to the high-tariff attitude of the Republican party generally, shown by nearly all of the 200 labor papers published in the United States. To these must be added the very striking proof of the political drift of the laboring men shown by the action of their mass meeting in Indianapolis last Thursday. While the resolutions adopted show some special personal feeling against the Republican candidate as a man, they are chiefly directed against the attitude of the Republican party regarding the tariff. Evidently it is not going to be so easy to "work the free-trade racket among the workingmen" as the Republican managers expected.

When Gen. Harrison committed himself to the scheme of subsidizing South American steamers, he overlooked the fact that when this question came before the House only a few days ago, scarcely half of the Republicans could be rallied to the support of a subsidy scheme; and leading men from the West, like Mr. Henderson of Iowa and Mr. Nelson of Minnesota, made it clear that the farmers have concluded once for all that this policy must not be resumed. Gen. Harrison also overlooked the letter sent Mr. Nelson by the ship-owners and importers of Baltimore, commending his course, and protesting against the ruin threatened their business by the proposed subsidy. They can speak from experience, the Garrison and Roach subsidies, in their time, having pretty thoroughly crowded out the Baltimore clippers. By the way, in all this patriotic talk about our flag on the sea, why are our sailing vessels always left out of the account? In building and navigating them we have some chance of holding our own against competitors. The Baltimore clippers are now carrying a considerable part of our South American trade. Their freights can profitably be put at a figure low enough to compete with the English steamers, and their trips occupy but little longer time. New York importers use them much and value them highly. Why should somebody be paid to get their business from them? Gen. Harrison says that if our merchants but had more frequent and more regular mails, they could at once enlarge their business in South America. A correspondent points out that, as transactions of importance are conducted by cable, this is a rather obsolete delusion. He also had to have his fling at "tramp" steamers, apparently not understanding the significance of the presence of "tramp" steamers in all waters. It simply means that the

business of building steamships has been overdone, there being, according to Mr. Wells, an excess of 25 per cent. over the needs of the world's commerce, so that they swoop upon an offered cargo, like a crow upon carrion, cut freights to the lowest point ever known, and make the project of special legislation to get more steamers afloat ridiculous to a degree.

The "rebel-flag incident" was brought into the debate in the House last Thursday. Mr. McKinney of New Hampshire, in the course of a speech on the pension bill, remarked that "the only return of Confederate flags by the Government took place under a Republican Administration." This was disputed by Mr. Boutelle of Maine, but Mr. McKinney affirmed that twenty-one such flags were returned by Edwin M. Stanton, Secretary of War, and that not one had been by Mr. Cleveland's Administration, although a Republican official, to wit, Adjutant-Gen. Drum, had recommended in writing that they should all be returned. Then Mr. Boutelle questioned the Republicanism of Gen. Drum, but did not go to the length of denying it. Mr. McKinney reaffirmed what he had said as a fact within his own knowledge, and repeated that the only rebel flags returned had been returned by Republicans. This incident recalls the confession made by Gov. Fairchild of Wisconsin, after he had invoked "three kinds of palsy" on the author of the rebel-flag order, that his information about it came in a telegram "from his friend Gen. Drum." It is very clear now that when Gen. Drum sent the telegram to his friend Fairchild he expected to receive congratulations in return, and not any kind of palsy.

Probably no harm will come from the passage of Senator Cullom's resolution to investigate the relations of Canadian railroads with transportation across the continent, although there was a good deal of rubbish mixed up with it. The Canadian Pacific Railway, we are told, is now carrying 42 per cent. of the tea that we consume. Well, what of that? If they are doing so, they must be doing it at a loss, because they have a more difficult and expensive line to operate than ours. If they are doing it at a loss, they are giving us some of their money, which Senators ought not to object to except upon strictly political grounds. If they are doing it at a profit, then our own railroads are to blame for allowing the Canadians to pick up business under their noses. So as to business taken from American ports on the Pacific to American points east of the mountains: we venture to say that every pound of freight so carried has been carried at a loss, or at least without profit, the Inter-State Commerce Law being non-operative as to that traffic. It will probably be found that not more than 5 per cent. of the traffic naturally belonging to American lines has been taken by the Canadian Pacific, and that upon this 5 per cent. the Canadians have no reason to congratulate themselves. But there can be no objection to the investigation except that it involves a certain amount of useless bickering, and plays into the hands of those who seek to multiply difficulties with foreign countries in order to help the "home market."

The continued indifference of the Post-office Department to the doings of Postmaster Jones of Indianapolis is one of the crying scandals of the day. The impunity he has enjoyed, and continues to enjoy, has done more harm to the Administration than all the "work" of one thousand Joneses could repair in a year. For the President makes a great mistake if he supposes that the mischief done by a man like Jones is confined to the State in which it is carried on. As we long ago pointed out to him, it is not possible, in these days of telegraphs and cylinder presses, to confine the results of abuses to States in which the reform sentiment is feeble. The idea that the spoils system can be allowed to thrive without damage in States in which it is vigorous, provided it be cut down remorselessly in States in which the reformers are numerous and powerful, has been proved to be utterly fallacious. Indiana or Maryland scandals cannot be confined to Indiana and Maryland. The whole Union hears of them. Thousands in other States who supported Mr. Cleveland in 1884 are disgusted or alienated by them, and led to doubt whether he has done any good at all, or to underestimate grossly the good he has done. The reports which the Civil-Service Reform Association in Indianapolis continues to make on Jones's doings are simply sickening, and, as far as we can learn, they are neither denied nor deniable. The last one, besides the record of apparently unjustifiable dismissals among the carriers to make room for Democratic workers, tells of one shocking appointment, that of a man named Tompkins, who had, as shown by the records of the Marion County Criminal Court, pleaded guilty in November of last year to an indictment of giving liquor to a minor—namely, a school-girl of thirteen—whose acquaintance he made at the post-office while he was serving as a clerk, and whom he enticed to "a resort" out side the city. The charge is that, though Tompkins was suspended when arrested for this offence, he was, after his conviction and the payment of his fine, restored by Jones to his clerkship, "and is in that position now," the report says. "Nearly all these facts," it adds, "have been brought before the Administration." We hope and believe this one is not among the number. We cannot believe that the President is knowingly allowing Jones to get *full* swing.

Signor Cesare Rosmini, in the current number of the *Giornale degli Economisti*, presents the Italian side of the immigration question which is now awaiting solution at the hands of a Congressional committee, reviewing at length the bill introduced into the Italian Parliament by the Crispi Ministry. Such a law has long been demanded by Italian statesmen and economic and statistical societies, but the steady opposition of Signor Depretis defeated all action in this direction. On July 29, 1887, however, Depretis died, and in the speech with which the King opened the XVI. Parliament, November 16, he announced that the Government would request the assent of that body to an emigration law; and a month later such an act was introduced. Its most important provisions are as follows: The licensing of domiciled Italian citizens as emigration agents for one year by the Minister of the Interior on the proposition of the prefect of the province. The agent must deposit 1,000 to 3,000 lire ($200 to $600) as security against sudden losses of emigrants resulting from his action or negligence, to be disbursed on the award of a Governmental commission. A copy of the contract must be given to the emigrant. The agent is forbidden under penalty to ask or receive compensation from emigrants, except for sums actually disbursed on their account; to counsel, induce, or excite emigration; to furnish emigrants with shipping, to mediate between them and the shipping company, or to accompany them to the place of embarkation or destination. Clergymen and local officers who promote emigration, even without the desire of gain, are likewise liable to punishment, as are all who procure or give shipping to emigrants unprovided with proper papers. The spreading of false information, with fraudulent intent to promote emigration, is punishable as swindling. Finally, the Government is armed with full ordinance power.

Mayor Hewitt announces that he is not a candidate for another term, that he does not want to be Mayor again, does not expect to be, and does not intend to be if he can help it; but that there are things that he wants to see started, and things that have been started which he wants to see carried on to completion, and that "if the people should go ahead and elect me, that would be something I could not help and could not run away from," and he "would have to take it as a matter of duty." There ought to be no doubt about the action of the people. Mr. Hewitt has his weaknesses and infirmities, but the average of his official action is exceedingly high, and the city will be blind to its own interests if it does not command his services for another term, now that it is evident he would obey its command.

The fight between the Liberals and Tories over the Commission Bill, providing a judicial tribunal to inquire into the charges of the London *Times* against the Parnellites, practically ended last week in the reporting of the bill from the Committee of the Whole, after a debate of extraordinary acrimony. The Government has been dragged into proposing it little by little, and little by little has made it as disadvantageous to the Parnellites as possible. The *Times* pamphlet was originally really a campaign document of the kind with which we are very familiar in this country, and fortified, in order to make it more sensational, by a copy of a letter purporting to have been written by

Parnell, expressing satisfaction with the assassination of Burke and Cavendish. Incautiously the Ministers were led, both on the stump and in the House of Commons in the fury of debate, to refer to it now and again as a true description of the Irish Home-Rulers, probably hardly foreseeing the consequences of treating seriously accusations of this kind against members of Parliament, and thinking they could confine themselves to taunting Parnell with not bringing a libel suit—and probably forgetting, too, as they often do in their rage, that the Irish really are members of the House. This gave the Irish an advantage, of which they promptly availed themselves to ask for a Parliamentary Committee of Investigation, which was refused; but the refusal made even fair-minded Tories uneasy about the situation.

The matter then lay quiet for a while, until the Attorney-General, a member of the Cabinet, in another incautious mood, took a brief for the *Times* in the O'Donnell libel suit, and produced the *Times's* pamphlet in his speech, strengthened with more assassination letters from Parnell, and in fact committing himself to the assumption that Parnell was an accessory to a murder. Coming from the highest law officer of the Crown, this was, of course, a prodigious blunder, and really committed him to a criminal prosecution of Parnell, and made the cry, "Why don't you sue the *Times?*" absolutely ludicrous. After this there seemed nothing for it but to grant a special investigation of some kind. The former refusal made it impossible to grant a Parliamentary committee, so the plan of a judicial commission was devised. The Parnellites wanted the inquiry confined, and it looks as if it was originally intended to be confined, to the authenticity of the letters, but the *Times* and the Attorney-General seem to have been greatly alarmed over this, because it is now admitted that the authenticity of the letters cannot be proved, and they therefore induced the Government to extend the inquiry to all the charges made by the *Times*, and to "other persons" besides members of Parliament. In this way, if the evidence about the letters breaks down, the effect will, it is hoped, be neutralized or softened by a cloud of other testimony about the crimes of the National League and the violent speeches of the agitators. The result has been reached by an amount of subterfuge, evasion, self-contradiction and wriggling on the part of the Ministry which makes the affair one of the most discreditable chapters in English politics. But, in spite of everything, the inquiry must do good. The three judges are men who will not be led astray by clap-trap or elocution, and their report will reduce the *Times* charges to the proper dimensions. One has only to glance at these charges to see that a tribunal like this must make sad havoc among them.

We learn from the London *Economist* that the Telegraph Department of the British Post-office is being worked, not only at a loss, but a loss which is increasing every year. The annual loss was £112,000 in 1881-2, and £471,000 in 1886-7. In the expenditures of the telegraph service is of course included interest (at 3 per cent.) on the capital invested in the purchase of the telegraph lines, for which the State paid, according to the *Economist*, much too high a price. But a very large portion of the deficit is caused, according to the report of the select Committee on Revenue Estimates, by the low rates for press messages, the loss in this branch of the work being computed to reach nearly £200,000. If this estimate is well founded, the *Economist* thinks there ought to be no hesitation in advancing press rates to the paying point, and is of opinion that no self-respecting newspaper would oppose such a step. There is no valid reason, says the *Economist*, why newspapers should receive this disguised subsidy; although they confer great benefits upon the country, they are after all business undertakings, in general amply able to pay their way, and if, while making money, they are performing a public service, the same may be said of the butcher and the baker.

Unionist circles in England either believe, or affect to believe, that the Tammany Society in this city is composed exclusively of Irishmen, and that the chief business of the organization is the planning of raids on the city treasury. We think it was Mr. Arthur Arnold who pointed out in a magazine article that the Tweed Ring also contained Irishmen only, and that its operations afforded a fair illustration of what would go on in all the Irish towns in case Ireland obtained home rule. We need hardly say that this view has obtained frequent and powerful support from our friend Prof. Goldwin Smith, writing from his eyrie in Toronto, and that it has done good service on the Unionist stump. Unluckily, however, the Government investigation into the doings of the London Board of Works has revealed a state of things which shows that even among the Saxons of that city "pulls" and "boodle" are by no means unknown. In fact, it has ruined the Tammany argument against home rule. The *Daily Telegraph*, a furious Tory and Jingo sheet, thus speaks of the revelations now made:

> "Nobody will now dispute that probably for a good many years past the chair of the excellent Lord Magheramorne has been planted at the side of one of the most corrupt organizations that the history of any modern community can show. Corruption seems to have been the very oxygen which—if that respectable and valuable gas will excuse us the metaphor—a certain class of the Board's officers and servants habitually inhaled. It was the breath of their official life, the ozone of their administrative existence. All these gross scandals and abuses, all this giving and taking of commissions, all these levyings and payments of blackmail, were going on for years under the very eyes—nay, under the very nose—of this blameless official and most estimable man; but no whiff of the vile odor of all these malpractices seems ever to have assailed his nostrils, no faintest jingle of ill-gotten gains seems ever to have reached his ear."

The coöperative experiment in England is of much greater age than might be inferred from noting that the recent Coöperative Congress at Dewsbury was numbered the twentieth. Back at least to 1849 and the Christian Socialism of Maurice and Kingsley, does the movement date. Indeed, we believe that Mr. Neale, the President of the Congress, was himself associated with Ludlow and Maurice in the organization of the first workingmen's coöperative society. However that may be, the Dewsbury meeting served to bring out the great proportions now reached by an enterprise whose beginnings were of the humblest. The United Kingdom now has 1,350 coöperative stores, supplying more than 920,000 members. Their sales amounted to more than $120,000,000 last year, and the profits shared reached nearly $15,000,000. This last sum represents the annual saving now effected by dispensing with the profits of middlemen. It cannot be denied, therefore, that the experiment in distributive coöperation has been a great success. Yet, on its face, it is but a partial and self-limited solution of the question it attacks. Distributive without productive coöperation is a one-legged affair, and the record of experiments in productive coöperation is almost wholly one of failures. The Congress voted to take up that work anew, but the past is not reassuring. Merely distributive coöperation, even if carried to the greatest possible extent, and made to reach all of the 5,000,000 families of Great Britain, might not mean a higher standard of living. As Lassalle pointed out, it might mean lowered wages, under the stress of competition, thus really neutralizing the saving now effected by coöperative stores.

The distinct promise made by the new Emperor, in his speech to the German Parliament, to enact laws for the benefit of the poor, has a partial fulfilment in the measure of socialistic legislation which has recently passed the Bundesrath. The first of Bismarck's laws in the interest of workingmen, along the line of the demands of the Socialists, was, it will be remembered, that providing for a pension to workmen disabled by an accident. The new law extends the system to invalided workingmen and those who may reach the age of seventy years. The scheme is to operate in the following manner: An insurance fund is to be accumulated to which workingmen themselves, employers, and the Empire, each contribute equally. Men are to subscribe five cents per week and women about four cents, each employer of labor is to add as much as the sum drawn from all his work-people, and the Government will give its third. From the sum thus obtained, a pension of sixty-two cents a week will be paid to any who are kept from working by sickness, and to all who have passed their seventieth year. Measures thus purely socialistic seem now to be the settled policy of Bismarck, undertaken in the hope of drawing the fangs of the Socialist party. Thus far he has certainly met with little success in that purpose, as the Socialist vote keeps on growing, and the Socialist party, far from being conciliated by his half-way laws, laughs at them and pushes on its propaganda with redoubled zeal.

LAODICEAN POLITICS.

DR. STORRS has written a long letter to the *Independent*, explaining the saying attributed to him by Dr. Cuyler, that he was so perplexed and displeased by the Republican platform that nothing seemed left for him but to "take to the woods." He qualifies this now as an "idle word," representing "a real feeling of uncertainty and unrest" from which he has not altogether escaped, "though it becomes increasingly probable that he will again vote for the Republican ticket"; at least, that "seems the conclusion towards which his mind drifts," though his dislike of the platform is as great as ever. But he thinks that, on the subject of temperance, reliance is rather to be placed on the Republican party than on the Democrats, and, as to the tariff, although he again denounces the utterances of the Republican platform as absurd, nevertheless, "in view of the majestic history of the party," etc., he "waits to see if such a revision of the tariff as appears to him demanded will not be accepted by the party as a near and an imperative duty."

The letter is interesting as an illustration of the way in which the mind of a good man who does not give particular attention to politics, and lives under strong habits and traditions, works about election time, and postpones or fends off the disagreeable necessity of taking any positive step in the direction of a change for the better, even when he acknowledges that such a change is needed. It is still more interesting, however, to the student of American politics, as an illustration of the agencies which have brought the Republican party into its present troubles. If we were asked by a young man to explain to him the process by which the party of Greeley, and Sumner, and Lincoln, and Chase, and Seward had become the party of Blaine, and Quay, and Elkins, and Shook, and Reid, and Ford, we doubt if we could do better than put into his hands Dr. Storrs's letter, with some such comment as this:

A party begins inevitably to decline in force when its founders die out and its principal aim has been accomplished; and it must necessarily do so because it is not a church, and is, therefore, not a divinely appointed depositary of revealed truth, or a divinely appointed means of individual edification. It has no corporate existence whatever. It is simply the agreement, necessarily transitory, of a large body of voters to try to embody some particular idea or set of ideas in legislation, or intrust the execution of the laws to the hands of a particular set of men. The only way in which we are made aware of its existence or of its aims is through the pledges it exacts of the legislators whom it elects, the platforms in which it enunciates its principles, and the kind of men it puts in high office.

Except through this manifestation, no one knows anything about a party. Its members have nothing in common but their momentary agreement to say certain things on certain topics, and to support these things by voting together at certain elections. But we inevitably get into the way, in countries of universal suffrage, of talking of the men who take charge of the machinery as "the party"—that is, the men call the conventions together and regulate their proceedings, and we finally come to think of them as "the party." And after talking and thinking of them as the party, for a time, we soon get into the habit of ascribing to them a corporate existence, with a sort of transmitted goodness and purity, or spiritual efficacy, like "holy orders" in the Catholic and Episcopal Church, so that each of them, however unworthy personally, will, in his relations to the party, and in his action for the party, be moved by a special inherent and perpetual grace, of which he cannot, as long as he speaks for the party, divest himself by any ordinary sin or iniquity. Under this view the party, of course, never ceases to be the party of the original founders; and Blaine, Quay, Elkins, Shook, Reid, and Ford continue to be, and are for for all party purposes, Greeley, Sumner, Lincoln, Chase, and Seward, to the eye of the faithful man.

Once this corporate continuity of character and aims is established in behalf of the party, and men like Dr. Storrs are got to accept it, of course persistence in any line of error or folly becomes easy, and change for the better hard. "The party," for instance, has for twenty years been promising to revise the tariff, but has steadily refused to do so. Dr. Storrs says this ought to be done, but when he asks the party why it is not done, the answer is simple—in fact, he makes it himself. "Matt" Quay will say: "You trusted Lincoln to do what was right eventually, did you not? Then why do you not trust us? For all party purposes we are Lincoln, and Seward, and Sumner, and Chase rolled into one. We are heirs of all their purposes and aspirations, and just as sure to come out right in the end as they were. You admit that our past, including that of Blaine, Dorsey, Shook, and Reid, is 'majestic,' and you must surely see that, this being the case, although we have for twenty years or so never shown the smallest intention of altering the tariff, except to raise it, we are pretty sure to reduce it before long. In fact, we cannot help ourselves. The reduction of the tariff being, as you say, a 'near and imperative duty,' and duties of this sort being very attractive to us, we are almost certain to buckle down to the work within a few years. If we do not, we shall transmit 'the majestic history' which we have received from our precursors, to other managers who will come after us, and, you may rely upon it, the tariff will be revised, either before you die or afterwards. In the meantime, do not lose heart or hope, but vote our ticket as usual. We are as sound on the liquor question as on the tariff, although it may not seem so to the casual observer. Our brothers Shook and Reid may now and again seek to 'give Republican saloon-keepers the protection to which they are entitled,' but this ought not to cause you to mistrust them, because, in virtue of the law of the party's being, the persistence of such men in error is impossible. How often has the Christian Church fallen into corrupt ways, and made discreditable concessions to sinners; but how surely has she in the end come back to her primitive purity."

CAMPAIGN LYING.

LATE in the canvass of 1880, after the Republicans had succeeded in making the tariff an issue, the Republican National Committee issued from their headquarters in this city and Brooklyn the following card:

[From a pamphlet issued by the Free-Trade Club of London.]

"Let it be understood, once for all, that the salvation of England depends upon the destruction of American manufactures, and that the only possible way in which American manufactures can be destroyed is by free trade. This can only come through Democracy, and Democracy can only secure control of this republic by the votes of Irishmen. How England must laugh in her sleeve as she sees the men who left their homes vowing vengeance, serve her interests by working for a party which, if it gets control of the country, will inevitably carry out the policy she most desires!"

Mr. David A. Wells promptly pounced on this as a fraud and exposed it, challenging Stephen W. Dorsey, the precious scamp who, as Secretary of the National Committee, then had charge of the "majestic history" of the Republican party, to produce the pamphlet. Dorsey, after waiting three weeks, and submitting to nearly as much prodding as Mr. Foster about the "fat" circular, came forward, and in thoroughly characteristic fashion flatly denied that the Committee had issued any such card. This was too bold, however, for a cloud of witnesses at once appeared to testify to the issue of whole bundles of it, both in this city and Brooklyn, and Dorsey disappeared into the obscurity in which he has ever since lived, except when he was under trial as a Star-route thief. There never was any such pamphlet, or any such club as "The Free-Trade Club." The whole thing was a pure invention, and yet it was simply the most barefaced of many similar ones.

Proofs that our Republican friends are again resorting to the same tactics pour in on us now every day. Devices of this kind are very hard to meet, because they are rarely resorted to through the newspaper press, and therefore one only hears of them in a measure accidentally. The instrumentality is usually oral gossip, or hand-bills addressed to workingmen. An illustration of the former of these methods came to us within a day or two, from a respectable correspondent in the West, whose letter we reproduce, suppressing the names.

DEAR SIRS: A gray-haired lawyer, formerly of your city, and a friend of Levi P. Morton, always damages my arguments, based upon your facts and lines of thought, by declaring that the *Evening Post* property is mortgaged for $500,000 to two members of the Cobden Club at 2 per cent. Innuendo that you are bribed.

The statement, to be sure, has nothing to do with the value of the arguments, but hurts me on facts with two doubtful men in our office, and if you can see no objection to denying the statement, you would confer a favor on me by so doing. His name is ——, and to my denials he said it was matter of record to his knowledge.

No offence whatever if I receive no answer.

Yours respectfully, ——.

We presume, in the ordinary relations of life, this "gray-haired lawyer" is a scrupulous and truthful man; but when the tariff is attacked, he has no hesitation in becoming a deliberate and circumstantial liar. As a general rule these oral lies are, in order to make them effective, backed up by "personal knowledge" of the facts. In the canvass of 1884 a reader in this city made known to us that a friend of his, living a short distance in the country, had accounted to him for the course of the *Times* and the *Evening Post* by alleging that he knew personally of the pecuniary inducements applied to the editors of these journals, respectively, in order to get them to support Cleveland. On hearing this, we made the most tempting offers to persuade him to come to town and expose the wretches to public disgrace in the presence of any reputable witnesses, but never could induce him to open his mouth or move an inch again. He will probably now carry his secret with him to the grave.

The Chicago *Tribune*, we perceive, has just been having a similar experience. A report has been spread through several country newspapers that the editor had received money from the Cobden Club, in the usual way, for "supporting free-trade doctrines." The editor calls for "names, dates, and specifications," and promises, if the author of the story will come forward, to convict him in the courts of lying. But he will never get any names, dates, or specifications, nor will the author appear. Such tales are not intended to be proved. They are intended to close the ears of ignorant people between now and November to facts and arguments that would probably otherwise affect their votes. It is, as the Chicago *Tribune* says,

"amazing that intelligent men should be fooled in this day and generation by the silly old Cobden Club hobgoblin. The Cobden Club is a poor organization, half dead and half alive, without any funds, and never having had enough to pay the small expense of circulating documents."

But intelligent men are not fooled by it. It is meant for the more ignorant workingmen, and particularly the Irish, who seem to be in this country the chief prey of demagogues and impostors. The opponents of tariff reform are at this moment circulating another forgery, purporting to be an extract from the London *Times*, to the effect that "the only use England has for Irishmen now is to send them to the United States to vote for Cleveland and free trade." Of course this is an impudent invention, like Dorsey's in 1880, but it will probably be of use to its concocters. Retract it, or apologize for it, or feel ashamed of it, they never will.

Another and very common form of campaign lying is the issue of hand-bills addressed to workingmen — or "wage-earners," as they are called—showing, sometimes by anecdote, sometimes by argument, and sometimes by figures, the dreadful consequences to American labor should the Mills bill become a law. We have a sheaf of these documents lying on our table now. Of the arguments we have nothing to say on the score of dishonesty. There is hardly any fallacy so gross, on questions of trade and taxation, that it may not be held and used in good faith. But the columns of figures intended to give a comparative view of the money received by workingmen in this country and in England, and of the cost of clothing, provisions, etc., in the two countries, are generally curious and interesting examples of what may be called oscillatory falsehood. The writer does not lie straight down either one column or both, but oscillates from one to the other. If he tells the truth, for instance, about the wages paid in one trade in London, he will lie about the wages paid in the same trade in New York, or vice versa. And when he tells the truth about the cost of a particular article in New York, he will lie about its cost in London, and so on. There is no way that we know of directly counteracting the mischief done by these leaflets. No authority is given for their statements. The author's name is unknown, and so is the source from which they are issued, and they cannot be followed in their circulation. They are probably the most flagrant appeals ever made in American politics to sheer ignorance and gullibility, and can only be met by the equally diligent diffusion of facts taken from official documents and capable of verification.

THE FIGURES AS TO TARIFF REDUCTION.

Many inquiries are now being made as to the way in which the average rate of duty, and the average reduction of duty proposed by the Mills bill, are estimated. Some complaint has been made that the slight reduction of the average duty shown by considering only the dutiable list is deceptive. One or two inquiring correspondents have remarked that if the Mills bill had put all but a few articles on the free list, and had placed a duty of 100 per cent. on those, there would have been, on the basis of the dutiable list alone, an increase of rate, although the customs duties had been practically abolished. The *Tribune* a few days ago seized this idea and made it the basis of an elaborate attack. It will doubtless be of service to many readers to give some consideration to this and related matters.

In the first place, then, speaking broadly, the dutiable list is the proper basis for estimating the scale of the existing protective tariff. What people want to have an idea of, in the present discussion, is the rate at which the protected interests are protected, or, in other words, the percentage of discrimination that is given to them as against foreign producers. That percentage, in the case of the year ending June 30, 1887, was 47; namely, our imports of dutiable articles amounted to 450 million dollars, and the duty collected on them was 212 million dollars. Our imports of articles on the free list in the same year amounted to 233 million dollars. Now, if we were to add this to the amount of dutiable imports, and reckon the percentage of duty on the whole 683 million, we should find the average duty to be 31 per cent. But evidently this would not be a correct measure of the protection afforded by the present tariff. The free list consists of articles which receive no protection, most of which cannot receive any, and of all of which it may safely be said that there has been no demand worth mentioning for their protection, or they would certainly never have been put upon the free list by a Republican Congress. Of the whole importation on the free list one-third was coffee and tea, one-eighth chemicals, one-eighth hides, skins, and furs, one-twelfth unmanufactured silk; one-twelfth consisted of American products returned unaltered, and brown sugar imported free under the treaty with the Hawaiian Islands, and the remaining one-fourth partook of the general character of the above.

To compare the average rate of duty under the proposed bill with the present rate, Mr. Mills has taken the actual imports for the year ending June 30, 1887, of articles on the dutiable list of his bill; has found the aggregate amount of duty which these articles would have had to pay under the provisions of the bill; and has found what percentage of the total importation this duty would have been. It turns out to be (taking the bill as amended and sent to the Senate) 42½ per cent., as against 47 per cent. in the present tariff.

It must at once be admitted that these figures do not fully represent the reduction of the rate of protective duty. Some articles have been placed upon the free list against the strenuous protests of protectionists; the chief of these is raw wool, and the next in importance are raw flax, lumber, and salt; tin-plate belongs in a somewhat different category, as it is not produced in this country, though there has been a considerable outcry about putting it on the free list. The total amount of duties remitted by articles being placed on the free list is $20,000,000, and to this amount the articles above enumerated (including tin-plate) contributed about three-fourths; the remaining articles placed on the free list are chiefly chemicals, and other materials of the same general nature as those previously placed on the free list by Republican Congresses.

It would be a mistake, however, to suppose that any great reduction would have been shown if we had made the whole importation, instead of dutiable articles only, the basis of our calculations. The total importations of the year amounted to $683,000,000; the remission of duty which the Mills bill—free list and all—has made on these is $50,000,000, which is 7¼ per cent. of that total; in other words, if we considered the aggregate imports instead of the dutiable list alone, the average rate of duty on the imports actually made in the year 1886-87 would have been 7¼ per cent. lower by the Mills bill than by the existing tariff, instead of 4½ per cent. as found above.

To all these calculations several objections may be justly made. In the first place, it may be said that the placing of certain arti-

cles on the free list will cause an increased importation of them, so that the figures of the year 1886-87 should be increased for the purposes of this estimate. Secondly, it may be said that where a duty was practically prohibitory, the imports under it were too small to appreciably affect the average, and its reduction would not be perceptible; of course, this remark cuts both ways. A point much more important to notice is, that, in a prominent class of cases, the reduction of protection is not as great as would appear from the figures. The chief illustration of this is in the item of woollen goods, the duty on which has been reduced by just the amount that had been laid on to compensate for the duty on the raw material. The average duty on woollens has been reduced from 59 to 39 per cent., and the reduction of duties thus effected amounts to $12,000,000, which is two-fifths of the total reduction made on the dutiable list; and this reduction, so large a part of the whole, while being so much saved to consumers, cannot be regarded as a diminution of protection at all. This consideration alone far outweighs all the objections that may be made to the figures by high-tariff advocates.

Finally, it must be said that no method of averaging, based on amounts of imports, can give an accurate idea of the actual rate of protection. In making such an average, the weight attributed to each article is made proportional to the amount of it imported, whereas, to measure its importance in a scheme of protection, it ought rather to be made proportional to the amount produced at home, though even this would be open to serious objection. Nothing can be substituted for an actual examination of the chief provisions of the tariff; and any one who will take the trouble to make such an examination will see how carefully the Mills bill has been framed, in almost all its points, to secure cheaper necessaries and cheaper raw materials, with extremely little disturbance of existing industries. But, as few can take the trouble to satisfy themselves of this the brief rough statement that can be made in a word must serve on most occasions. And we trust that the considerations above presented suffice to show that when we say that the Mills bill makes the average rate of duty on dutiable goods 42½ per cent., instead of 47 per cent., and that it places raw wool, raw flax, hemp and jute, lumber, salt, tin-plate, certain chemicals, and a few other articles on the free list, we give as fair a statement of the proposed tariff reduction as can be made in a few words.

THE NEW VIEW OF CHEAPNESS.

SOME months ago, Gen. Harrison, the Nominal Candidate of the Republican party, said in a speech in Chicago:

"I am one of those uninstructed political economists that have an impression that some things may be too cheap; that I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coats."

As about 90 per cent. of the male population of this country wear ready-made clothing, and, as a matter of necessity, take great pains to get it as cheaply as possible, this seemed a very hard saying, and we have commented on it with some severity. The Chicago *Herald* has since taken the same view of it, and asked, as it seemed to us, with much force:

"Why should a cheap coat involve a cheap man under it? And if a man is obliged to wear a cheap coat, why should he not be allowed to buy the best one possible for the money he can lay out?"

Upon this it was taken to task with much sharpness by Gen. Harrison's home organ, the Indianapolis *Journal*, which asked very sternly:

"Do you not know, as a matter of fact, that tailors and seamstresses, men and women, now sew for very low wages, and that to cheapen clothes would be to lower wages, thus bringing tailor and seamstress nearer to the starvation point and making cheaper men and women?

"Do you not know that this was what Gen. Harrison meant?

"Do you not know that a very large majority of the male population in this country, probably 90 per cent., wear ready-made clothing the year round?

"Do you not know that a common, a good, or a first-rate ready-made all-wool suit of clothing can be bought in this country to-day as cheap as or cheaper than in any other, and, we may add, much better made and better fitting?

"Do you not know that the repeal of the duty on wool could not possibly reduce the price of ready-made clothing unless a reduction of wages followed?"

We were, on reading this, beginning to feel sorry for the wretched *Herald*, whose ignorance or cruelty was thus remorselessly exposed, when our eye fell on the following from another Republican organ, the St. Louis *Globe-Democrat*, quoted with approval on Monday by the great organ of all, the New York *Tribune:*

"We beg leave to remind our Democratic friends once more that the price of whiskey has been quadrupled and that of clothing quartered by the Republican party in the last twenty or twenty-five years."

It would thus appear—if the Indianapolis school of economists be correct in their doctrine, that "to cheapen clothes is to lower wages"—that the Republican party has cut down wages in the clothing trade 75 per cent. within the last twenty-five years, and has poured brine on the wound by raising the price of whiskey in the same proportion. A more extraordinary confession to be made by a party which is going into this canvass as the friend of the workingman, it would be difficult to conceive.

We now see that the more Gen. Harrison's objection to cheap clothing is discussed, the harder of comprehension it becomes even to his own supporters. The only way we can think of in which he could clear the matter up, would be to put himself, in another speech, in the place of a laboring man—whether mechanic, or operative, or farmer, matters not—and give us a sample of the reflections with which such a man should prepare for the purchase of a suit of clothing, say in the fall, when the chill in the air warns him to get ready for the winter. His means are of course small. To provide his family with lodgings, food, and clothing tasks his resources to the uttermost, and often leaves him unable to make any provision for sickness or loss of work; every dollar is precious to him. But the time comes when he must have a new suit of clothes. He knows of one store where he can get it for $15, but he knows, or has been told, of another where he can get the same thing exactly for $12. Now, what we want from Gen. Harrison and his organ, and what they ought to supply, is an outline of the debate with himself which the poor man ought to carry on before deciding at which store he will purchase. If he follows Gen. Harrison's advice, and buys the dear suit, in order to avoid becoming "a cheap man," his wife and children and neighbors and creditors will think him a crank, will consider that he has wasted three dollars, and will begin to fear that his earning days are nearly over; while if he buys the cheap suit, he will, according to the Indianapolis *Journal*, not only feel cheap himself, but lower wages. Such a situation is sure to be most puzzling to the untaught mind of the average poor man, and he ought to be helped in dealing with it by an argumentative tract from some high Republican authority.

We would respectfully suggest that Gen. Harrison should put into the same speech an outline of the letter which an American commission merchant or manufacturer in New York should write to his agent in Brazil or Chili in order to procure orders for American products from those countries, when that "regular [subsidized] mail communication" is established which, the Nominal Candidate says, is all that is necessary to give us profitable commercial intercourse with those countries. As matters now stand, we speak advisedly when we say that not a single manufacturer or dealer in this country knows what to say in such a letter, particularly as he would have to begin by repeating Gen. Harrison's warning that we will never allow any foreign goods to be offered for sale in our markets, on equal terms. At present, without the further light which Gen. Harrison may hereafter throw on the subject, it would have to be something of this sort:

NEW YORK, November 8, 1888.

DEAR SIR: We take the liberty of enclosing herewith a price-list of the leading articles of American manufacture, in which we shall be pleased to execute your orders in this market. You will note, doubtless, that the prices are all, or nearly all, from 30 per cent. to 50 per cent. higher than those of similar articles in England and on the continent of Europe, which you will, we feel sure, not object to pay, both in order to maintain your own self-respect and to enable us to keep up the wages of the laboring man in this country. It is proper to add that should you think of paying for the same in goods of your own the like of which are produced here, even in small quantities, it cannot be permitted, this market being reserved exclusively for American sellers. Any dealings we have with you will, therefore, have to be for coin, and particularly silver, of which we are now seeking to accumulate as large a store as possible. You will be rejoiced to know that, owing to the regular mail communication with your country recently established by our Government, we shall be able to forward you a communication of like tenor and effect with this one, every week, which must, we are sure, inure to our mutual advantage.

Trusting to hear from you in due course, and thanking you in advance for the orders you would probably like to send, but will not send, we remain, with great respect,

Your faithful servants,

LUNKHEAD & CO.

THE CANADIAN NORTHWEST.

THE negotiations in progress between the Northern Pacific Railway Company and the Provincial Government of Manitoba, respecting an entrance to and a commercial alliance with that country on the part of the railway corporation, have a deeper significance than appears upon the surface—deeper, perhaps, than the negotiators themselves are aware. As regards the details of the bargain, we have no knowledge beyond what the telegrams from Winnipeg furnish. These imply that the Manitoba people turn over to the Northern Pacific Company the line from Winnipeg to the border recently undertaken by their Government, and that the company will build a new line from Winnipeg to Portage La Prairie, to connect there with the Manitoba and Northwestern Railroad, which is already in operation for a distance of upwards of 140 miles into the heart of the great Valley of the Saskatchewan, and will extend the latter line still further northwestward, the Manitoba Government to guarantee the bonds of the new roads to the extent of $6,500 per mile.

We do not assume the correctness of the details of this arrangement, but as to its general features and its quite inevitable consequences we have no doubt. The Canadian Northwest is to receive a new development, its interests are to be allied with those of our own Northwestern States, and eventually there will be a commercial union on the basis of reciprocal free trade, to be followed by political union in the fulness of time. These unions will not be confined to the northwestern provinces of Canada, but will embrace all the British mainland of North America, and when the time comes that the people of Canada see their interest and their inclination this way, the mother-country will offer no opposition.

If the political union of the two countries is desirable, commercial union is the surest step to bring it about. This is the opinion of all parties in Canada, both those who favor and those who oppose it. The obstacle to union at the present time, as in the past, lies in the hearts of the people. Commercial antipathies, rivalries, jealousies, and fishery disputes growing out of hostile tariffs, have borne their natural fruit. Good feeling, the necessary precursor to union of any kind, does not grow out of unfriendly acts. When we abrogated the Treaty of 1854 we turned Canada away from our doors, forced her to seek new commercial relations, and postponed by a quarter of a century the consideration on her part of the question of entrance into the American Union. We will not now ask whether we were justified in abrogating that treaty. It is certain that we had some provocations growing out of the civil war, but in the greatness of our victory we might have overlooked them, and it would have been to our advantage to have done so.

At the present time we are told there is no party in Canada that dare avow the wish to link their fortunes with the United States; that there are men of prominence and influence here and there who do not hesitate to favor such a policy, but that they have no following worth making account of. This is probably true of old Canada, though not in the same degree as in the past. It is not true, however, of the Canadian Northwest. The prejudices of the olden time are scarcely felt in the new territory of the Saskatchewan, while the reasons for union between these people and their neighbors across the border are much stronger than anywhere else in the Dominion. The long distance that separates them from any civilized communities of their own confederation, the bleak and sterile nature of the country to be traversed, forbidding the hope of any considerable settlement of it at any future time, the cost of transportation, and the loss of time—all conspire to turn the eyes of these people southward for trade and for social sympathy. How powerful these influences are, the recent breaking up of the Canadian Pacific Company's monopoly in that country, at a cost to the Canadian Government of $15,000,000, abundantly testifies. The maintenance of the monopoly would have led inevitably to the disruption of the Dominion.

And what is the Canadian Northwest? Few people in the United States have any adequate or proximate conception of its extent or value. It embraces an area of fertile land, fit for the homes of civilized people, of 200,000,000 acres, equal to the territory of Dakota and Montana together, abounding in coal—both anthracite and bituminous—natural gas, the precious metals, furs, timber, and water power, while in the attractiveness and variety of its natural scenery it surpasses anything in the United States or Europe. The climate of this region is somewhat, but not greatly, colder than that of Dakota, the isothermal lines running southeastwardly from the Mackenzie River to the southern bend of Lake Michigan. It is not too cold for the hardy populations of northern Europe, who eagerly seek to better their fortunes by occupying the country. One hundred and fifty thousand people now live and thrive there, and millions may do so as easily.

MANIPULATION IN WALL STREET.

THE lately renewed activity in Wall Street is ascribed by some well-informed and experienced heads wholly to "manipulation." This explanation, however true it may be, needs itself to be explained. The dulness and deadness of the past twelve months, and the decline in securities that followed the bursting of the Manhattan bubble, were ascribed in like manner to manipulation. So it appears that manipulation works both ways with equal facility. Down or up is all one to the manipulator. He is at home in any state of the weather, and as ready to turn a dishonest penny by a rise as by a fall. But what is manipulation?

It cannot be supposed that manipulation is a final cause—certainly not manipulation which takes opposite directions at different times. It is the resultant of other things. As generally understood, manipulation signifies a common understanding and design on the part of a clique of operators to raise or depress values in order to get other people's money, either by "shaking out" their securities or by "unloading upon them" at fictitious prices. This feat may be accomplished in a variety of ways, by making money tight or easy, by spreading false rumors, by selling short or buying long; but obviously such manipulation can be only short-lived. Money cannot be cornered, false rumors are soon corrected, and both selling and buying have very narrow limits when confined merely to cliques. Moreover, the cliques are subject to the laws of trade. It is to their interest to "manipulate" in accord with the facts of the business world in all cases. If they sometimes make mistakes, they never do so designedly. It is their intention always to go with the tide, never against it. Manipulation is therefore only anticipation expressed in acts. It may be based upon error, but it is nothing else than an attempt to reap a profit from something which is going to happen, but which the mass of the community have not yet divined or grasped.

Again, the manipulators are no select body of persons. They are Tom, Dick, and Harry to-day; Jones, Brown, and Robinson to-morrow. It may and often does happen that two sets of manipulators are working at cross purposes at the same time, having conflicting ideas of what is likely to come to pass, as whether crops are to be good or bad, whether railroad companies are going to make war upon each other or not, whether trade is to be profitable or unprofitable, whether the situation in Europe is peaceful or otherwise. Simultaneous and concerted manipulation in one direction is never long continued unless supported by facts. If we look back at the manipulations of the past year, we shall find that they were based upon a pretty general belief that business was dull and was likely to continue so for a good while; that times were bad and profits low, and that those who "bet their money" on that opinion would win. Accordingly, all the manipulations that have been complained of — and they have been almost incessant for twelve months — have been "on the bear side," and they have been pretty generally successful because the facts were on that side.

If now manipulation has taken the opposite tack, it means that the majority of those who make it their business to forecast the future of trade and industry anticipate better times. If the improvement in Wall Street is due to manipulation, the manipulation itself is due to a belief that there is a turn of the tide. This may be a wrong belief, but it certainly does exist. People do not manipulate for fun, but for profit. When we find a persistent and continued manipulation for a rise, we may be sure that the operators think that there are good grounds for a rise. Is this belief well founded? We shall not dogmatize on this subject, although the improved tone of Wall Street is the best evidence within reach that it is so. Wall Street is the focus of the country in the business sense. Whatever is known or can be known anywhere is known there. There all the streams of intelligence converge, and it

would be as easy to manipulate Niagara Falls up stream as to manipulate the money market, for any considerable time, counter to the true business situation of the country. All the professional operators conjoined with all the newspapers and stump speakers could not, more than momentarily, change the true set of the current.

With the single exception of the woollen industry, all trades are now fairly and increasingly prosperous, and we hear less of labor troubles than usual. The cereal crops, although not wholly out of danger, are highly promising, and the foreign demand for them is more encouraging than it has been in recent years. The small towns in the interior, and especially in the West, are full of business enterprise. The slackening of railway construction which was noticed at midsummer has been followed by a new season of activity, and as a necessary consequence the demand for iron has revived. These are some of the facts, probably the chief ones, that have changed the balance of manipulation in Wall Street from the bear to the bull side. They are all taken into the account, as they should be; but no manipulator or other business man imagines that the Mills bill will interfere in the least degree with the prosperous current that appears to have set in. Whatever politicians may say, nobody will bet a dollar on the theory that a small reduction of duties on imports and an enlargement of the list of free raw materials will check or interrupt the revival of industry. On the other hand, we ought to reckon on the probable reduction of the Treasury surplus, however that may come about, as one of the most important factors contributing to the present improved situation.

There is always danger, in times like these, that speculation will be overdone, but if we have not yet passed the stage of manipulation, if the upward movement is all the doing of the professionals, if the public are not yet in the swim, that danger is not imminent.

THE COPYRIGHT BILL IN THE HOUSE.

Although it is now more than two years and a half since the Chace bill was introduced into the Senate, it has only been before the House of Representatives officially a little more than four months. On March 19 the Senate Committee on Patents made its second report upon this bill, and on the same day, by prearrangement, Col. Breckinridge of Kentucky presented to the House (without remarks) a duplicate of the bill as formulated by the Senate Committee, after the public hearing held in March. This text included the so called "typographical amendment"—stipulating that only such books should be copyrighted as were "printed from type set within the limits of the United States," and the slightly modified prohibition of importation. The bill was read twice, ordered to be printed (as H. R. No. 8715), and referred to the House Committee on the Judiciary. After a public hearing of arguments in favor of the bill before this Committee, it was placed in the hands of a subcommittee, who drew up a favorable report, and on April 21 it was reported back to the House by Mr. Collins of Massachusetts, whereupon it was referred to the House calendar, and was again ordered to be printed with some slight verbal alterations.

The report was also printed as House Report No. 1875, a document of two pages. It begins by pointing out the insular position occupied by the United States in excluding aliens from laws protecting literary and artistic property, and says:

> "This bill proposes that the creators of this class of property, whether citizens or foreigners, shall be protected in the enjoyment of it within the limits of the United States. It is now the only species of property which stands unprotected by our laws. Its recognition and protection seem to rest upon the foundation of common honesty. The persistent confiscation of it has been a reproach to our people, a serious discouragement to our authors, a marked injury to our publishing trade, while working demoralization and debasement of our literature."

The passage of the bill will, the Committee are satisfied, "encourage and stimulate American authorship, designing, engraving, and all the arts that enter into the making of good books. By it our authors obtain a wider market—that of the whole world—while they are saved from the competition of the unpaid work of the foreign authors. It will unquestionably raise the standard of literary taste, also, by banishing the 'trashy' and the 'gas-light' literature from the field." The unanimity of "authors, publishers, type-setters, electrotypers, binders, booksellers, and all others engaged in making and distributing books" in their advocacy of the bill is dwelt upon, as also the care taken to insure that the books copyrighted shall be entirely manufactured in the United States. Finally, the Committee revert to the question: Will the price of books be increased under international copyright? and answer it in the negative, believing it certain that "the best books written by men and women all over the world will be sold in the United States for less than they are sold now"; and that "the general consensus of opinion, the argument pushed almost to a demonstration, is that all other books will be sold for as low a price as they are now," the experience of European countries before and after international copyright being considered by the Committee as conclusive on this point.

On Wednesday, May 9, the Senate passed the Chace bill, and on Friday, the 11th, the Speaker laid the Senate Act before the House of Representatives, whereupon it was read twice and referred to the Committee on the Judiciary. On May 24 Mr. Collins from that Committee presented a second report (No. 2311), noticeable for its brevity. It reads as follows: "This bill differs but slightly from the House bill of the same title already reported. The Committee report the Senate bill favorably and recommend its passage." Both report and bill were ordered printed, the latter being marked with the Senate number (S. 554), and entitled: "An act to amend title sixty, chapter three, of the Revised Statutes of the United States," such having been the title of the Chace bill from its first presentation in Congress. The Senate "act" was referred to the House calendar, taking the place of the prior House bill, under date of April 21. All bills entered before that date would, in ordinary course, take precedence of it. The edition of the House calendar prepared for Monday morning, July 30, indicated that on that day there were 147 bills in the Committee of the Whole House, 88 bills on the House calendar, and 402 on the private calendar, or 637 bills in all, waiting to be considered before it became the turn of the Copyright Bill. This condition of affairs precluded any hope of the latter being reached during this term in its regular turn. The alternative was to secure the setting aside of a future day for its discussion. This could only be brought about by obtaining unanimous consent to introduce a resolution to that effect, and on Monday week Mr. Collins presented a resolution setting apart Thursday, December 6, for the debate of the bill, and asked unanimous consent to have it considered. To this Mr. Rogers of Arkansas objected, and the resolution was lost. As a single objection to any similar resolution would defeat it, it is clearly not probable that a discussion can be secured this session, and the whole matter must therefore go over until next winter, when, Mr. Rogers said, he expected the bill to pass.

PHILIP H. SHERIDAN.

The death of General Sheridan closes the active service of the military officers for whom special rank was created by act of Congress. It is thus a reminder, serious and forcible, of the rapidity with which the generation is passing away that took an active part in the great civil war. Gen. Sherman remains, with the earnest good wishes of the nation that he may long enjoy a green old age; but he is upon the retired list, while Sheridan, a much younger man, falls in the midst of the active duties of commandant of the army at the comparatively early age of fifty-seven.

Grant, Sherman, and Sheridan are placed, by the popular verdict from which there is no appeal, as a trio of great men standing apart from all the other military chieftains on the national side in the great struggle with secession. It does not matter that Sheridan's active service was chiefly in lineal rank below that of Meade and Thomas, and that his appointment to the grade of Lieutenant-General over them was after the war had closed. The popular mind has taken the ultimate rank as the index of the war service, and, by an *ex post facto* decree, assigned its importance to a grade corresponding to the final recognition in rank which he received. It will be the historian's duty to recall all the incidents of his brilliant career, and to weigh all the circumstances which test his claim to highest military honors. To the people he will always be what Blücher was to the Prussians, the "Marshal Vorwärts," who was to them the embodiment of patriotic devotion and boiling, aggressive energy.

Sheridan was never tested by the supreme responsibility of the command of a great army in an important campaign, as Meade was at Gettysburg and Thomas at Nashville. Even his justly famous campaign in the Shenandoah was so connected with that of Grant against Lee as to be subordinate to it, and to be free from that accountability for decisive events which is by far the heaviest burden a general has to bear. It cannot be too often repeated

that the difference between the intellectual tests applied to the commander of an independent great army and to his most important subordinate are different in kind, and that the most glorious success in the latter is no proof of ability to sustain the former. Military history is full of examples of brilliant marshals who were unequal to supreme command.

It was Sheridan's great merit that he proved equal to all the increased responsibilities that were put upon him, and that his powers were manifestly and rapidly growing when peace put an end to his career in war on a great scale. He had been much slower in reaching prominence than numbers of his great rivals. It is doubtful if he himself had much confidence in his own military capacity till much experience in brigade and division commands had educated him to trust his own judgment, and to follow the inspiration of his moments of battle enthusiasm.

Born in March, 1831, he was just thirty years of age and a captain in the Thirteenth Infantry when the war began. His career at West Point had not been specially promising; indeed, he had for some reason been obliged to spend an extra year in completing the course. Seven or eight years had been spent in garrison life on the frontier and in the petty conflicts with the Indians of the Pacific Slope. The first organization of our great army of volunteers made it necessary to use many officers of the regular line in staff duty, and Sheridan probably regarded it as a lucky thing that he was assigned to duty as a quartermaster. A full year was spent in routine administrative duties, but in the spring of 1862 he was serving in this capacity on Halleck's staff after the battle of Shiloh. In the stir of an actual campaign the hot blood of his Irish ancestry showed itself in flashes of energy and originality even in his duties as quartermaster, and the opinion both Halleck and Grant then formed of him bore fruit later in the war. His transfer to a regimental command came, however, from the appreciation of him then formed by the officers and men of a volunteer regiment, and on their request he was made Colonel of the Second Michigan Cavalry. To be a captain of regulars and colonel of volunteers was then but a step from brigadier, and though a brilliant affair at Booneville was the occasion of the promotion, it was, in the rapid increase of the army, almost a matter of course. His new commission dated from July 1, 1862.

In the rearrangement of departments after the Corinth campaign, Sheridan was assigned to the Army of the Cumberland and shared its fortunes till the spring of 1864. He commanded a division under Buell in the battle of Perryville, and under Rosecrans in the battles of Stone's River and Chickamauga. His military reputation grew solidly, but his division had formed part of the right wing of Rosecrans's army, and was involved in the disasters which were the opening scenes in both the great engagements last named. His personal conduct was always heroic in battle; but it cannot be said that he had yet shown the power to grasp and control large bodies of men in a decisive moment. At Stone's River he had rallied his broken brigades and stubbornly defended the new line which was formed, and against which Bragg's assaults finally failed. At Chickamauga the break in the line occurred beyond his left, but his division was carried away in the disorderly retreat towards Chattanooga, and did not again come actively into the fight.

At Missionary Ridge he had part in the enthusiastic assault in which the men of the line, without orders, instinctively continued the rush after Bragg's retreating skirmishers up the hill, and carried the crest by that extraordinary and spontaneous inspiration which, as we now know, was as unexpected to their commanders as it was to the enemy whom it crushed. It is no reproach to the reputation of Grant or of Sheridan to recognize the fact that here, if ever, the goddess Fortune asserted her old-time control over the events of war. They were worthy of her favors, and knew how to use them. The glory of the result illumined all the actors in it, and begot a popular confidence which went far to sustain them in the desperate struggles of the next year.

Sheridan had been made a Major-General of volunteers after Stone's River, and his reputation was that of a good division commander, faithful to his superior officers, and with personal characteristics of impetuous courage and hot, enthusiastic nature which belong to brilliant personal leadership. His associates did not think of him as of one likely to show the broader intellectual comprehension of the problems of war or the strong grasp of a great leader. Army reputation among regular officers was so much a matter of class standing in the Military Academy, that it may be doubted if Sheridan himself, at this time, did not yield to the habitual assumption that the men who had stood higher than he at West Point were much more competent to command. He was afterwards accustomed to speak of these phases of his experience as "tests" through which he had passed, and by which he himself as well as others had learned what higher work he was capable of.

His transfer to the command of the cavalry of the Army of the Potomac was probably determined by Grant's feeling that he especially needed a leader then who could show an example of personal energy and enthusiasm which would beget a like spirit in his subordinates. The Confederate General Stuart had, rightly or wrongly as he thought, overtopped the cavalry leaders of the Potomac army in the matter of enterprise and personal prestige, and it is probable that Grant looked more to this quality in Sheridan than to his strictly intellectual endowments.

A few weeks' service, however, proved to Grant that his subordinate had qualities which surpassed his expectation, and his confidence in Sheridan grew rapidly and steadily to the very end of the war. The Shenandoah campaign satisfied him that he had no one so fit to be trusted with a detached command with powers of independent action; and whatever criticisms have been made upon the severity towards the inhabitants which marked the mode of carrying out his orders, there is no doubt that that favorite route for diversions against the advance of the Army of the Potomac was thenceforth closed. Here, as at Missionary Ridge, Fortune favored Sheridan, and his ride to Winchester, which in fact little resembled the popular account embalmed in story and in stirring verse, gave a romantic interest to his career, more effective with the public than the sterner and solider events of the campaign. He took the tide at the flood, and popular confidence stimulated him to double effort and greater trust in himself.

Under his handling, the cavalry of the Potomac army became practically a mounted infantry, using its horses for rapid locomotion, but fighting dismounted with fire-arms of sufficient range and with a sufficient steadiness of line formation to put them upon nearly equal terms with the ordinary line of battle. Its self-confidence and prestige rapidly grew, and the fruits of hard discipline and experience through the preceding campaigns were reaped under the new leader in an almost unbroken series of victories in combats great and small, from the Wilderness and Todd's Tavern to Five Forks and Sailor's Creek and Appomattox. The death of Stuart emphasized the change that came in the relative power of the cavalry arm in the opposing forces, and the Confederate Army, horse as well as foot, was kept pretty steadily on the defensive till the final surrender. In the closing campaign Sheridan was often intrusted with a mixed command which answered more nearly to the control of a wing of the army than to any other, and Grant lost no opportunity of showing his complete trust in the judgment as well as the dash of his favorite subordinate.

Sheridan's relations to other officers were usually cordial, but the ardor of his temperament led, at times, to collisions in which he was not always right. At Missionary Ridge he had charged Wood's division with appropriating cannon gathered, as he said, in the line of march of his own victorious brigades. Both in substance and in form the assertion was unjustifiable, as investigation has shown. It left wounds which never quite healed. A similar hastiness of temper was no doubt the cause of his unfortunate act in relieving Gen. Warren of command in the very moment of victory at Five Forks. The power to do so had been left in his discretion, but its exercise was in total misapprehension of Warren's spirit, and in ignorance of the wise and gallant conduct by which Warren was in the very act of achieving success. It crushed an officer who had few equals in the service. There is justice in the argument that the burning zeal and energy which brooks no delay in quick surmounting of obstacles, must almost necessarily ride over some whose misfortune it is to seem to be in the way; but as one and the other pass away from earth, we owe it to truth to point out the injustice or the error. The country owes a generous sympathy, if not a remorseful vindication, to one who suffered in her cause for faults mistakenly attributed to him, as well as an admiring tribute to the successful hero.

In the Franco-Prussian war Gen. Sheridan represented our army at the headquarters of the Prussian King. It has been much regretted that he published no memoir of his observations in the campaign of Sedan. In private conversation he indicated the opinion that our civil war had had great effect in modifying the tactics as well as the weapons of European armies, and that the military leaders of Germany and France had learned more from our experience than could be taught us by theirs. This meant that the European war had been the occasion for testing changes and improvements originating here, and for putting them into general practice, rather than for originating new methods. He had formed clear ideas as to the relative merits of the continental systems, and of the armies affected by them; but whether from disinclination for the theoretic presentation of such questions, or from an unwillingness to criticise either Frenchmen or Germans, he maintained a reserve in all public references to the subject.

His personal attachment to Gen. Grant was always warm and devoted, and the points of his public performance of duty since the war which have been most criticised were those in which, as in Louisiana and Texas, he was attempting to enforce what he believed to be the policy of his chief. Political life he was sincerely averse to, and limited his activity as far as possible to the strict performance of military duty. His devotion to the country

was unquestioned and unquestionable. His patriotism was pure and sincere. His great services and the romantic brilliancy of his career forbid that his fame should be forgotten, and it is likely to grow only more solid and glorious with time.

A COUNTY-SEAT WAR IN KANSAS.

GOODLAND, KAN., July 30.

ONE evening, early in the fall of '87, four men were driving through the streets of a small town in the extreme western part of Kansas. As they passed the principal drug-store, one of them cried out, "What's the matter with Eustis?" and they all shouted in chorus for reply, "She's all right!" A straggling group of men on the sidewalk gave them a cheer, and they drove on into the country.

Four miles of level road across the prairie brought them to a sod house, just as the lamps were being lighted. The homesteader came out and gave them a homely and hearty welcome, took the care of their horses upon himself, and ushered them within. Inside, one hardly realized that one was on the frontier. The walls were perfectly white and smooth, and hung with engravings. A deep window recess was filled with house-plants, and five or six men were talking around a cheerful coal fire. One of them was a candidate for the Legislature, another for a county office. They were all on their way to a political meeting, and had made this their rendezvous.

As soon as the party of a dozen or more had eaten supper, they drove some eight or nine miles to the schoolhouse at which the meeting was to be held. One to whom such a scene as the interior formed was new, could not but be impressed with its peculiarities. As a matter of course the building was made of turf. It was newly built, and nothing had been done towards finishing it. There was neither window nor door in the openings left for them, and the floor was the natural ground with the buffalo grass scraped off. From one of the planks which supported the roof hung a badly smoked lantern. Gathered in one end of the house was a small heap of pine blocks and shavings, from which every now and then some one would economically feed the feeble fire which burned primitively upon the ground, and which furnished most of the light and all the warmth for the audience. About thirty men were assembled. Some were perched in the deep window-seats; others, talking, in small groups, leaned against the turf walls, while most of them squatted, Indian-fashion, about the fire, and smoked or chewed tobacco.

Truly, it was not a promising outlook for an interesting and edifying discussion of public affairs. Yet the chief question at issue was so important, locally, the people present were so absorbed in its settlement and so anxious to see its bearings, that for three hours the little meeting continued, under the disadvantages of cold and partial darkness and the absence of seats, listening to the debaters. These spoke with energy always, generally with directness, and sometimes with genuine power. Entire courtesy was shown throughout, and the proceedings were marked with more dignity than one would have thought possible under the circumstances.

Many of the new counties in the West nowadays, at the time of their organization, pass through a fierce fight over the question of locating the county-seat. Sherman County was no exception, and this meeting was the first one of a campaign which was to finally settle the point of so much importance to town-site speculators—of importance to them because it meant financial loss or gain; why the homesteaders were so interested it is hard for one to understand. They were tired, for one reason, of a fight which had now been going on for two years, and which divided their county into factions; they had personal grievances against the citizens of one town or personal likings for those of another. At any rate, as a rule they felt more intensely and were more bitterly partisan than those whose property was at stake.

At the time the meeting above described was held, six towns had been started within a radius of four miles, near the centre of the county. Three of them had given up the struggle, and the buildings had been moved to one or the other of the remaining three. The town of Eustis had been designated by the Governor as the temporary county-seat, and one election had been held at which no town had received a majority of the votes cast. Goodland, the town which was eventually successful, had been laid off but a month before within a mile of Eustis, and consisted almost entirely of buildings which had been moved from other towns. Some of the buildings now here, by the way, have been moved across the prairie for several miles as many as five times.

Goodland was backed by a town company which put plenty of money into the campaign. The town was also supported by a secret organization among the farmers, many of the members of which were promised town lots in case of success. At the election for county officers each town had a full ticket in the field. The Goodland candidates were elected; the Eustis ticket was a poor second. The third town—named Voltaire, yet the first to have a church—was so discouraged by the vote for officers that the fight for county-seat was given up. The remaining two weeks before the county-seat election were devoted by both the Goodland and Eustis leaders to capturing the Voltaire vote. All sorts of deals and offers—which probably amounted to buying and selling—were made in the strictest privacy. Influential men in different neighborhoods were "seen," and many a thrifty bargain was driven. Both towns had already made liberal donations of public buildings and land to the county as a bid for support, and on election day the money was given directly and almost openly to the voters. About fourteen hundred ballots were cast, and, it is said, nearly five thousand dollars spent. In one township, which threw but a few more than a hundred votes, thirteen men, I am told, stood in a row while their leader negotiated for the lot at a hundred dollars. In another, three men held off for fifty dollars until the money gave out on both sides, and then went home disgusted without voting. Some took pay from both sides, and then voted as they pleased; others, and I am glad to believe a majority, refused all offers of money, and voted according to their convictions. When the count was made, Goodland had received a majority of nearly two hundred.

The Eustis leaders, however, were far from giving up at this stage of the game. They immediately began a policy of obstruction and delay. The commissioners were enjoined from canvassing the vote, the election of all the county officers but one was contested, and measures were even taken to keep the matter in court for several years. In the meantime Eustis, of course, remained the county-seat. The Lincoln Land Company, a corporation which is officered by men connected with the Burlington and Missouri River Railroad Company, and which owned a half interest in the Eustis town site, expected to secure the extension of the railroad into the county, and, by placing the station at Eustis, to discourage the Goodland people into giving up and moving over.

For two months matters advanced slowly, and to a superficial observer it began to look as if the Eustis leaders would make good their boasts and wear out their opponents. Negotiations were constantly on foot for a compromise on some sort of a basis, and the citizens of Goodland acknowledged that their town company was trying to sell them out. They refused to be sold out, however, and concluded to cut short matters of negotiation and legal procedure alike. A committee of the homesteaders' secret society first waited upon the Commissioners and informed them that they must canvass the vote for the new Board; that if they refused to do so, and made answer instead to the alternative writ from the Supreme Court—as they were allowed by the court's method of procedure to do—they, the committee, could neither foretell nor be answerable for the consequences.

In spite of the committee's advice, which amounted practically to threats, the Commissioners refused to count the vote, and made answer to the writ instead, and war was practically declared. It was generally understood that both towns had been quietly collecting guns and ammunition. There was one brick building in Eustis, to the second story of which the county records were moved and a guard placed over them. The only stairway was on the outside, and it was fully commanded from the upper windows of a building just across the street. Behind these windows some ten or a dozen repeating rifles were quietly stored, and an equal number of men told off to use them in case of necessity. Every three or four days during the first fortnight in January some one in Eustis would be arrested on a trivial charge, taken before a justice in Goodland, and placed under bonds.

One day, the 13th, quite a number, including most of the county officers, were taken in this manner as prisoners and witnesses, while others went along to sign their companions' bonds. This was simply a part of a well-laid plan to carry off the county records by force. While these men were delayed in Goodland on one pretext or another, a mob of fifty or sixty well-armed homesteaders, headed by one or two determined citizens of Goodland, started across the level stretch of prairie for Eustis. One man belonging in the latter place noticed their departure, and, driving his horse well to one side of them, hastened into town to give warning. The mob fired on him several times, but failed to stop him.

Many of the people of Eustis were of the opinion that all the bravery was on their side, and it was hard to make them realize that their enemies were forcing the fighting; but when the squads into which the mob had divided came marching in from four different directions, with their rifles on their shoulders and determination in every countenance, the contempt with which some had treated the news of their coming gave way to other feelings.

The leaders of the mob were evidently informed as to the disposition of the Eustis forces. The twelve chosen men had hurried to their quarters across the street from the stairway, which was the key to the situation, and it was around the building they were in that the little handful of men gathered. A good deal of loud talking and profanity was indulged in at first, but it was soon quieted by the leaders, who declared that they had not come "to take the records by law, but by force," and that "one Winchester in the hand was worth two mandamuses at Topeka." They told the deputy sheriff

—under whose direction the Eustis men that were expected to do the shooting were acting—that they knew where his men were; that they would set fire to the building which contained them the instant a shot was fired, "and," they said, "we'll sure get the man that fired it." The deputy was impressed with their arguments, told them he would himself lead them to the records, and would answer for their safety. He held a consultation with his posse and warned them of their danger. They nevertheless begged him to authorize them to fire upon the mob, as they all were anxious to kill, but none cared to be held as murderers in the eyes of the law. He refused to give them his authority, and returned to the leaders of the mob.

The latter succeeded in getting their men to form, after considerable hesitation, a skirmish line down the middle of the street, and one may imagine that their position was not an enviable one. But they believed that they represented a principle. The phrase "the will of the people" was in all their mouths, and the idea that the majority must rule in all their minds. By listening to their talk while their leaders were negotiating, one understood that they had no realization of the magnitude of their offence towards law and order. They were exasperated at the law's delay, and angry at the thought that a rich corporation's money, through legal niceties which they could not understand, was about to cheat the majority of its will. Then besides—and mainly through this, I fancy, for their action might fairly have been called foolhardy—they were actuated by the prospect of the ridicule they would have to undergo at the hands of friends and enemies alike, should they return empty-handed.

With a humor which was probably not appreciated, they cautioned the deputy sheriff, who was quite a large man, fat, and, just then especially, scant of breath, that if he were playing them false, there was ground enough in the county to cover him; and then, with much caution, and him leading, two or three mounted the stairs, while the skirmish line covered the building opposite with their rifles at full cock. It was not five minutes until even the Goodland boys, who had followed the mob at a distance, were carrying down dockets and assessment-rolls by the armfuls. Two wagons were filled with books and furniture, and, guarded by the proud and successful homesteaders, were driven to the Goodland courthouse, where their contents have ever since remained.

The chagrin of the Eustis people may be imagined. Of course there was plenty of talk about recapturing the records; the Governor was petitioned to order out the militia, and a dozen schemes were thought of and discussed. Finally, another writ from the Supreme Court was to be answered, and, owing partly to threats really uttered and partly to natural apprehensions, many believed that another effort would be made to intimidate the Commissioners, and coerce them into a line of action which should accord with the will of the majority. When the particular day arrived, it was interesting to note how an excitement grew from nothing. There was absolutely no basis for the rumors which reported that another mob was forming in Goodland. Yet such was the state of public feeling that the talk and suggestions of one man to another aroused suspicions and apprehensions; these, passing from mouth to mouth, became serious fears, while a quiet, waiting sort of excitement generally prevailed. It was not the excitement which causes men to lose their heads, but it was sufficient to stop all business for the time. Men gathered about and talked over the situation. Every one who could procure a gun—and runners were sent as far as thirty miles to bring in a friendly rifle—placed himself at the disposition of the captain, and was sworn to defend the Constitution of the United States and of the State of Kansas, and uphold the law and order of Sherman County. Rifle pits were dug at frequent intervals surrounding the town; pickets were stationed, and no one was allowed to enter or leave without stating his business. News of these preparations, of course, reached Goodland, where it was believed that an effort to recapture the records was on foot. The guard at the court-house was therefore strengthened, while wagon-loads of stone were distributed about the building as breastworks.

This state of affairs continued for over a week, when two officers of the State guards, acting under orders from the Governor, arrived on the scene. At his request the hundred men who had been answering to roll-call every morning and evening, were disbanded; the wrinkled front of grim-visaged war was smoothed out, and negotiations undertaken for a compromise. They eventually amounted to nothing, and the books remained in Goodland. But in the meantime people had cooled down and all danger of bloodshed was over.

At this time Eustis people began to acknowledge cautiously that the chances of winning the county-seat through the courts were slim; and the advantage of keeping the matter unsettled was gone with the books. The railroad was the last resource, and it was soon learned that the company had a surveying party at work. Then came the great engineers' strikes, and the party was recalled. The Rock Island built into the county, and not only missed Eustis and gave Goodland the station, but also made the latter place headquarters of a division. The Supreme Court held the election valid, and the two towns are now united. It was an easy matter to move the light frame buildings across the level prairie, and the one brick building was torn down and rebuilt and ready for occupancy within thirty days. L.

WALTER SAVAGE LANDOR.

London, July 20, 1888.

Not long ago there appeared in the pages of the *Nation* an account of a touching little ceremony which took place in St. Mary's Church, Warwick, when Walter Savage Landor's bust was unveiled in the presence of a few who remembered him. Some memories of this singular man must, one would think, have been revived among the *Nation's* many English readers. No doubt, there are but few who can remember to-day a man who was born in 1775, and these are growing fewer every year. Every year carries with it irrecoverable impressions of the past, which ought to have been caught and recorded before they faded quite away. In Florence there must surely be some traditions of Landor left; they cannot all have died out. His wife lived in a villa at or near Fiesole for some time, and it was there that, after an absence of thirty years, Landor suddenly rejoined her without a word of notice. He had left her in a fit of caprice, and when he returned as capriciously he was outraged and indignant to find that no niche in the family circle had been left vacant for him. He had taught his family to do without him, and had left them for thirty years to practise their lesson, and then was bitterly disappointed when he found how well they had learned that lesson. Late one night he appeared in Florence at the lodgings of his faithful friends the Robert Brownings, in a towering rage, and vituperating, no doubt, as only he could vituperate, against the whole female sex, and that arch-villain his wife in particular. He would never go back to her, never! Indeed, it was the only possible decision to make. He was at no time an easy man to live with, and after that little absence of thirty years, Mrs. Landor may be forgiven if she did not receive him with open arms. But she cannot be forgiven for the long bill which she sent after him, in which every lemon which had been made into lemonade for him during his brief stay was entered and charged for; and it must be remembered that the villa itself, with its garden and all its lemon-trees, had been paid for out of Landor's own money.

Some of the Florentine courts of justice still, perhaps, possess records of the suits brought against Florentine citizens by this impracticable Englishman. The last time he appeared, whether as prosecutor or defendant, in the Syndic's court, he stooped to hoist up a heavy bag which he had brought with him, and which he placed on the table before him, coolly observing that, as he knew every man in Florence had his price, here was money to secure judgment on his side. The Court, feeling itself this time outraged beyond endurance, pronounced sentence of banishment against him, and he left Florence, never to return.

Before he was exiled, Landor had lived in rooms above those occupied by his kind friends the Brownings. They used to send his dinner up to him every day, and, to a man of his vehement temperament, dinner was a very important event. He would stand, watch in hand, when the hour was approaching, and if the dinner was a moment behind time, he would seize the dish and hurl its contents out of the window. Mr. Browning's son, who was then very young, well remembers seeing a leg of mutton pass the window of his father's room on one of these occasions. An expensive and troublesome inmate, no doubt; but what good times the three poets must have had in those long evenings when dinner was forgotten and there was nothing left to do but talk! How they must have enjoyed each other's scholarship! Landor, the splendid old heathen, whose imagination not only revelled in classical thought, but clothed itself in classical expression and style; Mrs. Browning, with her keen interest in and knowledge of Latin and Greek, though it may be that, like Aurora Leigh's, hers was "lady's Greek without the accents"; and Robert Browning himself, a rare instance among English scholars (less rare, it may be, among Americans) of a man who, being neither an editor of Greek plays nor a teacher of undergraduates, still studies with fresh delight, for his own mere solace and entertainment, the works of the ancients—with how much advantage to the English-speaking public the readers of 'Balaustion's Adventure' will gladly acknowledge. Those evenings must have been racy indeed, undisturbed by Landor's Tudor furies, refreshed often by his Homeric laughter.

Of all writers, Landor is perhaps the one whose reputation most depends on the reports of his friends rather than on his writings themselves—so very few now read what he wrote. Classics in an English dress are no longer the literary fashion. Landor's 'Imaginary Conversations,' even, are better known by their title than by their contents. They have little pretence to be dramatic, though they not only pretend to represent the tone of thought of the time, but seem to do so, and succeed in a remarkable degree. They are dramatic as to century, but not as to individual.

Each interlocutor appears to talk as Landor would have talked if he had lived at the time. The public takes his learning for granted, and his poetry on trust, and is really interested only in his strange personality. The contrast afforded by the two sides of the man's passionate nature is what really attracts at the present day. The one side he showed to his enemies—or, rather, to all but his friends—violent, impracticable, a fury of indignation out of all proportion to the offence; all which seemed to his friends, when they got a glimpse of it, to be mere harmless bluster. They could only believe in the sweet kindliness of his nature, which alone existed for them under all this outrageous vehemence of invective. This is the view given by Dickens in 'Bleak House'—a charming and most effective portrait of this strange creature, perhaps the only one which exists of the gentle side shown exclusively to his friends. Forster's Life gives the obverse of the medal—the violent explosions, the impracticable dealings with the whole world of Philistines who were not his friends. There is the long story of his dealings with his tenant at Llanthony, beginning with some petty squabble about opening and shutting a gate, but soon growing into a hopeless tangle of exasperation on either side—a quarrel which became too complicated for explanation or arbitration, and in which the angry landlord found consolation in small hits made by his friends:

"I know all your Welsh annoyances, the measureless B.'s," Charles Lamb writes in 1832. "I knew a quarter of a mile of them. Seventeen brothers and sixteen sisters, as they appear to me in memory. There was one of them that used to fix his long legs on my fender and tell a tale of a shark every night, endless, immortal. How have I grudged the salt-sea ravener not having had his gorge of him! The shortest of the daughters measured five foot eleven without her shoes. Well, some day we may confer about them. But they were tall. Truly, I have discovered the longitude."

It was too bad of Lamb. He knew how to please the old heathen, for he did not himself hate "the measureless B.'s"—at least, one of the sixteen daughters was his honored correspondent. But it is pleasant to remember that though Mr. Boythorn put up fierce notices of mantraps and spring-guns, not only in his plantations, but in his lifelong intercourse with his fellow-men, he quite as vehemently insisted on turning out of his own house, that Dame Durden, the invalid, might take possession of it and be undisturbed—that Landor was ready and willing to sacrifice his own comfort for the good of his friends. 'Bleak House' is not Dickens's best story, and it is quite possible that our grandchildren will prize it most for the two portraits it contains, the one of Walter Savage Landor, taken at his best, and the other, which, if true, is very severe, of Leigh Hunt, under the name of Harold Skimpole.

Correspondence.

A NEWFOUNDLANDER'S PROTEST.

To the Editor of The Nation:

Sir: In a speech delivered by Mr. David A. Wells, he is reported to have said:

"The people of Newfoundland are, as a whole, wretchedly poor, and they inhabit one of the poorest, most desolate, and unattractive countries on the face of the globe outside of the polar regions. There is not timber enough on the island to build a good-sized house; its climate is practically eight months winter and four months spring and summer; its agriculture is limited to potatoes and oats."

Newfoundlanders are glad to have so able a man as Mr. Wells on their side, but they do not like his way of clinching his argument. They are not suing *in forma pauperis* for anything. They do not ask for more than justice, and, being an unsophisticated people, they naturally assume that a great nation like the United States has too much self-respect to yield less. Indeed, so far are Newfoundlanders from appealing on the score of the poverty of their resources to the benevolent feelings of Americans, that they indignantly deny that Mr. Wells's description of their country is at all accurate.

The ignorance prevailing in this country regarding Newfoundland is astonishing. Its great size, one would suppose, ought to be enough of itself to make people desirous of learning something reliable about it. But in the school geographies it is dismissed with about a dozen lines, half of which are misleading. Its very name is mispronounced, if Newfoundlanders know the name of their own country; even the index to the American Cyclopædia indicating that the stress of the voice should be upon the first syllable, whereas it properly belongs to the last. And now it appears that an able man may actually go to the island itself, and bring back more misinformation about it than he carried there.

The "eight months winter" is as great an exaggeration as the saying of the Spaniards that Madrid has nine months winter and three months hell. October and May are no more like winter in Newfoundland than in central New York. I recollect going for a swim in the St. John's "Narrows" one first of October. I may add that although there is much variation of temperature in Newfoundland, the changes are not so sudden and violent as they are here, and the range of the thermometer is not so great. S. G. W. Benjamin, who visited several of the Atlantic islands and wrote a book about them, says that any of them (including Newfoundland) has a better climate, from the point of view of one considering health and strength chiefly, than any of the Atlantic coast climates from Maine to Florida. The latter are all more subject to racking variations of temperature than Newfoundland is.

And things grow there, too. Almost every sort of vegetable that I have ever seen will grow to maturity there as well as potatoes, and there is a great variety of berries and the smaller fruits. The strawberries and raspberries grown in Newfoundland are as good as those grown here, and blueberries and huckleberries (the last two called there indiscriminately "hurts") grow to a larger size and are of better flavor than any I have seen elsewhere. If it were true that Newfoundland has no timber trees, it would be some little consolation to know that she could never have a lumber trust. But it is not true. I have myself seen, not twenty miles back of the coast, timber enough to build a city full of good-sized houses. In the interior, as has been recently found true also of Labrador, there are plenty of timber trees. Agriculture is indeed very backward, but the backwardness is not to be attributed to the poverty of the soil, for the soil is not poor well back of the coast, nor to the severity of the climate, for the climate will compare favorably with North American climates in general.

About attractiveness and desolation opinions differ. A straight Chicago street, with its big stores and telegraph poles, would be the abomination of desolation to a Natty Bumppo. The immense number of bays, harbors, hills, lakes, ponds, and streams make the scenery of Newfoundland very picturesque. I have spent many pleasant days in solitudes where there was nothing to break the silence but the leaping of trout, the flight of startled partridges, or the cry of some sea-fowl—voices such as used to give Robert Burns premonitions of immortality. The idea of desolation never once entered my mind while in such places. When the resources of Newfoundland are developed—a desirable thing, I suppose—she will be more attractive to many than she is now, but all the charm of wild nature will vanish away. Why she is unattractive to Mr. Wells as she is now I do not know. Bayard Taylor did not find her so. Perhaps Mr. Wells formed his opinion of the entire country from some such specimen as a lump of chalk from her southern coast would be of England.

There are too many people in this country who, like a certain Senator, profess to care nothing for "abroad," but who are anxious to get a slice of "abroad" when they see a chance of doing so without paying a fair price. Newfoundlanders are heartily glad that Mr. Wells is a very different sort of person, and that even if he has a poor opinion of Newfoundland, he has only good will towards her people. A Newfoundlander myself, it gives me pleasure to know that the *Nation*, with its usual force and fearlessness and contempt for bogus patriotism and false pretences, advocates justice to my countrymen; that it has recognized the great ability of Sir Ambrose Shea, and the service rendered by that statesman to his country on a former occasion of international difficulty, and that it gave a strictly truthful account of Newfoundland in its interesting review of the Rev. M. Harvey's excellent book.

John C. Cozens.

Amsterdam, N. Y.

AN OPEN SECRET.

To the Editor of The Nation:

Sir: Your article "Exit Boulanger" contains these words: "Why is it that no more leaders are to be found in French politics? No prize the Academy of Moral and Political Sciences could offer would secure an answer to this question." It seems to me, on the other hand, that the answer is so plain that one is tempted to say, with *Hamlet*, "There needs no ghost come from the grave to tell us that." In fact, the question is perfectly answered by the remarkable letter of "Observer" which follows it—so perfectly that I can scarcely add anything. This result is owing to what he calls the conversion of Parliamentary Government into government by Parliament, and the whole force of his letter is summed up in one sentence: "Ministry succeeds ministry, until every man, it is anticipated, who has the least capacity for leadership, will soon have been discredited by the futile attempt to exercise what is ridiculously called power."

Government by a chamber, with its majorities and minorities and its committees, kills individuality and leadership, and renders government impossible. But the necessity of leadership has brought out a desperate effort to throw off the disease. The first result is Boulanger, who has failed; but the spectre has, as you say, frightened the Chamber into submission, and Floquet has an easier time than any of his recent predecessors. But this is only momentary. The passions and the anarchy of the Chamber will soon get the upper hand again, and the country will again look to some strong man for relief. No doubt this might and ought to come legitimately. President Carnot, in his provincial tours, has met with the warmest reception. If he would cry aloud and warn the country of the danger, would appeal to the constituencies to notify the members of the Chamber to support his Ministers on penalty of

losing their seats, and would promise them order and good government on that condition, he might yet play the part and leave the name of a Washington or a Victor Emmanuel. But he will not do that, because he owes his seat to the Chambers. They knew their man too well, and did not intend to have a leader in the Presidency any more than in the Cabinet. And so, no change being possible within constitutional limits, it must come sooner or later outside of them.

"Observer" says: "Nor does this result spring from the supposed mutability of Frenchmen; it arises from the inherent vice of modern parliaments." Exactly, and a living illustration may be found in the Congress of the United States. With very different social and political conditions, it is precisely the same cause which has brought the dominant Republican party from what it was during the war to the condition and "leaders" of to-day. That which in France produced Boulanger has in this country produced James G. Blaine. The anxious question is, whether the cause which is sure to bring new Boulangers is going to entail upon us a series of Blaines. Fortunately, we have a safeguard in this, that the President is elected by the nation. It has saved us once from the Blaine danger, which, though not so threatening an evil, was far more imminent than that from Boulanger. The struggle in this country, as in France, has got to be between Legislature and Executive. For that purpose what is wanted is—not merely for President, but for precedent—a man who has the courage to strike boldly for what he believes to be right. Like yourself, I have been filled with admiration for the courage with which Mr. Cleveland, when he had only to sit still and be reëlected as a matter of course, dared to endanger it by his tariff message. What may not be hoped for from a man like that? What a lesson to the world if a President can appeal directly to a nation upon a purely political question and receive a hearty response.

I shall watch with breathless interest and anxiety to see whether the people of this country will rise to the occasion. G. B.

Boston, August 4, 1888.

A HINT TO THE PRESIDENT.

To the Editor of The Nation:

Sir: As one of the Republicans who bolted the party nomination in 1884 for reasons that would induce me to the like course again, I beg that you will give me space enough to suggest that when the President begins to rid the Administration of "the disloyalty to the service, and the insolence, of employees who remain in place as the beneficiaries and the relics and reminders of the old vicious system of appointment" (I am quoting the words of his late message to Congress), he should extend his purification process a little further, and take under his cognizance at least a few of the "beneficiaries" of a "vicious system of appointment" that has had considerable vogue at Washington during the past twelve to eighteen months, who scruple not to insult the President by openly professing their belief that he is merely "humbugging the Mugwumps" by his talk about civil-service reform, or that, if he means it, he is only a "chump." I trust that the Civil-Service Commissioner who lately communicated with the Washington correspondent of the New York *Times*, and who seems to have influential access to the President, will urge upon the latter that when the crusade for civil-service reform shall begin in the departments at Washington, its vindicatory operations shall not be restricted to the comparatively harmless "relics and reminders," but shall extend also to the fresh and vigorous exponents of "the old vicious system," who are not afraid to preach unceasingly and from the housetops what has been practised in their own behalf. If there was any way by which certain members of the Cabinet could be informed that civil-service reform was the *mot d'ordre* of the Administration, the dispersal of their ignorance of the President's wish and purpose could hardly fail to have a beneficial influence in the ranks below. B.

Washington, D. C., August 3, 1888.

GRANDSIRE AND GRANDSON.

To the Editor of The Nation:

Sir: Forty-eight years ago Gen. William Henry Harrison delivered at Fort Meigs, near the city of Toledo, a noted speech which exercised a very important influence in the election of 1840. The speech is now chiefly remarkable for the vivid contrast it presents to the doctrines which are now maintained by the Republican party under the nominal leadership of a grandson of the speaker, and under the actual leadership of James G. Blaine. Let me make a few quotations to show this contrast, and to throw a strong side-light on the great strides made by the Republican party towards the overthrow of the constitutional system of this country, and the substitution of another which means the exchange of local liberty and self-government for a centralized despotism:

"I have been called a Federalist! . . . That accusation . . . cannot apply to me. . . . I was taught to believe that, sooner or later, that fatal catastrophe to human liberty would take place—that the general Government would swallow up the State governments, and that one department of the Government would swallow up all other departments. . . . See that the Government does not acquire too much power. Keep a check upon your rulers. . . . Power is insinuating. Few men are satisfied with less power than they are able to procure. . . . The Executive of the Union has immense power to do mischief. . . . He may prostrate the country. Indeed, the country has been already prostrated. It has fallen from pure Republicanism to a monarchy in spirit if not in name. . . . *Direct your eye to the Government.* Do that, and your children's children to the latest generation will be as happy and as free as your fathers have been."

But the grandson of the speaker is the man who has voted for the Blair Education Bill—a measure which gives the executive branch of the national Government the beginning of absolute power over the whole system of public education. He is the champion of the tariff system, which involves the power to favor some industries at the expense of others, certain States at the expense of the rest, and individuals at the expense of the entire nation. And, to quote again from the elder Harrison, "I do not know if [Benjamin Harrison] has a throat that can swallow everything [in the way of centralizing legislation]; but I do know that if his measures are carried out, he will lay a foundation for others to do so if he does not."

Charles S. Ashley.

Toledo, July 30, 1888.

Notes.

David Douglas, Edinburgh, will publish Mr. William Winter's Poems in a companion volume to this writer's 'Shakspere's England.'

Harper & Bros. issue this week 'The Land beyond the Forest,' viz., Transylvania, by Mme. E. Gerard; and 'A War-time Wooing,' by Capt. Chas. King, U. S. A.

'Americanisms—Old and New' is the title of a work to be published in a limited subscription edition by Thomas Poulter & Sons, London. The compiler is John S. Farmer. American subscriptions will be received by Henry Stevens & Son, 39 Great Russell Street, London, E. C.

A French translation of Prof. Bryce's 'Holy Roman Empire,' with a preface by M. Ernest Lavisse, is about to be published in Paris by Armand Colin & Cie.

The eleventh volume of the Wisconsin Historical Society's Collections follows hard upon the tenth, and begins a new series marked by the entire exclusion of the Proceedings heretofore bound up with the Collections. Some of the matters in vol. xi have already been touched upon in these columns, such as Mr. Thwaites's valuable researches on the boundaries of Wisconsin, and Prof. Butler's biographical sketch of Alexander Mitchell, whose portrait forms a frontispiece. Other matters are an exhaustive summary of what is known about Jean Nicolet; a great variety of Western state papers, partly translated from the French, papers from the Canadian archives, etc., etc. Mr. E. W. Keyes's "Early Days in Jefferson County" gives a very good idea of pioneer life.

The "Chetham Society," of Manchester, England, was established in 1843, "for the publication of historical and literary remains connected with the palatine counties of Lancaster and Chester." The new series of its publications commenced in 1883, since which time the Society has issued three volumes a year. The volumes for 1886-87 have just been published. The first of these, vol. xiii, is a bibliography of the works of Dr. John Worthington, Master of Jesus College, Cambridge. This is edited by the President of the Society, R. C. Christie, Chancellor of the Diocese of Manchester. The most important of these works is a translation of the 'De Imitatione Christi,' under the title 'The Christian's Pattern.' Of this translation thirteen editions are specified, from 1654 to 1831. Vol xiv is the 'Coucher Book' (Register Book) of Furness Abbey, Part 3. Part 1 (1884-85) contained the "Furness Domains"; Part 2 (1885-86) the first half of the documents. The present volume begins with No. 340, a "Bull of Protection," by Pope Alexander III., the last document being a Grant by King Henry IV. This Coucher Book is edited by the Rev. J. C. Atkinson. Vol. xv, by the Rev. George T. O. Bridgeman, is Part 1 of the 'History of the Church and Manor of Wigan,' the history being brought down to the reign of James I.

E. J. Brill of Leyden has published the first and second parts of a classified list of all simple and compound cuneiform ideographs, occurring in texts hitherto published, with their Assyro-Babylonian equivalents and phonetic values compiled by Rudolph E. Brünnow, Ph.D. At present every Assyrian student who desires to conduct original investigations is under the necessity of compiling a sign list for himself, and it was to save this energy and divert it to some more useful field that Dr. Brünnow was induced to undertake the laborious task of making a cuneiform sign concordance. The system of arrangement is good, and the book (which is a reproduction of the author's manuscript) presents a clear and pleasing appearance.

The sixth of Mr. W. M. Griswold's "Cumulative Indexes" is just out, being an 'Index to *Harper's Weekly*' for the thirty years 1857–1887. Though relating only to the text, it serves to a large extent, from the nature of the case, as a clue to illustrations—to portraits most surely of all, and then to places and events. Thus, the title "Wrecks, etc.," with

its long list of vessels, will certainly be found to cover more or less authentic delineations in black and white. So of "War-vessels," "Railways," "Riots," "Floods," "Earthquakes," "Mississippi," "Hospitals," "Churches," etc., etc. The compiler's address is East Capitol Station, Washington, D. C.

"The Tariff—Protection and Free Trade" is the subject of the third number of the *Bibliographer and Reference List* (Buffalo: Moulton, Wenborne & Co.), and the genuine interest now awakened in economic discussion ought to create an active demand for this guide to self-instruction.

The Division of Entomology of the U. S. Department of Agriculture has begun a periodical bulletin, called *Insect Life*, for the speedy dissemination of odds and ends of information of a practical sort. The first number contains a scientific description, with engravings, of the corn-feeding syrphus-fly, and the willow-shoot saw-fly, with an account of their devastations; a report of the sugar-cane beetle injuring corn; extracts from correspondence, and notes, full of suggestions for the farmer.

The June number of *Appalachia* is readable to an unusual degree and has several fine illustrations. Mr. Percival Lowell tells, with characteristic lightness and agreeableness of style, of a visit to the Japanese volcano Shirane San, of which he lends a heliotype view with other local pictures. Another excellent narrative in a less poetic vein is Mr. F. H. Chapin's "Ascent of Long's Peak," a mountain mass which, as one may see, far surpasses in beauty and sublimity of outline the Shirane San, while it can boast of a sheer precipice of 2,000 feet "as smooth as the side of Bunker Hill monument," and hardly rivalled except by the Yosemite walls. There are other interesting papers, and the usual reports.

Some inscriptions found on the Acropolis of Athens, and probably relating to thank-offerings of freedmen acquitted of the charge of having violated the conditions of their emancipation, are discussed with learning by Mr. Carl D. Buck in the *American Journal of Archæology* for June. The Rev. W. H. Ward interprets two striking Hittite bas-reliefs photographed by the Wolfe Expedition at Carchemish-Jerablûs. One had been imperfectly figured before on wood in another journal.

Leonardo da Vinci's "Saint Anne" is the subject of a study in *L'Art* for July 1 (Macmillan). M. Eugène Müntz, we need hardly add, is the writer, and he provides a large number of sketches exhibiting the conception of the masterpiece. The main illustration of the number, however, is an etching after Paul Delaroche's "Princes in the Tower." M. Paul Leroi censures the awards at the late Salon, and contends for a reform which shall completely remove the Government from interference with the exhibitions. Leave these in the hands of the artists, he says, and there will be an immediate reduction in the number of canvases admitted, with a corresponding improvement in their quality. The State may still buy, as now, for the public museums, but that should be its only appearance upon the scene. Another writer remarks the diminishing importance of the architectural exhibit, and suggests such regulation as will lead to the making of competitive studies expressly for the Salon.

We are notified that the leading American etchers have formed a society for the elevation of their art, as well as to regulate the limitation of editions, "each publication by the members of the Society being guaranteed by the stamp of the Society of American Etchers, in the same way as English prints are protected by the printsellers' stamp." Thomas Moran is President, and C. Y. Turner Secretary. The Society's address is No. 19 E. Sixteenth St.

Something of genuine antiquity attaches to the circumstance of the 125th anniversary of an endowed school in this country, established on land held by the founder's ancestors first after the aborigines relinquished it. Such is the case with Dummer Academy in the parish of Byfield (Newbury), in Essex County, Mass., which was opened on March 1, 1763, and has never ceased to contribute its yearly quota to the ranks of liberally educated men. In the Dummer stock, as we learn from the address of Mr. W. D. Northend, the famous Judge Sewall, the poet Longfellow, and President Cleveland —with many other personages of distinction— unite as kinsmen.

Suggestive of changed fashion is the list of novels taken at least twenty-five times from the St. Louis Public Library in March last. We quote from the current *Library Journal:* 'Ben-Hur,' 87; 'Scarlet Letter,' 42; 'Anna Karénina,' 40; 'Les Misérables,' 37; 'Ivanhoe,' 33; 'Vanity Fair,' 31; 'April Hopes,' 28; . . . 'Uncle Tom's Cabin,' 27; . . . 'David Copperfield,' 25; 'Count of Monte Cristo,' 25.

By the courtesy of Mr. Nagayo Sensai, Director of the Central Sanitary Bureau of the Home Department of Japan, we have received in a pamphlet a 'Brief Review' of the operations of that Department in connection with the cholera epidemic of the nineteenth year of Meiji (1886). This is a history of the progress of that epidemic and of the hygienic measures for its control taken by the Government. It is a very interesting paper, and is accompanied by beautifully executed maps of Tokio and Osaka, and by copious numerical tables. We have had occasion previously to refer to the remarkable example that Japan sets the world in the organization of this Central Sanitary Bureau, and we quote the last paragraph of the introduction to the review to show that, in appreciation of the etiology of the disease, the Bureau is familiar with Western teachings:

"The reason that the epidemic of this last year prevailed so violently in spite of all the precautionary means used, including inspection and disinfection as systematic and as thorough as was possible, was owing to the impurity of the drinking water and the filthy state of the country. It is quite important, of course, to pay attention to the preservation of health, and to carry out the measures for inspection and disinfection properly at the time of epidemics, but the greatest efficacy of the measures of prevention cannot be attained until some strict measures are taken to insure purity of the drinking water and efficiency of construction of the sewers and other drains."

We are glad to learn and to announce that the new State Atlas of New Jersey, just completed, is to be put on sale by the sheet and in sets. The uniform price is twenty-five cents each, and this sum covers cost of transmission. Applications, with prepayment, should be made to Mr. Irving S. Upson, New Brunswick, N. J.

—In the midsummer *Century* Mr. Kennan holds the first place, both by his not very successful portrait and the sketch of his career, as well as by an excellent Siberian paper. He describes with telling simplicity the first political exiles he met, cultivated young fellows guilty of no wrong; but a different and novel interest belongs to his journey through the little known Altaic region of torrid deserts and icy Alps, which he narrates with the zest of a mountaineer. The personal sketch of him shows us a man with a story, and affords a fine example of an American career. In the Lincoln biography Grant comes to the front, and there is an excellent opportunity for a careful reader to observe how intently Lincoln watched the military situation, and how close his criticism of it was. The most notable war-episode, however, which this number brings, is Lee's very remarkable letter upon the project of arming the slaves. He says plainly that only necessity would lead him to interfere with that beneficent institution of which he thought so highly, "the relation of master and slave, controlled by humane laws, and influenced by Christianity and an enlightened public sentiment"; but necessity had come, in January, 1865, and it seemed to him a mere choice between using the negroes on the Southern side or allowing the North all the advantage of this resource. As to their fitness for such use he entertained no doubt: "I believe that with proper regulations they can be made efficient soldiers. They possess the physical qualifications in an eminent degree. Long habits of obedience and subordination, coupled with the moral influence which in our country the white man possesses over the black, furnish an excellent foundation for that discipline which is the best guarantee of military efficiency." This was to be a free army, however; and to insure fidelity Lee proposed to free their families also at the end of the war, and give a bounty with permission to reside at the South, and he suggested and advised also the adoption of a plan of "gradual and general emancipation." If the war lasted, slavery was certain to be destroyed; and, therefore, Lee argued that the South should get what good it could from the negroes by abandoning slavery on the best terms to be made with the inevitable. But what a programme this was: armed negroes, free negroes residing in the South, emancipation! The States that had seceded to save slavery would now abandon slavery to save secession! Here was a piece of that historical irony which preaches the subjection of man to his interests in terms almost too gross. The attempt to steal Lincoln's emancipation thunder, as a war-measure for the South, did not succeed; and in three months from the date of this letter the war was over. We have no space to notice other articles, by Cable, Prof. Holden, and Dr. Abbott, all of which are solid and useful, or the account of that curious survival, a Trappist monastery in Kentucky, of which the author gives mainly a sentimental impression; he would naturally find the brothers uncommunicative.

—About four years ago we reviewed an excellent set of chronological tables for modern history, by Prof. John Nichol of Glasgow (Macmillan). A revised edition of the present year enlarges the tables by the addition of two columns—for science and invention and for art—and adds also four tables of American history. These last are, on the whole, compiled with good judgment, although the column of literature and art contains several names which we never heard of before, and—as is almost invariably the case in English publications—we find some rather wild spellings of proper names, *e. g.*, J. Quincey Adams, U. Grant, R. W. Hayes, J. Garfield, and S. Cleveland among the Presidents. The very first date in the very first table perpetuates that inveterate blunder, *Septimus Severus*. The tables, we should note, begin with Gibbon, with the end of the second century of the Christian era. Almost, but not quite, supplementing Mr. Nichol's tables are the 'Chronological Tables of Ancient History,' by Rev. A.C. Jennings (Macmillan). Why they should end with the Christian era we cannot see. These tables, like the others, are arranged upon the plan of parallel columns, with an irregular number of years on each page, varying with the abundance or scarcity of data. The columns are six in number: political history, Jewish church history, wars, etc., biography

and topography, inventions, etc., laws, etc.—not, on the whole, a very satisfactory arrangement. Military stands in so close connection with political history, as together making up the substance of what is given by most historians, that it is rather inconvenient to find "Athens refuses overtures from Mardonius" separated from "Athens occupied by Mardonius" by "Esther made queen by Ahasuerus" (marked as a doubtful date). Again, legislation is so closely related to political history that we have a great deal of such repetition as, "Solon changes Athenian oligarchy to a timocracy," and "Solon legislates at Athens," etc. On the whole, we should prefer to have separate but parallel columns for Greek, Roman, and Oriental history; at any rate, it is hard to see why "Jehoiakim *d* by violence" comes under the head of *church* history rather than *Wars, popular movements, catastrophes*. Here we have one nation with a column to itself. The work seems to be generally accurate. On pages 30 and 31 we have twice *Volens* for *Volero*; on page 44, *Sextus* for *Sextius;* page 55, *Valeriana* for *Valeria;* page 85, *Crassas* for *Crassus*. Under the year B. C. 46, it is stated that Mauretania was made a Roman province, which did not take place until A. D. 40. B. C. 492 we have the institution of the *Comitia Tributa!* In regard to the Decemvirate there is a strange confusion: 449 Decemviri deposed; 448 Decemvirate abolished, consulate and tribunate restored; 446 the *Tribunitia potestas* renewed. Under the date 373 we find the comical-sounding entry, "Cir Jonathan H. Priest *son*," but we look in vain for any possible father, unless it be Jehoiada, High Priest about 430. Again, what *Duumviri* were Lucius and Caius Cæsar in B. C. 63?

—Prof. Albert S. Cook, whose rendition of the second edition of Sievers's 'Anglo-Saxon Grammar' we noted a few months ago, still continues his good work. This time it comes to us in the shape of an exhaustive edition of the Anglo-Saxon poem of 'Judith.' (Boston: Heath & Co.) An introduction of seventy-two pages treats of the conjectured origin (sources) of the poem, its literary features, its grammar and prosody, and some minor points. The editor's opinions on the origin of the poem are summed up at page xxiii. He holds that it was, or at least may have been, composed about 856, in honor of the historic Judith of France, then recently married to the Wessex King, Athelwulf, and also to commemorate the (temporary) release of England from Danish invasion. Swithhun, Bishop of Winchester, is even credited with the composition. This hypothesis we can scarcely accept. If, as is generally believed, and as Cook himself asserts (p. ix), "the mixture of dialectic forms seems to indicate that a northern original passed through one or more hands, and that the last scribe, at all events, belonged to the late West Saxon period," how can we reconcile this *northern* original with a Wessex author? Besides, were matters in 856 in such a shape as to inspire an *epinikion* and *epithalamion?* We doubt it, despite Prof. Cook's enthusiasm. The 'Battle of Maldon' shows us plainly how the English felt and wrote when fighting the Danes. In grammar and metre, the editor gets upon safer ground. We may trust the translator of Sievers for knowing his teacher's principles. We regret, however, that in treating metre Prof. Cook has departed from Sievers's A, B, C, D, E classification. This had the merit of simplicity, and of not committing one's self to other systems, whereas Prof. Cook's resumption of terms such as iambic, trochaic, dactylic, suggests at least classical conceptions which Sievers sedulously avoided.

—The Glossary is an exhaustive concordance, and prepared with exceeding care. By the way, is the length of *drod* certain? *Wyrm-sele* should be translated 'worm-hall'= 'hell,' rather than 'dragon hall.' The passage is plainly a reflex of Mark ix, 44. The list of Verbal Correspondences between 'Judith' and other poems will be very useful to every one. The list of Kennings will be practically useful for the study of style; but, in principle, it is founded upon what seems to us too broad a use of the term kenning. Prof. Cook uses it for synonym, trope, periphrase — in short, for whatever is not direct speech. We should prefer restricting it (*a*) to such conventionalisms as "the battle-snake on the hawk-perch"="the sword in the hand"; (*b*) to such traditional phrases as "Ymir's skull"="heaven." The point is not unimportant; it is, in truth, the turning-point of Icelandic court poetry. This latter is written in a jargon of its own, made up of *Kenningar* like the above. One must be initiated before he can understand a single stanza, whereas the figurative terms here summed up from 'Judith' are one and all self-explanatory. Similar ones have been used by poets in all times and tongues. In this connection we suggest that 'enemy' is scarcely an adequate rendering of "eald-fynd," "ealdhettende," etc. The word means 'devil,' and is better rendered by the English 'fiend' than the German 'Feind.' The translation, made by five of Prof. Cook's pupils, but revised by him, will be of help. The greatest attention has been paid to the text. It is based upon a facsimile of the MS., aided by the collations of Sievers, Cosijn, and Sweet, and the labors of all previous editors. It is by far the most scholarly effort in this field that America has yet put forth. We regret only that the editor has not given us the entire facsimile, instead of merely the sample, verses 55-69. Let us hope that the rapid sale of this first edition may encourage him to do for 'Judith' what Zupitza has done for 'Beowulf.'

—The July Proceedings of the Royal Geographical Society contains an account of Fernando de Noronha. This island, which lies about 290 miles northeast of Pernambuco, is interesting from the fact that, being a Brazilian convict station and consequently inaccessible to travellers, its natural history was almost unknown. Last year, at the request of the Emperor himself, Mr. H. N. Ridley of the British Museum, and the Rev. T. S. Lea, the author of the paper, spent six weeks upon the island, during which time they were able to explore it thoroughly, and to make valuable collections of its fauna and flora. Among these were many specimens of species new to science, one being "of a plant so strange that its very order seems uncertain." The expedition was well-timed, as the endemic vegetation appears to be rapidly disappearing before that introduced by man. Mr. Lea suggests that the island is the ancient vent of a volcano. The population numbers about two thousand, of whom fourteen hundred are convicts—negroes, Indians, and half-breeds—mostly there for murder. The system of government "seems almost unique in its excellence," an assertion apparently borne out by the fact that "we never saw any of the officials carrying any weapon whatever." The convicts are divided, according to their behavior, into classes, in the first of which all of their time is their own, in the others a part only. A striking scene is at evening parade, when a hymn to the Virgin is sung. The Foreign Office contributes a lively report of an exciting journey by Mr. H. H. Johnston, the well-known traveller, up the Cross River from Old Calabar, among inveterate cannibals. He was many times in great danger, but succeeded in escaping, through the exercise of great tact and forbearance, without firing a shot. At one town a chief presented him with "a necklace of human knuckle-bones"; at another, "even little children armed themselves with matchets and knives, and, standing ankle-deep in water, shrieked out how they would like to eat us." Mr. Fred. Jeppe gives a rather dry account of the "Kaap Gold-Fields of the Transvaal," which show evident signs of having been worked by a white race in ancient times, whether Phœnicians, as some assert, or Portuguese, as others are inclined to believe, is still a matter of doubt.

MR. LOWELL'S POLITICAL PHILOSOPHY.

Political Essays. By James Russell Lowell. Boston: Houghton, Mifflin & Co. 1888.

MR. LOWELL has done what probably no one else in the country who has written as much would have the courage to do—collected and republished a dozen of his political essays covering a period of twenty years, beginning with a philippic against the cowardice of the American Tract Society in 1858, and ending with an eloquent description of the place of the "Independent in Politics," in 1888. When one remembers the variety of experiences with which that period has been crowded, the number of political prophets whom it has brought to naught, the number of political sages whom it has stripped of their wisdom, and exposed to the scorn or pity of the younger generation, he needs to be thrice armed who steps into the arena, as Mr. Lowell has done, laden with "back numbers," and challenges the criticism of all comers for the doubts and fears, and hopes and expectations, of half a lifetime. The challenge is the more remarkable because we think it may be said that he has been far better known to the American public during the past thirty years as a poet and literary man than as a political philosopher or observer. The 'Biglow Papers' were full of political shrewdness, it is true, but those who witnessed their beginnings ascribed Mr. Lowell's excursions into politics more to philanthropic horror of slavery than to interest in the art of government. It was not until the war broke out that he really made his appearance as a political observer, and we are inclined to think the Hayes Administration, in offering him the Spanish mission, intended it mainly as a compliment to American letters, and that when Mr. Evarts was giving him his instructions, he did not realize he was talking to a man who was his master in every branch of politics except law, and yet this was the simple and literal truth. The essays before us make this plain enough to any one who has paid any attention to the public utterances of the two men.

The article on "The American Tract Society" is a sermon in elementary morals preached to a religious association. It is mainly interesting now as a memorial of Mr. Lowell's courage in evil days. That it should have been necessary to make such an exposition of Christian duty to an organization devoted to the work of spreading the Gospel, is a kind of thing which history never satisfactorily explains. It is one of the phenomena of human society which only contemporary observers can understand, like the intolerance of Marcus Aurelius, or the belief in witchcraft of Cotton Mather or Judge Sewall. Most of the discussions carried on thirty years ago with the Biblical pro-slavery

men read now like some of the oldest pieces of modern literature. Mr. Lowell's voice, as he traverses the proposition that "slavery is of divine ordination and its bases laid in the nature of man," and supports himself by citing the fate of the Ptolemaic astronomy at the hands of Galileo, seems to reach us from afar, through endless "corridors of time." It is the essays on the various phases of the civil war, beginning with the election of 1860, and ending with the reconstruction of 1866, which give us the measure of his capacity as a political philosopher and observer. As we have said already, we do not know of any public man who lived through those times whose speeches or writings would say so much for his sagacity and the soundness of his judgment. For we must all admit they were times in which the wisest found it almost impossible to avoid saying foolish things, and the ablest to avoid indulgence in quackery. Mr. Lowell may well be gratified, therefore, as he observes in his preface, to find that he "was able to keep his head fairly clear of passion when his heart was at boiling point."

In reading through the essays on the Rebellion, including under this head that on Gen. McClellan's Reports, and that on the Lincoln-McClellan election, we find only two points in which Mr. Lowell was mistaken; and his mistake in these cases was shared, we think, by every observer of prominence at the North—we mean the readiness of the Southerners to fight, and their courage and tenacity after the fighting began. There was hardly any Northerner in this part of the world who did not apply to the South the old adage that bullies and braggarts are cowards, and that if faced boldly they were sure to back down; and yet in the whole list of adages there is not one which derives less support from experience. We believe the rule to be that bullies and braggarts are brave, and that the proverbial doubt about their courage is due simply to the éclat which attends the occasional collapse of a person so obnoxious and unpopular as a hector is sure to be. The Southerners did themselves injustice as soldiers and statesmen through their lack of literary culture. They boasted themselves like Montenegrins or Albanians, while really possessing an admirable talent for organization whether in war or peace, and as great powers of protracted effort as any people in the world.

Where Mr. Lowell shines most is in his clear presentation, through the cloudy and bewildering days of 1860-61, of the real issue between the North and South, and his masterful exposure of the folly and futility of the various schemes of compromise, avoidance, or postponement, with which the air was full until after the Seven Days before Richmond. To him "the election in November [1860], whatever its result, was to settle for many years to come the question whether the American idea was to govern this continent, whether the Occidental or Oriental theory of society was to mould our future." In the following year (1861), he was equally sure "that the United States are a nation, and not a mass meeting; that theirs is a government and not a caucus—a government that was meant to be capable, and is capable, of something more than the helpless *please don't* of the village constable; that they have executive and administrative officers that are not mere puppet figures to go through the motions of an objectless activity, but arms and hands that become supple to do the will of the people, so soon as that will becomes conscious and defines its purpose." In 1864 he said that "war means now, consciously with many, unconsciously with most, but inevitably, abolition. Nothing can save slavery but peace. Let its doom be once accomplished, . . . and the bond between the men at the South who were willing to destroy the Union, and those at the North who only wish to save it for the sake of slavery, will be broken. . . . The mass of the Southern people will not feel too keenly the loss of a kind of property in which they had no share, while it made them underlings, nor will they find it hard to reconcile themselves with a government from which they had no real cause of estrangement. If the war be waged manfully, as becomes a thoughtful people, without insult or childish triumph in success, if we meet opinion with wiser opinion, waste no time in badgering prejudice till it become hostility, and attack slavery as a crime against the nation, and not as an individual sin, *it will end, we believe, in making us the most powerful and prosperous community the world ever saw.*"

The review of McClellan's Report, in 1864, is the best example in the collection of Mr. Lowell's powers of political discussion. Nothing could be happier or more acute than his definition of the relation either of a successful or unsuccessful military commander to the civil government which he serves, or keener than his analysis of Gen. McClellan's character as a strategist, and of his own explanation of his operations. There was much that was trying in McClellan's position. He organized the great army that was raised at Washington, and his success in this, and the eulogy it called forth, would readily have turned stronger heads than his. Moreover, he was dealing with civil superiors who naturally showed the doubts, uncertainties, and timidities of the great public behind them, and communicated them to the army through the very air of the camp. It was not wonderful that under these circumstances a second-rate general should have felt the politician in him getting the better of the soldier, and that he should, unconsciously perhaps, have come to think the government of his own country a more pressing, as it was apparently an easier, task than the destruction of the enemy. Mr. Lowell's description of this state of mind, of the steps which led to it, and the absurdities which it involved, are admirable specimens both of political and military criticism.

The closing article, on "The Place of the Independent in Politics," is still fresh in the minds of our readers, and was discussed in these columns when it was delivered. Any one who reaches it through the volume before us will miss the triumphant note of the preceding essays, and will, perhaps, find it a reason for believing that Mr. Lowell, in writing about the war and its effects, was animated by more enthusiasm than he imagined. He has lived to see the dull days which are sure to follow every revolutionary epoch, when the heroes are dead and the great memories are waxing faint, and a new generation has come on the stage which is still uncertain what use to make of the glory won for it by its fathers, or what duties it imposes. But he readily finds in the situation a hundred lessons for those who have reaped the fruits without sharing the sacrifices of the war, and extracts, as hardly any other living writer can, from the very disappointments and shortcomings of the restored Union, new reasons for patriotic toil and endeavor.

HARRISON'S OLIVER CROMWELL.—I.

Oliver Cromwell. By Frederic Harrison. [Twelve English Statesmen.] Macmillan & Co. 1888.

MR. FREDERIC HARRISON has performed a noteworthy achievement: he has produced what will (it may be anticipated) be for a long time the popular account of Cromwell's career. Mr. Harrison's book is "popular" in the good, not in the bad sense of that term. It tells ordinary readers the facts which men who are not historians, but who care for history, want to know about the Protector, and it tells these facts in a style which is clear, striking, and unaffected, and therefore preëminently readable. The deficiencies of Mr. Harrison's treatise are almost forced upon the writer by the nature of his task. A contributor to a series, he was compelled to observe the narrow limits of the space assigned to him. You cannot write a life within the number of pages which suffice for an essay. As, again, he had undertaken to write one among a set of biographies intended for general reading, he was obliged to consult the taste of the general reader. We should certainly have preferred to hear more about Cromwell's constitutions, even at the sacrifice of a description of Marston Moor or of Naseby. But we have no reason to suppose that the thousands in England and America who read the Statesmen Series share our tastes, and, after all, the legitimate object of the series is to provide for the mass of intelligent readers an account of Cromwell which they will care to read, and a picture of the Protector which they may be able to remember.

May it not further be fairly said that the one other fault in Mr. Harrison's book which fair criticism need notice is also imposed upon him by the nature of his task? His treatise is too much of a eulogy; but a writer must be wanting in some of the qualities which go to make up a good biographer if he can study such a striking and massive character as Cromwell's without coming under the influence of the great Puritan statesman. Seldom is a good life of a man written by one not his admirer; and as long as an author aims, as Mr. Harrison always does, at perfect fairness, there is no reason either for wonder or for censure if capacity for impartial criticism of his hero is a trifle blunted by a tendency towards hero-worship. If we regret the presence of this tendency in Mr. Harrison, our regret is caused not by any idea that admiration for Cromwell inspires him with a kind of unfairness to a hero's opponents which vitiates the writings of Carlyle and his school, but because it prevents our author from dwelling on some of the aspects of Cromwell's career which, just because they call for criticism rather than either for eulogy or for censure, are in reality the most deserving of careful attention.

Yet, if Mr. Harrison fails to a certain extent on the critical side of his work, his clear and vigorous narrative suggests instructive criticism on the Protector's career. No one can read this last life of the Puritan leader without feeling that Cromwell's successes and Cromwell's failures suggest two questions or problems which are very closely connected with each other. What was the character of the man? What was the real scope of his policy?

No student of average intelligence can at the present day fancy that the Protector was a hypocrite who masked ambition under the pretence of religious faith. But to acquit Cromwell of hypocrisy is rather to increase than to diminish the difficulty of understanding the sentiment of distrust excited by him in men of all parties. For it cannot, we think, be in fairness denied that when the Protector lay on his deathbed, there was scarcely a statesman with whom he had acted who was not more or less estranged, and did not feel himself more or less deceived. Cavaliers, Presbyterians, Republicans, even Cromwell's own generals, all had some ground of complaint. It is vain to suppose that the charge of hypocrisy, baseless though it was, could have been believed not only by the mass of the people, but by men of sound sense and keen observation, unless there

had been something in Cromwell's character which gave it plausibility. The old rule of pleading, that, in some cases, you cannot dispose of an opponent's allegation simply by denying its truth, but that you must "show color," i. e., explain the grounds which may give rise to his misconception, is a principle of at least as much importance in solving questions of history as in dealing with questions of law. If an error is to be fully exposed, you must explain its origin. The causes of disbelief in Cromwell's sincerity were in the main two-fold. They are to be found partly in the peculiarities of his nature, partly in the peculiarities of his political position.

Hero-worshippers often appear to hold that to prove the sincerity of Cromwell's religious belief is much the same thing as establishing not only the honesty but the straightforwardness of his conduct. Yet in plain truth religious fervor not only is compatible with a want of directness, simplicity, and honesty in action, but is closely allied with a certain subtlety and tortuousness of intellect and of feeling which are apt to result in courses of action that betray a good deal of the wisdom of the serpent. To account for the fact that genuine piety and the habit of measuring the worldly transactions of the day with reference to the actor's belief in the principles governing another and better world lead, if not to dishonesty, yet to modes of speaking and acting which to the outer world seem wanting in candor, would involve a lengthy and difficult analysis of the most subtle of human feelings. That, however, spiritual enthusiasm does not of itself dictate to those under its influence plain and simple dealing with their fellow-men, is proved by all the history of religious movements. One can see in Cromwell's case, at any rate, some of the causes which turn zealots into casuists. He had to lead enthusiasts and men of the world; he was compelled, however honest his intentions, to use two languages. The tone in which he addressed his Puritan friends and his Puritan soldiers was certain to be somewhat different from the tone in which he spoke to cool-headed lawyers and scheming politicians. This difference of tone does not argue the speaker's disbelief in his religious professions. To a certain extent it is almost forced on every religious leader who has dealings with men of the world. The late Lord Shaftesbury was as honest a man as ever lived; we should, however, conjecture that his conversation with Lord Palmerston was unconsciously rather different in tone from his conversation with Mr. Spurgeon. A necessity, further, for speaking in two tongues by degrees affects the speaker's own mind. Cromwell, when seeking for the Lord in the midst of his Ironsides, was a different man from Cromwell debating constitutional questions with Whitelocke, or from Cromwell trying if possible for some basis of negotiation with Charles.

An enthusiast, moreover, who is compelled to perform the part of a statesman, suffers from the unconscious blending of his religion and his statesmanship. This evil was intensified in the case of Cromwell by his avowed belief that outward success, and especially success in battle, was the sign and proof of God's favor. His own successes were to him the bona-fide justification of his policy. He was, indeed, a master, within certain limits, of statecraft. But immediate political success gave him no satisfaction unless he could feel in his own mind that the course he pursued was approved by Heaven. One mark of the Divine sanction was success. Another was the sympathy of good men—that is to say, of the men whom Cromwell bona fide believed to be the chosen children of God. Mr. Harrison has brought out admirably the reality of Cromwell's desire for the sympathy of ardent Puritans. His attitude in this matter may be compared to the position of many modern Liberals in respect to the will of the people. A Liberal statesman feels that his knowledge exceeds that of his followers. He knows that public opinion is often wrong; he knows that it is his duty to oppose popular error, and at times he opposes it. But he cannot be happy unless public opinion, the voice of the people, the great heart of the masses, is with him. This desire for popular sympathy arises from the only half-acknowledged belief that the ultimate judgment of the people is in some sense the voice of Heaven. Our modern statesman plays tricks with this oracle. Views opposed to his own are, he thinks, not really countenanced by the people. There is a difference between public opinion and the opinion of the part of the public who happen to support the policy of our statesman's opponents. In any case, he knows by a sort of faith that public opinion will at last be found in his favor, and he spares no arts to bias the jury whose verdict he wishes to gain. So, apparently, it was with Cromwell with regard to the opinion of the saints. He wished with his whole heart that "good men" should approve his course. His deference for their sentiment was real. The two most important of his political actions were dictated, and in his own mind we may suppose morally justified, by his respect for enthusiasts whose beliefs he shared, and whose approval he desired. The execution of Charles and the refusal of the crown were each apparently dictated by genuine respect for the opinions of the good men who had risked their lives in the Lord's quarrel. How much there was of policy in this deference no human being can tell. But knowledge of human nature suggests that a genuine desire for the good opinion of good men had at least as much influence on Cromwell's conduct at the crises of his career as any ideas of statesmanship. The sentiment of the saints seemed to him to reflect the will of God.

But this very respect for the opinion of zealous Puritans of itself fostered, if not duplicity, yet what we may call doubleness of mind. Cromwell knew the language and the sentiments likely to conciliate an army of zealots, and he undoubtedly used language which, while it was natural to himself, suited the taste of his followers, and, when dealing with the army, brought into prominence that part of his character with which his Puritan soldiers could sympathize. He, too, like our modern statesmen, must have often been conscious that the "public opinion" which he respected was liable to error. He, too, played tricks with his oracle. He tried to bring round the sentiments of the army to his own views. As his age and experience increased, his ideas of policy expanded, and possibly, though this is not certain, his religious fervor cooled. In any case, he was more and more compelled to act with design. In his acts, in his words, in his policy, he had to consider the principles or prejudices of the army and, what was a very different thing, the principles or prejudices of the nation.

We can hardly wonder if religious faith which was sincere was tainted with casuistry, and subtlety of policy was marred by some of the unscrupulosity of statecraft. For, after all, Cromwell's political position has at least as much to do as have the peculiarities of his nature with those charges of his insincerity which, for more than two centuries, have detracted from his fame. His attitude is more intelligible to men of this generation than it was to men of the eighteenth century, who were devoid of the instruction which the modern world has gained from the records of a century of revolutions. Cromwell, in spite of the burning religious enthusiasm which made him the friend and ally of fanatics and sectaries, belonged at bottom to a class of statesmen of whom the last fifty years have produced striking examples. He was a conservative revolutionist; he belongs to the family of Cavour, of Deák, and of Bismarck. He was one of those men, in short, who have tried to carry through a great change without using the methods of anarchists and fanatics. Of the extent to which the spirit of a conservative revolutionist is the mark of his policy, we may say something in another article. For our present purpose, the point which deserves notice is that a statesman who uses revolutionary forces to effect a great change, and at the same time attempts to preserve the institutions of his country from destruction, is certain to incur, with more or less of justice, the charge of duplicity. An opportunist will never receive credit for sincerity. To cavaliers, Cromwell was the sectary who had murdered the King. To zealous republicans, he was the traitor who had destroyed the commonwealth in order that he might assume the crown. Combined complexity of character and ambiguity of policy rendered Cromwell, even to his contemporaries, the most incomprehensible of statesmen. The leader whom Englishmen do not understand they may admire, but they will never trust.

RECENT NOVELS.

Summer Legends. By Rudolph Baumbach. Translated by Helen B. Dole. Thos. Y. Crowell & Co.

Two Men. By Elizabeth Stoddard. Cassell & Co.

The Steel Hammer. By Louis Uhlbach. Translated from the French by E. W. Latimer. D. Appleton & Co.

Lajla: A Tale of Finmark. By Prof. J. A. Friis. Translated from the Norwegian by Ingirid Markhus. G. P. Putnam's Sons.

In 'Summer Legends' we have a collection of charming little fairy stories from the pen of Rudolph Baumbach, a Thuringian poet, now living in Leipzig. These tales have had a wide circulation in Germany, which is not surprising, since they are full of the aroma of those forests where Easter hares run about, and where gnomes and fairies dwell, visible on Midsummer's day, and ready to bestow their favors on mortals in perplexity. But it is not only the fairy-story lover at the back of every brain that will be gratified by the 'Summer Legends'; he who loves a nineteenth-century barb for his magic arrow, will find that, too, in the pungent satire which Baumbach, as an observer of to-day, cannot escape, and as a poet of nature cannot help wrapping in field-flowers, wood-mosses, and mist-wreaths. Poetry, whether in prose or verse, is clearly the author's field. The few stories which describe student life are the least attractive in the volume. The real charm of the book is felt when we see the "meadow-sprite sitting on a bright yellow marigold, kicking his little legs for joy," the water sprite playing on his violin among the reeds till "the birds in the trees were silent, the bees stopped humming, and the fishes raised their heads out of the pond to listen to the sweet sounds"; the stork, who "clapped his bill together with joy"; the upspringing of a "little flower with eyes of heavenly blue. The flower has since spread over the whole land, and for those who do not know its name

this story was not written." Not less attractive is the solemnity with which the poet himself enters into every fairy superstition. Thus, "on holy Midsummer Day," says he, gravely, "one should not make sport of such things in the forest"; and of the little old women of the wood: "Nothing hurts the little creatures more than to have their gait made fun of." And again: "For a bell, nothing is harder than to be obliged to keep silent at the feast of the Resurrection." The "Ass's Spring" is a clever little satire, the "Easter Rabbit" a story which children will delight in, "The Water of Youth" and the "Beech Tree" exquisitely tender poems in prose.

The book, then, will charm many moods of young and old, to whom the verses which serve as a prologue will prove a fitting key to a "box where sweets compacted lie." It is impossible not to be reminded once more, in reading these graceful and clever stories, as one has often been reminded before in German literature and German art, that the line between the poetic and the grotesque is more faintly marked than with other nations. Rudolph Baumbach's water sprite, who plays on his violin till the fishes raise their heads out of the pond to listen, is made by his unscrupulous creator to do it as a reward to the barber's apprentice, who had "combed and oiled his hair till it was as smooth as silk; then he parted his hair evenly from his brow to the nape of his neck, took off the apron, and made a bow as his master had taught him." The translation is made in a thoroughly sympathetic spirit, and, on the whole, gracefully, though disfigured here and there by such phrases as "she related, too, about the sleeping man," "at school he was, frankly, none of the best," "a doleful Madonna," etc. But these are crumplings in the rose-leaves which cannot spoil their fragrance, nor make us less debtors to the hand that has gathered them.

The reader of 'Two Men' will find that he has lighted upon no ordinary novel. He will read it eagerly for its interest, slowly for its fulness, and he will lend it to those among his friends who have a sense for the uncommon, an ear for rare and fine melody, an eye for nature's scale of color, a soul to which nothing that is human is foreign. By a majority of readers Mrs. Stoddard's book will be called "queer" and nothing more, and truly nothing is easier than to find fault with its angularities, abruptnesses, its needlessly sphinx-like wording. The Muse has indeed put on oddly fashioned habiliments, her gait is uncouth, her gestures are prim and dry; but do but speak with her —her words are those of a prophetess. Is it a Muse, this practical New England woman whose story lies equally in the woods and the kitchen, whose cake-making goes on at the same time with the plucking out of men's and women's souls and holding them in the light? It is precisely this mingling of the homely and the awful which gives 'Two Men' its quality. The rude New England sea-coast life, with all its austerities, bears the relation to the character of the book which the moors of Yorkshire do to Charlotte Brontë's genius. It is impossible not to regret that destiny silenced Mrs. Stoddard's pen many years ago, impossible not to believe that work as great as this is impressive might have crowned a persistent practice. Mr. Stedman, in his appreciative preface, truly observes that it is "merely the fitness of things that Mrs. Stoddard's books should now be reproduced"; and to the "critical few" who a generation ago received them as "the pioneers of something new and real in the novelist's art" (to quote Mr. Stedman again) should now be added a larger public.

The 'Steel Hammer' is one of those cleverly constructed murder stories in which the French excel. Even yet the possibilities of such stories seem not to be exhausted, for we are given in this novel a score of new and ingenious situations. The absence of villany, except in the case of the murderer, or rather the presence of respectability, is perhaps the salient feature of the plot, and lends the book a sympathetic quality. The interview between the wives of the real murderer and of the accused one, the home lives of these true and upright women, the daily intercourse, superficially smooth, but with its hideous undercurrent of suspicion, between the murderer and his wife, the visit of the latter to the morgue to subject herself as her husband's other self to the test of "the judgment of God," are all originally conceived and impressively written. A shortening of the book would have spared the reader some of the wearisomeness which comes from an excessive paragraphic style, and would also have enabled the author to escape his own literary crime of postponing the end of the story to a sequel. The French law which assigns to the judge instead of to the lawyers the questioning of the accused and of the witnesses at a murder trial, and permits him to use his own discretion in allowing them to introduce theories as well as facts into their testimony, gives the author a dramatic opportunity in his trial scene, which is well used, and suggests the question whether the French may not after all be right in legally deciding that nothing is so misleading as facts.

'Lajla' is a most attractive little tale of northern Norway and the Lapps. The human interest of the story is not without a primitive charm, but the *raison d'être* of the book is to be found in the descriptions of the nomadic life of the Lapps a hundred years ago, their wanderings from mountain to coast and back again with the season's change, their meek acceptance of their position as a race inferior to the Norwegian, and their pathetic opposition, notwithstanding, to a merging of their language in that of the "haughty Daro." The reindeer plays a conspicuous part in the pages of 'Lajla' necessarily, since he is to the Lapp life, liberty, and currency; and one reads the tale with a bracing sense of driving the fleet animal over crisp snows lighted by auroral flashes or by the midnight sun.

DRUMMOND'S TROPICAL AFRICA.

Tropical Africa. By Henry Drummond, LL.D. Authorized edition. With six maps and illustrations. Scribner & Welford. 1888. Pp. xi, 228, 8vo.

It is still an unusual circumstance for a man of Prof. Drummond's mental characteristics and scientific training to make a pleasure trip into Central Africa. We greatly regret, therefore, that he has not seen fit to write a full account of his travels. Had he done so, not only would his book have been an important contribution to our knowledge of the region visited by him, but, we are convinced, he would better have reached his aim of arousing attention to the dangers of the negro, beset with the two-fold perils of slavery and intemperance. His sketches of scenery and descriptions of personal incidents and native customs are vivid and entertaining; his scientific and political chapters are instructive and convincing; but his book nowhere rises above the dignity or value of a cleverly written magazine article. Our regret is the greater as Prof. Drummond is a keen observer, as well as a master of literary expression, and succeeds better than most travellers in reproducing his own impressions in the minds of his readers. We do not remember, for instance, to have got from any other writer so clear an idea of the native tracks which traverse the "dark continent" from ocean to ocean. "They are veritable footpaths, never over a foot in breadth, beaten as hard as adamant, and rutted beneath the level of the forest bed by centuries of native traffic." So numerous and well defined are they that "probably no country in the world, civilized or uncivilized, is better supplied with paths than this unmapped continent." The explorer has but to select one from a network leading from the east coast and to persevere in the right direction, "until one day suddenly he sniffs the sea-breeze again, and his faithful foot-wide guide lands him on the Atlantic seaboard." Equally graphic is the description, too long to be quoted in full, of the "vast, thin forest, jaded and sun-stricken, . . . the bare trunks frescoed with few lichens, their motionless and unrefreshed leaves drooping sullenly from their sapless boughs," which clothes east Central Africa.

The western limit of Prof. Drummond's wanderings was the plateau between Lakes Nyassa and Tanganyika, which he reached by way of the Zambesi and Shiré Rivers and the former lake. Here he spent a few weeks, studying its geology and insect life, being the first naturalist to visit and describe this region. On his way thither he visited the station of Livingstonia, "one of the loveliest spots in the world." At the head of a bay at the southern end of Nyassa

"stood the small row of trim white cottages. A neat path through a small garden led up to the settlement, and I approached the largest house and entered. It was the Livingstonia manse—the head missionary's house. It was spotlessly clean; English furniture was in the room, a medicine chest, familiar-looking dishes were in the cupboards, books lying about, but there was no missionary in it. I went to the next house—it was the school: the benches were there and the blackboard, but there were no scholars and no teacher. I passed to the next; it was the blacksmith's shop; there were the tools and the anvil, but there was no blacksmith. And so on to the next, and the next, all in perfect order, and all *empty*. Then a native approached and led me a few yards into the forest. And there, among the mimosa trees, under a huge granite mountain, were four or five graves. These were the missionaries."

A firm friend and believer in missions, he closes a short digression upon the African fever in which is a realistic description of his own sufferings during an attack, naturally suggested by this melancholy scene, with a solemn warning to the missionary, that not even for a holy cause should a man "seek to overleap what is plainly a barrier of Nature," and "that those who work for the highest ends will best attain them in humble obedience to the common laws."

The scientific part of the volume is a sketch of the geology of the region through which he passed, and chapters upon the mimicry of insects and the white ant. In the latter he endeavors to show that this insect does, for Central Africa at least, what Mr. Darwin has demonstrated that earthworms are doing for many other parts of the globe. It brings such enormous quantities of the underlying earth to the surface in building, not only its houses, but also the tunnels through which it reaches and devours the dead limbs on trees, that at times every tree in forests miles in extent is "so swathed in red mud that the bark is almost completely concealed, the tree looking as if it had been taken out bodily and dipped in some crystallizing solution."

In striking contrast to the deserted mission-station of Livingstonia was another village upon the same lake visited by the author. Its filth was indescribable, and around the lodge of

the chief were poles, impaled on which, "their ghastly faces shrivelling in the sun, I counted forty human heads." It was not a negro village, which are "never so dirty," but that of a noted Arab slaver. This scene and a distant glimpse of a slave caravan were apparently the only occasions in which Prof. Drummond came into direct contact with the accursed traffic which is to-day devastating vast regions of Central Africa. But the whole region passed through was affected by it in one way or another. About Lake Shirwa the main land is almost deserted, the remnant of negroes having fled for shelter from the kidnappers to the islands, which they never leave except under cover of the night. Then there were districts "where *three* natives cannot be sent a message in case two should combine and sell the third before their return." The Arabs pursue different methods in procuring slaves, the most common being that of simply raiding districts. But sometimes they

"will actually settle for a year or two in the heart of some quiet community in the remote interior. They pretend perfect friendship, they molest no one; they barter honestly. They plant the seeds of their favorite vegetables and fruits—the Arab always carries seeds with him—as if they meant to stay for ever. Meantime they buy ivory, tusk after tusk, until great piles of it are buried beneath their huts and all their barter-goods are gone. Then one day, suddenly, the inevitable quarrel is picked. And then follows a wholesale massacre. Enough only are spared from the slaughter to carry the ivory to the coast; the grass huts of the village are set on fire; the Arabs strike camp, and the slave-march, worse than death, begins."

A graphic representation of the extent of these operations, of which almost every fresh African mail brings us reports, is given in a "slave-trade map of Equatorial Africa," so colored as to show the districts harassed by the slave-hunters, those absolutely depopulated, and the principal tracks of the slave-caravans to the east coast, none reaching the Atlantic seaboard, though a few approach suspiciously near it. Prof. Drummond suggests two things which can be done to check, if not entirely uproot this frightful traffic—the maintaining a firm and uncompromising stand against it at Zanzibar, the Arab capital, and the establishment of small armed posts here and there throughout the country.

The concluding chapter, entitled "A Political Warning," discusses the Portuguese claims to the sole navigation of the Zambesi, and to a part at least of the country discovered by Dr. Livingstone and developed solely by the African Lakes Company and the Scotch Mission. These claims, which are simply destructive to the commercial and religious aims of both traders and missionaries, are shown to be indefensible, the Portuguese having acquired the districts claimed, neither by discovery, conquest, nor treaty. The importance of this question as regards the future of the negro, which is now occupying the serious attention of the English Foreign Office (the English Government having at one time given a moral guarantee of protection to the Scotch Mission), is shown by contrasting the condition of the negroes who live in the Portuguese dominions and of those who are building the Stevenson road between Lakes Nyassa and Tanganyika. Language fails to describe the demoralization of the one. The others have voluntarily made forty-six miles of road, "full of difficult cuttings and gradients, which would not disgrace a railway contractor at home." In this connection we may say that we are surprised that Prof. Drummond has said nothing about the intemperance of the African, an evil probably more deadly even than his twin-curse slavery. If he had seen the West Coast negro, whose very currency is a bottle of rum, so as to have been able to compare him with these diligent laborers whose wages are "a yard or two of calico per week," he would have been as earnest and eloquent in his denunciation of the liquor traffic of Germany and the United States as he is of Arab slave-hunting.

The maps which accompany this volume, six in number, both scientific and political, are of unusual excellence. The omission of an index, however, is greatly to be regretted.

The Makers of Venice: Doges, Conquerors, Painters, and Men of Letters. By Mrs. Oliphant, author of 'The Makers of Florence.' Macmillan & Co. 1888.

VENICE is one of the inexhaustible subjects of historian, romancer, or artist, and, like all subjects on which every student of the picturesque in either department must try a fall, it gets much illuminated and illustrated, and finally becomes hackneyed and wearisome. Mrs. Oliphant, as a practised writer with a strong appreciation of the romantic and an honest deference for the verities of history, has summed up, without novelty and without profound research, what the world of careless and sentimental readers care most to know about the city of the Lagunes, and told it in a way which, if sometimes slightly maudlin, is never really fatiguing, but which, it must be said at the same time, never rises above the commonplace. The book, *pueris virginibusque*, is genial in its second-hand inspiration, and sufficiently accurate in its second-hand research. It is, in fact, a specimen of book-making as done by thoroughly competent hack writers who have a job to do, and do it without enthusiasm and without a special fitness for the work, but also with a good English conscience and a creditable sobriety of style. It is another book on Venice, but then all is said.

The serious fault we should find with it is, that at times the habit of the novelist overcomes the author, and leads to the padding out to a quite unnecessary volume the history already full of detail, and weakening the narrative by a strained wordiness. Thus, in the account of the murder of Candiano, a savage event, of the details of which history knows very little, we have a minute description, as follows:

"This sudden conflagration lights up in the darkness of that distant age a savage scene. The Doge seized in his arms his young child, whether with the hope of saving it or of saving himself by means of that shield of innocence, and made his way out of his burning house, through the church which was also burning, though better able, probably, to resist the flames. . . . In the midst of the fire and smoke, surrounded by those threatening fierce countenances, with red reflections glittering in every sword and lance point, reflected over again in the sullen water, he made a last appeal. They had banished him in his youth, yet had relented and recalled him and made him Doge. Would they burn him out now, drive him into a corner, kill him like a wild beast? And supposing even that he was worthy of death, what had the child done, an infant who had never sinned against them? This scene, so full of fierce and terrible elements, the angry roar of the multitude, the blazing of the fire behind that circle of tumult and agitation, the wild glare in the sky, and amid all the one soft infantine figure held up in the father's despairing arms, might afford, etc."

This is poor descriptive writing, and would be weak even in a romance; but it is a fair example of much that goes to swell the bulk of the book, with about the same effect as the new process of fattening oysters by laying them down in fresh water, or the adding of useless details to a picture. Of the Piazza the author says: "Most probably this vacant space, in the days of the first Orseolo, was little more than a waste of salt-water grasses and sharp and acrid plants like those that now flourish in such luxuriance on the Lido, or perhaps boasted a tree or two, a patch of cultivated ground." But the writer of that had every opportunity to learn that there was originally a canal across the middle of the space now occupied by the Piazza, and that it was subsequently filled up to carry out some of the most important modifications in the architectural character of Venice of which we know, for on the *riva* of this canal stood the church built by Narses.

Of Orseolo we read:

"But one may fancy how, amid all the toils of the troubled state, while he labored and pondered how to get that money together for Valdrada, and pacify the Emperor and her other powerful friends, and how to reconcile all factions, and heal all wounds, and house more humbly his poor burned-out citizens [why *more* humbly?], the sight of those fair solid walls rising out of the ruins must have comforted his soul."

But we could fancy this without the authority or suggestion of Mrs. Oliphant, whose book would be all the more readable for the omission of this sentimental reflection, while the compliment of solidity paid the walls of St. Mark is perhaps the least merited of any that could be paid them, seeing that there is probably no work of approximate importance which less deserves the epithet of "solid."

In relating one of the most important military achievements of the early city, the subjugation of the Narentines, "sometimes called Narentani, sometimes Schiavoni and Croats, allied bands of sea robbers who infested the Adriatic," we have a right to expect some better account of these sea robbers, for it is a well-known as well as interesting fact that they were the advance of the great Slavic invasion which had occupied the upper Balkan country and advanced across the Danube in the later centuries of the Roman Empire, and driven the Illyrians to their present habitat, the provinces of Turkey known as Albania, Epirus, etc. They are now the Bosniaks, Herzegovinians, Montenegrins, Servians, etc. From them the Riva dei Schiavoni took its name; and by a prince of the same nationality, the last Prince of the Zeta, the hospital and church of St. George of the Slavs were founded. The Slavs on the River Narenta, having a magnificent port and a safe retreat up the river to where is now Metcovich, became seafarers, and, after the manner of most of their kind, more or less pirates, and united probably the greater part of the maritime marine population not under the influence of Venice. Instead of some historical information on the matter, we have the following characteristic effusion of commonplace sentiment.

"With what swelling sails, *con vento prospero*, the fleet must have swept back to the anxious city, which, with no post nor despatch-boat [why?] to carry her tidings, gazed silent, waiting in that inconceivable patience of old times, with anxious eyes watching the horizon! How the crowds must have gathered on the old primitive quays when the first faint rumor flew from Malamocco and the other sentinel isles of sails at hand! How many boats must have darted forth, their rowers half distracted with haste and suspense, to meet the returning armada and know the worst! Who can doubt that then, as always, there were some to whom the good news brought anguish and sorrow? But of that the chroniclers tell us nothing. Naturally, for the chroniclers in those days wrote history, and had no time to write what everybody knew and could readily anticipate."

The most kindly criticism would be to desire that the author should not be tempted again into the realms of historical labor when she has the entire field of romance still open.

Gli Stati Uniti. Ricordi di Carlo Gardini. Bologna: Nicola Zanichelli. 2 vols., 8vo, pp. 351, 392.

THE Italians are not a nation of tourists like the English and Americans; but we cannot accuse them of falling short of the traditions of their ancestors when we think of the fervor with which they have thrown themselves into the exploration of Africa, especially of Abyssinia, when we remember the books of travel of De Amicis and Foresta; or when we look at the volumes before us. Dr. Gardini came to the United States four times in eight years, between 1878 and 1886, and remained on each journey not less than eight months, during which he traversed nearly the whole of the United States. His observations are put into a continuous narrative—from New York to Albany; Boston, which he compares to Bologna as standing in a similar position towards the United States, so that *Docet* in the old phrase might as well be appended to Boston as to Bononia; Newport, the White Mountains, Saratoga, Niagara, the oil regions, Cincinnati, St. Louis, Chicago, Colorado, Utah, California; and thence back by Arizona and Texas to New Orleans, and so through the South to Washington.

This book differs from most of the sort in being written by an enthusiastic admirer of the United States, and by one whose habits and points of view are very different from those of the Teutonic races. The author had, moreover, travelled over the greater part of Europe, so that he was at no loss for standards of comparison. He is evidently an acute man, who not only can see and lay stress upon what is best worth observing, but who notices many little details which do not strike the ordinary traveller. He is interested, for example, in the advertisements of railways and land companies which terminate in tableaus of graphic statistics. But while much impressed with the different forms taken by advertising in America, he does not seem to have noticed the growing indecency of pictorial advertisements, which so strikes an American on returning home after a year or two of absence—perhaps because this tendency in America is so similar to that nowadays observable in most European countries.

In spite of the title-page, Dr. Gardini presents us not with the impressions of a mere tourist, but with the reflections of a sensible man based on reasoning and close observation. Owing to his position he had access to good society, although, with occasional exceptions, he mentions no names, and never indulges in gossip either well-meant or ill-natured. His book is well illustrated—some of the woodcuts were lately displayed at the Exhibition of Bologna—and, what is rare in a book of this kind, he gives many graphic tables, maps of particular regions, and plans of towns and their surroundings.

Some of his remarks are acute, and many are interesting, as showing from what a point of view unusual to us they were looked at. For instance:

"University students are much calmer than their colleagues in Europe. They don't at all trouble themselves about politics or affairs outside their line of study; and, with the practical sense which animates the nation, they try to make the best use of their time. They fight no duels; and it is only for health and recreation that they take part in various sports and games."

"When there is a question of appointing bishops, creating dioceses, ecclesiastical discipline, or excommunication, the State remains passive; there is no right either of proposal, of preference or choice or *placet* or *exequatur*, or of any of those indefinable prerogatives which cause so many difficulties between the Church and governments."

The author notices the external religious feeling of Americans as shown in the Thanksgiving Day proclamations, oaths on the Bible in the courts, the grace said by clergymen at political dinners, and the observance of Sunday. He is astonished, however, at finding a fancy fair in a Catholic church at New York—a practice which, though now generally disused in Europe, dates from the good old mediæval times. His remarks about American men and women are entertaining:

"Women of New York, physically speaking, are the happy result of the fusion of the rigid, statuesque, and rather virile forms of English women with the sympathetic and attractive feminine qualities of the daughters of the Latin race. They are therefore not as expressive, as gushing, and as winning as Italian and French women; at the same time not as serious, cold, and angular as Anglo-Saxons."

"The men, however, inherit much more than the women Anglo-Saxon peculiarities. They are rather serious, with a less aristocratic bearing, and at first you would think them unsocial. But as soon as you are introduced they shake your hand, offer you a cigar, and with few but frank words ask you to sit down, and show you their house, their picture-gallery, or their garden. Their first questions are about America—if you like it; how you find its climate, and its government; what they think elsewhere of the progress of the Great Republic; if you are up to the last statistics; and whether you have observed that the value of the exports exceeds that of the imports."

CLAVERACK COLLEGE
AND HUDSON RIVER INSTITUTE,
Claverack, Columbia County, N. Y.
Three miles from the City of Hudson-on-the-Hudson. The design of this Institution is to furnish superior facilities for Academic and Collegiate Study to young women, to prepare young men for college, professional school, or business, and at the same time furnish them a comfortable, cultured Christian home. The favorable location, combined with correct habits of living and a system of daily exercise in Calisthenics and military drill, have always secured to a very high degree the physical health and growth of its pupils.
The Conservatory of Music and Art presents complete courses to those wishing to prepare for professional work. Thirty-fifth year opens Sept. 10. Catalogues may be had upon application.
Rev. A. H. FLACK, A.M., President.

DICKINSON SEMINARY,
WILLIAMSPORT, PA.
A thoroughly equipped Classical and Scientific School for both sexes. 15 teachers. Degrees conferred. Elective studies when desired. Rare facilities in Music and Art. Steam, water, ventilation, fire escapes. $183 per year for board, washing, heat, light, and room. Tuition according to studies. Discounts to preachers, teachers, and two from the same family. Fall term opens Sept. 3. Catalogue free. E. J. GRAY, D.D., Pres't.

ELLWANGER & BARRY.

INSURE YOUR LIFE
AS YOU
INSURE YOUR PROPERTY,
each year by itself, but with the right to renew the insurance as long as you live by payments adjusted to the cost of the risk during the term paid for only; avoids the unnecessarily heavy outlay required by level or unchanging premiums. The renewable term policy of the PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, 120 Broadway (Equitable Building), New York, is the safest, the fairest, and the most economical contract for life insurance attainable. Among all the life insurance companies the PROVIDENT SAVINGS shows the largest ratio of assets to liabilities, and the smallest ratios of death claims and expenses. Maximum security. Minimum cost.
WM. E. STEVENS, Secretary. SHEPPARD HOMANS, President and Actuary.
CHAS. E. WILLARD, Supt. of Agencies.

BOOKS OF THE WEEK 139

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

When mailed in paper tubes, without creases, 50 cents per year extra.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents. —

A column (140 lines), $20 each insertion; with choice of page, $27. —

A page (3 columns), $60 each insertion; with choice of position, $80. —

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. —

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding. —

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The regular EDITION of THE NATION this week is 8,900 copies; special edition, 5,100; total, 14,000. The Subscription List is always open to inspection.

***Copies of THE NATION may be procured in Paris of Brentano Bros., 17 Avenue de l'Opéra; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; and H. F. Gillig & Co., 449 Strand.

Fall term opens Sept. 3. Catalogue free. E. J. GRAY, D.D., Pres't.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates—15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

MACMILLAN & CO.'S
STANDARD EDUCATIONAL WORKS.

MACMILLAN'S ELEMENTARY CLASSICS.

18mo. Each 40 cents.

The following Elementary Books, with Introductions, Notes, and Vocabularies, and in some cases with Exercises, are ready :

ÆSCHYLUS.—PROMETHEUS VINCTUS. Edited by Rev. H. M. Stephenson, M.A.
ARRIAN.—THE EXPEDITION OF ALEXANDER. Selections adapted for the use of beginners. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A. With Exercises.
CÆSAR.—THE GALLIC WAR. Book I. Edited by A. S. Walpole, M.A.
THE HELVETIAN WAR.—Selected from Book I of 'The Gallic War,' and arranged for the use of beginners by W. Welch, M.A., and C. G. Duffield, M.A. With Exercises.
THE INVASION OF BRITAIN. Being selections from Books IV and V of the 'De Bello Gallico.' Adapted for the use of beginners by W. Welch, M.A., and C. G. Duffield, M.A. With Exercises.
THE GALLIC WAR. Books II and III. Edited by the Rev. W. G. Rutherford, M.A., LL.D.
THE GALLIC WAR. Book IV. Edited by C. Bryans, M.A.
THE GALLIC WAR. Book V. Edited by C. Colbeck, M.A.
THE GALLIC WAR. Scenes from Books V and VI. Edited by C. Colbeck, M.A.
THE GALLIC WAR. Book VII. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A.
CICERO.—DE SENECTUTE. Edited by E. S. Shuckburgh, M.A.
DE AMICITIA. By the same editor.
STORIES OF ROMAN HISTORY. Adapted for the use of beginners by the Rev. G. E. Jeans, M.A., and A. V. Jones, M.A. With Exercises.
EUTROPIUS.—Adapted for the use of beginners by W. Welch, M.A., and C. G. Duffield, M.A. With Exercises.
HOMER.—ILIAD. Book I. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A.
ILIAD. Book XVIII. The Arms of Achilles. Edited by S. R. James, M.A.
ODYSSEY. Book I. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A.
HORACE.—ODES. Books I-IV. Edited by T. E. Page, M.A. Each, 40 cents.
LIVY.—Book I. Edited by H. M. Stephenson, M.A.
THE HANNIBALIAN WAR. Being part of the XXI and XXII Books of Livy, adapted for the use of beginners by G. C. Macaulay, M.A.
THE SIEGE OF SYRACUSE. Being part of the XXIV and XXV Books of Livy, adapted for the use of beginners by G. Richards, M.A., and A. S. Walpole, M.A. With Exercises.
LEGENDS OF EARLY ROME. Adapted for the use of beginners by Herbert Wilkinson. With Exercises. *In press.*
LUCIAN.—EXTRACTS FROM LUCIAN. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A. With Exercises.
CORNELIUS NEPOS.—SELECTIONS ILLUSTRATIVE OF GREEK AND ROMAN HISTORY. Edited for the use of beginners by G. S. Farnell, M.A. With Exercises.
OVID.—SELECTIONS. Edited by E. S. Shuckburgh, M.A.
EASY SELECTIONS FROM OVID IN ELEGIAC VERSE. Arranged and edited by Herbert Wilkinson, M.A. With Exercises in Latin Verse Composition.
STORIES FROM THE METAMORPHOSES. Selected and edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A. With Exercises.
PHÆDRUS.—SELECT FABLES. Adapted for the use of beginners by A. S. Walpole, M.A. With Exercises.
THUCYDIDES.—THE RISE OF THE ATHENIAN EMPIRE. Book I, Chs. LXXXIX–CXVII and CXXVIII–CXXXVIII. Edited by F. H. Colson, M.A. With Exercises.
VIRGIL.—ÆNEID. Book I, Edited by A. S. Walpole, M.A.
ÆNEID. Book IV. Edited by T. E. Page, M.A.
ÆNEID. Book V. Edited by the Rev. A. Calvert, M.A.
ÆNEID. Book IX. Edited by the Rev. H. M. Stephenson.
SELECTIONS. Edited by E. S. Shuckburgh, M.A.
GEORGICS. Book I. Edited by C. Bryans, M.A. *In preparation.*
XENOPHON.—ANABASIS. Book I. Edited by A. S. Walpole, M.A.
SELECTIONS FROM ANABASIS. Book I. Edited for the use of beginners by E. A. Wells, M.A. With Exercises.
THE RETREAT OF THE TEN THOUSAND. Selected from ANABASIS, Book IV, with Exercises, by the Rev. E. D. Stone, M.A. *In press.*
SELECTIONS FROM THE CYROPÆDIA. Edited by A. H. Cooke, M.A. With Exercises.

The following more advanced books, with Introductions and Notes, but no Vocabulary, are ready :

CICERO.—SELECT LETTERS. Edited by the Rev. G. E. Jeans, M.A.
EURIPIDES.—HECUBA. Edited by the Rev. John Bond, M.A., and A. S. Walpole, M.A.
HERODOTUS.—SELECTIONS FROM BOOKS VII AND VIII. The Expedition of Xerxes. Edited by A. H. Cooke, M.A.
HORACE.—SELECTIONS FROM THE SATIRES AND EPISTLES. Edited by the Rev. W. J. V. Baker, M.A.
SELECT EPODES AND ARS POETICA. Edited by H. A. Dalton, M.A.
PLATO.—EUTHYPHRO AND MENEXENUS. Edited by C. E. Graves, M.A.
TERENCE.—SCENES FROM THE ANDREA. Edited by F. W. Cornish, M.A.
THE GREEK ELEGIAC POETS.—FROM CALLINUS TO CALLIMACHUS. Selected and edited by the Rev. H. Kynaston, D.D.
THUCYDIDES.—Book IV. Chs, I–XLI. The Capture of Sphacteria. Edited by C. E. Graves, M.A.
VIRGIL.—GEORGICS. Book II. Edited by the Rev. J. H. Skrine.

LATIN ACCIDENCE AND EXERCISES. Arranged for beginners by W. Welch, M.A., and C. G. Duffield, M.A.

Other Volumes to follow.

Macmillan & Co.'s New General Catalogue sent free, by mail, on application.

MACMILLAN & CO., 112 Fourth Avenue, New York.

Macmillan's Foreign School Classics.

Edited by G. Eugene Fasnacht. 18mo.

FRENCH.

CORNEILLE.—LE CID. Edited by G. E. Fasnacht. 30 cents.
DUMAS.—LES DEMOISELLES DE ST. CYR. Edited by Victor Oger. 40 cents.
LA FONTAINE'S FABLES.—Books I.—VI. Edited by L. M. Moriarty, B.A. *In preparation.*
MOLIÈRE.—L'AVARE. By the same editor. 30 cents.
MOLIÈRE.—LE BOURGEOIS GENTILHOMME. By the same editor. 40 cents.
MOLIÈRE.—LES FEMMES SAVANTES. By G. E. Fasnacht. 30 cents.
MOLIÈRE.—LE MISANTHROPE. By the same editor. 30 cents.
MOLIÈRE.—LE MÉDECIN MALGRÉ LUI. By the same editor. 30 cents.
RACINE.—BRITANNICUS. Edited by Eugène Pellissier. 50 cents.
SAND.—LA MARE AU DIABLE. Edited by W. E. Russell. 30 cents.
SANDEAU.—MADEMOISELLE DE LA SEIGLIÈRE. Edited by H. C. Steel. 40 cents.
FRENCH READINGS FROM ROMAN HISTORY.—Selected from Various Authors and edited by C. Colbeck, M.A. $1.10.
THIERS' HISTORY OF THE EGYPTIAN EXPEDITION. Edited by the Rev. H. A. Bull, M.A. *In preparation.*
VOLTAIRE.—CHARLES XII. Edited by G. E. Fasnacht. 90 cents.

GERMAN.

FREYTAG.—DOKTOR LUTHER. Edited by Francis Storr, M.A. *In preparation.*
GOETHE.—GÖTZ VON BERLICHINGEN. Edited by H. A. BULL, M.A. 55 cents.
GOETHE.—FAUST. Part I. Followed by an Appendix on Part II. Edited by Jane Lee. $1.10.
HEINE.—SELECTIONS FROM THE REISBILDER AND OTHER PROSE WORKS. Edited by C. Colbeck, M. A. 60 cents.
LESSING.—MINNA VON BARNHELM. Edited by J. Syme. *In preparation.*
SCHILLER.—DIE JUNGFRAU VON ORLEANS. Edited by Joseph Gostwick. 60 cents.
SCHILLER.—MARIA STUART. Edited by C. Sheldon, M.A. 60 cents.
SCHILLER.—LYRICAL POEMS. Selected and Edited, with Introduction and Notes, by E. J. Turner, B.A., and E. D. A. Morshead, M.A. 60 cents.
SCHILLER.—WILLIAM TELL. Edited by G. E. Fasnacht. 60 cents.
SCHILLER.—WALLENSTEIN'S LAGER. Edited by H. B. Cotterill, M.A. 50 cents.
UHLAND.—SELECT BALLADS. Adapted as a First Easy Reading Book for Beginners. With Vocabulary. Edited by G. E. Fasnacht. 30 cents.
*** Other volumes to follow.

Macmillan's Primary Series of French and German Reading Books.

Edited by G. Eugène Fasnacht. With Illustrations.

PERRAULT.—COMTES DE FEES. Edited, with Introduction, Notes, and Vocabulary. By G. E. Fasnacht. 30 cents.
LA FONTAINE.—SELECT FABLES. Edited, with Introduction, Notes, and Vocabulary. By L. M. Moriarty, M.A., Assistant Master at Rossall. 50 cents.
GRIMM.—HAUSMARCHEN. Edited, with Introduction, Notes, and Vocabulary. By G. E. Fasnacht. 50 cents.
SCHWAB (G.)—ODYSSEUS. With Introduction, Notes, and Vocabulary. By the same editor. *In preparation.*
XAVIER DE MAISTRE.—LA JEUNE SIBÉRIENNE ET LE LEPREUX DE LA CITÉ D'AOSTE. Edited, with Introduction, Notes, and Vocabulary. By S. Bartlet, B.Sc. 50 cents.
HAUFF.—DIE KARAVANE. With Notes and Vocabulary. By Herman Hager, Ph.D. New edition, enlarged. 75 cents.
FLORIAN'S FABLES—Selected and Edited, with Notes, Exercises, and Vocabulary. By the Rev. Charles Yeld, M.A. 40 cents.

The Nation.

NEW YORK, THURSDAY, AUGUST 16, 1888.

The Week.

MR. BLAINE landed on Friday, and began his speech-making as usual with a blunder or misstatement so glaring that every business man in the country recognized its parentage at once. Contrasting the business situation of to-day with that of last year, in order to show how mischievous have been the effects of the President's message and the Mills bill, he said that business was prosperous last year, and that we had now entered upon a period of depression. This is not the opinion of the New York *Tribune's* financial editor, however. We put in the deadly parallel the sayings of these two authorities:

MR. BLAINE, AUG. 10.	THE TRIBUNE, AUG. 6.
The year 1887 was prosperous, and the President at its close proposed a radical change in the industrial system which had produced that prosperity, and since that day there has been reversal and confusion in the commerce and manufactures of the United States.	The General Situation.—The general trade reports for the past week were of a satisfactory character, and the volume of business is reported equal to that of the date of last year.

The truth of the matter is, that the *Tribune's* financial estimate of the present state of business, as compared with the period selected by Mr. Blaine, is rather under than over the mark. The trade journals represent the situation as decidedly better than that of last year, and we venture to say that if the business men of the country were polled on the question, ninety-nine in every hundred of them would say at once, and without the smallest hesitation, that there is a marked improvement in trade and industry. *Bradstreet's* issue of Saturday says its special telegrams from leading cities "mark an increase of the improvement in the conditions of trade noticed last week." The same paper furnishes a table of railroad earnings for about two-thirds of the country's railroad mileage, showing that, notwithstanding the rate wars and the interference of the Inter-State Commerce Commission and the State Railroad Commissions, "the earnings from January 1 to June 30 show an increase of .8 per cent. over the first six months of 1887, while over the same periods of 1886 and 1885 they are 13.7 and 22.6 per cent., respectively, greater." Immediately preceding Mr. Blaine's blundering statement of the business situation was another, equally untrue, namely, that he was going to discuss a question on which he is "supposed to have a consistent record." His consistency is that of reckless misrepresentation. Nothing else would be consistency on his part. It is very evident that when he made his speech on Friday evening he had not taken pains to inquire whether business was good or bad, better or worse than last year. It suited his purpose to represent it as being bad, and so he said that it was bad, and took the chances.

It is interesting to contrast the theory of the Republican candidate for Head of the Administration as to the only way in which wages can be reduced with the fact, as stated by Mr. B. F. Jones, late Chairman of the Republican National Committee:

MR. BLAINE, AUGUST 10.	MR. JONES, JUNE 20.
I say here that the wages of the American laborer cannot be reduced except with the consent and with the votes of the American laborer himself.	Our works will close down to-morrow, and remain closed until a satisfactory [that is, a lower] scale is presented to us by the workmen.

The bugle blast of the Greatest Living Statesman was repeated nine times on Monday, with slight variations, and was perceptibly weaker each time. It is noticeable that Mr. Blaine is already shy of using statistics, in which his blunders are so easily exposed, and is confining himself to broad general, rather than specific, untruths concerning the effects of tariff reform and Cleveland's reëlection. We no longer find in his speeches his misstatements about the bad effects of Cleveland's policy upon the business of the country, or about the deposits of the wage-earners of Great Britain in savings banks being less than those of Massachusetts. These were the only specific statements that he has made since he began to blow the bugle, and both have been shown to be recklessly false. He confined the blast in eight instances on Monday to a general assertion that the prosperity of the country and the interests of the laboring classes would be injured by a change in tariff policy, but in the ninth he introduced a few fresh variations, saying that the President and his party were "alarmed" because they had discovered that the "mighty host which earns its bread by the sweat of the brow" would resent the "attempt to place wages on the low basis of the European plane," and that "if we have free trade, the factories *will not be closed*, but *if kept open* they will be run at half the present wages."

Two pathetic appeals for "fat" in aid of the cause of high protection and free whiskey come to our notice simultaneously. One is, of course, a fresh circular from the prolific and irrepressible James P. Foster, President of the Republican League of the United States. This is dated at the Headquarters, July 30, and, like all of Mr. Foster's utterances, is chiefly noticeable for the frankness with which it "gives away" Republican secrets. "Unless great effort is made in the next three months," says Foster, "there is danger that Grover Cleveland will be reëlected." When Foster made this admission, he did not know that Mr. Blaine had discovered that the President and his party were "alarmed." Foster goes on to say: "All we ask of you is a small contribution. Give us the means, and we will do our duty." That is the sentiment of all the Boys in this city—"means" first, duty afterwards. The delay in the forwarding of the means is what is keeping the Boys' coats so closely upon their backs. The second appeal comes in the form of an editorial article in the Boston *Journal*, in which contributions of a dollar each are solicited. "The wheels," says the *Journal*, with Mr. Foster's "fat" circular evidently in its mind, "must be *greased*, and the more readily the money is given, the more effective will be the work." Obviously the protected manufacturers are still refusing to be "fried."

Indiana Republicans went to Chicago asking the nomination of Gen. Harrison for President on the ground that it would make the State surely Republican. Ever since General Harrison was nominated, they have been importuning ex-Gov. Porter to accept the nomination for Governor, on the ground that he was the only man who could pull Gen. Harrison through—the Republican candidate for President having proved uncommonly weak in his own State, by reason especially of the bitter opposition to him which has developed on the part of "organized labor." But Mr. Porter would not accept, and the Convention finally pitched upon a man named Hovey, who represents the pension mania in its most offensive form, his chief notoriety coming from the fact that he is an earnest advocate of the "service pension" scheme, which proposes to give a pension to everybody who served in the army. Now somebody is wanted to help Hovey pull Harrison through. Who better than the Greatest Living Statesman, endeared as he is to every true son of Indiana by the famous letter of December 10, 1884, in which he paid a glowing tribute to the State as one in which "it is simply impossible that I can have a fair trial"?

It is encouraging to find Indiana Republicans denouncing the practice of gerrymandering, and demanding "constitutional apportionments whereby the votes of members of all political parties shall be given equal force and effect." Indiana Republicans have not always held these views. In 1872 they carried the State for two Congressmen-at-large by the trifling majorities of 533 and 126, and the Legislature by a narrow margin in each branch, while the Democrats secured the Governorship. The next State election would involve a United States Senatorship, and the Republican managers concluded that the way to insure that Senatorship was, not to give equal force and effect to the votes of members of all political parties, but to redistrict the State so that the Republican half of the voters would elect thirty out of fifty Senators and fifty-nine out of one hundred Representatives in the Legislature. The outrageous scheme miscarried, as it ought to have done, and the Republicans elected in 1874 only twenty-two Senators and thirty-two Representatives, the Democrats thus securing the United States Senatorship. Naturally enough, a few years later the Democrats improved upon this Repub-

lican example, and made a gerrymander in 1885 which was expected to give them 100 out of 150 members of the Legislature, whereas the Republicans had tried to grab only 89. They ought to have been punished by losing the Legislature altogether, and the Republicans allege that they did on a fair count, although the Republican majority of the United States Senate admitted the Democrat chosen by the narrow majority which the party, by hook or by crook, finally secured in the Legislature.

A few days after the adjournment of the Chicago Convention, Senator Sherman of Ohio was quoted by a newspaper interviewer to the following effect, viz.:

"Henceforth I can say what I please, and it is a great pleasure. This feeling of freedom is so strong with me that I am glad I did not get the nomination."

Strong presumptive evidence of the truth of the foregoing quotation is found in his speech on the Fishery Treaty, published in the *Congressional Record* of Wednesday week, for here the Ohio Senator throws off all disguises, if he ever had any, and comes out squarely for free trade with Canada as the basis and beginning of the political union of the two countries. Hardly anything more effusive can be found in the literature of the day than Mr. Sherman's good feeling towards the Canadians and the whole British world. In fact, Mr. Sherman opposes the ratification of the Fishery Treaty precisely because he thinks it does not go far enough in the direction of amity and brotherly love. It almost takes our breath away to read his fervent ejaculations. And, what is more to the point, there is no doubt that Mr. Sherman is perfectly sincere in all this. He means every word of it. He would cut off the Maine and Michigan lumbermen and the Massachusetts fishermen from the benefits of the tariff with no more compunction than Artemus Ward felt for his wife's relations in the war.

It would not be in keeping with Mr. Sherman's cast of mind if he did not seek to make a point against the Democrats while adopting their policy in part. Accordingly we find him insisting that the Democrats favor the ratification of the pending treaty "because Senators on that side of the house are controlled more or less by party ties in supporting this treaty—because it is a treaty made by a Democratic Administration." It requires considerable hardihood to brush out of sight the distress, we might almost say anguish, that has been endured by Secretary Bayard on this subject ever since the State Department came into his hands—a state of feeling which was and is necessarily shared by his party in Congress—with the dilemma before him and them of a lot of raging fishermen and wild Irishmen on the one side, lashed on by reckless partisans like Senator Frye, and hired attorneys like Judge Woodbury and the late R. S. Spofford, and a possible war with Great Britain on the other side. Only the mutual good will of the two peoples, born of the *Alabama* settlement, of which the last Fishery Treaty was a part, and cultivated by commerce and travel during the past twenty years, saved us from the hostile attitude which commonly presages war. No thanks to the Senate that we were spared this disturbance, for the Senate prepared and forced upon the House the Retaliation Act, which has not yet been put in force.

The Central Labor Union is discussing the question of making the repeal or modification of the conspiracy laws an issue in the fall campaign. There is a conflict of opinion as to the most expedient way of doing this, but it seems to us that the open, bold way would be the best. Let the Central Labor Union take the field on the broad general ground that the law "must go," that it interferes with boycotting, and makes it difficult for the Walking Delegate to earn his living without work, and let us see what the people will do about it. Thus far the only man outside the Union who has taken his position against the stringency of the law is Gov. Hill. The Legislature refused solidly to follow his lead, and the public generally, so far as it expressed itself, said amen to Mayor Hewitt's warm denunciation of the Governor for coming out on the side of disorder and violence in the settlement of labor disputes. There are many elements in the community, however, which do find laws of almost every kind too severe, and if these could be rallied under a common standard, like "Down with laws!" we have no doubt that they would poll a considerable vote, and no doubt either that the Governor would enter into a "dicker" with them for it as soon as they completed their organization.

The *World* considers that it would be an insult to Gov. Hill to ask him to return to the city treasury the $10,000 of aqueduct money that he received from one of the contractors. Of course it would be an insult if he did not have the money. It would be an insult to ask him to return it if he was entitled to receive it. In no other sense could it be an insult to ask him to pay it back. The *World* would be much better employed in seconding every honorable effort to get this money back into the city treasury than in throwing stones at those who are making the effort, if any such there be. The fact that he received the money has been sworn to most positively by the contractor who paid it, and has not been denied. Nor is there any doubt or question as to the source and origin of this money. It was part of an extra sum, over and above a fair compensation, obtained from the city for work on the new aqueduct. This is as plain as A B C. The only explanation of this affair that we have ever heard was, that the Governor used the money to pay his campaign expenses. We have been waiting to see whether the Governor would put in this plea in abatement himself, but he has not done so.

The simultaneous retirement of Sir George Stephen and Mr. L. P. Morton from the management of the Canadian Pacific Railway, the former as President and the latter as a director, has been made the subject of no little comment. Sir George, it is said by one set of commentators, goes out in order to give the chief place to Vice-President Van Horne, an American citizen of much renown in the railroad world. It is believed that Mr. Van Horne's accession to the Presidency of this great corporation will dull the edge of criticism in the United States, and tend to prevent hostile action in Congress of the sort prefigured in Senator Cullom's speech. Mr. Morton's resignation is ascribed to patriotism and a natural desire to get votes. He was succeeded by Senator McInness of New Westminster, British Columbia. So by a concerted movement one Canadian made room for an American and one American made room for a Canadian. There is very little room for fault-finding here—certainly none as against Mr. Morton.

M. de Molinari calls attention, in the July number of the *Journal des Économistes*, to the reward which England is now reaping for her steadfast adherence to the policy of free trade, in the face of the protectionist movement which has swept over all Europe. For a time English industries were considerably embarrassed by losing a portion of their former market in Germany, France, and Austria. In those countries, on the other hand, a temporary impulse was given to production and to foreign trade by the stimulus of a protective tariff and bounties. But the impulse could be, and has been, but temporary. Taxed provisions and materials of manufacture have had their necessary outcome in higher cost of production, and England's adherence to free trade, although paying higher wages, is putting her at the front again. For the first five months of this year, English imports show a gain over the corresponding period of 1887 of $39,875,000, and exports a gain of $33,300,000. For the same months, France, on the contrary, has lost $13,000,000 and $4,000,000 in imports and exports respectively. The foreign trade of Germany, though showing a slight gain, is only improved by comparison with a very bad preceding year, and is really at no higher point than in 1883. The London *Economist* had already commented on the decided looking up of England's foreign commerce, and had remarked that it would prove a serious setback to the "fair-traders."

The protectionist agitation in Spain has assumed its most formidable shape in the so-called Agrarian League. This organization is not made up of land-owners alone, but appears to be a political catch-all, designed for the convenience of all who agree in demanding a higher tariff, no matter how widely they may differ on other points. With the farmers who complain bitterly of their heavy taxation and their inability to compete with foreign agricultural products, and who clamor for higher duties on breadstuffs, are associated manufacturers who cry out that in spite of the tariff on the goods they make being higher than any other in Europe, they are being ruined by the slight reductions

made in pursuance of commercial treaties, and owners of real estate who call for a reduction of their taxes to the extent of $10,000,000, the amount to be made good to the Government by heavier customs duties and by taxing personal property and bonds. With these demands go hand in hand, as usual, appeals for extravagant State expenditures in aid of internal improvements. At the head of the movement is Señor Gamazo, ex-Minister of Public Works, representing the agricultural constituency of Old Castile. He has a following of thirty deputies and as many Senators, all from agricultural and manufacturing provinces. So great headway has the agitation made as to draw into its support such Conservatives as De Toreno, Villaverde, and Canovas, Liberals of prominence like Romero y Robledo and Montillo, and at least one leading Republican, Muro of Old Castile. In addition to the prevailing agricultural depression, as ground of complaint and appeal, the protectionists make a great deal of the considerable falling off in foreign trade which has marked the past three years. Altogether, this compact Agrarian League promises to be a powerful political organization.

Prime Minister Sagasta meets its demands with partial concessions. He proposes to take off $3,600,000 of the taxes laid on real estate and agriculture. He promises to get lower rates of freight on the railroads for products of farm and mine. He accepts the programme for extensive public works, and undertakes to stimulate foreign commerce in all possible ways. But he declares that the main demand, viz., that for higher duties, cannot be granted without a violation of national faith. The light reductions in customs duties which have been made are, he points out, parts of solemn treaty obligations entered into with twenty different countries in the course of the last twenty years. That the foreign trade of Spain has quadrupled during that period is, he claims, a direct result of the more liberal policy. Acknowledging the severe agricultural depression, he shows that it is not confined to Spain, but is universal in Europe, and remarks that it must be overcome by the use of better methods rather than by raising the tariff. If Spain has exposed some of her industries to a sharper competition by relaxing her tariff restrictions, she has, at the same time, gained a greatly expanded market for those products in which she can defy competition—viz., olive oil, wine, raisins, and ores.

Lord Salisbury's speech at the banquet in London on Thursday seems to have dissipated whatever remained of the war scare of a year ago. Our readers may remember that the belief that war was sure to break out last spring was widely prevalent in Europe, even among the best informed observers, during the whole of the winter of 1887-8. It was due largely to the continued dissatisfaction of Russia with the state of things in Bulgaria, and to the fear that she would take advantage of the French desire for revenge to form an alliance with the Republic, and use it to paralyze Germany while she worked her own will in the Balkan peninsula. At that time Boulanger was still taken seriously in France. The air was full of accounts of his achievements as an organizer, and somehow his horsemanship also spread the idea that he would prove a great commander in time of war. In one way or another, in fact, the expectation of another great European struggle of the nations, became stronger than it had been at any time since 1869. Bismarck did much to pour oil on the waters by his triple alliance with Austria and Italy. This was his answer to the threatenings on the side of France. He frankly published the treaty, which showed that he was determined to have peace, even if he had to fight for it. The quieting effect of this was at once apparent. Russian activity in Bulgaria began to diminish, and so did Boulanger's popularity in France as a military man.

It is curious, but it is a fact, that Boulanger's conversion into a politician, and the transfer of his interest from foreign to domestic affairs, began almost simultaneously with Bismarck's notice that he was ready for France or Russia at any time. Boulanger henceforth began to occupy himself with the defects of "parlementarisme," and with the revision of the Constitution, rather than with the best means of conquering Germany. His course since then, too, has undoubtedly had a strongly sedative effect on Russia. The facility with which he became a budding Cæsar, and the panic which he for some weeks spread among the Republican politicians, were to all foreigners an unmistakable sign that France was still afflicted with serious internal weakness, and was not to be counted on as a reliable ally in any European conflict. In other words, the Boulanger episode made unmistakably for peace. Another agency which has helped to restore the feeling of security, has been the steady and persistent disregard of the Bulgarians for Russian, and indeed all foreign, threats. Whether their course has been dictated by simple bullheadedness or by political sagacity, matters little. The fact is, that the little people which only emerged from mediæval darkness and barbarism within ten years, has astonished all Europe by its independence and capacity for self-government. Probably nothing in the whole situation has done as much to disconcert Russian plans as this revelation, because it has furnished Austria and England with materials for protests against interference which, in these days of public opinion, even the master of a hundred legions cannot disregard.

The discussions started in the French press by the result of the Boulanger-Floquet duel are very interesting illustrations of manners. Our forecast of the effect it would have in discrediting Boulanger in the popular mind has been fully justified by the event. The latest *Figaro* has an article on the subject, in which it enlarges at some length on the disgrace for a military man of being beaten with the sword by a *péquin* — the French military slang name for a civilian. It says: "The defeat of a general by a civilian has seemed to all classes, 'bourgeois' as well as 'people,' so complete, so crushing, so unexpected, that one of our friends heard on the same day, within an interval of two hours, a workingman claim for M. Floquet the chief command of the national forces by sea and land, and a Boulangist concierge (janitor) exclaim, 'What a misfortune! They must have dipped M. Floquet's blade in poison.'" The army men, it says, suffered still more keenly—repeating with a groan, "A general beaten by a *péquin!*" The *Figaro* tries to cheer them up by recalling other occasions on which civilians have got the better of military men with the small sword, and notably the duel between M.de Lauriston and the Marquis de Gallifet. Lauriston was a civilian sixty years old, and Gallifet a distinguished young cavalry officer. He accused Lauriston of staring at his wife at the theatre in an unbecoming manner. Lauriston slapped his face, and soon after wounded him severely.

The writer then goes on to explain how it is that French soldiers are exposed to these mortifying defeats at the hands of civilians. The reason is, that fencing is compulsory in the army three times a week, and, therefore, like all compulsory things, is distasteful, and that the halls provided for the purpose are dreary, ill-lighted, and poorly furnished, and in winter very cold. Consequently, it says, among the fencers of renown in Paris, all of whom are well known to the public, there is not a single military man. To be a good fencer needs from two hours to two hours and a half every day — in other words, as much as good piano playing or dancing. Of this, one hour is given to actual practice, and another to bathing, dressing, and cooling off. For this a soldier has not the leisure. The best fencers in Paris to-day are to be found in two classes, the rich young men, who take to the small sword as one of their daily amusements, and the Government and bankers' and lawyers' clerks, and the brokers, who are at liberty after four or five o'clock, and are apt to fill up the time before dinner with a bout with the foils. The three crack fencers are Baron Ezpeleta and M. Aldama, both men of leisure, and a young stockbroker named Vavasseur. M. Floquet took up fencing within a year, after twenty years of disuse, under the doctor's orders, but he was known in the *salles d'armes* as a mere "mazette," or butter-fingers. The comparative indifference to the art in the army is ascribed also to the fact that in active service it is the sabre only which is worn, and most men use the sabre in a mêlée to cut and slash, and not to point, although every French writer on cavalry dwells with solemnity upon the duty of pointing and not cutting in a charge. But pointing when a man is approaching an adversary whose blade is swinging high in air requires more coolness and experience than most men have.

THE CAMPAIGN.

THE Leader of the Party having arrived, the Republican canvass now opens. For several weeks the stage has been occupied by amateurs, the star being a comical actor from Indianapolis, who has delivered with the greatest impressiveness the emptiest nothings ever uttered. The country has watched his antics with mingled curiosity and amusement, while awaiting the return of the great professional. He came on Friday, and with his first words brushed aside the amateurs. "The political campaign on which we are about to enter," was the notice which he served on all concerned, that the Indianapolis business was a farce which was now ended.

The total effacement of the Nominal Candidate is the most striking and the most impressive feature of the situation. The name of Benjamin Harrison appears at the head of the Republican ticket, but that is his only part in the canvass. His position, indeed, closely resembles that of the Presidential elector in ordinary campaigns. Usually the voter who desires a certain man to be President, votes a ticket containing a list of Presidential electors practically pledged to vote in their turn for the man whom the voter desires to see at the head of the Administration. In like manner this year the voter who wants to see Mr. Blaine Head of the Administration, will vote the ticket of Harrison Presidential electors; but everybody understands that Gen. Harrison is expected to act only as caretaker of the White House. So far as the personal issue is concerned, it is simply between an administration dominated by Grover Cleveland, on the one side, and an administration dominated by James G. Blaine, on the other.

On the burning question of the tariff the two parties present a clear-cut issue. The Democrats propose a well-considered measure, which puts sundry raw materials, notably wool, lumber, and salt, upon the free list, and reduces the duties on a number of other articles. They advocate these changes on the ground that the freeing of raw materials would promote manufactures, and that the proposed reduction of duties on other articles would benefit the masses of the people. The Republican platform, on the other hand, commits the party to the maintenance of the existing protective system, even if that policy requires the total abolition of the internal-revenue system, and the flooding of the country with cheap whiskey. An attempt has been made by the Republican Senators to substitute some other doctrine, through the passage by that branch of a tariff bill which would reduce the duties on some articles and remove those on some others; but the difficulties in the way have already proved so great that they now threaten to be insuperable. The Leader of the Party evidently so regards them, for he treats the matter as settled by the Chicago platform. The setting aside of a platform by a party between convention and election is a thing which never has occurred, and it is safe to say that it will not occur this year. The Democrats made their appeal to the country upon the declaration of principles adopted at St. Louis; the Republicans theirs upon that adopted at Chicago. The voters will decide between the two policies.

Upon the issue thus presented the Republicans appeal to greed and ignorance, the Democrats to public spirit and intelligence. The President of the Republican League of the United States has given the world the testimony of "a Republican United States Senator" that "the manufacturers get practically the sole benefit of the tariff laws," and the Republicans seek the support of Democratic manufacturers on the ground of their selfish interests. Whenever one says, as Pierce Kane, a Democratic knit-goods manufacturer of Rensselaer County, said: "I know what my own interests are, and will do my best to protect them. I am voting for Kane," he is hailed as a patriot. Along with this appeal to the pocket of the manufacturer, who gets "practically the sole benefit of the tariff laws," goes an appeal to the fears of his employees, by what is known in political parlance as "working the free-trade racket." This is the attempt to frighten the workingmen into voting for the high-tariff and free-whiskey party by the threat that the country will go to ruin, and they will lose their places, if a moderate reduction in the tariff is made.

The Democrats do not advocate their cause on the ground that its success would swell still larger the immense fortunes of a small number of protected manufacturers like Andrew Carnegie, but on the ground that it would promote the interests of the great mass of the American people. They still hold to the old-fashioned notion that taxation is a bad thing, of which the less the better, and that an economical administration of the Government is preferable to a policy of reckless extravagance. The loud cries with which the "free-trade scare" is raised, they meet by quiet arguments showing the advantage to the community of free raw materials and low duties, quoting the unanswerable words on this side in the past of nearly all the great Republican leaders.

Leader and policy are ideally suited to each other in each party. The Republican candidate for Head of the Administration is just the man to represent a cause that appeals to the greed of a small ring of men whose only idea of the Government is that of a machine to make money for its "friends," and to the ignorance of the workingmen, whom among themselves they laugh at as they plan to dupe them. The Democratic candidate is just the man to represent a cause which appeals to the intelligence and good sense of the mass of the people—a plain man, without a particle of "magnetism" or "brilliancy," doing what he conceives to be his duty without regard to the danger of its costing him a reëlection (Mr. Blaine himself concedes that Mr. Cleveland would probably have been reëlected if he had not written his tariff message), trusting his fortunes to the "plain people."

THE HOME-MARKET FALLACY.

GEN. GRANT refers somewhere in his Memoirs to the great variety of antiquated fire-arms called into use by the sudden outbreak of the civil war, and the observation might be applied to the vigorous controversy over the tariff question into which the country has now plunged. The exigencies of debate bring out arguments of all kinds, some of which are about as effective in the present discussion as arquebuses and culverins would be in modern warfare, and their production is a striking proof of the long dearth of serious issues in our politics. Perhaps as remarkable a specimen as any of this kind of argument is what may be called the home-market fallacy. This fallacy consists in inferring that, since the home market is the best for the products of a country, it is the best policy to shut off the foreign market. It is urged that, if we sell goods to foreigners, taking their goods in exchange, we are enabling them to employ their capital at a profit and furnishing wages to their laborers, while if we sold the goods to our own people, we should be giving a profit to home capital and wages to home labor—a course so obviously beneficial to the whole country as to demand legislative enactment.

This argument—the premises of which must have been fished out of the 'Wealth of Nations' by some scholarly protectionist—may not seem to deserve serious discussion; but, as it is quite commonly advanced by very honest people, and as its examination lets in a great deal of light upon the main question, it is advisable to scrutinize it with care. It really contradicts the fundamental principle upon which all commerce, and, in fact, all modern industry rest—the principle, namely, of the division of labor. We may best get at the heart of the matter by asking why it is that the farmer nowadays does not, as he once did, make his own clothes. It is obvious that, if he combed and spun and wove his own wool, he would be employing his own capital and furnishing wages to the laborers of his own family. He would save the expense of transporting the wool to a market, and transporting the clothes back again; he would not be paying a profit to the woollen manufacturer or wages to his workmen, and would, in short, be enjoying all the advantages of a home market in the highest possible degree. What has induced the farmers of the world to sacrifice all these advantages? Simply the fact that they have found that they could get more and better clothes by making this sacrifice. They have found that they obtained a higher profit upon their capital and better wages for their labor by producing, not clothes, but articles which they exchanged for clothes. It is true that a protective tariff tends to compel them to accept the advantages of the home market by making them accept worse and fewer clothes in exchange for their products than they would receive if trade were free; but the advantages of the division of labor are so much greater than those of the home market, that farmers still find that it does not pay them to make their own clothes.

What is true of individuals is true, although to a less extent, of communities. According to the home-market theory, the people of Massachusetts and the people of

Minnesota are making a great mistake in exchanging their products with one another. The shoemakers of the East ought to exchange their shoes for flour produced in their own region, since thus they would give employment to home capital and labor; and the farmers of the West should for the same reason barter their flour for shoes produced in the West. But it is clear that in such case the Eastern manufacturers and the Western farmers would both be worse off than before. Massachusetts is a poor place for growing wheat, but it is from several causes a very good place for making shoes; and Minnesota has much greater advantages in wheat-raising than in shoemaking. If the home-market theory be true, nothing can be more ruinous to a country than the construction of railroads. Without them the shoemakers of Massachusetts would be compelled to exchange with the farmers of Massachusetts, and the people of Minnesota would have to make their own shoes or go barefoot. There would be more "home market" in both cases, but there would be fewer commodities, fewer people, and lower profits and wages.

The plausibility of this fallacy is due to the ambiguous terms in which it is expressed. It is assumed that the home capital and labor to which the tariff is to give employment are somehow created by the tariff, and it is implied that they would be unemployed unless the tariff gave them employment. But the imposition of taxes cannot create new capital. It can only divert capital from existing channels into new ones, and, by the very theory of protection, in these new channels the ordinary rate of profit cannot be obtained. If it could, capital would enter them of its own accord. Capital thus diverted may earn a profit, but it is earned by a comparative reduction of the rates of profit and wages current in the community at large.

After the establishment of a protective tariff there is no more capital than there was before. There are no more laborers. There is less "foreign market," and experience shows that it is not even certain that there will be more "home market." If the foreign market were entirely cut off, the total production of the country would not be increased but diminished, for a portion of the capital of the country that was formerly employed at a profit would then be employed at a comparative loss. The home market creates itself whenever there is any profit in it, and when there is none, Congress cannot produce it. The only way to enlarge the home market is to allow the greatest possible freedom to our citizens in the employment of their capital. They will be very certain to cease trading with foreigners whenever they can make more by trading at home, and nothing but loss can follow from the attempt of the Government to control their business.

TRUSTS.

THE people of the United States are beginning to realize that the situation in which they are placed, by the Trusts and Combines multiplying around them, is very serious. The preliminary report of the Congressional Committee on this subject is a confession that up to this time no way has been discovered to relieve the public from the exactions of these new-fangled monopolists. The legal position of the Trusts is apparently impregnable. They have all the existing apparatus for making certain staple articles indispensable to civilized society, such as refined sugar, cotton bagging, steel rails, illuminating oils, etc. There are forty or fifty of these constrictors, organized in one way and another, all squeezing the life out of that patient ox, the public.

A suit at law has been begun against one of them in this State to dissolve certain corporations that have been amalgamated into a Trust. The prosecution of this suit will occupy not less than three years, probably much more, and, if successfully maintained, will dissolve the wicked corporations. But how will that achievement help the public? The property of the dissolved corporation does not become public property. It still belongs to the owners. Suppose that it is a sugar-refining company. Its existence as a corporation comes to an end, its machinery and assets are sold in order that the proceeds may be divided among the shareholders. Its chief, perhaps its sole shareholder, is the Trust. Of course the Trust can bid more for the property than anybody else, because the proceeds fall into its own treasury. What the Trust wants is the property, not the charter. If there is anything it can easily dispense with, it is the corporate title. There are probably some corporations amalgamated into Trusts which the Trusts would be glad to have dissolved at the expense and by the authority of the State, as, for example, those which have a few discontented, impracticable stockholders.

The dissolution of an incorporated company is an operation of extreme delicacy and difficulty, as has been found by those who have ever attempted to freeze out a minority interest, however small. We can imagine that the Trusts would be exceedingly obliged to the State for taking the job off their hands, eliminating all disturbing elements, and handing the property over to them. A corporate franchise is in no way essential to a Trust. Incorporated companies have been picked up and brought into these "combines," not because that particular form of holding was desired, but because it was actually in existence. It was easier to take it as it was than to change its form and its legal relations. But in the case of a property where division of ownership is not desired, and where personal liability for debts is not apprehended, a charter from the State is manifestly superfluous. No Trust has sought to have itself incorporated. No Trust, we venture to say, cares a farthing whether its subordinate corporations are disincorporated or not.

If there is no relief coming from lawsuits, or from this kind of a lawsuit, is any to be expected from the force of domestic competition? In the long run, the very long run, we should say yes. Yet it is by no means certain. The argument in favor of competition assumes that whenever the Trust or Combine advances the price of its product beyond a fair remuneration for the capital, labor, and skill employed, other capital, labor, and skill will come into the field and bring down prices and profits to the normal level. This is the doctrine usually held by economists; but economists recognize equally the truth of Stephenson's maxim, that where combination is possible, competition is impossible. The vital and real question is whether in any given case—that of the Standard Oil Trust, for example—combination will continue to be possible, say, for a whole generation. If so, then for that generation it is the same as though it were possible for ever. The Standard Oil Trust has lasted twenty years. He would be a bold man who should say that it would not last ten years longer—and this notwithstanding the immense extension, development, increase, and variation of the oil business during the period. But in the case of the Standard Oil Trust the fear of competition has had the effect to keep down the price of oil, so that it might not have been lower under any condition of trade. But it may not always be so. The fear of competition will always be in proportion to its imminence. The Sugar Trust, the Cotton Bagging Trust, the Dental Trade Combine are evidently under no such fear.

It would seem to be a very simple proposition to fight these Trusts and Combines in every way possible, to repeal duties where they are sheltered by the tariff, and to fight them in other ways where they are not so protected. All of them are protected by the tariff except three—the Standard Oil, the Cotton Seed Oil, and the Whiskey Trusts. As to these three articles, we have had, up to this time, such a substantial monopoly of the raw material that foreign competition was out of the question. The situation of the producers was, for monopolizing purposes, as satisfactory as though they had had a prohibitory duty against foreign petroleum, cotton-seed oil, and whiskey. It is freely acknowledged that no change in the tariff can disturb them. The Republican leaders in Congress have seized upon this fact to excuse themselves from taking any action tariff-wise against the forty or fifty other Trusts. In reply to every demand for lower duties on the trust-protected articles they have said, "What are you going to do about Standard Oil and cotton oil and whiskey—how are you going to hit them?" This is like saying: "You have the potato-bug, and the army-worm, and the grasshopper, and many other pests ravaging your fields, but unless you can devise means for getting rid of all of them at once, we will not attack any of them. Show us a sure cure for the grasshopper, and it will be time enough to talk about exterminating the potato-bug and the army-worm." This was the substance of the argument made by Mr. Reed of Maine and others in the House before the Chicago platform was adopted.

Now comes the blessed platform, and expressly declares that no Trust shall be attacked by the repeal or reduction of duties on the articles that it has monopolized. We quote the words again:

"If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of the internal-revenue system rather than the surrender of *any part of our protective system.*"

This is all that the Trusts want. Since the platform was adopted, the Trusts have multiplied like the plagues of Egypt, and those that existed before have put up their prices to the top notch, taking everything that the Tariff allows. All that they wanted was some official declaration that they would not be disturbed tariff-wise. They could take care of everything else if the Republican party would guarantee them at this corner. They had no fear that the courts would enjoin them from charging more than 5½ cents a pound for sugar, or more than 8 cents a pound for cotton bagging, and so on. The shingle-makers on the Pacific Coast had no apprehensions that the courts would order them to desist from organizing a Trust, and accordingly they hustled together to form one as soon as they read the assurance that there was not to be any even the smallest change in "our protective system." Our protective system is the tariff as it is, in all its parts—sugar, shingles, cotton bagging, steel rails, steel beams, and every other thing that is or can be "trusted," combined, monopolized. No wonder the Trusts increase and multiply on every hand and in every direction.

THE TARIFF ON BOOKS.

THE clause in the Mills bill, as it passed the House of Representatives, which relates to the free importation of books, reads as follows: "Bibles, books, and pamphlets printed in other languages than English, and books and pamphlets, and all publications of foreign governments, and publications of foreign societies, historical or scientific, printed for gratuitous distribution." This wording and punctuation (which accords with the edition of the bill printed, after it had passed the House of Representatives, by order of the Senate) leaves room for differences of construction.

The interpretation given to the paragraph by the members of Congress who are responsible for its introduction and present form is that it includes: (1) Bibles printed in any language or languages; (2) all books and pamphlets printed in other languages than English; (3) all books and pamphlets printed abroad for gratuitous distribution, without regard to their language; (4) all publications of foreign governments in whatsoever language, if distributed gratuitously; and (5) all publications of foreign historical or scientific societies (in any language) when these are printed for gratuitous distribution. Concerning this construction of the paragraph, it may be remarked that the limitation of free importation of gratuitous society publications to such as are by "historical" or "scientific" societies, would seem to conflict with the provision that all books and pamphlets printed for gratuitous distribution are to be included. Indeed, the fifth provision, coming after this latter stipulation, seems superfluous, except in so far as "publications" may be meant to include other works than are covered by the words "books and pamphlets," such as maps or engravings, for example. One might question, also, the intention of the words "printed for gratuitous distribution" as applied to the publications of societies; but presumably the Committee meant to designate the works distributed to subscribing members of societies, notwithstanding that the subscription had been paid to cover the cost of such publications. The Senate Committee, it is said on good authority, have stricken out the word "Bibles," evidently interpreting the clause to include Bibles printed in English only when they are issued for gratuitous distribution—holding, presumably, that when they are printed for sale in any other language, they are covered by the description "books" in the second provision, and do not require, therefore, to be specially designated.

In the detailed consideration of the bill by the House of Representatives, this clause was reached on Thursday, June 28, and—modest as its provisions will seem to scholars and lovers of books, and to all who desire the spread of knowledge—it was not allowed to be passed without opposition. Mr. Farquhar of New York put himself upon record as opposing the first timid step taken by Congress to lighten the burden placed upon every American citizen who is struggling after wisdom, by the imposition of a tariff upon knowledge. Mr. Farquhar, it seems, has discovered that to put "Bibles *printed in other languages than English*, and books and pamphlets, and all publications of foreign governments, and publications of foreign societies, historical and scientific, *printed for gratuitous distribution*" upon the free list, is "strictly in the line of enlightened public intelligence," and is "proper and correct in all respects"; but a proposition to allow the many thousand intelligent American citizens who do not despise knowledge because it is made public in a foreign language, to import their books free from taxation, he considers "unfair to the American publisher, and the American printer, and booksellers, and bookbinders, and all persons engaged in the manufacture of books"—not because they make these same foreign books, it should be noted, but because they print, or bind, or sell *some kind of books*.

The logic of Mr. Farquhar's argument is, therefore, that our Government exercises its best judgment in levying a tax upon the works containing the learning and wisdom of the great men of Europe, in order that its citizens may be encouraged to buy in place of them any poor trash whatsoever, the printing of which will afford a living to Mr. Farquhar's old compatriots of the typographical unions. "In the admission of Bibles printed in foreign languages free, there is manifest propriety," Mr. Farquhar repeats, "and no one can find fault with that"; but we should much like to know where he discovered the "enlightened public intelligence" which argues that the foreign-born immigrant to this country is to have his Bible free, while the poor native-born American citizen is to be taxed one-quarter the cost of *his*, although this tax only goes to increase our dangerous surplus.

Mr. Kelley of Pennsylvania, who has been in the House long enough to have argued on both sides of tariff reform, seemed concerned because this paragraph would permit the free importation of the publications of the Cobden Club. He knew, moreover, the name of one publisher of foreign books in this country who would have to "close" his business upon the passage of this paragraph of the Mills bill (we trust the Philadelphia publisher who is named properly appreciates this view of his solvency), and he had learned of several other "large establishments engaged wholly in the production of books and pamphlets in foreign languages," and predicted that similar catastrophes would overtake them; but when asked to name them, he could only hazard the name of Scribner & Company. Mr. Townshend of Illinois wished to know if he was willing to "put a tax upon knowledge just to benefit two or three large firms," whereupon Mr. Kelley could only declare: "I stand by the American paper-maker, printer, type-founder, book-binder, whether he is engaged in printing and binding books in English or in a foreign language." To which Mr. Townshend promptly responded, "At the expense of the dissemination of knowledge."

In answer to Mr. Townshend's repeated questions as to the publication of German school-books in this country (the drift of the inquiry not being detected), Mr. Farquhar hastened to the Library of Congress, and returned with certain volumes as ocular proof that German text-books were published in the United States. Thereupon Mr. Townshend turned upon him with the remark: "I would like to have the gentleman tell me how it is that school-books published in the protective-tariff country of Germany can be published there and brought into this country to compete with the books published here. There is a higher protective tariff in Germany than there is in this country. How can they publish books in Germany and import them into this country and be successful in competition with ours? It seems to me, Mr. Chairman," Mr. Townshend concluded, "there is an effort here to put a tax on knowledge in this country." There was no answer at hand to this home thrust.

It is a pleasure to turn, from such shallow opposition, to the intelligent and forcible argument in favor of the paragraph made by Mr. Breckinridge of Kentucky. He considers the step proposed "as short a step as the American Congress ought to be willing to take"; and instead of striking out anything from the provision, Mr. Breckinridge would add to it, and "make all literature free. . . . I regret that we do not see our way clear to go further than we have in this provision. I wish that we thought that we were able to make all books, all art, all productions of human genius, in print, or picture, or sculpture, free." After stating the true nature of the provision, Mr. Breckinridge exclaims: "Surely no one will go to the extent of saying that taxes and

duties ought to be levied on learning simply for the purpose of protection. Protection ought not to go so far as to make the means of knowledge more expensive merely for the purpose of taxation, and that, too, at a time when there is no necessity for the tax, and when we are removing taxation. In the effort to eliminate subjects of taxation, in trying to reduce the revenue by assorting the subjects upon which the taxes are laid, what better subject for release from duty can possibly be found than good books? From what can we possibly take the burden better than from a tool for education? From what could we in this nineteenth century better take taxation off than knowledge?" The effort to strike out this clause Mr. Breckinridge denounces as "protection gone mad," and it is pronounced as being "of a piece with the effort to keep books from the slave or the Bible from the people."

Mr. Farquhar's amendment, to strike out the provision that books and pamphlets printed in other languages than English should be permitted free importation, was defeated by 70 noes to 53 ayes. It now remains to be seen what the Senate will do with this paragraph of the Tariff Bill, which is of such vital interest to every American student and scholar.

FAST TRAIN SERVICE.

RECENT improvements in the train service between London and Edinburgh have made it the fastest in the world. Three years ago there was some doubt as to the relative speed of the best English and American passenger trains. Even then, the best judges thought that the balance was slightly in favor of England; to-day it is distinctly so. The West Coast Route (London and Northwestern Railway) runs a train 400 miles in eight hours. On the opening day this train arrived at its destination eight minutes ahead of time, having made the run at the rate of 50 2-3 miles an hour, including stops, or 53 3-5 miles, excluding stops.

The first of these figures is quite without precedent for the distance in question, or in fact for any long-distance run. The last is not. There is at least one American record which surpasses it in many particulars. On the West Shore Road, July 9, 1885, a special train a trifle heavier than the Scotch express was run from East Buffalo to Weehawken, 422.6 miles in 9 hours and 23 minutes, *including 20 stops*. A special train, arranged on short notice, was of course liable to detentions of this kind. It is said that 1 hour and 34 minutes was lost in this way. Making this deduction, and deducting in the same way the time lost by the English train, we have the following results:

	Distance. miles.	Time. H. M.	Running rate. Miles per hour.
L. & N. W...	400	7 25	53.60
West Shore.	422.6	7 49	54.06

These results are practically equal; for we suspect that the time allowance for stops was computed in a manner which gave a slight advantage to the West Shore. But certain parts of the West Shore run were better than anything in that of the London and Northwestern, sixty-one miles from Buffalo to Genesee Junction being made in fifty-six minutes actual time, or at the rate of sixty-five and one-quarter miles an hour. The last part of this run was made at a rate of from 83 to 87 miles an hour; while the maximum attained in the English run was only about 75 miles an hour. Two hundred and one and seven-tenth miles from Buffalo to Frankfort, with eight full stops (besides five partial ones), were made in an actual time but slightly greater than that required in England for the same run with one stop, and at an average running speed, excluding stops, barely under sixty miles an hour. This record, though ignored in some English accounts of railroad speed, is thoroughly well attested. It is decidedly the best we have. A Grand Trunk special of June, 1886, is said to have made 229½ miles in 237 minutes, excluding stops, or 58½ miles an hour; but this, even if thoroughly well established, does not equal the record of the West Shore.

But of regular trains we have none which can come anywhere near the English record in this matter. The best for the distance in question is the Chicago Limited, from New York to Buffalo, which takes 10 hours 45 minutes to run 440 miles—a weak showing as compared with the 400 miles within 8 hours on the London and Northwestern. The best of the Washington expresses now takes 5 hours and 18 minutes to make the 226 miles between Jersey City and Washington. But the distance in this case is much shorter, and the time record far from equals that of the best English trains. For short distances, especially between New York and Philadelphia and between Baltimore and Washington, we have had trains scheduled to run at rates above fifty miles an hour; but the conditions of short-distance running are more favorable for high speeds.

It seems clear that we can make as good time as they do in England; it is also clear that we do not. The reason is not one of engineering, but of finance. As far as construction goes, the English have not so great an advantage over our best roads as is commonly supposed. Their one distinct point of superiority is freedom from grade crossings. A large part of the enormous cost of English track has been due to this cause. It is questionable whether their track is straighter or more level than ours. In the absence of accessible statistics, no one can speak positively, but it is pretty certain that the profile and alignment of the English roads are not so good as is generally supposed, and probably not as easy as those of many American lines. In finish of track the English of course have a great advantage, as well as in many of the details of operation; but it is open to doubt whether their equipment is as good as ours except for a very narrow range of purposes. On the whole, the advantages and disadvantages are not far from equal.

But the English are willing to pay for fast trains, while we are not. Let it be observed that this is not merely a question of rates of fares, or even of passenger-train receipts, but a general question of traffic economy. The direct expense of running a fast train, large as it is, by no means measures the total cost. Other traffic is inconvenienced and rendered more expensive. The labor of trackmen is indirectly increased. If the community wishes to have fast trains, all this must be somehow paid for. England does pay for it; America does not.

It is a common complaint of Englishmen that railroad rates, and especially railroad freight rates, are higher in proportion to the work done than they are in any other country. This fact is closely connected with the speed of English train service. It often costs more to do common work with a first-class instrument than with a common one. And it is in like manner legitimate that it should cost more to ship freight on a road crowded with high-grade passenger traffic than on one built and operated for cheap freight service.

Passenger-train service at rates above forty miles an hour is, from the point of view of the public, a luxury; from the point of view of the railroad company, it is largely of the nature of an advertisement. In America, at any rate, it is resorted to rather as a means of obtaining incidental advantages on other business than from any direct profit in the business itself. The case stands somewhat in this way: The public demands rapid travel, but does not make it pay. The roads must meet the public demand, or fall behind in public esteem. The public in a general way fixes a standard of fast service which it demands. If it fixes this standard high, it indirectly pays a high price for it. If it is content with less, it pays less for its railroad service as a whole. These demands are pitched high in England and lower in the United States. There are some other reasons for the difference. The density of population in England makes fast passenger service better business policy there than it is here, and makes low-grade freight traffic relatively less profitable. But the reason first given is probably the chief factor in producing the result.

The highest speed is rarely attained by anything like voluntary action on the part of the railroad management. It is almost always the result of competition. The present service between London and Edinburgh is the result of an active struggle of this kind. Naturally enough, the fast trains are pretty much confined to England and America. In countries with private monopoly, like France, they are rare; in countries with State monopoly, like Germany, they are rarer still. The State does not feel the need of advertising, and can suit its service to its notions of what the public ought to demand. Only in international matters does it feel the stimulus of competition; only in connection with international routes when there was some positive rivalry, has train service been accelerated in central Europe in the past ten years.

This state of things has its good and its bad side. It is good to prevent waste of money on what is a mere advertisement or an unduly expensive luxury. It is bad if it

takes away the stimulus to a higher standard of railroad efficiency, or if it measures the value of rapid transit solely by the train-mile receipts. For train receipts do not measure its whole value to the nation, any more than train expenses measure its whole cost to the railroads.

FATNESS.

PROBABLY no question of personal hygiene has occupied so much attention from laymen or laywomen as the question how to avoid growing fat. Doctors, we think, as a rule take little interest in it as long as it does not result in some form of illness. About the inconvenience of being fat, there is generally little use in consulting them. Until within about twenty-five years the fat people, if we may use the expression, lay down under their fat. The opinion that fatness was irremediable was, in fact, widely diffused. Mrs. Fanny Kemble used to say, in her grand manner, that "when there was a constitutional tendency to fat, nor diet, nor exercise, nor sorrow would avail."

Since she took this view, however, a great change has come over what we may call the fat world. Fat people refuse any longer to accept their fatness as hopeless. They deny that any portion of the human family has been set apart by Nature as the prey of obesity. This great awakening was due in a large degree to the celebrated Banting, an immensely fat man, who, by greatly reducing his weight by confining himself to nitrogenous food, filled all fat people with the anticipation of a better day. Tens of thousands followed his example, and cut down their size immensely. Unfortunately he died very soon after he became lean, and a panic spread through his followers. Distrust about the effect of his system on the general health began to gain ground. Many people suffered severely in strength and spirits by following his regimen too strictly, and it fell into more or less discredit. It would now be as hard to find an original out-and-out disciple of Banting as of Priessnitz, the hydropathist, or of Hahnemann, the homœopathist. But many still follow him in a slight degree, by eschewing butter, eating but little bread and potatoes, and sticking steadily to lean meat.

If his teachings and example had had no effect at all, however, it would have proved that the fat people were less enterprising and energetic than other civilized men in our day ever are. They refused to consider Banting's failure as final. They declined to accept the doctor's advice to "let well alone." They continued their demand that obesity should be treated as a disease, and a cure found for it. Accordingly, every few years a new fat doctor appears on the scene, and the quacks fill up the intervals with the sale of more or less deadly specifics. No great progress was made, however, until Bismarck became dissatisfied with his fat, and called for a physician who could relieve him of it. This physician appeared in the person of a certain Dr. Schweninger, who cut down the Chancellor's weight to such an extent that he had him nominated to a professorship in the Faculty of Medicine in the Berlin University, and insisted on his appointment in the teeth of the opposition of the other doctors, who had either never heard of Schweninger before, or heard what was bad. To the argument that he had won no distinction in the profession, the answer was that he had taken fifty or sixty pounds off the Prince's huge frame. Schweninger accordingly rapidly became an authority on fatness, and the pamphlet containing his system is sold by tens of thousands.

The well-known Dr. Yeo of London discusses this system in the last number of the *Nineteenth Century*. It ought to be said *en passant* that Schweninger's cure is claimed also by Prof. Oertel of Munich, who says he discovered it, but this avails him little because he did not treat the Chancellor. Schweninger maintains that the chief cause of fat among men, as among animals, is eating too much, no matter of what, and drinking too much, even of water, at one's meals, but especially of wine, beer, and spirits. The central principle of his system is, that unless you live by muscular toil, you must cut down the quantity you eat, and must drink but little, if any, with your meals. Of course he has minor rules, and makes distinctions between different articles of food, but to him quantity is the great enemy of the obese. After him comes a certain Ebstein, who also has his system, which differs from both Banting's and Schweninger's, but all three agree that to be lean you must greatly reduce your consumption of the carbo-hydrates or starchy things.

Germany is the country where the most vigorous fight with fat is carried on, and where fat cures excite most interest, owing, it is said, to the great prevalence of obesity —a result in part of the consumption of beer and in part, doubtless, of the frequency and heartiness of the meals. Accordingly, the number of people who go to the various baths for simple corpulency is very large. Oertel makes provision for this class by prescribing carefully graded walks, in which the ascent will stimulate the heart's action and strengthen it.

All the masters agree that it is mainly through its effect on the heart that fat becomes dangerous. If you surround your heart thickly with fat, you impede its working, and it gradually grows weaker, and then, some fine day, when you have put a little more fat on it, and call on it for extra exertion, it stops short, and down you go. Fat does not greatly trouble the young and active in any country. It is when, in middle life, exercise begins to be distasteful but the appetite remains as good as ever, that it comes on people like a strong man armed, and makes exertion, especially in hot weather, very formidable. But the fat people are aroused, and we feel sure their number, in proportion to population, will hereafter be diminished.

THE SLATER MEMORIAL MUSEUM.

PERSONS visiting the beautiful city of Norwich a few months hence will find there a museum of fine art of a kind which every big town or little city might possess, given only sufficient knowledge and good taste. These, indeed, it must set itself to seek in earnest. If it can command the most extensive knowledge and the most delicate refinement of feeling in the person of the custodian, the chairman, the president, the director, or whoever else the official may be who has charge of selection and purchase, a wonderful collection can be procured with small outlay. There is excellent art which can be reproduced so well that, while something is lost, very much remains. To select from out the mass of the world's possession of such art as this the few pieces which the fund allows—choosing those which are the most instructive, as being either the most nearly uninjured, or as being the most perfect types of important schools or epochs, or even as being more easily comprehensible by intelligent but not especially trained minds—is, of course, a task for which few students are fitted. Years of residence in those parts of the world where works of art can be studied comparatively and critically, and a minute and exclusive devotion to such study and comparison, are the necessary preliminary to the proper expenditure of even a few thousand dollars in the foundation of a really instructive museum of fine art. Given these qualifications in some one whose services you can command, and it is astonishing how much great and precious art a few thousand dollars will buy, and how admirable a museum a citizen of moderate means may present to his native town. Much more may be expected when the citizen is possessed of ample means and the most liberal disposition, as in the case in hand. Mr. W. A. Slater has been the good genius to bestow this boon upon the city of Norwich, and Mr. Edward Robinson, of the Boston Museum of Fine Arts, has, to his great credit, had sole charge of the selection and arrangement.

That part of the Slater Memorial Building which is devoted to the Museum of Fine Art is a large hall, reaching to the roof, and having a broad gallery next the wall on each of the four sides. There are windows below the gallery and windows above the gallery on three sides, and dormers in the roof on two sides. There is abundant light; and in the central area within the belt of galleries the light is good for sculpture, as it is, in the main, in the galleries themselves. Under the galleries the windows are too low, as indeed the ceiling is, for large pieces of sculpture, which nevertheless it has been found necessary to place there. A life-size or "heroic" statue needs a very diffused light; the necessity of putting many such statues in the strong horizontal and concentrated light from windows near the sculpture and on its own level is to be regretted. This same light does well for bas-reliefs, however, and it is to be hoped that when all the sculpture is in hand, it will be found possible to occupy nearly all the space beneath the galleries with sculpture in relief, including medallions, coins, and the like, to the exclusion of, at least, the larger statues and groups. This space beneath the galleries is to be divided into alcoves by means of curtains hung from rods, and capable of being drawn at will. The arrangement of the sculptures now going on seems to include a mainly chronological sequence, which is eminently desirable, but which may involve of necessity the inadequate lighting of which mention has been made. Thus the Harmodios and Aristogeiton group from Naples is fortunate in being placed in the high central nave, but the Naples Doryphoros suffers from the direct and concentrated light which alone it receives in its alcove. On the other hand, the Calf-Bearer from Athens

and the Spinario from the Capitol, being smaller, are sufficiently well lighted, and the early reliefs are in an excellent light—the great Eleusis relief being more perfectly placed and illuminated, for all purposes of examination and study, than any copy of this important and puzzling work of art that we can now recall in Europe.

There are now about one hundred and fifty important classical sculptures in place, and more are to come. Among these are some of the newest discoveries, such as the Boxer that has recently come to light in Rome. Of the archaic works, and of those just not archaic, but still full of the breath of early art, a few have been named; there are also the so-called Apollo of Tenea and the Aristokles relief from Athens, the headless robed figure from the Louvre, and four figures of the west pediment of Ægina from Munich; also, one of the Selinus metopes from Palermo, and a large part of the frieze of Phigalia. Then, of perfected art, there are nearly 140 feet of the Parthenon frieze, and, from the Parthenon pediment, the Theseus and two of the groups of draped figures; with other works that we cannot enumerate. All that is well preserved of the parapet of Nike-Apteros; the noble Hermes of Andros, and, to compare with this, its double from the Vatican Belvedere; one of the Discobolos statues, and, to compare with this, a small-scale reproduction of another and differing one; a vast slab from the Pergamon frieze of the Giants' Battle, the Laocoon, the Venus of Milo, the draped Niobide from the Vatican, the Nike of Paionios (shown here, as nowhere else in the world, on an exact reproduction of its original pedestal), and a pedestal reserved for the torso of the Belvedere whose coming is announced—the mention of these must suffice to give an idea of the whole collection; to which, as representative of Greek and Greco-Roman art, no exception can be taken. It does not appear that it would be possible to choose better the same number of pieces as representative of the whole mass of such sculpture which is known to us moderns. If any piece not included were proposed, on condition of excluding one of the present collection to make room for it, it would be seen that such a change would be of at least doubtful expediency.

The sculpture of the later Middle Ages and of the Renaissance is less easy to embody in a couple of hundred examples taken from its vast stores. It cannot be hoped that any two students of art would agree heartily on the selection to be made. Moreover, there are at Norwich fewer in proportion of the Renaissance pieces already in place, and the future of the museum of modern art is much less easy to judge of than of the classical department. What is good about it, what is hopeful and promising, is the large freedom with which semi-architectural pieces, such as the pulpit of S. Croce, the large font of Siena, and the tomb of the Cardinal della Rovere, and pieces of pure decoration—sword handles, bells, weapons, and the like—admirably reproduced by Josef Krettmayr of Munich, colored and gilded or bronzed into actual facsimile of the original, are added to the statuary and reliefs. The statue of Lorenzo de' Medici, with the accompanying supporters, "Twilight" and "Dawn," are set above a door the architectural frame of which seems well calculated to receive them; but they are placed too high to be properly seen from the gallery itself, and unfortunately they can be seen also from the floor below. It is greatly to be desired that they could be arranged more as the originals in the Sacristy of San Lorenzo. The same might be said of Michael Angelo's Moses, but that its placing is possibly only temporary. Panels from the doors of the Florence Baptistry—the earlier doors, those of the northern and southern portals—and from the Donatello Altar in Saint Antony's Church at Padua, give one the hope that these works may be shown ultimately in their completeness. The panels from Luca della Robbia's Singing Gallery are, one is sorry to see, already framed into the wall, so that this important work will not be put up with its architectural framework complete; but one cannot have everything. There is no room for such a mass of construction; one might as well insist upon all the Della Robbia reliefs of swaddled babies from the Hospital of the Innocents instead of rejoicing over the two that are already here. The whole collection of casts promises to be excellent and instructive beyond the reach of fault-finding. All have been chosen with extreme care, and if the student is left wishing that bronze originals should be represented by a bronze-colored rather than by a white reproduction, and that painted sculpture should be reproduced in full color, this is only what he feels on leaving any of the important collections of Europe, beginning with the vast and, for classic sculpture, almost complete collection at Berlin.

Coinage is to be studied in air-tight and dust-tight glazed frames, behind the plate glass of which, and mounted on dark velvety material, the deceptively imitative reproductions are mounted. Each coin is shown, the obverse and the reverse side by side, and an inscription immediately below gives the approximate date and the city or kingdom.

A few photographs are framed and glazed, ready to be exposed. They are the largest, and partly because of this the most effective with the spectator, that could be chosen. Thus, the enormous view of the west front of Reims Cathedral, made by J. Trompette of Reims, is a type of what an architectural photograph for public exhibition ought to be. The Naya photograph of the front of Saint Mark's is almost equally imposing. One of the largest frames is Braun's ceiling of the Sistine Chapel, but this photograph is made up of many pieces. Here is also the Sistine Madonna, a single plate half the size of the original, and the great Paul Veronese of the Venice Academy, known as the "Green Man," from the supposed portrait of the artist—a noble full-length figure, invested in various shades of that color, who stands fully relieved against a prominent mass of the architecture. This large photograph is also in three pieces; but several of the ceiling panels of the great rooms of the Ducal Palace, though nearly as large, are each a single print, and one of the finest photographs in the collection is Braun's superb new plate of the "Night Watch."

Into further detail we cannot go. It has seemed important to mention by name some of the works of art of admittedly supreme merit, which are capable of such reproduction that those who are far from the originals may yet gain much of that enjoyment which they can give. Casts of sculpture may be made almost perfect reproductions of the originals; electrotypes of coins may be absolutely perfect reproductions—that is to say, the first living experts are sometimes in doubt whether a coin offered them is genuine or not. Photographs, we know, give often more than one would expect, so to speak; the photograph, even of a painting, though reversing many of the comparative lights and darks of the original, gives yet a sense of that original's beauty which no engraver's copy has succeeded in doing. Engravings themselves, ancient and modern, made with the burin or with the etching needle and acid, and woodcuts as well, are capable of indefinite and very cheap reproduction by modern processes; any one may have Amand-Durand copies of Dürer and Rembrandt prints, which, if not equal to the choicest impressions from the original plates, are better than impressions which are considered passable and salable. Drawings by the old masters have been admirably copied, as every one knows, in autotype; the only defect of the copies being that every accidental pen scratch, stain, or finger-mark is of necessity reproduced in the tint of the drawing itself. Color you cannot reproduce, nor texture of surface; a Japanese lacquer, a Chinese porcelain, an embroidered cope or chasuble, you cannot reproduce, and of paintings you can give only the abstract in monochrome. This limit is set to our low-priced museum; but of the world of noble art which is included within this limit, the Slater Museum at Norwich gives an inspiring and encouraging realization.

THE TWO EMPERORS AT ST. PETERSBURG.

PARIS, July 28, 1888.

THE eyes of all Europe may be said to be turned at present on the shores of the Neva; but, alas! we cannot say with Voltaire:

"C'est du Nord aujourd'hui que nous vient la lumière."

We are left in utter darkness as to the results of the interview of the two Emperors of the North. We know the most minute details of their meeting, the correspondents of the English, German, and French newspapers tell us all that is visible to the eye; but we can find few significant details in the immense amount of their information. We know, however, that there is something remarkable, something important, in the character of the first political steps taken by the young Emperor of Germany, who has been called to the throne by the lamentable death of Frederick III. In his first declaration to the Reichstag, William II. spoke of his allies, Austria and Italy; he did not even pronounce the name of France, or, what may appear more singular, of England. But he reminded his people that Prussia had old ties of friendship with Russia, and he showed himself inclined to follow the policy of his predecessors with regard to the great Empire of the North.

This was not enough—he did not wait for the effects of this declaration. He started for Saint Petersburg as if he were determined to conquer the confidence and the good will of his powerful neighbor. In order to well understand the importance of this visit, you must remember the violence of the attacks of the Russian press on Germany and of the German press on Russia during the last months of the reign of William I. The antipathy of the Slavs and of the German races had free play for a time; war seemed almost imminent; the German official press complained every day of the warlike disposition of Russia, of the great movement of troops on the Polish frontiers and in Poland; it seemed as if immense masses of cavalry were all ready to enter into Posen and Silesia, and to hinder the mobilization in the German frontier provinces.

When William died, the accession of his already dying son put a stop to this polemical war. The Panslavist organs became silent; by a sort of tacit understanding the press of Russia as well as the press of Germany did not trouble the slow agony of a sovereign who was known to be inspired with generous sentiments, and whose last thoughts tended only to the peace of the world. It was to be feared, however, that this peace, imposed by the state of

the sovereign, was only a truce, and that hostilities would break out again after his death, especially as the new sovereign was represented as an ambitious young man, ardent for action and for glorious deeds. The new Emperor, fortunately, had always professed the most fervid admiration for the Chancellor of the Empire, and everybody felt that, especially at the beginning of his reign, he would be ready to accept the advice and to follow the policy of Prince Bismarck. His visit to Saint Petersburg derives all the more importance from this consideration, since it may be considered as the joint inspiration of the Emperor and of his Chancellor.

To those who know the history of Prussia as well as the history of Prince Bismarck, the initiative taken by the Emperor will not be a matter of surprise. Read the history of the Electors of Brandenburg, and afterwards of the kingdom of Prussia, and you will see that Prussia has never obtained any marked political advantage, that she has never entered on any great enterprise, without having assured herself, if not of the coöperation, at least of the neutrality, of Russia; and when this cooperation or neutrality has failed her, she has suffered great reverses of fortune. To speak only of the more recent events—at the time of the last Polish insurrection, Prince Bismarck concluded with Prince Gortchakoff a military convention (February 8, 1863), and he was soon afterwards paid for this service: the question of the Danish duchies arose, and the alliance of Prussia and of Russia allowed Prince Bismarck to give it a solution which was favorable to his country. "The Vice-Chancellor," wrote Lord Napier to his Government at the beginning of the Danish difficulty, "is disposed to consider a federal execution as a conservative measure." Russia abandoned the cause of Denmark, though it had, more than any Power in Europe, the greatest interest in the liberty of the Baltic. When war broke out between Prussia and Austria, Russia remained perfectly neutral; the Cabinet of Saint Petersburg felt or affected the most perfect security. Russia seemed totally unconcerned—in reality she enjoyed the discomfiture of Austria.

At the time of the war between France and Prussia, Russia preserved the same attitude. The prodigious victories of the Emperor William excited no alarm in St. Petersburg. If you read a book published by Schneider, who accompanied the E nperor William in the Austrian and French campaigns, you will find abundant proofs of the sympathy felt by the Emperor of Russia for his uncle; he is never tired of expressing his admiration for his deeds. The mutual understanding between Russia and Prussia at the time of the Franco-German war became apparent to all the world when Russia denounced the clause of the Treaty of Paris which restricted its liberty of action in the Black Sea. Everybody understood that the virtual abolition of the treaty made after the fall of Sebastopol was the price of Russian neutrality. After Sadowa, Napoleon III. had pronounced "Væ victis!" on Austria; after Sedan, the Emperor of Russia pronounced "Væ victis!" on France.

On February 26, 1871, the Emperor of Germany telegraphed from Versailles to the Emperor of Russia: "It is with an inexpressible feeling, and with thanks to God, that I announce to you that the preliminaries of peace have been signed. Never will Prussia forget that she owes to you the fact that the war has not taken on extreme proportions. May God bless you! Your friend, grateful for life."

Many things have happened since; and after the Turkish war, Russia found fault with Prussian gratitude. The Treaty of Berlin left her discontented with herself, and discontented with her neighbors. This vague feeling of ill-humor has been much worked upon by the Panslavists, as well as by the Revolutionists, by all those, in fact, who form the party of opposition—a party which in Russia has no organization, no regular organs, but which is nevertheless important, and perhaps all the more dangerous for being unorganized. Things went so far that Prince Bismarck, when he asked the Reichstag not long ago to vote new credits for the army and to alter the military laws, had to face the possibility of a struggle which might oblige Germany to confront her enemies on her eastern as well as on her western frontier. Still, in this bold and extraordinary speech, the Chancellor was very careful not to say a word which might give offence to the Emperor of Russia; he made the strongest appeal to the personal sentiments of the sovereign, and it may be supposed that the new Emperor of Germany, in his visit to St. Petersburg, will hold a similar language—that he will show to the Emperor a real danger in the effervescence of the Panslavist and anti-German passions. The two Emperors are both strong enough to control the unreasoning passions of the multitude; they both feel that a great responsibility arises from the extent of their own power; they have both, however, to deal with great difficulties. Prussia is no longer the Prussia of old. Since obtaining the long-coveted hegemony of Germany, not under the form which would have satisfied her, but under the form of the Empire, she has new duties, she has also new interests. Since Sadowa, she detains in what the diplomats call her sphere of influence the large part of Germany which was for a long time in Austria's sphere of influence, and which afterwards oscillated for many years between Berlin and Vienna. Since the war of 1870 and the erection of the new empire, the influence of Prussia extends over all the German-speaking provinces of the centre of Europe, over Gross-Deutschland, and may be said to extend also indirectly over all the provinces which are bound by old historical ties to the Austrian Empire. The creation of German unity, which had been prepared by so many thinkers, but which was only accomplished in our time, has altered the historical mission of Prussia.

The new Empire cannot have exactly the same position with regard to Russia as the Prussia of the great Frederick. Prussia is no longer struggling for life, to borrow an expression from the Darwinian theory; she has no longer to think only of her frontier, of her organization; she has become essentially the representative of German culture—she represents a stage and a form of civilization highly different in every respect from the rudimentary civilization of Russia. What do we see in Russia? The Slavic orthodoxy, intolerant, propagandist, which does not separate the ambitions of the State and the ambitions of the Church. What do we see in Germany? A diversity of religious communions, the Occidental ideal of the state which allows to the religious conscience whatever is not contrary to public order. In the political order of ideas, the contrast is quite as great. Russia professes as a dogma the theory of the omnipotent Emperor, the autocrat, only judge and only master, sovereign in the most absolute sense of the word, unfettered by chambers and by constitutional rules. In Germany we see a powerful Emperor, but we see Chambers, and the sovereign does not ascend the throne without swearing to respect the Constitution. Nobody has ever spoken with more force than Prince Bismarck against the abuse of Parliamentarism, but who has made more frequent and eloquent appeals to public opinion? Who has better felt the necessity of speaking to the people, of being understood by the people? We need not follow our comparison any further, in all the details of the social organization; it is enough to say that Germany is conscious of representing a civilization and a culture which are very different from the Russian, and, therefore, it is not to be wondered at if a close alliance between the two German empires has become the necessary basis of her policy.

As we have shown Prussia in her double aspect of Prussia proper and of Prussia representative of the German interest, we might show the Russian Government in double form and character. The dynasty is German in origin, bound by a hundred ties to the Occidental princely families. A German element is found in all the higher spheres of the administration and of the army; Germany gave the first lineaments of civilization to Russia. But under what might be called the German envelope is a great people, with sentiments, habits of thought, passions, aspirations, entirely unknown to the Occident, even adverse to the Occident. The Government of Russia is like a medal with two faces. Its mission is difficult, for it has to reconcile constantly its policy with the feelings of the great Slavia or Panslavia. At the present moment Russia feels that she has suffered a great moral defeat in Bulgaria; she considers this province as a necessary part of Panslavia, which has been torn from it by the wicked diplomacy of Europe and the astuteness of Prince Bismarck. *Inde iræ.* It is difficult to see how the interests of general peace can long be harmonized with the growing ambition of the Panslavists; and the future is all the more uncertain because the passions of the Slavic world have no organized representation, because the authority of the Emperor is more arbitrary.

THE FRITZ REUTER CELEBRATION AT JENA.

JENA, July 22, 1888.

THE site of the old walls and moat of Jena is now occupied by four streets, which encircle the old town and are still called the *Graben*. That on the north, Fürsten-Graben, has been converted into a promenade. On it are the old Schloss, the University building, the Library, and the Botanical Garden, with the house once occupied by Goethe. Between the trees on the other side of the drive are shrubs and flowerbeds and the mounted busts of former Jena professors. Among these, opposite my window, have stood since the sad 14th of June the scaffolding and the pedestal of the unfinished Reuter monument—a fit emblem of the rent the death of Emperor Frederick made in the hearts of the German people.

A few days ago the work was again taken up and the colossal bust mounted. The celebration began with a grand *Kommers* in which the Korps and Burschenschaften as well as the scientific and other societies took part. They appeared "*wichs*"—in other words, they wore their society caps, and their officers had decked themselves out in their handsome regalia, including their swords, with the flat blades of which, at the close of each stanza of the songs they sang, they belabored the beer-tables in wild old barbarian style. There were several short speeches, some in High, some in Low German. The principal speeches of the evening considered the *Kommers*, next to the ceremony of unveiling the bust, the most important part of the celebration; "for in the case of a man so thoroughly German as Fritz Reuter, a celebra-

tion must be German, and to drink beer—to drink great quantities of beer—is German"—which was received with a round of applause. As is usual on such occasions, the drinking and singing lasted on towards morning, and the police were instructed to keep out of the way and not see anything as the revellers made their way home.

A finer day for a celebration than yesterday could not have been desired. It was Sunday, and soon after the morning service the various societies began to collect before the old college buildings. At the head of each society, gathered about its richly embroidered banner, were its officers, wearing their beautiful velvet caps with waving plumes, their gaudy sashes, hip-boots, and swords. This semester the Finken, or Independents, for the first time also appeared *wichs*, the Finkenkönig at their head. They carry the University flag. On its way to Fürsten-Graben, the procession, headed by the Mayor of Jena and the Parliamentary representative, passed through various streets of the quaint old University town. The population seemed to take a hearty interest in the celebration, and from nearly every window hung a flag displaying the colors of one or another of the societies or those of the town, the Grand Duchy, or the Empire.

The address was delivered by Dr. Ernst Harmening, an attorney in Jena, but by birth a Plattdeutscher. He began with a quotation from a letter from Frau Louise Reuter: "In Mecklenburg stood his cradle, in Thuringian soil rest his remains—the beginning and the end. Between these—Jena." It was these words which, when the question arose as to where a monument should be erected to Reuter's memory, led to the selection of Jena. "In Mecklenburg stood his cradle": in the little town of Stavenhagen, November 7, 1810, Fritz Reuter was born, the child of the town justice and burgomaster, who at the same time managed a large farm. Of the "Stemhäger" life of these early years, Reuter has given us a charming picture in "Schurr Murr." At the age of fourteen he was put to school at Friedland and later at Parchim. His university studies were begun at Rostock; and at Easter, 1832, we find him matriculating at Jena. The Burschenschaften were just then at the height of their political development, and Reuter plunged headlong into their wild life. It was intended that he should study law, but he had little taste for it, and devoted what time he could spare from fencing and "beer studies" to mathematics and drawing. How dear to him in after years the memory of his life in Jena was, we can judge by the scene in 'Hanne Nüte' where the good pastor for the time forgets that "Die ganze Kreatur ist in der Sünde tief versunken" and "Es ist auf Erden alles eitel," and passionately bursts out with:

"Sieh' mich, mein Sohn! In meinen alten Tagen
Lebt frisch noch die Erinnerung,
Als ich, wie du, einst frei und jung,
Den Flug that in die Ferne wagen.
Ach Jena! Jena! lieber Sohn,
Sag' mal, hört's du von Jena schon?
Hast du von Jena mal gelesen?
Ich bin ein Jahr darin gewesen,
Als ich noch Studiosus war;
Was war das für ein schönes Jahr!"

At the end of the year Reuter returned home, and in the fall, while on a visit in Berlin, was arrested by the Prussian authorities as a member of the Burschenschaft, and confined, during a three years' investigation of his case, in various fortresses. He was then condemned to death for "attempted treason," but the sentence was changed by William III. to one of thirty years' imprisonment. He was confined successively at Silberberg, Glogau, Magdeburg, and Graudenz, being obliged to endure unusually hard treatment. At the end of seven years the Mecklenburg Government succeeded in getting its subject back into its own hands, but only on condition that he should continue to serve out his sentence in his native land until the Prussian King should be pleased to pardon him. But here he did not lack manifestations of kindness and regard, and at the death of King William he was set at liberty by the Grand Duke of Mecklenburg. Much as he had been compelled to suffer, it does not seem to have embittered him in the least, and we can hardly overestimate the qualities of heart and mind which did not permit these years of hardship and abuse to develop in Reuter the bitter satirist rather than the genial humorist.

On regaining his liberty, he once more took up the study of the law, and this time at Heidelberg; but he soon let it drop again and became a "Strom," as they call a farmer in Mecklenburg. At his father's death in 1845 there were, however, no means at hand to undertake the management of a farm, and Reuter's next five years were spent in an irregular, wandering life. Having engaged himself to Louise Kunze, the daughter of a pastor, he settled down to the occupation of private tutor, and in his spare time wrote poems in his native dialect. The unexpected success of his first volume, 'Läuschen un Riemels,' led him to devote himself entirely to dialect writing. This instantaneous success was doubtless not a little due to the interest that Groth's 'Quickborn,' which had appeared the year before, had aroused for the hitherto neglected dialect. Plattdeutsch had become the fashion, and this fashion prepared the way for a just appreciation of the genius of the man who had chosen that idiom for its expression. In 1856 Reuter moved to Neubrandenburg, where he lived till 1863. These years were those of his greatest literary activity—'Olle Kamellen,' 'Schurr Murr,' 'Hanne Nüte,' 'Kein Hüsung'; and nothing that he afterwards wrote added to the reputation these had won for him. But for a trip to Palestine and Greece in 1864, the last ten years of his life were spent in the handsome villa which one passes on his way from Eisenach up to the Wartburg—years the memory of which is saddened by the knowledge that they were the last steps a great man was taking to a drunkard's grave. In a country where even the religiously bigoted cannot withhold from the liberal author of 'Hanne Nüte' and 'Olle Kamellen' their admiration and affection, there can be no lack of apologists for a man who could not control his appetite for drink, and the blame is thrown now upon hereditary tendencies, now upon the peculiar circumstances of his prison life, less often upon the temptations of his student days.

The unveiling of the bust was followed by brief addresses from the delegates from the various Plattdeutsche Vereine, who laid garlands at the foot of the pedestal. At two there was a banquet at the sign of the Black Bear (memorable as the inn at which Luther was wont to stop, and the scene of his interview with the Swiss student Kessler and of his heated controversy with Karlstadt). The bill of fare was printed in Low German and began with:

"Wat dat all to eten giwt
to dat
Festeten be de Enthüllung
von dat
Reuter Denkmal."

And how is this as a sample of successful avoidance of the hated *Fremdwort*?—"Kalwfleesch in'ne fine klüterige Stipp in Bläderdeeg inleggt up de Aart as de Franzosen dat in Toulouse eten (dor nennen's dat Fricassée)"? Besides the members of the Plattdeutsche Vereine and the guests from abroad, many citizens and students were present, but not more than one or two of the University professors. Telegrams of greeting were received from Frau Reuter, the Grand Duke, and many others. No little credit is due the Burschenschaften in Jena for their substantial contribution to the monument fund. Other contributors were not forgotten, and I was glad to hear the hearty and repeated expressions of appreciation of what had been done by those in America who had taken an interest in the matter. The bust is considered by those who knew the author ("Olle Peters" himself was present) a good likeness of Reuter as he appeared in his best years. A representation of it will be found in the *Illustrierte Zeitung* for July 21. Ernst Paul, the sculptor, was born in Arolsen in the Duchy of Waldeck in 1856. As a pupil of Schilling he was engaged upon the National Monument on the Niederwald, and, besides minor works, has produced the Gutenberg statue in the Germanic Museum at Nürnberg and a "Sandalenbinderin" that is praised.

Some of the guests returned to their homes by the evening trains, but not a few remained over till to-day, and enjoyed one or more of the delightful walks and climbs of which the valleys and the hills about Jena offer such a profusion—drank Lichtenhainer where it is brewed, and bought a Ziegenhainer cane where they grow—or joined in ascending the Hausberg and drank a *Frühschoppen* at the Fuchsturm. But the real close of the celebration was yesterday evening, when many of us climbed up to the Sophienhöhe, a place of amusement on the slope of the Kernberge southeast of Jena, and, seated about the little tables in the gardens or on the verandas and gallery of the inn, spent a pleasant hour or so in that simple and *gemütlich* way the Germans so well understand. At our feet lay spread out the valley of the Saale with Jena and the neighboring villages. On the elevated plateau to the northwest the mighty invader dealt Prussia his hardest blow—on the heights opposite rises above the Jenaer Forst the imposing tower erected in commemoration of the final victory over the *Erbfeind*. As the sun went down behind the Thuringian hills we sang Reuter's "Ik weit einen Eikbom," and that song, so dear to the hearts of all who have had the good fortune to spend a summer in Jena, "An der Saale hellem Strande."

GEORGE HEMPL.

Correspondence.

THE FIRST COLLEGE OBSERVATORY.

TO THE EDITOR OF THE NATION:

SIR: Professor Loomis states, in his 'Progress of Astronomy' (edition of 1850, p. 162), that the first attempt to establish a college observatory in the United States was made by Prof. Albert Hopkins of Williams College, Massachusetts. This is an error; and it is repeated in the *Nation* of July 12, 1888, in the introduction to your abstract of Professor Safford's address on "Fifty Years of American Astronomy." Your article states that the Williams College Observatory was erected in 1838. Seven years before, an "attempt" had been made at the University of North Carolina by Dr. Joseph Caldwell, who was then President, and had been for a long time Professor of Mathematics. This was probably the first attempt made in this country, and will you not allow me space for a brief account of it?

In 1824 Dr. Caldwell was sent to Europe to buy books and apparatus for the University. Among the instruments he purchased in Lon-

don were a meridian transit instrument and a zenith telescope made by Simms, a refracting telescope by Dollond, an astronomical clock by Molyneux, a sextant by Wilkinson, a reflecting circle by Harris, and a Hadley's quadrant. These instruments were used in the University buildings until 1831, when they were placed in an observatory which had just been built for them. This building was of brick and stone, about twenty feet square and twenty-five feet high. A column of masonry rose through the centre to furnish stable foundations for the instruments. The flat roof contained a wide slit which continued for some distance down the walls and afforded a range of 180° for the transit. This slit was covered by a wooden framework which could be moved by rope and windlass.

Observations were made at this place by President Caldwell, Prof. Elisha Mitchell, and Prof. James Phillips. But the observations were continued only a few years. The construction of the building was very imperfect. The flat roof was so troublesome that the instruments were removed soon after Dr. Caldwell's death in 1835, and the building was partially destroyed by fire in 1838. It was never restored. President Swain, who succeeded Caldwell, afterwards carried away the bricks and used them in building a kitchen. This is still in use! The ruins of the observatory are yet plainly visible on a hill just outside the campus.

The records of these observations have, in some way, been lost, whether during "Reconstruction days," when the University was closed for several years and troops quartered in the buildings, or before, no one seems to know.

Dr. Caldwell's attempt to establish this observatory deserves record. His instruments were small, but the equipment was entirely sufficient for an excellent beginning. Accurate and valuable work could have been done with it. There would have been something lasting done, and this might have grown into one of the best college observatories in the country, if Dr. Caldwell's successors had possessed his zeal and taste for astronomy. But the University was poor, the public was indifferent, and there was too much to struggle against—the opportunity was lost.

There are persons now living in Chapel Hill, whose authority is unquestioned, who were often in this observatory and saw the instruments in place. Among them is Rev. Dr. Charles Phillips, who, as a child, frequently attended his father, Dr. James Phillips, while making observations, and to whom I am indebted for the above facts.

During the civil war a novel use was found for the telescope, when some of Sherman's troops passed through Chapel Hill. The instrument had been lying unused for a number of years, on an upper shelf in one of the lecture-rooms, and looked harmless enough not to attract anybody's attention. Two of the professors thought it would be a good place to hide their watches. The dusty object-glass was removed and the watches carefully concealed within the tube. But some of the soldiers must have been enthusiasts in astronomy. At any rate they loved gold watches, and the unlucky professors had to apply to the officers of the regiment to have their watches returned!

JAMES L. LOVE,
Associate Professor of Mathematics.

UNIVERSITY OF NORTH CAROLINA, August 6, 1888.

WHAT THE REPUBLICANS EXPECT TO DO FOR CIVIL-SERVICE REFORM.

TO THE EDITOR OF THE NATION:

SIR: During the past year many of those who voted for the Democratic candidates in 1884 have beyond question been pained at President Cleveland's lapse from the civil-service principles to which he once gave utterance. Some of those who supported him at that time, forgetting now that with all his shortcomings in that regard there has not been another administration for a quarter of a century when the civil service of the country was, *as a whole*, so far removed from politics, appear to have despaired, and are considering whether it may not be wise to support the Republican nominees at the coming election, in the hope of better things from them, if elected.

On this point we may for the moment ignore the probability, now openly asserted by the Republican organs, that the election of Mr. Harrison means Mr. Blaine as Secretary of State and chief adviser, and four years of Blaineism abroad in the land. The Republican State Convention of Michigan, just held, has, we may assume unintentionally, but plainly, announced what may be expected in the civil service if the Republicans are successful in the present campaign. The platform adopted yesterday at Detroit "arraigns the Democratic party . . . for the prostitution of the civil service"—why? Because it is wrong in principle? No: simply because this "prostitution" has been found "so soon following the glowing declaration of the newly elected Democratic President"! The platform is silent as to the real views of the Republican party of Michigan on the naked question of civil-service management, but the speech of the temporary chairman, applauded to the echo by the Convention, formulates their sentiments better than any vote-catching plank in a platform. From the report in the Detroit *Tribune* (the Republican organ in Michigan) I make the following extract from the chairman's speech:

"I find no fault with the administration of the Democratic party in bestowing its favors and its offices upon its friends. That is one of the fundamental principles and tenets of my political faith [applause]; and I believe that in the early part of 1889 the Republican party will be kept very busy in that same direction [applause and laughter]."

Verily the spirit of the delegate from Texas still dwells in the Republican party. Does it promise better than President Cleveland's performances? G.

AUGUST 10, 1888.

CAMPAIGN CREDULOUSNESS.

TO THE EDITOR OF THE NATION:

SIR: In your editorial on "Campaign Lying" in the *Nation* of August 9, you state that "intelligent men are not fooled by them, and that they are meant for the ignorant workingmen, particularly the Irish." In this you are mistaken, as I have talked to some men recently, whose intelligence is undoubted—notably a prominent member of Councils, representing one of the most influential wards in Philadelphia, who assured me that the article purporting to be an extract from the London *Times*, to the effect that "the only use England has for Irishmen now is to send them to the United States to vote for Cleveland and free trade," had positively appeared in the London *Times*, and gave me the date of its publication (June 16, I think). He also stated that in the future whenever this quotation was used, it was to have the date of publication. As far as I have observed, these articles are believed by intelligent Republicans as well as by the ignorant.—Yours, etc., W. H. C.

PHILADELPHIA, August 11, 1888.

"*TO ADMIRE AT.*"

TO THE EDITOR OF THE NATION:

SIR: At page 33 of your current volume, you designate the phrase "to admire at," in the sense of "to wonder at," as "a decided provincialism." Is it not, rather, an archaism? See Dr. Murray's Dictionary.

"To feel or express wonder mingled with approbation" is a sense of "to admire" which, I believe, has not hitherto been noticed by lexicographers.

"The Divine goodnesse, whose providence is never enough *to be admired at*."—William Watson, *A Decacordon of Ten Quodlibeticall Questions* (ed. 1602), page 24.

The expressions "the onely *admired at* Heroes of the world in his dayes," "such *admired at* worthies," "his *admired at* holy father," and the like, occur in the same work, at A 2 v., pages 102, 145, and elsewhere.

As any one who has lived in New England must be aware, the meaning which the New Dictionary assigns to "I *admire* to do it," quoted from Miss Alcott, is erroneous. See Webster or Bartlett.—Your obedient servant,

F. H.

MARLESFORD, ENGLAND, July 23, 1888.

Notes.

WE mentioned last week the late Gen. Sheridan's aversion to any publication of his observations on the German Army in action during the war with France in 1870-71—perhaps because what he did let slip touched German-American sensibilities somewhat deeply. The November *Scribner's*, it is now announced, will reproduce, in an article called "From Gravelotte to Sedan," the General's notes made during his stay at the German Headquarters. A high degree of interest will attach to this posthumous paper, as to the General's Memoirs, of which Charles L. Webster & Co. will be the publishers.

Harper & Bros. publish directly 'Fifty Years Ago,' by Walter Besant—an illustrated account of English life, customs, and manners at the date of Queen Victoria's accession.

Longmans, Green & Co. will shortly publish 'The Record of a Human Soul,' an anonymous little book, "the honest account of the struggle of a sceptic who ardently but unavailingly desired to believe."

A new edition of the late Capt. R. F. Coffin's 'Yachts and Yachting,' brought down to date by Charles E. Clay, editor of *Outing*, is in the press of Cassell & Co.

Mr. Edward McPherson's 'Handbook of Politics for 1888' will be issued by James J. Chapman, Washington, D. C., about September 1.

We welcome the appearance of a second edition of Mr. Edward Stanwood's 'History of Presidential Elections' (Boston: Ticknor & Co.), which also serves as a history of parties, in default of a general work on the latter subject. Apparently it is the intention of author and publishers to renew this work every four years, so that the political student may be kept fully abreast of the movement of the national sentiment. Armed with the present volume, and with McPherson's 'Handbook of Politics' (which lags this year like our pokey Congress and our deliberate Presidential campaign), the stump-speaker and the voter have great resources for intelligent thought, speech, and

action. Mr. Stanwood's new chapters tell, first, the story of the campaign of 1884 with impartiality, and with an accuracy not to be questioned, unless we take issue with his positive ascription of the defeat of Blaine to the alliterative Dr. Burchard. The second one records with all necessary detail the passage of the Electoral Count Bill and the Presidential Succession Bill—two measures whose success in a time of strictly-drawn party lines and of public apathy on the matters in question, contains a most useful moral for the legislator and the reformer. Finally, an appendix embalms the party conventions and platforms of the current year, and the index crowns the whole.

The latest olive-green Bohn reissue to reach us is an edition of Goldsmith's plays, "The Good-Natured Man" and "She Stoops to Conquer" (Scribner & Welford).

From the Messrs. Longman we have a School Geography, by George G. Chisholm, who owns his large measure of indebtedness to a German model, and who has in turn furnished a model to our American makers of similar works. Its English origin and scope by no means deprive it of direct usefulness in our schools, at least as an adjunct. The illustrations, in which the fanciful is suppressed, are excellent. The same author and publisher produce a Junior Geography, more condensed, with a few diagrams and no scenic illustrations, but with uncolored maps reduced to their simplest terms.

A supplementary reading-book for schools, 'Familiar Animals and their Wild Kindred,' by John Monteith (Van Antwerp, Bragg & Co.), is noticeable for the pains taken to supply engravings of the several animals discoursed of. The result in this direction, if it falls considerably short of Bewick, is nevertheless much above the average. It is open to doubt whether for reading purposes it is not better for the teacher to have at command several first-rate naturalist books of travel.

Prof. George O. Curme, of Cornell College, Mt. Vernon, Iowa, edits for D. C. Heath & Co., Boston, Selected Poems from the 'Premières et Nouvelles Méditations' of Lamartine. Prof. Curme has the enthusiasm of an ardent admirer, and takes much satisfaction in reviewing the list of the poet's critics now forgotten. He furnishes a somewhat florid sketch of Lamartine's career, and adds notes chiefly explanatory and literary.

Ginn & Co., Boston, have brought out 'Aims and Methods in Classical Study,' by Prof. W. G. Hale of Cornell University, a companion pamphlet to his 'Art of Reading Latin.' It consists of an address delivered last year before the Massachusetts Classical and High School Teachers' Association in Boston, and is full of suggestion and instruction.

An obvious reflection arises when we are shown 'Charts of the Governments of the United States and of the State of Virginia,' displayed on one sheet for comparison by a school principal of Roanoke, Va., Mr. William M. Graybill. The idea is a good one, and is to be carried out for every State in the Union.

The second Bulletin of the Agricultural Experiment Station at Cornell University demonstrates the differences in value of the wool, flesh, and fat of lambs as fed on nitrogenous and non-nitrogenous food. Colored plates of several cuts from the slaughtered animals after photographs are very striking.

Mr. Horace Howard Furness comes to the defence (in *Shakespeariana* for August) of a passage in the trial scene of the "Merchant of Venice"—

"Thy currish spirit
Govern'd a wolf who hanged for human slaughter"—

which in his Variorum Edition he had intimated was corrupt. He cites the practice of hanging wolves and other rapacious animals for their sins. This custom, we will add, which seems opposed to modern notions, was nothing strange to a generation used to excommunications of noxious animals by the Catholic Church.

The principal articles in the twenty-third volume of the German Shakespeare Society's *Jahrbuch* are on "English Proverbs," by the late M. C. Wahl, a continuation and completion of an article on this subject printed in the last volume; and on "Timon of Athens," by Dr. W. Wendlandt. There is also a translation of Miss Grace Latham's paper on *Volumnia*, the mother of *Coriolanus* (according to Shakspere), and an account by Th. Vatke of English feasts and meals in the Elizabethan era. A curious table of the representations of Shakspere's plays on the German stage (including that at Milwaukee) during the year 1887 shows that twenty-five plays were given 717 times by 122 companies, "Othello" leading the list with 90 representations by 56 companies, "Hamlet" closely following with 88 times by 50 companies; the lowest being "The Tempest" and "As You Like It," each having been given twice by a single company. If, however, an adaptation of "Taming the Shrew" by Holbein, called "Liebe kann alles," be reckoned with the original play, this would stand first with 107 representations. The répertoire of the Meiningen Company included "The Merchant of Venice," "Julius Cæsar," and "Twelfth Night," which they gave 48 times in different parts of Germany. There is no bibliography in this volume, but the completion of Prof. Burgersdijk's Dutch translation is noticed with the remark that "now Holland has this advantage over Germany, that she has all Shakspere by one master-hand, while with us 'Meister' Schlegel translated but the smaller half."

The seventh annual report of the Dante Society, whose headquarters are at Cambridge, Mass., announces the approaching publication of Prof. E. A. Fay's 'Concordance of the Divina Commedia,' at the charge of a lady, one of the members of the Society. Mr. W. C. Lane has prepared the Dante bibliography for the year 1887, which is printed with the report, as was last year that for 1886. He intends at his leisure to bridge the gap between 1886 and the last contributions of Petzholdt. A prize has been awarded for a Dante essay by a student or recent graduate of Harvard, and fresh subjects are announced. The library has been steadily increased; but this, we regret to say, is not true of the Society's membership.

Feeble, numerically, as the Dante Society is, it has the distinction of being the fellow of the Deutsche Dante-Gesellschaft in an organized pursuit hitherto unknown even in Italy itself. This reproach has just been removed, thanks to the initiative of the Accademia della Crusca, with the support of the Marquis Pietro Torrigiani, Mayor of Florence, and with the approval of King Humbert, who enrolls himself in the new Società Dantesca Italiana, as the Marquis says, "non come pallida ombre di sovrana protezione, ma come lucente vessillo di nazionalità." The Society, in fact, though it will have its seat at Florence, will have branches throughout the peninsula. We quote once more from the Mayor's circular for what he says of the Dante Society of Cambridge—words too generous for the present facts, but of good omen, we may trust: "Dallo spirito democratico della nazione giovane prende vigore ad espandersi."

The University Library at Copenhagen has just acquired a copy of the first book printed in Icelandic, namely, the New Testament translated by Oddur Gottskálksson, and issued at Roeskilde, the old capital of Denmark, in 1540. The book exists in only a fragmentary state in Iceland, but the Copenhagen Royal Library has two very inferior copies. That which is now on the shelves of the University collection is absolutely perfect and in clean condition. It was found in the house of a Zealand peasant, not very far distant from Copenhagen, and was purchased for 25 Danish crowns (less than $7)—its marketable value being, of course, a great many times that sum. Nothing is known of its history except that it was in Iceland down to near the year 1820.

There has recently been organized in Paris the "Société de l'Histoire de la Révolution Française." Its objects, as stated in the *Revue Historique*, are to cause a scientific method to be followed in the studies upon the French Revolution; to offer a rallying-point for all students of the history of this period; to publish inedited, rare, or original works touching that time; to organize historical lecture courses; to prepare for the coming centennial celebration. Among the works announced for publication are the 'Mémoires inédits de Fournier l'Américain,' which will be edited by M. Aulard, the secretary of the new society.

Of late years, *Punch* has been to most Americans a mere picture-book, in which the "cuts" were of importance, and the "comic copy" seemed to be very inferior padding. But one series of articles which recently appeared, a "Manual for the Use of the Young Reciter," attracted attention far beyond that usually excited by the letter-press of the paper, and it was evident that the staff of *Punch* had received a new and valuable recruit. These articles have been reprinted in a neat little book with cover by Mr. Linley Sambourne, and we know now that "Burglar Bill" and his fellows are the work of "F. Anstey," as the author of 'Vice-Versa' still desires to be known. There are a baker's dozen of parodies in the thirteen different styles with which the amateur reciter or parlor elocutionist is wont to afflict unfortunate audiences. The subject of "Burglar Bill" (which is in the "Sympathetic Artless" style) is, oddly enough, almost identical with Mrs. Burnett's pathetic "Editha's Burglar." The "Wreck of the Steamship *Puffin*" is cruelly like the serious "marine emotional turgidities" which *Punch* publishes now and then. But perhaps the final poem, "Positively the Last Performance," is the most ludicrously exact exaggeration of all—its pseudo-pathos is most delightful.

Although the art of bookbinding is not in a very flourishing state in Great Britain, a monthly magazine devoted to the art has just completed the first year of its existence. The *Bookbinder* (London: Wm. Clowes & Son) is not a very attractive or a very artistic periodical; its editor's ideals are not high, his knowledge is not wide, and his editing is rather slovenly; but in the twelve numbers there are illustrations and scraps of information which those interested in bookbinding are glad to receive. There is an account of the exhibition of bookbindings by the Society of Arts last winter; also, an admirable and apparently exhaustive bibliography of bookbinding, to which we are able to add only the articles in the *Art Amateur*, the *Art Age*, and the *American Bookmaker*, and a chapter in the 'Home Library' of "Arthur Penn." It is to be wished that the editor of the *Bookbinder* would begin a systematic reproduction of the interesting and beautiful bindings exhibited in the King's Library at the British Museum, taking as his model M. Henri Bouchot's excellent book on

the bindings of the National Library in Paris. We glean that Mr. Weale is collecting material for a much needed history of bookbinding in England.

With the fourth annual report of the Commissioners of the State Reservation at Niagara for the past year, just issued at Albany, is printed a catalogue, by Mr. David F. Day, of the flowering and fern-like plants growing without cultivation in the vicinity of the falls of Niagara. Mr. Day's preliminary remarks on the connection between the flora and the geology of the neighborhood are very interesting. Goat Island he reports very rich in the number of its species, surpassing any adjacent area of equal size. The annual product, also, is noticeable for its abundance.

—The Drakes are disposed of in vol. xv of Leslie Stephen's 'Dictionary of National Biography' (Macmillan), and the great Admiral Sir Francis Drake has slightly more space accorded him than any other personage. Disraeli is a good second in this respect, and is treated in a manner that can give no offence to his admirers. In twelve pages the editor sums up what is needful to be said about Dickens. So far as the literary judgment goes, it is, on the whole, quite as high as one would have expected. Mr. Stephen says of the 'Pickwick Papers' that it "has caused more hearty and harmless laughter than any book in the language," and "shows in their highest development the qualities in which he [Dickens] most surpassed other writers." 'Martin Chuzzlewit' "shows Dickens at his highest power; . . . and the American scenes, revealing Dickens's real impressions, are perhaps the most surprising proof of his unequalled power of seizing characteristics at a glance." Of personal traits, Mr. Stephen observes slyly that Dickens "loved dogs, and had a fancy for keeping large and eventually savage mastiffs and St. Bernards; and he was kind even to contributors." His domestic infelicities are set down to his discredit. Good reading is the sketch of Charles Dibdin, and, in fact, of each of the Dibdins. Little is allowed by way of praise to the bibliophile Doctor, whose chief merit is detected in his share in founding the Roxburghe Club, precursor of the great number of similar publication societies. Another pioneer was C. W. Dilke, who established the practice of independent book reviewing. Dr. Thomas Dover, proverbially remembered in the name of Dover's powder, was also the discoverer of Alexander Selkirk, and thus was in a sense the author of 'Robinson Crusoe.' Sir Geo. Downing, with all his shortcomings, brought about specific appropriations for supplies in Parliamentary grants of money. He is, by his American birth, the most distinguished connecting link in this volume between the mother country and the United States. We could wish that room had been made, among the Dixons, for that Jeremiah whose surveying labors on the border of Maryland and Pennsylvania gave us the convenient politico-geographical expression "Mason and Dixon's line," to mark the parting of slave and free territory. For the same reason his chief, Charles Mason, merits recognition, perhaps, when overtaken in the Dictionary's alphabet. The writer of the sketch of Richard Doyle asserts that the facsimile of this artist's delightful MS. Journal of 1840 gives no idea of the beauty of the original in the British Museum. The inclusion of Alfred Domett, who died November 2, 1887—*i. e.*, after the date when men were conventionally assumed to be living, and therefore to be excluded—has had several precedents, in the exercise of a wise discretion.

—The July *Bulletin Historique et Littéraire* contains the third part of a description by M. E. Delorme of the *méreau* or communion-token formerly in use in the French Protestant churches. These tokens have long been an object of much interest, both to the collector and the antiquarian and numismatist, to whom they still present numerous unsolvable puzzles. They are medals, averaging an inch in diameter and almost exclusively of lead, which were given at stated intervals by the elders to those persons who were entitled to come to the communion. The custom originated in the first days of the Reformation, having been recommended by Calvin himself from the difficulty of distinguishing between the true and the false believers. During the days of persecution, when spies frequented the secret meetings of the proscribed church, they served as badges of membership simply. A number of these tokens, of which each distinct congregation generally had its own, are reproduced in the Bulletin. The most interesting, as well as the most ancient, dating back to the sixteenth century, is one having on the obverse a figure of Christ in a short coat and trunk hose, bareheaded and sounding a horn, which he holds in one hand, while in the other is a shepherd's crook. On the reverse are the words in French, "Fear not, little flock." The most common form is a medal having the eucharistic cup rudely stamped on the obverse, and the initials of the town in which the church is, together with other symbols or ornaments, according to the fancy of the maker, not infrequently one of the elders, on the reverse. These tokens were used for two centuries, but are now given up except in one village.

—Africa still claims the largest share of the geographers' attention, three of the four articles in *Petermann's Mitteilungen* for July being upon that continent. The first is Dr. L. Wolf's report of his explorations of the Sankuru, a tributary of the Kassai, the largest of the southern branches of the Congo. Some idea may be formed of the extent of these great streams from the fact that in the middle course of the Sankuru it is often two miles wide and ten feet deep. It flows through a fertile country still densely populated, though the slave-traders, attracted by the abundance of ivory, had already begun their desolating ravages. The medium height of the land in Africa F. Heiderich shows to be 2,208 feet, a different result from that which Dr. John Murray reached in similar investigations published in the *Scottish Geographical Magazine* for January. Dr. Junker contributes a pathetic account of the fate of the European prisoners in Khartum, brought by two messengers who reached Cairo last May and June. These unfortunates are Lupton-Bey, an Englishman, Slatin-Bey, an Austrian, Neufeld, a German, three missionaries and four nuns, who are Austrian and Italian. These last are allowed their freedom, as being harmless, and earn a precarious living by their labor. Lupton has till recently been doing the lowest and most difficult work in the arsenal, such as shovelling and carrying, dressed only in underdrawers and felt hat. Slatin is footman to the Mahdi, who takes great pride in the fact that a Christian and former governor of a province should hold his stirrup and run before his horse. Neufeld is kept in chains, for what reason is not stated, and has twice been led to the gallows and nearly hanged. The messengers report that misery, want of money, clothing, and food reign in Khartum, and that hangings and murders are frequent. There are also bitter dissensions between the Mahdi and some of his chiefs. One of the messengers says that 500 well-armed Turkish or Egyptian soldiers, *without English*, could gain possession of the city within three months. The first of the two set out on the 5th of June in the disguise of a dervish to return to Khartum, having letters, about four times the size of a postage-stamp, for the captives, sewed into his clothing. Dr. Junker believes with Gen. Gordon that Zebehr Pasha is the man who could most easily restore the Sudan to Egypt. The editor is inclined to the opinion that Stanley is the "white pasha" reported as advancing against the Mahdi in the province Bahr el-Ghazal, though he regards it as not improbable that his object is not Khartum, but a union with Emin Pasha. The fourth article is on the "Caves of the United States," by C. Fruhwirth.

—Some time ago, in these columns, attention was called to the supposed indebtedness of Whately for the idea of his 'Historic Doubts relative to Napoleon' to a pamphlet by J. B. Pérès, entitled 'Comme quoi Napoléon n'a jamais existé,' and it was then shown that Whately's pamphlet was written years before that of Pérès, and that if there was any indebtedness, it must have been on the part of the latter. It may be worth noting that in *Mélusine* for July 5, the pamphlet by Pérès forms the subject of a very interesting article by H. Gaidoz, who gives some additional particulars concerning Pérès and his works. It seems that Barbier's remark that the preface to the third (anonymous) edition of 'Comme quoi,' etc., signed P. B., is by Petrus Borel, has led some cataloguers to place the work under that name, which Gaidoz tells us was the pseudonym of E. Bouchery, thus causing additional confusion. It is interesting to learn that the second and third editions (Paris, 1836) were due to the exertions of Pastor Frederic Monod, the chief editor of the *Archives du Christianisme*, who saw in this satire a powerful weapon against the theories of Dupuis, then attracting much attention.

—A considerable portion of the article in *Mélusine* is devoted to an analysis of Whately's 'Historic Doubts,' showing that though Pérès wrote his essay long after Whately's had appeared, there is little probability that he is in any way indebted to the English writer, and there remains merely a simple coincidence of subject. It is noted that 'Comme quoi Napoléon n'a jamais existé' has been translated into Dutch and Italian, and that an English translation may be found in *Philobiblion*; but no mention is made of the two English translations which appeared almost simultaneously in London in 1885. It would seem that a German translation also exists, for Miss E. J. Whately, in a letter to the Manchester *Guardian*, says that the first time her father saw the solar-myth tract of Pérès was in the form of a German translation, sent him by a friend about 1840. She adds that her father was much amused by the ingenuity with which Pérès's idea was worked out, but saw that the two tracts took totally different lines of argument, Whately's being written to disprove Hume's axiom concerning testimony by a *reductio ad absurdum*, while Pérès wrote to answer the myth theory of Dupuis. In referring to the additions made by Whately to the later editions of 'Historic Doubts,' showing how the death of Napoleon at St. Helena, the advent to power of Louis Napoleon, etc., could all be made to confirm his theory, M. Gaidoz adds that were the author still living he might find in one of the recent Parisian idols of the day a new avatar of the Napoleonic Dalai-lama, and quotes the *Temps* to show how the country people a few months ago were assured that Boulanger is a Bona-

parte, and a grandson of Napoleon I. Then, too, was not 'le boulanger' the name given by the populace in 1789 to the head of the State? Other explanations of the name may also suggest themselves, which would help to strengthen this position. The article concludes with a rather scornful reference to the principal upholders of the solar-myth theory in France, who seem to be at the head of the "Société des Traditions populaires," and a disparaging mention of the *Revue des Traditions populaires* published by that society.

—In the *American Meteorological Journal* Prof. Winslow Upton has presented the observations made by himself and Mr. Lawrence Rotch during the total solar eclipse of August, 1887, near Ivanovo, about 160 miles to the northeast of Moscow. Meteorological observations on such occasions are not easy to interpret; the fluctuations noted may be due to the eclipse itself, or to other conditions prevailing at the time, and it is not always possible to decide upon the true cause or causes of the observed effects. Fall in temperature and rise in humidity are obviously to be expected when the sun's heat is temporarily cut off; and these are always observed, though in varying degree. But the cause of fluctuations in the air-pressure and in the direction and velocity of the wind has not yet been definitely determined; and, on account of their minuteness, they are apt to be concealed in the greater fluctuations assignable to other causes. Meteorological stations were found to be quite numerous in the eclipse-region of Germany and Russia, and the weather-services of these nations coöperated with Prof. Upton in securing detailed observations of the chief meteorological elements every five minutes during the period of three hours adjacent to the time of greatest obscuration; also at intervals more frequent than usual on the days preceding and following the eclipse. The definitive discussion of this mass of observations will form perhaps the most valuable contribution to science which the last eclipse afforded; in fact, the astronomers everywhere, from Germany to Japan, met with chilling disappointment, while the meteorologists had pretty much the whole eclipse to themselves.

—The next total eclipse of the sun occurs on January 1, 1889, and it is to be hoped that astronomers as well as meteorologists may be successful. However, the outlook is perhaps better for the latter than the former. Totality is not very long, something like two minutes in the best places, which lie nearly one hundred miles to the north of San Francisco. Thence the eclipse track runs easterly across northern Nevada; curving more and more to the north, it crosses the Yellowstone National Park, and leaves the earth in British America about four hundred miles northwest of Lake Superior. It is doubtful if the phenomenon will attract observers to any great extent. The Director of the Lick Observatory has lately printed all the available meteorological data relating to the California region in question, and there is no eclipse observer who would, on such a showing, consider the prospect otherwise than forbidding. January, he says, is a particularly unfortunate time of the year for astronomical work, since it falls in the middle of the wet season, when it is possible that rainy periods of a week or more may be experienced all over northern California. Railway and other transportation facilities are good. Californian institutions will take prominent part in the proposed observations. Time signals will be sent out from the Observatory at suitable intervals adjacent to the eclipse, but observing parties will have to determine their own positions. Foreign visitors are welcomed to Mount Hamilton, and, in probable default of fine observing weather, are promised a magnificent mountain view at least.

—Dr. Thieler, the Mayor of Jena, recently discovered in the city archives and published in the *Jenaische Zeitung* (July 25) the record of an interesting and amusing suit. This was no less than that brought by "Herr Geheime Rath von Goethe" against his caterer for overcharging him. It seems that from April 20 to April 29, 1812, Goethe had his dinners served by "Hoftraiteur Steinert," himself preparing each morning the bill of fare, and requiring of Steinert "dass er die Braten alle ganz geben müsse; portionenweiss dürfe er ihm nichts geben." The bills of fare, preserved in the archives, are as follows:

"April 20. Dinner for two. Soup *au jus*, red cabbage with cutlets, stewed carp, roast pigeon, dessert. 1 reichsthaler, 6 groschen;—for the coachman, dinner and 1 glass of beer, 4 groschen, 6 pfennig. April 21. Dinner for two. Sago soup, pigeons with hop-sprigs, baked custard, roast kidney, dessert, 1 r. 6 gr.;—dinner and 1 glass of beer for the coachman, 4 gr. 6 pf.;—larded partridge roasted, 6 gr. April 22. Dinner for two. Barley soup, spinage with fried sausage, roast beef with mustard and roast pork, dessert, 1 r. 6 gr.;—coachman, 4 gr. 6 pf.;—two roast pigeons, 6 gr.;—supper and 1 glass of beer for the coachman, 4 gr. 6 pf. April 23. Dinner for two. Egg soup, hop-sprigs with cutlets, chicken-fricassee, roast kidney, dessert, 1 r. 6 gr.;—coachman, 4 gr. 6 pf.;—roast capon, 16 gr. April 24. Dinner for two. Soup with dumplings, surloin with anchovy sauce, farina pudding, mutton roast, lettuce, 1 r. 6 gr.;—two stuffed pigeons roasted, 6 gr.;—coachman, 4 gr. 6 pf.;—ham-salad for two, 8 gr. April 25. Dinner for two. Soup *au jus*, potatoes, hop-sprigs with cutlets, fricassee of calf's sweetbread, roast lamb, lettuce, 1 r. 6 gr.;—for the coachman, 4 gr. 6 pf. April 26. Dinner for two. Rice soup, surloin with anchovy sauce, cabbage with cutlets, roast lamb, dessert. 1 r. 6 gr.;—two roasted pigeons, 2 gr. April 27. Dinner for four. Soup *au jus*, sweetmeat with wine sauce, spinage with cutlets, potato-pudding, roast capon, lettuce, 3 r. 8 gr.;—roast and lettuce for two, 8 gr.;—for the coachman, breakfast, 4 gr., twice dinner and 1 glass of beer, 9 gr. April 28. Roast and lettuce for three, 12 gr. April 29. Dinner for four. Soup *à la Sautre*, veal fricassee, carp *en matelots*, mutton-roast, lettuce, 2 r. 16 gr.;—roast capon, 16 gr.:—broth, 9 gr.;—supper for two, 8 gr. Total, 20 reichsthaler, 15 gr. 6 pf. (about $15)."

Various cooks and landladies were summoned to give their judgment as to the fairness of the charges; some thought they could have furnished it a thaler or so cheaper, but Madame Hübschmann had the courage to intimate that in her opinion it was pretty small in a "Geheime Rath" to stickle at the price of a dinner that had been served as was due so high a personage. The result of the investigation was that the caterer's bill was cut down by 15 gr. 6 pf. (about 45c.), and Herr Geheime Rath von Goethe was so much the richer for his prosecution.

DONNELLY AND HIS CIPHER.

The Great Cryptogram: Francis Bacon's Cipher in the So-called Shakespeare Plays. By Ignatius Donnelly. Chicago: R. S. Peale & Co. 1888.

THE Baconian theory of the authorship of Shakspere's plays is now an old story. The argument for it has been repeatedly threshed out. It starts from the primary assumption that a mind which left no other evidence of itself than the plays could not have produced them, and it ends in the second assumption that Bacon, who stands next to Shakspere in the intellectual history of that age, must have been their author. The rest of the case consists of parallelisms of phrase and metaphor between the two authors, and the fact that Bacon was certainly acquainted with the common store of human learning. Mr. Donnelly rehearses the tale, oblivious of the destructive criticism which has been directed against it for a generation. What he adds is his discovery of a cipher in which Bacon has written his autobiography, with the expectation that posterity would discover it. This profound secret was not to be eternally sunk deeper than ever plummet sounded, but in the successions of time was to rise and reveal Bacon's greatness. There is no hint in any of his authentic writings to put the men of later times upon the scent. Yet, from an early period in his career, he had determined upon this method of addressing the future, and he practised it for years. He had, says Mr. Donnelly, a talent for secretiveness.

The secret, however, was known to his contemporaries; not the existence of the cipher, but the fact of Bacon's authorship. Spenser knew it, and, in his well-known lament for our "pleasant Willy," told it. This is the manner of his telling:

> "And he, the man whom Nature's self had made
> To mock herself and truth to imitate,
> *With kindly counter under mimic shade,*
> Our pleasant Willy, ah! is dead of late."

On which Mr. Donnelly comments (and it is a fair example of his learning) as follows:

"The word *counter* is not known to our dictionaries in any sense that is consonant with the meaning of these lines. I take it to be a poetical abbreviation of 'counterfeit,' and this view is confirmed by the further statement that this gentle-born playwright, who despised the base-born play-makers, imitated truth under a *shade* or disguise; and this disguise was a *mimic* one, to wit, that of a *mime*—an actor."

It is more natural to suppose that *counter* is our word *encounter*, when the meaning becomes clear and the expression proper to a pastoral poet; and at least one of "our dictionaries," the Imperial, sustains this interpretation, citing Spenser's usage.

It would be superfluous, however, to enter into an examination of Mr. Donnelly's understanding of Elizabethan English. Perhaps the most easy example is where he comes to his proof that Jonson also knew the secret. He quotes Jonson's statement that Bacon had "filled up all numbers," and explains it—"that is to say, he had compassed all forms of poetical composition"! Ignorance could not stand more nakedly confessed than in this perversion of a common Latinism. Jonson's verses on Shakspere have always been a stumbling-block in the way of the Baconians. Mr. Donnelly finds them not insuperable. Jonson was addressing Bacon all the time, and his lament for Shakspere is really a private appeal to Bacon to write more plays:

> "Sweet swan of Avon! what a sight it were
> To see thee in our waters *yet appear*.
>
> *Shine forth*, thou Starre of Poets, and with rage
> Or influence chide or *cheer* the drooping stage;"

only the lines should be repunctuated in some parts, especially where Jonson refers to the portrait:

> "O, could he but have drawn his wit
> As well in *brass* as he hath hit
> His face, the print would then surpass
> All that was ever writ—in *brass!*"

One difficulty, however, immediately occurs to the reader; it is in this passage that Jonson reproaches the poet with "small Latine and less Greek." Mr. Donnelly thinks that this was directed, in the pride of scholarship, at Bacon, whose 'Promus' contains several errors in the Latin and Greek; "how 'rare old Ben,'" exclaims Mr. Donnelly, "must have enjoyed whacking Bacon over Shakspere's shoulders, in verses written at the request of Bacon!"

We are not yet at the end of Bacon's confidants. Nash knew the secret when he sneered at those "who leave the trade of *noverint*,

whereto they were born," to busy themselves with play-writing. This was in 1587, and Spenser's knowledge was at least as early. Essex knew it, of course, as the chief conspirator in the group that used the theatres to stir up discontent with Elizabeth, by means of "Richard II."; and Bacon's servant, Harry Percy, who was the go-between in dealing with the players, knew it. Cecil knew it, himself the model after whom "Richard III." was drawn (both being humpbacked), and used his knowledge to keep Bacon out of favor with the Queen, to whom Cecil told it as well as to King James. Certain of the Cecil party must have known it when they sent out to arrest Shakspere, according to Mr. Donnelly. Coke certainly knew it, and insulted Bacon openly with it, so that Bacon applied to Cecil to have his mouth stopped on the subject. Bacon's brother, Anthony, knew it, and furnished the Italian backgrounds; his friend, Sir Tobiè Matthew, was acquainted even with the existence of the cipher in the plays, and compliments Bacon on the Folio of 1623; the printers, Hemynge and Condell, knew it, and had to take great pains with the bracketed and italicised words, else the cipher would have been irretrievably confused and lost. But the list is long enough. This secret, known to many men for a period of forty years at the shortest, was never told. It was hinted at in verse and prose, if Mr. Donnelly's interpretations be accepted, but it was never told. No syllable of it was ever explicitly put down in any records, letters, gossip, or what-not, and even the tradition of it died out utterly. So much for "the secret."

What of the cipher? Mr. Donnelly does not tell what it is. He even acknowledges that he has not completely worked out the rule of it; but he hopes to solve it entirely some time. From the description he gives it appears to be a word-cipher, determined by arithmetical relations to some starting-point, whence, by the aid of the numbers of the pages and the number of bracketed and italicised words, one counts backward and forward some hundreds of words, and so picks out the significant ones. It is an extraordinarily complicated cipher, and the labor of unravelling it has been herculean. There is no question of the labor Mr. Donnelly has expended. It is the only thing about which there is no question. But, leaving the cipher, which is not submitted to us for judgment, what does the cipher tell us? Is it written in Bacon's style and in Elizabethan English? The substance of the cipher, so far as Mr. Donnelly gives it in full, is the defamation of Shakspere, boy and man. Bacon seems to have been more concerned with heaping ignominy upon his tool for the sake of posterity than in any attempt to entertain his living audience. Of the sort of disgrace which is thus put upon Shakspere, we can but refrain from speaking. It is of the sort that would soil the foulest pen. It is natural for a Baconian to find great interest in all that makes for Shakspere's personal discredit, and it is on this account that Mr. Donnelly has chosen these passages to give to the world first. It is singular that he should have hit on this description of the youth and manhood of the vagabond debauchee before he met with anything else. The tradition of Sir Thomas Lucy is sustained and much amplified by the narrative, the character of Shakspere's wife is limned with coarse colors, and the appearance of Shakspere among his family is so told that one cares to hear no more. So far as Shakspere is concerned, as here described to us by Bacon, who even stops to tell us what the wretch had for breakfast, we do not know where in history or fiction a more degrading characterization is to be found.

The cipher-narrative is not confined to these unsavory and revolting details. It is well spiced with other matter. The conspiracy of Essex is touched on; Bacon takes ratsbane, and is only saved from death because he took an overdose which his stomach rejected; the Queen beats poor Hayward, who was arrested on account of dedicating a book to Essex, in a scene quite the most violent that we have of "the old jade," as the cipher designates her. There is action and color enough. The revelations are by no means tame. If Bacon's autobiography keeps up as it has begun, it will be a treasure for the lover of strong sensations. It is true that in the style of the composition one discerns no trace of the hand that wrote the "Merchant of Venice" or the 'Essays,' and the English has not the sequence and turn of Elizabeth's great age; but the words are from the plays. Such is the matter of what Bacon, at inconceivable pains to himself, took the trouble to dovetail into the plays in order to address that posterity to which he left his memory. Was it not enough to have drawn *Falstaff* from Shakspere and *Dame Quickly* from Ann Hathaway, as the cipher assures us he did, and to have afterward framed *Caliban* in the image of the Stratford peasant player, as Mr. Donnelly thinks was done? For when *Prospero* leaves the isle to the "moon-calf," Mr. Donnelly holds it is Bacon abandoning the plays to Shakspere.

It becomes apparent to the student of this controversy that what the Baconians really claim is, that Bacon was the whole Elizabethan age. This is the only inference to be drawn from their "parallelism" and "metaphors," etc. Any word, phrase, or image that Bacon uses is his exclusively. The argument assumes that there was no common language, no common stock of figures, no common nature in the working of all poetic minds. It is pitiable to find a pretending scholar citing "extraordinary" words in Bacon and Shakspere as if they were not also in a dozen other authors of the time. But it is not our intention to repeat old lines of argument. Mr. Donnelly is argument enough, taken by himself. He does not shrink from asserting that Bacon was the whole Elizabethan age. It is the natural conclusion of the Baconian theory, and it has been reached. Bacon, he says, appeared before Shakspere; he began writing early for the stage, perhaps ten years before Shakspere's entrance in 1592, if we adopt that date. There were many plays, some of which are extant, which various scholars have attributed to Shakspere's hand; there were other old plays which Shakspere rewrote; and there were Marlowe's plays. Bacon wrote them all. Mr. Donnelly thinks he had many of them printed between 1607 and 1613 in order to show his progress "from *Stuckley* and *Fair Em* to *Othello* and *Lear*." Bacon wrote the pre-Shaksperian drama, in other words. At first he used Marlowe as his mask, but Marlowe got killed, and then he had to find another "safe" fool, and took up with Shakspere.

The drama, however, is but a part of Elizabethan literature. Bacon also wrote the 'Anatomy of Melancholy.' But the most extraordinary of his "masks" was Montaigne. It seems that Bacon wrote the 'Essais' and got Montaigne to translate them into French; then after that version appeared he persuaded old Florio to father the *original English* which he had himself composed. How else, asks Mr. Donnelly, could Florio have written Baconian English, parallelism in phrase and metaphor and all? This is the reverse of the adage, for here the ridiculous really passes into the sublime. Florio and Montaigne were accomplices in the great secret, too. After this no one will wink when he finds "Mrs. Pott" alleging that she "sees the signs of the *Promus* notes and other Baconianisms of thought and expression not only in the plays of Marlowe, but in the writings of Marston, Massinger, Middleton, Greene, Shirley, and Webster"; and Mr. Donnelly has "great confidence in her penetration and judgment." The Baconians are not lacking in courage. It only remains for them now to tackle King James's Bible.

Mr. Donnelly has a great work before him. The cipher was not an incident in the plays; it was their topic, their marrow. He revels in the prospect:

"What a volume of historical truths will roll out of the text of this great volume! The inner life of kings and queens, the highest, perhaps the basest, of their kind; the struggles of factions in the courts; the interior view of the birth of religions; the first colonization of the American continent, in which Bacon took an active part, and something of which is hidden in the 'Tempest;' the death of Mary, Queen of Scots; the Spanish Armada, told in 'Love's Labor Lost;' the religious wars on the Continent; the story of Henry of Navarre; the real biography of Essex; the real story of Bacon's career; his defence of his life, hidden in 'Henry VIII.,' his own downfall in cipher being in the external story of the downfall of Wolsey."

In Shakspere we had but one story, the supreme one of the plays; but the possible rearrangement of so many hundred thousand words will suffice for an endless narrative of history in infinite volumes.

Mr. Donnelly has evidently but a small library; his acquaintance with literature is narrow and largely second-hand, and his familiarity with Elizabethan books is of the scantiest. He is unfurnished with scholarship or its implements; but he has the cipher, and that will suffice for the rest of his literary days. He has the secret of Bacon, lost since those days when his servant Harry Percy went to receive the author's share of the profits from the nightly performance, and was perhaps spied by Cecil's agents "in some dark alley"—for Bacon, like our friend of former days, Shakspere, worked for base hire out of poverty. This is with the other marvellous facts. Shakspere has disappeared in Bacon, and now Bacon is disappearing in his cipher. The plays are necessarily subordinate to the "veiled writing." We used to call it Shakspere's miraculous diction; but now Mr. Donnelly, who never shrinks, tells us that many of the finest gems of Shakspere's language are due merely "to the necessities of the cipher." This truth will grow more plain as the cipher extends its tentacle arms backward and forward through these curves, with the accompanying tables of what look like logarithms and read like lottery-numbers infinitely prolonged. Why does one think of Lilly, the astrologer, and of Bickerstaff, and wonder if the old almanack-maker really did not die, after all? Perhaps it will be as well—it will certainly be easier—for the inquiring student to content himself with Mr. Spedding's weighty remark, that in all his study of Bacon he has never seen any sign that the great philosopher ever read a line of Shakspere.

HARRISON'S OLIVER CROMWELL.—II.

Oliver Cromwell. By Frederic Harrison. [Twelve English Statesmen.] Macmillan & Co. 1888.

"NEVER did a leader invested with absolute power and overwhelming military force more obstinately strive to surround his authority with legal limits and Parliamentary control." These are the words in which Mr. Harrison describes the attempts of the Puritan statesman to found a constitution. These, and with them the whole

of Cromwell's policy, have been misunderstood. Carlyle, who hated Parliaments, did not understand why his hero voluntarily submitted to Parliamentary control. Liberals who have perceived that Cromwell hated despotism, have fancied that Cromwell wished for the kind of Parliamentary government which now exists in England. Mr. Harrison has avoided each error; he has suggested the right way of looking at Cromwell's ideal of government. He has unfortunately confined himself to suggestions. Cromwellian constitutionalism will never fully be understood until it is examined and expounded in detail by Mr. Gardiner. Meanwhile, a reviewer may with advantage expand Mr. Harrison's suggestions, and try to describe the point of view from which Cromwell's reforms ought to be regarded by intelligent critics. As a constitution maker, as in every other part of his public life, Cromwell is a conservative revolutionist.

In more than one point his policy was revolutionary. He aimed at securing freedom of religious opinion for all Protestants. On this matter he was in full sympathy with a few extreme sectaries. His toleration, it will be said, was incomplete; it was, however, far in advance of any measure of religious freedom which would have been granted by Anglicans or by Presbyterians. If Cromwell's views had prevailed, England would never have been cursed with the odious social division between members of the Church of England and Nonconformists. The Toleration Act, no doubt, relieved Dissenters from practical oppression, but the policy of which the Toleration Act was, so to speak, the outward sign, stereotyped the distinction between Churchmen and Nonconformists, and thereby will probably prove in the end fatal to the existence of a national church. Cromwell, again, was determined (and in this he sympathized with all the best men of his age) to free England once and for all from arbitrary government. Modern hero-worshippers may fancy that the men who had risked their lives in the cause of the Parliament, despised Parliamentary authority. No delusion is more baseless. It may be doubted if any man, whether a Roundhead or a Cavalier, who cared for the good of the country, wished to get rid of Parliaments. A king who legislated uncontrolled by the advice of Parliament would be a despot, and Englishmen who knew what despotism meant on the Continent, were determined not to submit to a rule like that of the Bourbons. Cromwell, moreover—and in this he was a revolutionist—clearly meant that no future ruler should be able to elude the remonstrances of the country by refusing to call a Parliament. The Instrument of Government provided specifically that Parliament should be convened at fixed intervals. He anticipated, further, and more than anticipated, the policy embodied in the Acts of Union with Ireland and Scotland. Under the Instrument of Government, or (to use modern expressions) the Constitution of 1654, the Channel Islands, as well as Scotland and Ireland, were to send representatives to Westminster. Add to this that the franchise was placed on a clear and rational basis, that the number of the House of Commons was fixed at four hundred, and that a systematic redistribution of seats anticipated and would have made needless the later demand for Parliamentary reform. Two other facts deserve special attention. The Protector's power over ordinary legislation was confined to a suspensive veto. "Fundamentals"—what modern writers would call "constitutional guarantees"—could not be changed in the same manner as laws; the principles of the Constitution could be altered, if at all, only with the assent of the Protector. The Constitution of 1654 was intended to effect a revolution. It secured religious freedom, it insured the legislative authority of Parliament, it placed the foundations of the Constitution above the risk of sudden change.

The Instrument of Government gave England a new Constitution, yet it was emphatically a work of conservative statesmanship. Some of the changes which it introduced may have seemed to its authors no more than the formal recognition of admitted principles. Charles's attempt to govern without a Parliament was admitted to be unconstitutional. The King's power of refusing his sanction to a bill carried through Parliament was an exercise of authority which was felt to be dangerous, and thoughtful men already perceived that a suspensive veto which could be used, might give greater weight to the head of the Commonwealth than an absolute veto which it might become more and more dangerous to use. Even the hindrances placed in the way of changing the fundamental principles of the Constitution were in keeping, not with any rule of law, but with principles recognized by the constitutional lawyers of the seventeenth century. Coke would have denied in theory that Parliament had a right to override the principles of the common law; and the notion that the legislature is morally justified in changing fundamental laws is of comparatively recent growth.

The point, however, wherein the Constitution of 1654 most markedly shows its conservative character, is the position it assigns to the Protector. In Cromwell's view, England needed a strong Executive, at the head of which should stand some one person, who, whether he were called President or King, should be a real ruler. He wished in one shape or another to keep alive the kingship. He was fully determined that the Executive of the Commonwealth should neither be Parliament nor a Parliamentary Committee. The thorough-going Parliamentarians wished, to use Mr. Harrison's words, "to establish the autocracy of an elected House supreme over the Executive, and free from any constitutional limit." Cromwell's idea was that there should be an Executive authority not directly subordinate to Parliament, and that the fundamental bases of the Constitution should not be alterable like ordinary laws. As a constitutionalist, Cromwell agreed with the ablest and the most public-spirited among the upholders of royal authority. He felt as strongly as did Bacon the evils that might be involved in the absolute supremacy of Parliament. He, however, perceived more clearly than the upholders of the prerogative, that in England no Executive could be permanently powerful which did not consult the will of the nation as expressed in Parliament, and that a ruler's powers ought to be given him by the Constitution, and not to depend on a vague "prerogative," liable at once to undue extension and to undue curtailment. Once grasp Cromwell's position, and we can understand both why he was utterly averse to governing without Parliament, and why he was never able to come to terms with Parliamentarians.

There is a considerable element of truth in Mr. Harrison's assertion that Cromwell's position "was exactly that of Washington, of Hamilton, Jay, and Madison." He, like the founders of the United States, wished for an Executive which should occupy a sphere separate from that of the legislative body, and for a legislature which should legislate and should not govern. The powers, nominally at any rate, conferred on the President would have satisfied the Protector, subject to two provisos, namely, that the powers should be really exercisable at the will of the ruler, and that the ruler should hold office for life. The only expression in Mr. Harrison's statement with which we quarrel is the word "exactly." We greatly doubt whether Cromwell's ideal was not far more nearly that of Bismarck than of Washington. No one supposes that the German Chancellor wishes to abolish the Reichstag or to destroy the Prussian Parliament. What he does wish—and for the time he has attained his wish—is that the Parliaments should confine themselves to legislation, and should not interfere with the action of the Executive. His old quarrel with the Prussian House of Representatives shows, indeed, that the line between legislation and administration cannot be strictly drawn. The Chancellor would assert that where the rights of the legislative and the administrative authority of the Government conflict, the representative body should give way. But Bismarck, no doubt, would also contend that where the people are sensible and the Government is patriotic, such conflicts ought not to arise. This, we take it, was the Protector's own conviction. His permanent, and from his point of view righteous, complaint was, that the Commonwealth's men would not accept the constitutional position of Parliament. Not content with legislation, they would encroach upon the sphere of the Government. To put Cromwell's views in another shape, he wished to establish formally what to the English people had been for generations the ideal of good government, namely, the rule of a powerful and patriotic monarch who, like Elizabeth at her best, should carry out the wishes of the nation, and, while listening with respect to the Houses of Parliament, should yet represent the country more truly than any assembly. This and not government by Parliament was the aim of Oliver's constitutionalism. It was not the aim of men like Vane or Bradshaw, but we may suspect that it far more nearly represented the wishes of the English people than did the ideas of more thorough-going Parliamentarians.

An apprehension of Cromwell's aim enables us to appreciate with fairness his obvious indifference to means. He was willing to have come to terms with Charles, if only Charles had shown himself capable of respecting the constitutional principles which in Cromwell's eyes were all-important. It can, we think, hardly be doubted that he would have been willing himself to accept the position of king. It may be perfectly true that, as he said, he valued the title not more than "a feather in his hat"; but he must have felt more keenly than most men the real and weighty arguments in favor of the kingship. "A 'King' was a legal, constitutional, traditional, familiar functionary; a 'Protector' was a provisional *locum tenens*, with no known prerogatives, no known limits, an indefinite and unfamiliar makeshift." And a king armed with the authority of Cromwell, and supported by Parliament, would have been just the kind of ruler whom in Cromwell's judgment England needed. His refusal of the kingship was, we may take it, due in part to policy, and in part to his real respect for the opinion of the army and of "good" men. Is it not allowable to suppose that he hoped, if his life continued, the time would come when the opinion of the army would change, and he might honestly recognize in the wishes of the saints the sign of the will of God? The revised Constitution of 1657 looks strangely like a stage towards the restoration of the monarchy.

It is one of the paradoxes of history that the restoration of royalty under Charles II. was in reality the destruction of the English kingship.

Events proved, or seemed to prove, that for England the choice lay between royal despotism of the Continental type, and government by Parliament. That the English people should, when this alternative was placed before them, choose government by Parliament was inevitable. But crises occur when the best friends of freedom may regret that the Cromwellian experiment of a strong Executive, respecting and respected by an independent Legislature, never received a fair trial. There is little good, however, in wasting thought over the tempting but useless problem of "what might have been." The experiment was doomed from the first to failure. Cromwell, with all his merits, lacked the patience, and we must add the self-control, needed by the architect of a constitution. His innovations were in advance of his times; his conservatism estranged his natural supporters. Experience, moreover, showed that for at least a century after Cromwell's death the English aristocracy had the power and (let it be conceded) the capacity to rule the English people. The Republicanism of the Commonwealth, even under its most conservative form, was premature. A careful study, indeed, of a period which, from a legal and constitutional point of view, has been too much neglected, will, it may be conjectured, show that the legislation of the Long Parliament and of the Protectorate left much more permanent traces on English law than is generally believed. Still, the history of Puritanism and of the Puritan leader will always have in it an element of tragedy; it is a tale of heroic efforts and of splendid triumphs ending in failure. The Cromwellian Constitution of 1654 is a noble fabric planned by architects of original genius; but from the first it rested on no solid foundation, and students examine its details with the interest excited by the ruins of an uncompleted palace.

First Steps in Geometry: a Series of Hints for the Solution of Geometrical Problems, with Notes on Euclid, Useful Working Propositions, and Many Examples. By Richard A. Proctor. Longmans, Green & Co. 12mo, pp. viii, 179.

Easy Lessons in the Differential Calculus: indicating from the outset the utility of the processes called Differentiation and Integration. By Richard A. Proctor. Longmans. 12mo, pp. vi, 114.

Mr. Proctor has written a great many books, most of them instructive, all of them interesting. How much he has contributed to the sum of human knowledge is a question we are not now called upon to discuss; but he has certainly done much to excite the curiosity of the many who know little, and impel them to seek information from the few who know much, in regard to a great variety of subjects. He seems lately to have been taking a retrospective glance at his own education, and to have been recalling the difficulties which he encountered and the incitements which urged him on. In this review two things appear to have especially impressed him: the difficulties he met with in the study of Geometry, and the surprise and pleasure he felt when he found that, by the processes of the Differential Calculus, he could solve, with wonderful ease and facility, certain problems in which he was interested. Neither of these experiences has anything very novel about it. Geometry, as usually taught, is, to the great majority of students, in its earlier stages a sort of mental torture; and when they have succeeded in *learning* the amount required to enter college, they are able to *do* hardly anything. The principal object of most text-books of Geometry seems to be to teach logic rather than to give the pupil a knowledge of one of the most useful and beautiful of the sciences. They shrink from any departure from the traditional manner lest it should "lack rigor." As to the Calculus, Snell, in his treatise on that science, published nearly half a century ago, remarks that when we consider the nature of the problems with which it deals, its formulas seem to have about them something truly magical (*wahre Zauberformeln*).

But novelty or originality of ideas is to Mr. Proctor of far less importance than attractiveness of presentation. There is nothing which the readers of newspapers look for with more eagerness than the accounts of occurrences about which they already know more than any reporter can possibly tell them. In the same way, all are eager to see how a writer who has often afforded them pleasure deals with even the most commonplace idea. For all this Mr. Proctor has a sense sharpened by long and profitable experience. He has accordingly, as is his custom, made the experiences above referred to the occasion for writing two new books, small but neat, ingenious, and taking—so far as these latter adjectives can be predicated of books relating to pure mathematics. From the general title, 'First Steps in Geometry,' one would almost inevitably infer that the book on Geometry was intended for those commencing the study of that science. It is not this at all. It is not a text-book, but a sort of companion to the text-book. It may be said generally that the book presupposes an acquaintance with the first two books of Euclid. In the solution of the first problem which Mr. Proctor treats there is a reference to Euclid, and two more before he goes to the next problem. The sub-title explains fairly well the character of the book. It is not an exposition of any regular system for the solution of geometrical problems, but is mostly made up of observations and illustrations, the former distinguished for their good sense, the latter for their ingenuity and attractiveness. Almost any one, teacher or pupil, will find the book useful, and, what Mr. Proctor always aims at and generally attains, interesting.

The little treatise on the Calculus is intended for a text-book. Mr. Proctor calls it 'Easy Lessons,' but tells us in his preface that "rather less" than it contains was sufficient for him to get his degree at Cambridge, and to prepare him for further acquisitions in after life. To be easy, to contain enough, and more than enough to get a degree, and to be a sufficient preparation for acquiring more, should the occasion for more ever arise, and all this in the compass of 114 small pages in large type, is about all that either pupil or professor could reasonably demand. It is certainly unfortunate that in the very first equation in so promising a book (p. 4, near the top), and that, too, the corner-stone of the whole structure, by a "printer's error" and a proof-reader's negligence, the coefficient ½ has been omitted from the last term of the left-hand member, so that the equation is no equation at all. Near the bottom of the same page, by a similar error, we have a minus sign in place of a sign of equality, thus again making nonsense. Mr. Proctor discusses (p. 59, *et seq.*) a problem in regard to the height of a light so situated that a point in a plane below may receive the maximum amount of illumination. In discussing one of the cases of this problem he says (the italics are his own): "Suppose, for example, *a* is equal to eight degrees, *the slope of my desk*, for I have taken the notion of *working out this particular problem with the practical design of determining how high I should set the moderator which illuminates the paper I am writing upon.*" Then, after showing in detail how the problem is solved, always in the first person singular, he concludes: "I find that the best height for the light of the moderator (above the surface of the table) is, as nearly as possible, 18¾ in." This autobiographical manner of treating a problem in *maxima* and *minima* has real advantages. The young students who use the book can but be impressed by the wisdom of a man who fixes the height of his light by the Differential Calculus, and all this contributes to increase the sale of Mr. Proctor's next book, which, as we write, is already in process of publication. We cannot, however, withhold the expression of our conviction that, whatever may be the case at Cambridge, some of the treatises on the Calculus with which we are acquainted are better adapted to the wants of those seeking a degree at Harvard, or Yale, or Columbia than Mr. Proctor's.

The Art of Investing. By a New York Broker. D. Appleton & Co. 1888.

The good judgment which characterizes most of this book manifests itself in the title. The author recognizes that investing is not a science, to be taught deductively, but an art, which can be learned only by experience. He therefore keeps well under control his happy faculty for coining aphorisms, and confines himself chiefly to giving significant facts drawn from business experience. Taking up, one after another, the various classes of investments, he shows in an interesting way the peculiar dangers attending each. In this portion of his work the only serious blunder made is where the author digresses into constitutional history, and maintains that "the Eleventh Amendment, which inhibits the suing of States by private parties, thus taking away a right previously existing, was meant to cut off certain claims growing out of the Revolutionary war, and for no other purpose whatever; no one at the time of its adoption dreaming that it would be used by the States to shield themselves from subsequently contracted liabilities." If the author will consult the decision of the Supreme Court in the case of Chisholm vs. Georgia (2 Dall., 479) he will find it expressly stated that claims against the States growing out of the Revolutionary war never could have been sued under the original Constitution. They represented the one class of claims which the Eleventh Amendment was *not* intended to cut off.

But an historical blunder of this sort does not reflect so seriously upon the author's credit as does the total loss of judicial temper which marks his concluding chapter upon "Speculating." This chapter is perhaps the most interesting in the volume. We have here the spectacle of a New York broker joining vigorously in the attack upon the Stock Exchange. Unfortunately, he follows the example of his eloquent comrades-in-arms (or, better, comrades-with-arms), and indulges freely in rhetoric. He represents the Stock Exchange as conducted solely in the interests of the stock-makers. It is merely "the conduit through which water is carried to the investor's pocket." "It is supposed to act as a sieve, but, . . . sieve-like, it is no obstruction to the passage of water." To his mind the Exchange does not even fulfil a useful function by supplying quotable values, and thus giving stability to business. "When securities are converted into footballs for gamblers to play with, they are pretty certain to be either too high or too low," and thus, "instead of being a balance wheel to the business of the country, the Stock Exchange is far more likely to be a disturbing factor."

In short, the entire institution is "an enemy to public morals and general business."

In support of these charges the author does state facts, and they are facts which deserve statement. It cannot, for instance, be too often repeated, that listing on the Exchange furnishes not the slightest guarantee as to the worthiness of securities. All brokers admit it, and the time may come when popular distrust will lead the Exchange to impose new duties upon its committee on applications for listing. Then, too, there is ground for the denial of the constantly repeated claim that the Exchange steadies values. When, as brokers admit, speculative orders outnumber investment orders a hundred to one, and the general tendency is to demand stocks that are rising and desert those that are falling, without thought as to dividend-paying qualities, there is grave reason to doubt whether the Exchange merits the eulogies which have been bestowed upon its steadying qualities. It may also be true that stocks listed yield on the average smaller returns than outside investments. In fact, there are two economic reasons why this should be the case. In the first place, they have the advantage of instant convertibility. In the second place, the gambling instinct which leads men to invest in lotteries, though the certainty of loss increases with the size of the investment, may also lead them to invest in stocks where the probable smallness of the dividend is compensated by the hope of adding to the principal. But these are merely tendencies which in no wise justify our author's characterizations of listed securities. Throughout the entire chapter the judgments are passionate and exaggerated. The obvious benefit which the Exchange confers, in enabling business men at any instant to convert their securities into cash, is ignored. The fact that the Exchange facilitates the sale of American securities, especially their sale abroad, by furnishing an index of their probable value, is apparently unthought of. The entire arraignment is that of a prosecuting attorney who permits himself to be carried away by his eloquence and indignation.

Most of the evils connected with the Exchange are those inherent in speculative human nature. There is, however, one which our author is justified in believing that the rigid enforcement of wholesome legislation may mitigate. John Bright once said that adulteration is a legitimate form of competition. This is true only when the fact of the adulteration is admitted. Otherwise, it is fraud. The adulteration of stocks is generally of the latter sort. When our author advocates that, in all our States, corporations which exist by the authority of the law be prohibited from issuing debentures or scrip not representing moneys actually paid into their treasuries, or proprietary interests whose values are to be determined by disinterested parties, he advocates a measure which the protection of the public against extortion and the protection of private investors against fraud alike demand. Fortunately, such laws are becoming more general. Insurance stocks in some States and bank stocks in all can now be relied upon to represent actual cash investments. When this shall hold true of all forms of corporate securities, European investments will be more frequent, American investments will be more secure, and the idea of riches be less dangerously dissociated from the idea of earnings.

The Philosophy of Kant, as contained in Extracts from his own Writings, selected and translated by John Watson, LL.D. Macmillan & Co. 1888. 12mo, pp. 356.

Mr. WATSON rightly anticipates an objection to his extracts, that "the work of a great author should be represented 'all in all, or not at all.'" But he as justly replies that "the writings of Kant, which are full of confusing repetitions that really mar their perfection of form, hardly deserve the same tenderness of treatment" that must be accorded "a faultless work of art like the *Republic* of Plato." Nevertheless, admitting the good judgment shown in the selections, the excellent character of the translations, the good print, and the general value of the work for technical class-room work, we have a more general criticism to pass. We have had translations enough of Kant. What the general student of philosophy wants to-day is an exposition.

Kant's obscurity of thought and style, his tortuous sentences and peculiar phraseology, and his meagreness of fact and illustrations, are the proverbs of philosophers. Translations can only transmit these defects into another language, where they are made tenfold worse by the necessity of making concessions to foreign idioms. Every one knows how intolerable it is to read the 'Kritik' in a translator's dress, unless he has first been initiated into the mysteries of its terms. We are convinced, however, that Kant can be expressed in as plain and simple English as was the philosophy of Locke, if his disciples will only condescend to interpret him. Prof. Royce and Prof. Schurman have both recently expressed themselves to the same effect. Until this is done, the merits of the Kantian philosophy will not be properly appreciated, as they have not been appreciated by the scientific mind—witness Herbert Spencer, George Henry Lewes, and John Stuart Mill. Kantian scholars would, therefore, do a lasting service to philosophic thought if they would perform this plain duty instead of merely translating their master, and talking only among themselves in a language that is essentially esoteric in its nature.

The Registers of the Parish Church of Rochdale, in the County of Lancaster, from October, 1582, to March, 1616. Edited by Henry Fishwick. Rochdale: James Clegg. 1888. 8vo, pp. 371.

IN this well-printed volume, the historian of Goosnargh and Kirkham has published the christenings, weddings, and burials of the parish of Rochdale. The editing is invisible, but we doubt not that the copying has been carefully and thoroughly made. There is nothing to notice except the bare names, and of these the principal are Aspinall, Ashton, Ashworth, Atkinson, Bamford, Banks, Baguley, Battersby, Belfield, Birch, Booth, Bradford, Brearley, Bridge, Briggs, Brook, Buckley, Butterworth, Byrom, Casson, Chadwick, Clegg, Collinge, Cowper, Crossley, Durden, Dickson, Dodson, Dowson, Earnshawe, Eastwood, Entwistle, Farrer, Fielden, Fenton, Fish, Fitton, Fletcher, Frith, Garside, Gorelde, Greave, Greenhalgh, Greenroade, Greenwood, Gryme, Halliwell, Hallowes, Hamer, Hanson, Hardman, Haslame, Haworth, Healey, Heyward, Hill, Holland, Hollas, Holroyde, Holt, Hopwood, Ingham, Jackson, Kaye, Kirshaw, Leache, Lees, Leighe, Lightowlers, Lorde, Lomax, Ludson, Marcroft, Mercer, Milne, Newall, Nuttall, Ogden, Radcliffe, Redferne, Rodes, Romsbothom, Rudd, Scolfield, Shaw, Shepheard, Shore, STOCK, Stott, Sutcliffe, Taylor, Turnough, Walch, Ward, Wardle, Whitehead, Whittaker, Whitworth, Wolfenden, and Wolstenholm.

BOOKS OF THE WEEK.

Aguirre, J. M. Uncle Sam in Pontifical Robes. G. W. Carleton & Co. 50 cents.
Arnold, E. L. England as She Seems. Frederick Warne & Co. 30 cents.
A Social Conspiracy, or Under the Ban. St. Paul, Minn.: Geo. C. Pound. 50 cents.

HENRY HOLT & CO.'s
Important New Educational Works.

THE NEW EDITION of WHITNEY'S GERMAN GRAMMAR. Teachers' price, $1.30; by mail, $1.45.

In revising the work many additions and improvements, suggested by experience, have been introduced. All the matter has been put into two sizes of type, averaging much larger than in earlier editions. The new spelling of German words appears in brackets beside the old. The exercises, which formerly were scattered through the volume, have been excised, and a much fuller and more comprehensive series, provided with references, appear at the end. No fundamental changes have been made in the plan or structure of the book, even the paragraphing having been retained.

PACKARD'S ENTOMOLOGY for BEGINNERS. 12mo. Teachers' price, $1.40; by mail, $1.53.

This book not only starts the beginner in the study, but gives amateurs and dillettanti copious directions for collecting and preserving insects and forming cabinets. It also is intended as a handbook for the farmer, fruit-grower, and gardener. After supplying the fundamental knowledge which all these persons need, it refers each very fully and specifically to the detailed works which supply his special needs.

HOWELL'S DISSECTION OF THE DOG. Teachers' price, $1.00; by mail, $1.07.

Prepared originally for the author's own class at Johns Hopkins University, as a basis for the study of physiology.

HENRY HOLT & CO.,
NEW YORK.

Johns Hopkins University,
BALTIMORE.

Announcements for the next academic year are now ready and will be sent on application.

The Anatomy of Negation.
By EDGAR SALTUS. 12mo, cloth, $3.00.
Now Ready. Volume Second of the Bankside Shakespeare. (Published by the New York Shakespeare Society.)
The Taming of the (A) Shrew.
The Bankside is the only Paralleled and Line numbered edition. Will be completed in about 20 vols., at $2.50 per volume. Send for descriptive circular. For sale by all Booksellers. Sent postpaid on receipt of price.
BRENTANO'S, 5 UNION SQUARE. { CHICAGO, WASHINGTON, PARIS.

Scribner & Welford's

LIST OF BOOKS

Suitable for Use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

By N. D'Anvers. With a Preface by Prof. Roger Smith. An entirely new and enlarged edition in 2 vols. Vol. i, Architecture and Sculpture. Vol. ii, Painting, with 360 illustrations. Large crown 8vo, cloth, gilt top.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class, no handbook of Art History could be more suitable than this work.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and Students of Music. Each volume strongly bound in decorated cloth. Price, per volume, $1. Including,

Haydn, Schubert, Bach, Wagner,
Handel, Schumann, Weber, Rossini,
Mozart, Purcell, Mendelssohn,
English Church Composers.

Art Hand-Books.

A new series of Illustrated Text-Books of Art Education. Edited by E. J. Poynter, R.A. Each volume contains numerous illustrations, and is strongly bound for the use of students. Price, per volume, $2.

I. PAINTING. Classic and Italian. By E. J. Poynter and P. R. Head.

II. —— German, Flemish, and Dutch. By H. W. Buxton.

III. —— English and American. By H. W. Buxton.

IV. —— French and Spanish. By G. Smith.

V. ARCHITECTURE. Classic and Early Christian. By T. R. Smith.

VI. —— Gothic and Renaissance. By T. R. Smith.

VII. SCULPTURE. Antique, Egyptian, and Greek. By G. Redford.

VIII. —— Renaissance and Modern. By G. Redford.

Biographies of the Great Artists.

Specially prepared for Schools, Amateurs, and Students of Art. Each volume contains about 16 illustrations, including a portrait of the master, and is strongly bound in decorated cloth. Price, per volume, $1.25, unless marked otherwise, viz.:

REYNOLDS — HOGARTH — GAINSBOROUGH AND CONSTABLE — LAWRENCE AND ROMNEY, $1.00—TURNER—WILKIE—LANDSEER—GIOTTO—FRA ANGELICO—FRA BARTOLOMMEO—GHIBERTI AND DONATELLO, $1.00—MANTEGNA—LEONARDO DA VINCI—MICHEL ANGELO—RAPHAEL—TITIAN—TINTORETTO—CORREGGIO, $1.00—VELASQUEZ—MURILLO, $1.00—ALBRECHT DURER—THE LITTLE MASTERS—HOLBEIN—OVERBECK — REMBRANDT—RUBENS—VAN DYCK—DELLA ROBBIA, $1.00—WATTEAU, $1.00—VERNET—FIGURE PAINTERS OF HOLLAND—MEISSONIER, $1.00—CLAUDE.

Complete detailed list supplied.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin, and Greek,

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS.—THE THOUGHTS OF M. AULIURES $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock, also complete lists of Bohn's Libraries, will be mailed, if desired, to those interested.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Important Text-Books.

POLITICAL SCIENCE.

American Political Economy.

By Francis Bowen, Professor of Natural Religion and Moral Philosophy in Harvard College. 8vo, $2.50.

This treatise presents views compatible with the idea that "every country has a political economy of its own, suitable to its own physical circumstances of position on the globe, and to the character, habits, and institutions of the people."

"If our members of Congress would vote themselves a copy of this book, and read it, fewer wild schemes would be concocted by them, and a great saving of time and the people's money would be secured."—*The Philadelphia Age.*

Political Economy.

By Arthur Latham Perry, Professor in Williams College. Crown 8vo, $2.50. Professor Perry's book has passed through many editions, and has recently been subjected to a thorough revision and recasting. It has stood excellently the test of the class-room, and has been adopted by many of the chief educational institutions in this country.

"Your book interests students more than any I have ever instructed from."—*Pres. T. D. Woolsey, Yale College.*

"As a manual for general reading and popular instruction, Prof. Perry's book is far superior to any work on the subject before issued in the United States."—*New York Times.*

Introduction to Political Economy.

Revised edition. 12mo, $1.50.

"This work is not meant in any way to take the place of its author's larger treatise. It is not an abridgment of that work, but a separate treatise, intended primarily for the use of students and readers whose time for study is small, but who wish to learn the broad principles of the science thoroughly and well. . . . We need scarcely add, with respect to a writer so well known as he, that his thinking is sound as well as acute, or that his doctrines are those which the greatest masters of political science have approved."—*The New York Evening Post.*

Political Science:

Or, The State Theoretically and Practically Considered. By Theodore D. Woolsey, D.D., LL.D. 2 vols. 8vo, $5.00.

"No work on Political Science has ever been published in America which covers so wide a ground and which treats the subject so fairly and impartially, and with so thorough knowledge and judgment."—*The Boston Transcript.*

MENTAL SCIENCE.

Psychology.

By James McCosh, D.D., LL.D., President of Princeton College. I. The Cognitive Powers. II. The Motive Powers. 2 vols., 12mo, each $1.50.

The first volume contains an analysis of the operations of the senses and of their relation to the intellectual processes, and devotes considerable space to a discussion of Sense-perception, from the physiological side, accompanied by appropriate cuts. The second volume continues the subject with a discussion of the power of the Conscience, Emotions, and Will.

"This book is written in a clear and simple style; it breathes a sweet and winning spirit, and it is inspired by a noble purpose. In these respects it is a model of what a text-book should be."—*Prof. William DeW. Hyde, Bowdoin College.*

Elements of Physiological Psychology.

By George T. Ladd, D.D., Professor of Mental and Moral Philosophy in Yale University. With numerous illustrations. 1 vol., 8vo, $4.50.

"His erudition and his broad-mindedness are on a par with each other; and his volume will probably, for many years to come, be the standard work of reference on the subject."—*Prof. William James, in the Nation.*

*** All correspondence is solicited in reference to copies for examination and terms of introduction.*

CHARLES SCRIBNER'S SONS,

NEW BOOKS.

NEW WORK BY MR. ANDREW LANG.

PERRAULT'S POPULAR TALES. Edited from the Original French Editions, with an Introduction on Fairy Tales, &c. By Andrew Lang, M.A., late Fellow of Merton College. $1.50. [Just published.

THE WIT AND WISDOM OF SAMUEL JOHNSON. Selected and arranged by G. Birkbeck Hill, D.C.L., Editor of the Oxford Edition of 'Boswell's Life of Johnson.' Tastefully printed in crown 8vo, cloth, elegant gilt top. $2. [Just published.

"An extremely interesting book."—*Globe.*

NEW WORK BY DR. MARTINEAU.

A STUDY OF RELIGION: ITS SOURCES AND CONTENTS. By James Martineau, D.D., LL.D., late Principal of Manchester New College, London. 2 vols., crown 8vo, $4.50. [Just published.

By the same Author.

TYPES OF ETHICAL THEORY. By James Martineau, DD., LL.D., late Principal of Manchester New College, London. Second Edition. Two vols., crown 8vo, $4.50.

"The most important and original work which English Philosophy has produced for at least a century and a half."—*Spectator.*

PART I. OF A NEW SCHOOL GEOGRAPHY.

GEOGRAPHY FOR SCHOOLS. By Alfred Hughes, M. A., Assistant Master at Manchester Grammar School.

Part I. PRACTICAL GEOGRAPHY. With Diagrams. Crown 8vo, cloth, 60 cents.

This "Practical Geography" is based on the results of several years' experience in the Modern Side of the Manchester Grammar School. It has been found possible, within the limit of an ordinary term's geographical course, to include the consideration of many classes of problems which are not usually treated at school.

A GREEK TESTAMENT PRIMER. An Easy Grammar and Reading Book for the Use of Students beginning Greek. By the Rev. Edward Miller, M.A., Rector of Bucknell. Fcap. 8vo, 90 cents.

HISTORY OF AGRICULTURE AND PRICES IN ENGLAND, A. D. 1259-1793. By J. E. Thorold Rogers, M.A., M.P. 8vo. Vols. I. and II. (1259-1400), $10.50. Vols. III. and IV. (1401-1582), $12.50. Vols. V. and VI. (1583-1703), $12.50. [Just ready.

NEW WORK BY THE DEAN OF WESTMINSTER.

LECTURES ON THE BOOK OF JOB. Delivered in Westminster Abbey by the Very Rev. George Granville Bradley, D.D., Dean of Westminster. Crown 8vo. $1.90. [Just ready.

*** Uniform with "Lectures on Ecclesiastes."

"This scholarly and yet most effective and popular book. . . . No one who takes up the volume is willing to lay it down till he gets to the end of it. A volume which could not have been written by a mere expert in Hebrew scholarship, or a mere layman who had not mastered the drift of the immense mass of modern and ancient criticism on this remarkable book."—*Spectator.*

A SECOND ANGLO-SAXON READER, ARCHAIC AND Dialectal. By Henry Sweet, M.A., Author of an "Anglo-Saxon Reader," etc. Fcap. 8vo. $1.50. [Just published.

The primary object of the present book is to give the student the means of making himself acquainted with the leading features of the non-West-Saxon dialects of Old English.

NEW EDITION OF MERRY'S "ODYSSEY," I.—XII.

HOMER—ODYSSEY. BOOK I. Edited with Notes, Introduction, and Synopsis of Homeric Forms, by W. W. Merry, D.D., Rector of Lincoln College, Oxford, Editor of "Aristophanes in Single Plays," "Selections from Herodotus," etc. In one or two parts, fcap. 8vo. $1.10. Fortieth thousand. [Just published.

"Mr. Merry's editions have revolutionized the study of Homer throughout the country."—*Oxford Magazine.*

THE THEORY AND USE OF A PHYSICAL BALANCE. By James Walker, M.A., Demonstrator at the Clarendon Laboratory. Demy 8vo, with Lithographs, stiff covers, 90 cents. [Just published.

This account of the Physical Balance was intended originally as a chapter of a book on Practical Physics for the use of students at the Clarendon Laboratory. As it is probable that the publication of the complete course may be delayed, it has been thought advisable to publish the chapters as they are ready, without waiting for the rest of the work.

BECKER'S FRIEDRICH DER GROSSE. Edited, with English Notes, by C. A. Buchheim, Phil. D., Professor of German in King's College, London. Extra fcap. 8vo, 90 cents.

(New Volume of the Clarendon Press Series of German Classics.) [Just published.

The Nation.

Recent Press Comments.

"THAT the *Nation* was the forerunner and the first successful example of the independent journalism as it exists to-day may be asserted without fear of successful contradiction; and it must be reckoned to-day as among the most worthy representatives of the new departure in newspaper methods."—*Philadelphia Times.*

"THE *Nation* has fairly fulfilled its promise to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"MANY changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"THE New York *Nation* has won a place for itself by its great ability. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments, or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"WE have often had occasion to differ widely with the *Nation;* but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"IT is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

Kansas Investment Co.,

Topeka, Kansas. { 101 Devonshire St., Boston, Mass.

Financial Agents and Dealers in

Conservative Investment Securities.

Capital (Full Paid), $500,000. Surplus, $50,000.

HERBERT E. BALL, President, Topeka, Kansas.
GEORGE C. MORRELL, Vice-Pres't, Boston, Mass.

The Eastern Directors of the company submitted the following letter to the stockholders May 28, 1888:

BOSTON, Mass., May 28, 1888.

To the Stockholders:

The undersigned, Directors of the Kansas Investment Co., having visited Kansas to attend the annual meeting, held at Topeka May 1, and to investigate the Company's business, take pleasure in submitting the following report to the stockholders:

After a careful examination of the accounts and methods of the office, several of the cities and many of the counties were visited, containing property loaned upon by the Company. The result was thoroughly gratifying. The business is upon a sound and conservative basis, and no cases of overvaluation were found—rather the reverse. The local agents were marked by their intelligence and caution, and having not inducement to strain values (as they receive salaries, and no commissions), rejections are certain when a doubt exists. The organization of the office and the character of the management are of the highest, and the names of the Western Directors are a sufficient guaranty of the esteem the Company enjoys locally.

It remains to be said that the State itself was a surprise and delight, both as regards its natural advantages of fertility and position, and the sobriety and thrift of its inhabitants. The future of Kansas is most promising, and the stockholders of this company, as well as the investors in its securities, are to be congratulated on the strength and safety of their investments. It seems to us impossible for Savings Banks, Trustees, or individual investors, to find anything more absolutely secure than the Gold Debenture Bonds and Mortgages of the Kansas Investment Company.

Yours truly,
JOSHUA G. HALL,*
LEWIS W. ANTHONY,
EDWIN A. SMITH,
WM. LLOYD GARRISON,
} Directors.

** I was unable to personally examine the property held by the company on mortgage—with that exception, I fully concur in the above report.*

J. G. HALL.

ARITHMETIC IN TWO BOOKS

Warren Colburn's First Lessons, 35 cents;

H. N. Wheeler's Second Lessons [in press].

These two books form a complete course in Arithmetic, which is characterized throughout by a careful application of the Inductive Method of Instruction by the aid of which the pupil is led to regard *a new word* as a labor-saving device for the expression of an idea, *a definition* as a brief statement of the net result of personal observation and thought, and a *rule* as a brief statement of how *he* has done something.

ANDREWS AND STODDARD'S LATIN GRAMMAR. A new and revised edition, by Henry Preble, Assistant Professor of Greek and Latin at Harvard University. [In press.]

The favor with which the work [in manuscript] has already been received by teachers in preparatory schools and by professors in colleges warrants the publishers in assuring all teachers of Latin that they will find it well worthy of their careful examination. It is believed that the new edition will prove to be an admirable combination of *practicability and scientific accuracy.*

4 Park Street, Boston,
11 East Seventeenth St., New York.

GINN & CO.'S BULLETIN.

NEW BOOKS:

LESSONS IN ENGLISH. By Mrs. S. E. H. Lockwood, Teacher of English in the High School, New Haven. Introd. price, $1.12. Allowance, 40 cents.

This book is designed for high schools, academies, and seminaries, and includes Language, Composition, Rhetoric, and Literature.

"It is clearly written, concise, with abundant exercises, and taking up the most useful points."—*Prof. Genung, Amherst College.*

"I heartily approve of its plan. The simplicity and clearness of the book are beautiful. I do not think I ever saw a book of its kind with so little of the 'dry as dust' about it."—*Prof. McLenegan, High School, Milwaukee.*

SCOTT'S NOVELS AND POEMS. Each complete, with notes and introductions for the use of schools. 'Rob Roy,' 'Ivanhoe,' 'Guy Mannering' (introductory prices: boards, 60 cents; cloth, 75 cents). 'The Talisman' (50 and 60 cents). 'Quentin Durward,' slightly abridged (40 and 50 cents). 'The Lady of the Lake' (35 and 50 cents). 'The Lay of the Last Minstrel' (30 and 40 cents).

SHAKESPEARE AND CHAUCER EXAMINATIONS. Edited by Wm. Taylor Thom, M.A., Professor of English in Hollins Institute, Va. Teachers' and introduction price, $1.00.

"This beautiful book is an honor to American scholarship. I hope that American scholars will show a just appreciation of it."—*Prof. Joynes, So. Car. College.*

SIEVERS'S GRAMMAR OF OLD ENGLISH. Translated and edited by Albert S. Cook, Ph.D. (Jena), Professor of the English Language and Literature in the University of California. Second edition, revised and enlarged. Introduction price, $1.12.

GRADED GERMAN LESSONS. By W. C. Collar, A.M., Head-Master of the Roxbury Latin School, Boston, and author of the 'Beginner's Latin Book,' being 'Eysenbach's Practical German Grammar,' revised and largely rewritten, with notes, selections for reading, and vocabularies. Introduction price, $1.20; allowance for an old book 28 cents.

These lessons harmonize, in a practical way, the natural and scientific methods. The treatment is inductive, direct and simple, well arranged, concise, thorough and complete.

"It embodies all that is of practical use in the so-called natural method, and the latest results of pedagogical experience."—*Prof. Boyesen, Columbia College.*

GERMAN EXERCISES. By J. Frederick Stein, Instructor in German in the Boston High Schools. Introduction price, 40 cents.

"They furnish very serviceable and very interesting material for the kind of composition and conversation which should accompany the beginner's work in German."—*Head Master Tetlow, Girls' High and Latin Schools, Boston.*

THE SATIRES AND EPISTLES OF HORACE. Edited, in the College Series of Latin Authors, by Prof. J. B. Greenough of Harvard University. Introduction price, $1.25. Text, 20 cents.

CÆSAR'S ARMY. A study of the military art of the Romans in the last days of the Republic. By Harry Pratt Judson, Professor of History, University of Minnesota, and one of the editors of Allen & Greenough's new Cæsar. Fully provided with illustrations, battle plans, and colored maps. Price to teachers and for introduction, $1.

ENTRANCE EXAMINATION PAPERS. Compiled by Dr. John S. White, Head Master of the Berkeley School, New York city. Teachers' and introduction price, $1.12.

These papers contain analyzed sets of recent examinations presented by Harvard, Yale, Columbia and Princeton Colleges, together with suggestions regarding preparation for the respective examinations.

WENTWORTH'S NEW GEOMETRY. By George A. Wentworth, Professor of Mathematics in Phillips Exeter Academy, and author of a series of Mathematics. Introduction prices, Plane Geometry, 75 cents; Plane and Solid Geometry, $1.25. Allowances, respectively, 25 cents and 40 cents.

HILL'S LESSONS IN GEOMETRY. By G. A. Hill, author of 'Geometry for Beginners.' Introduction price, 70 cents. Allowance 25 cents.

An admirable introduction to algebra and abstract geometry.

DESCRIPTIVE GEOMETRY. By Linus Faunce, Assistant Professor of Descriptive Geometry and Drawing in the Mass. Institute of Technology, Boston. 8vo, cloth, 54 pages; introd. price, $1.25.

AN INTRODUCTION TO THE STUDY OF THE MIDDLE AGES, A. D. 378-814. By Ephraim Emerton, Ph.D., Professor of History in Harvard University. With black and colored maps. Introduction price, $1.12.

ANCIENT HISTORY FOR COLLEGES AND HIGH SCHOOLS. Part I. The Eastern Nations and Greece. By P. V. N. Myers, President of Belmont College, Ohio. With illustrations and colored maps. Until Allen's Rome (Part II.) is ready, the publishers will bind with this book the History of Rome from Myers's Ancient History. Introduction price, $1.40.

TOPICS IN ANCIENT HISTORY. By Miss C. W. Wood, Professor of Ancient History in Mt. Holyoke Seminary and College. Introd. price, 15 cents.

A COURSE OF BENCH WORK IN WOOD. By W. F. M. Goss, Professor in Purdue University. Fully illustrated. Introduction price, 70 cents.

READY BEFORE SEPT. 1:

Wentworth's College Algebra; Young's College Astronomy; Rupert's Guide to the Study of the History and Constitution of the United States; Runkle's Plane Analytic Geometry; Williams's Laboratory Manual of General Chemistry; Manatt's Hellenica of Xenophon, Books I-IV; Lanman's Sanskrit Reader, Part III, Notes.

New Text-Books in Geography.

LONGMANS' SCHOOL GEOGRAPHY. By George G. Chisholm, M.A., B.Sc., F.R.G.S., etc. With 61 illustrations and diagrams. Crown 8vo, $1.05.

*** In this book an attempt is made at a new departure in the teaching of geography by providing a text-book which is founded on the results and methods following from the great advance which has taken place in geographical science and teaching on the Continent, and especially in Germany. The aim of the author has been to exclude from the book almost all details which pupils cannot be expected to keep permanently in mind, but to take care that what the book does contain should consist of what is most effective as discipline and of most importance to know.

LONGMANS' JUNIOR SCHOOL GEOGRAPHY. By George G. Chisholm, M.A., B.Sc., F.R.G.S., etc. With 31 maps. Small 4to, boards, 45 cents; cloth, 60 cents.

BOOKS OF THE WEEK 158

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

When mailed in paper tubes, without creases, 50 cents per year extra.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

	Scale of Agate lines.
On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.	—
A column (140 lines), $20 each insertion; with choice of page, $27.	5
A page (3 columns), $60 each insertion; with choice of position, $80.	—
Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.	10
Twenty per cent. advance for cuts, fancy or other letters not comprised in the NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.	15

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The regular EDITION of THE NATION this week is 8,900 copies; special edition, 5,100; total, 14,000. The Subscription List is always open to inspection.

***Copies of THE NATION may be procured in Paris of Brentano Bros., 17 Avenue de l'Opéra; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; and H. F. Gillig & Co., 449 Strand.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Important Text-Books.

POLITICAL SCIENCE.

American Political Economy.

By Francis Bowen, Professor of Natural Religion and Moral Philosophy in Harvard College. 8vo, $2.50.

This treatise presents views compatible with the idea that "every country has a political economy of its own, suitable to its own physical circumstances of position on the globe, and to the character, habits, and institutions of the people."

"If our members of Congress would vote themselves a copy of this book, and read it, fewer wild schemes would be concocted by them, and a great saving of time and the people's money would be secured."—*The Philadelphia Age.*

Political Economy.

By Arthur Latham Perry, Professor in Williams College. Crown 8vo, $2.50. Professor Perry's book has passed through many editions, and has recently been subjected to a thorough revision and recasting. It has stood excellently the test of the class-room, and has been adopted by many of the chief educational institutions in this country.

"Your book interests students more than any I have ever instructed from."—*Pres. T. D. Woolsey, Yale College.*

"As a manual for general reading and popular instruction, Prof. Perry's book is far superior to any work on the subject before issued in the United States."—*New York Times.*

Introduction to Political Economy.

Revised edition. 12mo, $1.50.

"This work is not meant in any way to take the place of its author's larger treatise. It is not an abridgment of that work, but a separate treatise, intended primarily for the use of students and readers whose time for study is small, but who wish to learn the broad principles of the science thoroughly and well. . . . We need scarcely add, with respect to a writer so well known as he, that his thinking is sound as well as acute, or that his doctrines are those which the greatest masters of political science have approved."—*The New York Evening Post.*

Political Science:

Or, The State Theoretically and Practically Considered. By Theodore D. Woolsey, D.D., LL.D. 2 vols. 8vo, $5.00.

"No work on Political Science has ever been published in America which covers so wide a ground and which treats the subject so fairly and impartially, and with so thorough knowledge and judgment."—*The Boston Transcript.*

MENTAL SCIENCE.

Psychology.

By James McCosh, D.D., LL.D., President of Princeton College. I. The Cognitive Powers. II. The Motive Powers. 2 vols., 12mo, each $1.50.

The first volume contains an analysis of the operations of the senses and of their relation to the intellectual processes, and devotes considerable space to a discussion of Sense-perception, from the physiological side, accompanied by appropriate cuts. The second volume continues the subject with a discussion of the power of the Conscience, Emotions, and Will.

"This book is written in a clear and simple style; it breathes a sweet and winning spirit, and it is inspired by a noble purpose. In these respects it is a model of what a text-book should be."—*Prof. William DeW. Hyde, Bowdoin College.*

Elements of Physiological Psychology.

By George T. Ladd, D.D., Professor of Mental and Moral Philosophy in Yale University. With numerous illustrations. 1 vol., 8vo. $4.50.

"His erudition and his broad-mindedness are on a par with each other; and his volume will probably, for many years to come, be the standard work of reference on the subject."—*Prof. William James, in the Nation.*

*** All correspondence is solicited in reference to copies for examination and terms of introduction.*

The Nation.

NEW YORK, THURSDAY, AUGUST 23, 1888.

The Week.

THE Nominal Candidate must have enjoyed reading the accounts of the scene at Portland, Wednesday week, when the Real Candidate "struck the keynote of the campaign." There was not even so much as a Harrison and Morton banner, or a picture of the man who is running for care-taker of the White House. The Leader of the Party, the candidate for Head of the Administration, dominated the occasion. It was Mr. Blaine, not Mr. Harrison, to whom the chairman of the meeting alluded when he spoke of "the American champion of protection"; it was Mr. Blaine, not Mr. Harrison, to whom the same speaker referred when he said that "millions of Americans will follow him in this contest that is now being waged in this country."

That Mr. Blaine is an habitual blunderer, cannot be denied. He writes impulsively, and speaks without carefully verifying his alleged facts. This has been uniformly true of him from the time of the Mulligan letters to the "Paris Message." That he has blundered every time that he has opened his mouth since his "triumphal" return is notorious, as is the fact that he dearly loves rich men, and longs for the friendly society of all corporations and other aggregations of wealth. Like Mr. Foster, he yearns for a share of the "fat" that is in such men and combinations. That he would naturally have a warm sympathy for trusts, any one who has followed his public career would not for a moment question. But having such sympathy, and expressing it openly, are two very different things. If Mr. Blaine had sent his views on trusts in a confidential letter to Mr. Carnegie, and had marked it either "Private—use wisely," or "Burn this," nobody would have been surprised.

The press report of Senator Sherman's remarks on the subject of trusts last week left some doubt whether he intended to say that these organizations should be checkmated by repealing or lowering duties, or by the exercise of the direct taxing power. The report as we find it in the *Congressional Record* leaves no doubt that he referred to the former method. He said:

"My impression is, that in any bill reported to the Senate in respect to the collection of the revenue, there will be provisions offered seeking, if possible, to prevent the evils which unquestionably grow out of these combinations and trusts, especially by corporations. The difficulty, however, is, that many of these combinations and trusts—some of the most dangerous of them, like the Standard Oil Company—grow out of matters as to which there is no tax, and *where they do not grow out of the revenue laws.* Whether in such cases we can reach the combinations and trusts which affect every citizen of the United States, I do not know; but it is certain that where these combinations grow out of revenue laws, as the Sugar Trust, which is one of the most dangerous and wrongful Trusts ever organized in this country, the Trust can certainly be reached by the operation of our revenue laws."

The plain statement is, that some trusts do grow out of the revenue laws, and that these are to be checkmated, if at all, by modifications of the tariff. Yet the Greatest Living Statesman thinks that all the trusts are private affairs, "with which neither President Cleveland nor any private citizen has any particular right to interfere."

Mr. Blaine stated, in his speech of Friday, August 10, that the deposits in all the savings banks of Great Britain were less than in the single State of Massachusetts. In the year 1887 the amount of deposits in the savings banks of Massachusetts was $291,197,900. In Great Britain there are three classes of depositories for the savings of the frugal and industrious, which fulfil the same function as the savings banks of the United States, and the deposits or contributions to which proceed from the same source, and are in every respect similar in character. These are the savings banks under the management, as in the United States, of trustees; the Post-office Savings Banks, under the management of the Government; and the "Building" and "Friendly" Societies, also under the close supervision of the Government, and whose several liabilities and assets are returned annually under the designation of "shares," "deposits," and "profits." The official returns of the condition of the "Trustee" and "Post-office" Savings Banks for 1886 and of the "Building" and "Friendly" Societies for 1885 are as follows, the £ sterling being reckoned at $4.86.6, its real value:

Trustee Savings Banks.		
Capital (deposits).	£46,843,995	
Interest credited.	1,231,556	
Government stock held for depositors.....	810,128	
Total.....	£48,885,679=	$237,877,669
Post-office Savings Banks.		
Capital.....	£50,874,337	
Government st'ks held for depositors.....	2,896,941	
	£53,771,278=	261,671,038
Total savings-bank deposits in Great Britain in 1886.....		$499,548,707
Friendly and Building Societies of Great Britain.		
Value of shares, deposits not represented by shares, and balance of unappropriated profits for 1885....	£52,812,281=	256,984,559
Total.....		$756,533,266

It thus appears that, restricting the comparison to savings banks alone, Mr. Blaine's statement had not the slightest foundation in truth, and that the depositors of the Massachusetts savings banks lacked $208,350,807 to put them on an equality with those of Great Britain, and that, counting in the value of the accumulations of the Friendly and Building Societies of Great Britain, which represent as truly and accurately the savings of the British masses as do the deposits of the savings banks, his statement contained an error of exactly $465,335,366; and that instead of the deposits of the savings banks of Massachusetts being in excess of the aggregate deposits of the United Kingdom, the masses of Great Britain have in fact about $2.59 on deposit for every $1 on deposit in Massachusetts.

There is another point of interest in connection with this matter which is well worthy the attention of those who consider Mr. Blaine a supreme authority on all points of economy and finance, and who are fond of parading contrasts between the pauper laborers of Great Britain and the workmen of the United States, who, under our high and unnecessary system of taxation, are supposed to be rolling in affluence. The aggregate deposits in the savings banks of the United States, according to the report of the Comptroller of the Currency for 1887, amount to $1,157,867,843. This, divided among our estimated population for that year of 62,000,000, would give an average of $18.66 per head. The aggregate deposits in the public savings institutions of Great Britain for 1885-6 were $756,533,266. This, divided among the population of the United Kingdom for 1886, namely, 37,000,000, would give an average of $20.97 per capita. It is, therefore, clear that any comparison of the savings-bank statistics of the United States and Great Britain will not help the high-taxation policy quite as much as Mr. Blaine expected.

If the Greatest Living Statesman had consulted Mr. Fred. E. Richards, Bank Examiner of the State of Maine, he would never have said a word on the condition of either general business or of savings institutions. There is no better test of the prosperity of a New England State than the amount of deposits in its savings banks. In Maine, reports are made semi-annually, May 1 and November 1. That for May 1, 1887, covers a period mostly included in "the year 1887," which Mr. Blaine confesses was "prosperous." The gain in deposits during that period was as follows:

Deposits November 1, 1886.....	$37,215,071
Deposits May 1, 1887.....	38,247,470
Gain.....	$1,032,399

The report for May 1, 1888, covers six months, of which five followed the date when "the President proposed a radical change in the industrial system which had produced that prosperity, and since that day there has been reversal and confusion in the commerce and manufactures of the United States"; and the gain in deposits during this period was as follows:

Deposits, November 1, 1887.....	$38,819,643
Deposits, May 1, 1888.....	39,871,969
Gain.....	$1,052,326

In other words, the savings banks of Maine—which amounts to the same thing as saying the people of Maine—have actually been

more prosperous since the President sent in his "free-trade message" than they were a year ago!

Now that the Greatest Living Statesman is indulging in prophecy, and predicting that, if the Democrats carry the Presidential election of 1888, the factories, "if kept open, will be run at half the present wages," it is interesting to recall his prophecy as to the effect of the Presidential election of four years ago, uttered in his Augusta speech of November 18, 1884:

"With the Southern Democracy triumphant in their States and in the nation, the negro will be compelled to work for just such wages as the whites may decree—wages which will amount, as did the supplies of the slaves, to a bare subsistence, equal in cash, perhaps, to 35 cents per day, if averaged over the entire South. The white laborer of the North will soon feel the destructive effect of this upon his own wages. The Republicans have clearly seen, from the earliest days of reconstruction, that wages in the South must be raised to a just recompense of the laborer, or the wages in the North ruinously lowered, and the party have steadily worked for the former result. The reverse influence will now be set in motion, and that condition of affairs produced which, years ago, Mr. Lincoln warned the free laboring men of the North will prove bostile to their independence, and will inevitably lead to a ruinous reduction of wages."

Three years have passed since this triumph of the Democracy. So far from any of these predictions having been verified, the whole negro press at the South is celebrating the unprecedented progress made by the race in the acquisition of property during the past three years; while at the North the whole Republican argument, as urged by all the authorities from Mr. Blaine down, is that the wages of the white laborer were never so high as they are now—but that if the Democrats carry the election this year, they will be cut down one-half.

There is a general impression that business must inevitably suffer in a Presidential year. That there have been Presidential campaigns in which this was the case is generally admitted. Nor is it strange that this should have been so, for half the people in the country were long told by their political leaders that the country would go to ruin if the other party should come into power. This "scare" argument has now been conclusively answered, and no longer carries any weight. Its removal is undoubtedly one element in the present prosperous condition and outlook, which were thus set forth by the leading Republican organ of the country on Monday morning:

"The changes developed last week relating to the general conditions and prospects of commercial and mercantile communities were of a favorable character. An increased activity in general movements was reported from all quarters. The bank exchanges for last week in New York were $38,000,000 greater than for the corresponding week of last year, although the stock transactions were smaller than in the week of last year. This reflects a much greater activity in the general business of the city. There is material improvement in the condition of the iron trade, which has warranted a blowing in of numerous furnaces which for a long time have been out of blast. The coal trade never was more active, or met with a more urgent demand, than at present. The distribution of dry goods is unusually large for so early in the season, and merchants from all parts of the country speak confidently of a prosperous autumn trade. Notwithstanding unfavorable reports concerning the cereal crops, seemingly manufactured for uses at the Stock Exchange, the prospects for a fair crop of spring wheat were never better, and nothing less than a national calamity can prevent the greatest crop of corn the country has ever grown. The conditions abroad continue to indicate a large foreign demand for these crops."

Gen. Harrison had better stick to schools, home, and other such "safe" topics. He made a terrible blunder on Friday when he said: "There is not a Republican voting precinct where any man, whatever may have been his relation to the flag during the war, may not freely exercise his right to vote. There is not one such precinct where the right of a Confederate soldier freely to cast the ballot of his choice would not be defended by the Union veterans of the war." The truth is, that there is one Republican State in not one voting precinct of which can "a Confederate soldier cast the ballot of his choice," except after making humble appeal to the Legislature, and securing the passage of a special act giving him the right to vote. The Constitution of Kansas contains the following section:

"WHO NOT QUALIFIED.—Section 2. No person under guardianship, *non compos mentis*, or insane; no person convicted of felony, unless restored to civil rights; no person who has been dishonorably discharged from the service of the United States, unless reinstated; no person guilty of defrauding the Government of the United States, or any of the States thereof; no person guilty of giving or receiving a bribe, or offering to give or receive a bribe; *and no person who has ever voluntarily aided or abetted in the attempted overthrow of said Government*, except all persons who have been honorably discharged from the military service of the United States since the first day of April, A. D. 1861, provided that they have served one year or more therein, shall be qualified to vote or hold office in this State until such disability shall be removed by a law passed by a vote of two-thirds of all the members of both branches of the Legislature."

The Kansas Legislature meets only once in two years. The last session adjourned on the 5th of March, 1887, and the next will not open until January 8, 1889. No Confederate soldier who has settled in Kansas since March, 1887, can vote in November, 1888. If Senator Riddleberger of Virginia, whose vote gives the Republicans a majority in the Senate, or Judge Key, who presides over a Federal District Court in Tennessee by the appointment of a Republican President, were to resign to-day and make his home in Kansas, he would be disfranchised.

It is understood that one of the chief reasons for the disclosure of Senator Plumb's authorship of the famous quotation in the Foster "fat" circular was the disgust of Senator Edmunds at having his name associated with so egregious a blunder. Mr. Edmunds's feeling is said to have been heightened by the fact that the Mugwump editors did not know, without telling, that he "had more sense than to have written such stuff." The warmth of the Senator is natural, but we think that the mistake of the Mugwump editors was natural also. The letter told the truth about the tariff with uncommon precision and force, and the Mugwump editors have been aware for a long time that Mr. Edmunds's private correspondence was noted for just those qualities. The Vermont Senator can hardly have forgotten a certain private letter, written eight years ago, in which he described so picturesquely the rising, "musket in hand," of the Greatest Living Statesman from "behind Jay Gould's breastworks." The truth of that description was amply verified the other day, when the same Statesman showed that the same "musket" is still loaded in defence of the trusts which have been an outgrowth of the corporations since the "musket," was first shouldered in their defence. Surely the man who pointed out with such happy exactness the location of the "musket," might readily have been expected to say that "the manufacturers get practically the sole benefit" of the tariff. But what Mr. Edmunds loses in this case Mr. Plumb gains. The latter is now perceived to have powers as a letter-writer at least equal to those of his colleague, Ingalls, whose discovery that there was not one real leader among all the candidates before the Chicago Convention, and whose identification of the greatest statesman of New Jersey as "some fellow like Phelps," placed him at once in the front rank of letter-writers, ancient or modern.

That "cyclone of fear" which Chauncey Depew said last June was the only hope for the Republicans, is not sweeping the workingmen into the high-tariff party quite as fast as was expected. The Michigan State Assembly of Knights of Labor held its annual session at Detroit the other day. Circulars had been sent out requesting an expression of views on the tariff. Replies were received from 44 local assemblies, of which 8 favored absolute free trade, and 29 tariff reform as proposed by the Democratic party, while only 7 expressed any degree of favor for the present tariff. Mr. Depew, by the way, has been tendered a reception by his friends and admirers on his forthcoming return from Europe, and we shall be interested to see if it is equal in brilliancy to that which was offered to the Plumed Knight. No reception, brilliant or otherwise, has yet been tendered to Gen. Harrison in this city, and we see no way for him to get one except by taking an ocean voyage. It might be well for him to act on this suggestion, and go to Europe instead of going fishing. The National Republican Committee could doubtless get a passage for him at reduced rates, and he could return immediately on the same steamer which took him over. A reception in the harbor could then be organized, and he could thus be formally recognized as one of the leaders of his party. He might in this way work his name into the editorial columns of the New York *Tribune*.

Mr. Breckinridge of Arkansas has emphasized the issues of the present campaign by introducing five bills to repeal or reduce the duties on articles monopolized by trusts. In order to satisfy everybody, he has included the Standard Oil, the Cotton-Seed Oil, and

the Whiskey Trusts in the scope of his measure, treating them all alike. So far so so good. But there are about forty of these Trusts and Combines now "running" the United States of America, all of which equally need the medicine that Mr. Breckinridge offers to the Sugar Trust, the Bagging Trust, etc. Let us have bills for all of them, and let us have votes on the bills. It should be observed that Mr. Breckinridge leaves a modicum of protection for the Sugar Trust that would have been considered sufficient for all purposes at any former period of our history, and would be so considered now but for the plank in the Chicago platform which forbids *any* reduction of protective duties whatever.

It has been discovered in Washington by some intricate process that, although the official estimates of appropriations for the fiscal year 1889, including the sinking fund, were only $326,530,793, the actual appropriations are or will be $428,269,520. For the fiscal year 1888 the actual expenditures were $316,817,785. According to this showing, the cost of carrying on the Government has increased more than $100,000,000 in one year. This, if true, is the most alarming result of the surplus revenue that could be imagined, since it betokens an irresistible impulse towards extravagance and waste of the taxpayers' money. Better, far better, a financial panic, with its sobering lessons, than a system whose central idea and governing motive is to make the national expenditure equal to the national income. It is noted in connection with this sudden swelling of the expense account that several Republican Senators think that no tariff bill is necessary, since the surplus for the coming year will be only $12,294,213. What were these wise men thinking about when they met at Mr. Evarts's house and resolved to report and pass a bill to reduce the revenue? Did they not then know that the appropriations would swallow up the whole of it, or could be made to do so by a vigorous effort?

Mr. Powderly and Mr. George are discussing the subject of restricting immigration. Mr. Powderly, in the *North American Review*, protests against having "the surplus population of Europe transported to this country," and complains of people, like the Italians, Hungarians, and Poles, who, he says, are crowded together and live meanly; do not wash themselves enough; have "dining-room, smoking-room, sitting-room, kitchen, and bed-chamber all in one"; work cheaply, and send their money home; fill almshouses and prisons; and cannot understand our institutions nor appreciate our liberty, but are naturally serfs. Mr. George retorts in the *Standard* that Mr. Powderly is himself the son of an Irishman, and that precisely the same charges which he now brings against the Italians, Hungarians, and Poles were brought against the Irish a generation ago, as everybody who has reached middle life well remembers.

Gov. Hill said, in his interesting statement about his two personal campaign notes, for $15,000:

> "Near the close of the campaign of 1885 the Democratic State Committee were short of funds, and appealed to me to aid them. I consented to lend them my credit, and, together with Judge Alton B. Parker and Judge W. L. Muller, the Chairman and Secretary of the Executive Committee, I signed a note with them as joint makers for $5,000, which Mr. John Keenan of New York, also a member of the State Committee and a prominent County Democracy man, then of excellent reputation, cashed for the Committee, which received and used the avails in the canvass. I also, upon a like request, signed another note for $10,000, which was endorsed by my friend, Judge Muller, the Secretary, and also (as I subsequently learned) by Mr. John O'Brien, the Chairman of the State Committee."

He did not explain that neither Parker nor Muller had the title of "Judge" at that time, nor did he state that it was he himself who gave them the title. It is a fact, however, that he appointed Mr. Parker a Justice of the Supreme Court for the Third District of New York and Mr. Muller Judge of the Court of Claims, after their friendly conduct in endorsing his note. It is also a fact that on May 17, 1886, four days after he signed the aqueduct "deal" bill, he appointed O'Brien (who paid the $10,000 note out of the $30,000 which had been taken from the city treasury unjustifiably on the contract for Section 12), Receiver for the Broadway Railway. O'Brien was at that time both Chairman of the Democratic State Committee and chief aqueduct contractor. The Governor rewarded him more handsomely than he did Messrs. Parker and Muller, but then O'Brien had done more. In all cases the reward came out of the public service.

A cablegram from London says that M. Goblet has instructed the French representative in the Sugar Bounties Conference not to sign the agreement unless the United States Government signs it also. This decision on the part of France is looked upon as fatal to any agreement, but we do not see why it should be so. We were not aware that any attempt had been made to bring this country into the conference, but if such an attempt has been made, it was quite reasonable. The United States has the power commercially to bring the conference agreement to naught at any time. She can pour bounty sugar enough into the London market to bankrupt every foreign refinery that depends upon that market. It is believed that the drawback system that prevailed before the present Administration came in, did amount to a bounty on the export of sugar. There is no guarantee, so far as foreign Governments are concerned, that the drawback may not be increased at any moment. Therefore, France is quite justified in the condition which she annexes to her own signing of the agreement. We see no reason why we should not sign it also. We can see many reasons why our sugar-refiners should be willing to have it signed, for sooner or later our sugar duties will be repealed, and then they will be brought into competition with France and Germany. If the duties should be repealed in a gust of passion, as the duty on quinine was a few years ago, Congress would make no account of foreign bounties, any more than it made account of the duty on the raw material of quinine. It is, therefore, for the interest of the Sugar Trust to have export bounties abolished all over the world as speedily as possible.

Had an enthusiastic advocate of union between the different churches of Christendom prophesied, only twenty-five years ago, that a time was not far distant when an English society, composed mainly of Dissenters and Quakers, should be convened to hear an address from a foreign Roman Catholic prelate, and that a resolution in response to that address, moved by the head of the English branch of that church, and seconded by a Bishop of the English Church, should be carried unanimously, he would have been laughed to scorn. Yet all this happened in London on July 31, when Cardinal Lavigerie (Archbishop of Algiers and Carthage) addressed the British and Foreign Anti-Slavery Society on the African slave trade. The Cardinal, who has undertaken to preach a crusade against this desolating traffic in every capital in Europe, presented no new facts, but confined himself almost wholly to a description of the methods of the Arab slavers and the sufferings of their wretched victims. As a companion picture to Prof. Drummond's statement that there are districts in Africa "where *three* natives cannot be sent a message in case two should combine and sell the third before they return," may be put this drawn by the Cardinal: "Every woman, every child, that strays ten minutes away from their village [in the vicinity of the great lakes] has no certainty of ever returning to it." Cardinal Manning moved the first resolution, "urging the governments of Europe to bring the pressure of public opinion to bear upon the rulers of all countries where slavery exists," which was seconded by Bishop Smythies of the Universities Mission to Central Africa. A resolution of similar purport was moved by the Rev. H. Waller, Dr. Livingstone's editor, and seconded by Lieut. Cameron.

A cable despatch to the *Sun* says: "Providence seems decided to watch over the grand old engineer De Lesseps—that is to say, if Providence may be imagined to take an interest in the game of chance in Panama. In the lottery the two first numbers drawn were found to be on shares unplaced, so that the biggest prizes of £20,000 and £4,000 respectively will not have to be paid." This is a two-edged sword. The company's 780,000 bonds, and the syndicate's 420,000, will not find a market very readily if they take most of the important prizes. Of course, their chances outweigh those of all the other holders of these bonds, by any calculation. A public suspicion that the control of the lottery machinery is a dangerous temptation to a needy concern, will render the bonds utterly unsalable. M. de Lesseps, in his annual report, said that the work could not go on unless they were sold. They are advertised for sale wherever the company has an agency. A kinder dispensation would have allotted the capital prize to the *Petit Journal* or *Figaro*. That would have given an impetus to the sale of bonds which would have far exceeded in value the prizes the company has drawn.

MR. BLAINE ON "TRUSTS."

THE National Republican Committee's doubts about the advisability of putting Mr. Blaine on the stump in the West are not likely to be quieted by his remarkable views on "trusts," as set forth in his Portland speech on Wednesday week. We quote the passage:

"When President Cleveland delivered his message, he had something to say to the American people about the danger of 'trusts.' I think there have since been no Democratic papers in the country, whether they understood the meaning of the word or not, that have not been constantly warning the people as to the horrible danger of 'trusts.' Well, I shall not discuss trusts this afternoon. I shall not venture to say that they are altogether advantageous or disadvantageous. *They are largely private affairs, with which neither President Cleveland nor any private citizen has any particular right to interfere.*"

Mr. Blaine went on to say that, aside from this point, he desired to impress upon his hearers the fact that trusts were not the outgrowth of the protective system, because England, under a system of free trade, was "literally plastered all over with trusts." As proof of this, he cited an article which he had found in a London newspaper, announcing that all the manufacturers of coffins and all the undertakers of the United Kingdom had formed a trust with $2,000,000 capital.

We will not dwell upon the question whether the proof which Mr. Blaine cites in support of his assertion that England is "literally plastered all over with trusts," is adequate or not. If it be accepted as adequate, it puts Mr. Blaine in the position of maintaining that free-trade trusts are no more objectionable than protection trusts, and strengthens his main contention that trusts "are largely private affairs, with which neither President Cleveland nor any private citizen has any particular right to interfere." This is a very different view from that taken by the Republican platform, upon which Harrison and Morton are standing; but as Harrison himself declares Mr. Blaine to be a "matchless defender of Republican principles," it may have to be taken as orthodox during the campaign. The platform says:

"We declare our opposition to all combinations of capital organized in trusts or otherwise, to control arbitrarily the condition of trade among our citizens, and we commend to Congress and the State Legislatures, in their respective jurisdictions, such legislation as will prevent the execution of *all schemes to oppress the people by undue charges on their supplies, or by unjust rates for the transportation of their products to market.*"

It is nobody's business, in Mr. Blaine's opinion, if the people are "oppressed by undue charges on their supplies"; that is the "private affair" of the enterprising capitalists who organize the trust which decrees the "unjust charges." Of course, then, Congress and the State Legislatures have no business to meddle with it, and the Republican national platform commits an impertinence by directing them to do so. There is nothing to do, in Mr. Blaine's opinion, but to let trusts alone; for, after citing his proof of the coffin trust in England, he says: "Now I think, my friends, that we might safely bury all the President's predictions of evil from trusts in this country in the graves in which those coffins are about to go." Of course, the denunciation in the Republican platform will have to be buried there also. The party must either follow its greatest leader, or part with him.

Nobody will deny that if Mr. Blaine knew that the Republican platform contained a denunciation of trusts, as "schemes to oppress the people by undue charges on their supplies," he must also have known that, in coming to the defence of trusts, and in ridiculing President Cleveland and the Democratic press for opposing them, he was injuring his own party and its chances in the election. Yet there is direct evidence that he had read the platform carefully. It will be remembered that the platform was adopted several days before the nominations were made. It was cabled in full to the London press on June 21; and on June 22, the correspondent of the *World*, who was on very friendly terms with the Carnegie coaching party, sent an account of the day's proceedings in which he said:

"Mr. Carnegie carries a copy of the Republican platform as adopted in Chicago, and cherishes it with tender regard. 'What do I think of it?' he said. 'Why, it is the finest platform that was ever constructed. When *we* [Carnegie and Blaine] read it over again last night at Jedburgh, *we* came to the conclusion that there was not even a single particle that we would wish to have altered.'"

If Mr. Blaine went over the platform so carefully then with Mr. Carnegie, it is scarcely possible that the plank denouncing trusts escaped his eye; but if it did, how could he have failed to have his attention directed to it when he read the New York *Tribune's* comments on the platform?—for, of course, he must have read them. In its headline over the text of the platform, in its issue of June 22, the *Tribune* called especial attention to the fact that trusts were "condemned," and editorially, on the same date, it said:

"It is a grand platform, because it utters plainly the hostility of the Republican party to *those Trusts and combinations by which the best fruits of the protective system are in some cases denied to consumers.*"

What explanation, then, can be given of the Portland speech? Mr. Blaine spoke deliberately, and revised the report carefully before giving it to the press. He is too sharp a politician not to have calculated the effect of his words. Taken in connection with the extraordinary conduct of his friends in the press since Harrison's nomination, and in connection with the personal ovation which has been given him by his followers here and in other cities since his return, to the complete obliteration of Harrison, his deliverance makes but one impression, namely, that he and his friends have no love for the Chicago platform or its candidates, and are determined to defeat them. No more deadly thrust at the Republican or any other candidate could be aimed, at this time, than to make him the champion and defender of the oppressive and hated trusts. When Mr. Blaine did that service for Harrison, he put the "knife" deep into his vitals. The party must henceforth either pull with Blaine and Trusts against Harrison and his platform, or it must repudiate Blaine and Trusts and thus split itself in twain. The "aut Blaine aut nullus" policy is in full operation.

ENGLISH FOREIGN MAILS.

THE only respect in which England will not have to serve the protectionist orator, until November, as a fearful example, is in her policy of liberal payment for carrying her foreign mails. Both those, like Mr. H. K. Thurber who fear the word "subsidy," and those, like Gen. Harrison, who have lost all fear of that term, are agreed that the thing for us to do is to imitate the English plan. Exactly what that plan is, and why it was adopted, they are not careful to state. Indeed, it is to be feared, from their vague statements, that they do not know. For the sake of their good faith, it is to be hoped that they do not, and that some of their positive assertions are made in ignorance. At any rate, it is worth while to set forth the facts and their explanation once more.

It is unquestioned that England expends large sums on her foreign mail service. From the estimates submitted to Parliament by the Post-office for the year ending March 31, 1887, we find that the following sums were called for, the grouping being by continents:

Europe	$91,000
Africa	58,620
America	1,078,125
Asia	1,799,000
Total	$3,026,745

The cost of the packet service within the United Kingdom, $611,560, is not reckoned in, of course.

It is only since 1860 that the Post-office has had the letting of contracts for carrying foreign mails. Before that date the matter was in the control of the Lords of the Admiralty. Under their management the cost to the country was as much as $5,000,000 yearly, with great incidental favoritism and corruption. As the result of a Parliamentary inquiry, the whole thing was put in charge of the Post-office, in the year named. Business methods were immediately adopted. Competition was open, penalties for non-fulfilment of contract were rigidly exacted, and the consequent economy at once became apparent. No special appropriations are made to cover the cost of the foreign mail service, as it is paid out of the general Post-office surplus, which is about $15,000,000 a year, and steadily increasing. In fact, the whole cost is nearly earned by the postage on the mail matter carried, added to the colonial repayments hereafter to be mentioned. Last year all but $200,000 of the total expense was earned.

Now the subsidy advocates who argue that the sole reason for the enormous growth of English shipping, in the last thirty years, is the obtaining of mail contracts by a few lines, make complete oversight of many things in the situation. England is paying now, as we have shown, only about half as much for this purpose as in the days of sailing vessels. But American sailing vessels more than held their own then. The English "subsidies," which existed then, if ever, did not drive the Americans from the ocean, nor did they have any marked effect in expanding the shipping of England. The man who fixes his eye on mail contracts, and will not see the immensely more potent influence of the change from sails to steam,

and from wood to iron, and of our insane refusal to buy what we cannot build, seizes upon an incidental cause, and lets the main ones go. Where England has one subsidized line, so called, she has a score unsubsidized. For a long time, at the beginning of experiments in steam navigation, it was doubtful if Government aid would not be indispensable. The Inman Line was the first to demonstrate, in 1857, that steamships could be run at a profit. After that, hundreds of other lines were established.

England meets two great needs of her imperial Government by means of her large payments for carrying foreign mails. One is the need of rapid and regular communication with her colonial dependencies. That this is one aim in the establishment of the packet service is seen clearly in the terms of the contracts let. Official despatches are to be carried free. Severe penalties are provided for every hour of delay beyond the advertised schedule of trips, and the schedule is figured to a finer point every year. That this service is largely for the sake of the colonies is seen in the fact that they have to foot a part of the bill. The estimated repayments from the colonies for the year we refer to amounted to no less than $518,800—over one-sixth of the total outlay. These repayments are turned into the exchequer as extra receipts, though really, of course, they diminish the cost of the service by so much.

Another need of the Empire is swift cruisers for use in time of war. The mail steamers supply this. By the terms of the contracts, they can all be taken by the Government on short notice. In the Egyptian campaign of 1882, for example, several of the magnificent Peninsular and Oriental liners were used as transports for troops and stores to help in the subjugation of Arabi.

We are aware that our remarks will seem quite beside the point to the protectionist reader who has been carefully educated to believe that these English payments for carrying the mails are made with main reference to the extension of English trade. It only remains, therefore, to show by a comparison of the payments with the trade how utterly impossible it is that the protectionist theory of the relations of the two should be correct. England's trade with Europe is about two and one-half times her trade with Asia; but she pays to the lines of steamers running to Asian ports about twenty times as much as to lines plying between England and European ports. Moral: There are English colonies in Asia, and none in Europe. But the objection will be made that the cases cited are too far away, and the disparity of distance too great. Take two countries about equally separated from England—the United States and the West Indies. With the former, England's trade is about thirty times what it is with the latter; but the steamers carrying the West Indian mail receive within $35,000 as much as those carrying the mails to the United States, or $465,000, as against $500,000. If any man can say, after comparing these figures, that England's motive in paying generously for the carriage of her ocean mails is not what she says it is, to keep up communication with her colonies and have a naval reserve at her disposal, but to foster trade and crush out competition, he will be able to claim an altogether new ingenuity in making figures lie.

Now, the United States are under no obligation, as a home Government, to keep in touch with colonial dependencies. If we want a naval reserve, it will be better to pay for it and maintain it outright, instead of hiring men to sail over the ocean to nowhere in particular, with nothing in particular to carry as a cargo. It would be simply impossible for our Government to let contracts for the foreign mail in the way observed by the English Post-office. There could be no competition in the bidding with us. This was the special absurdity of the law of March 3, 1885. As Mr. Vilas showed, it provided for competition where as a matter of fact there could be none. Only for a part of the way over two routes was there a possibility of competing companies bidding against each other. We may add that, by a subsequent consolidation, the possibility of competition has been reduced to only one route. The appropriation of $400,000 in 1885 was meant as a gift outright, and so the companies thought, to judge by the way they all hastened to claim their share. The same thing would be true of any appropriation now. Altogether, we think the protectionist orator had better go the whole figure, and maintain that English policy is detestable in every particular, not even excepting her foreign mail service.

THE ECONOMISTS AND THE SENTIMENTALISTS.

In the current number of the *Quarterly Journal of Economics*, Mr. F. J. Stimson has undertaken to give us a summary of Ruskin's contributions to Economics. The article is interesting, and is enlivened by numerous quotations of telling passages from Ruskin. If we were called upon to point out a single character which, more than any other, constitutes the difference between Ruskin's discussions of economic subjects and the discussions of the recognized economists, we should say it was that he is continually dealing with ends, and they with means. The operation of causes has always been the subject of their inquiry; the desirability of results is the constant text of his sermons. The former is the legitimate province of science; and, so far as political economy has any claim to the name of science, it is on account of such success, however imperfect, as its students have had in determining the operation of causes in the economic world. All of Ruskin's criticism is rendered worthless—worthless as criticism, however suggestive in other ways—by his apparently total failure to realize the nature of the problems which it has been the business of economists to consider.

The reasons which Ruskin has given for denying that political economy is a science are numerous, but they may be exemplified by a few citations. "It has omitted the study of exactly the most important branch of the business—the study of *spending*." It has not ventured to pronounce judgment on the land question, although it is "the nearest task of our day to discover how far original theft may be justly encountered by reactionary theft, or whether reactionary theft be theft at all." But perhaps most of all he would base his denial on the fact that the economists' discussion of value is confined to exchange value, while the kind of value which Ruskin thinks they ought to have considered is defined thus: "Value is the life-giving power of anything"; by "life" being understood "the happiness and power of the entire human nature, body and soul." All this is much as if one were to say that medicine is no science because it has not undertaken to say what kind of lives are worth living, or to prescribe the degree of sacrifice which is due from the well to the sick.

No charge that has been brought against Ruskin's economic utterances has been more resented by him than the charge of sentimentalism. Like all words that have long played the part of catchwords in great controversies, "sentimentalist" is a title of very vague meaning. Ruskin's ideal of what men ought to be and to do in their economic relations is anything but sentimental, in the sense of weak or effeminate or even unnatural; the underlying reason for the attribution of the name "sentimentalist" to economic writers of Ruskin's stamp is the fact that they propose ends to be attained by human beings, without troubling themselves to consider the means by which human beings can be impelled to action. As one reads 'Unto this Last' or 'Munera Pulveris' from cover to cover, one is amazed to find a writer of such force and a thinker of such insight complaining constantly of the social arrangements of England, laying the blame of them incessantly and with childish petulance upon English economists, and not giving the least intimation of any measure or policy which should have any tendency to alter them. From first to last we have the irresponsible judgments of a sentimentalist—that is, of a man who gives expression to his likes and dislikes, and does not feel called upon to analyze the evils he attacks or to consider the actual operation of the causes which affect them.

Two examples may serve to illustrate this attitude: "I am and always have been," says Ruskin, "an utterly fearless and unscrupulous free-trader. . . . Let other nations, if they like, keep their ports shut. Every wise nation will throw its own open." Having thus given vent to his feelings on the subject of free trade, he seems to be no longer concerned with the matter. He rails at the state of England; her factories, her smoky cities, are an abomination to him; "the tendency of the entire national energy is, therefore, to approximate more and more to the state of a squirrel in a cage, or a turnspit in a wheel, fed by foreign masters with nuts and dog's-meat." The essence of the matter is that free trade pleases him and factories offend him. That the abrogation of the corn laws has a causal connection with the increase of factories, does not seem to disturb his mind at all. Again, on the subject

of population, which occupies the closing pages of 'Unto This Last,' Ruskin says: "In all the ranges of human thought I know none so melancholy as the speculations of political economists on the population question." Ruskin does not mean by this that the speculations are "melancholy" as being erroneous, for in the sentences that follow he subscribes to the crudest and most extreme statement of Malthusian doctrine. As to the facts, they were so "melancholy" to Malthus that he could only find comfort in such features of the situation as gave promise of men's improvement in foresight and prudence; while Ruskin dispels the melancholy of the subject by turning his face away from the facts, and indulging in the contemplation of a "wise population" engaged in "the search for felicity as well as food," by whom "it will be found at last that all lovely things are also necessary—the wild flower by the wayside as well as the tended corn; and the wild birds and creatures of the forest as well as the tended cattle; because man doth not live by bread only, but also by the desert manna—by every wondrous word and unknowable work of God."

It seems to be a necessary accompaniment of this irresponsible frame of mind that sentimentalists should be bereft of all sense of proportion and even of common sanity of judgment when considering the work of scientific students. It is almost incredible that any one should suppose that selfishness and trickery and avarice have been advocated by the economists; but Ruskin does this and more: he continually writes as if these vices had to a great extent been actually created by them. He says "that this which they have called commerce is no commerce at all, but cozening, and that a true merchant differs as much from a merchant according to laws of modern political economy as the hero of the 'Excursion' from *Autolycus*." He speaks of the passion for luxury in furniture and dress being, "for the most part, provoked by economists, as advantageous to commerce"; and, to quote what is at once the most extravagant and the most incomprehensible passage of this kind that we have encountered, he says (in 'Munera Pulveris,' 1871): "Meantime, the theories of 'international values,' as explained by Modern Political Economy, have brought about last year's pillage of France by Germany, and the affectionate relations now existing in consequence between the inhabitants of the right and left banks of the Rhine."

Mr. Stimson urges, reasonably enough, that it is not by the childish and absurd opinions which he occasionally expresses that Ruskin should be judged as an economist. Nor do we judge him by them; but it is evident to us that they are only extravagant specimens of what naturally results from the false notions of economic research which pervade all his writing on that subject, and which are found in sufficient abundance in the works of more scholastic writers in whom the sentimentalist spirit is less apparent. What sober economists have endeavored to do is to gain a deeper insight into the working of the forces which make the economic world what it is, and into the agencies by which the operation of these forces may be modified. Most of the English economists whose work has produced an abiding impression have been men deeply devoted to the welfare of their fellows; some, like Mill, have expressed the profoundest abhorrence of the injustice of existing conditions, and have looked forward hopefully to a better time coming; but all have felt that their task as economists was simply to understand as clearly as possible the causes that determine economic phenomena. It may be that to do this is not to have a lofty mission; but as long as men love the light, there will be found those who will admire the thinkers that have earnestly striven to see without daring to pronounce judgment, however much they may be despised by the prophets who pronounce judgment without patient endeavor to see.

ARCHÆOLOGISTS VS. EXPERTS.

In a recent number of the *Classical Review*, M. Salomon Reinach summarizes the history of his attacks upon the authenticity of the terracotta groups which, during the last eight years, have been offered in the various European markets as "Cymæan," "Myrinæan," "Ephesian," and lately more vaguely described as "Asiatic": and with justifiable pride enumerates his triumphs over many of the leading archæologists who, at first discrediting his opinions, have gradually been won over to his side during a long controversy, the spirit of which has not been wholly scientific. The case is by no means closed yet. There are still a number of authorities eager to maintain the authenticity of the groups in question, as the correspondence in the London *Athenæum* during the month of June shows; but the fact that the directors of the Berlin Museum have been convinced—though, as we imagine, strongly against their will—and that some of the most beautiful terracottas in that and other German museums have been withdrawn from the showcases as modern forgeries, is in itself a victory of no mean importance. We confess that it is not without regret that we see such gems as the famous Charon group, and the Ganymede and the Eagle, among the convicted class, for they ranked with the most beautiful terracottas in any collection; but great is truth, and they have gone where they belong, while we are left to moralize upon the fact that their beauty made them the more deceptive.

With the main issue of the controversy we have little to do. At this distance, and with the very slender opportunities which Americans have at best to examine and handle these objects, as compared with the opportunities of almost every European scholar, it would be idle to sit in judgment upon the arguments of M. Reinach and his opponents; but the discussion contains two lessons which, it seems to us, should be brought home to every American collector, and to every American student of archæology. The first of these is with regard to the danger of purchasing so-called Greek terracottas without the assistance of the very best experts in such matters. The fact that the agents and officers of the great museums of Europe have been repeatedly duped in their purchases, should serve as a serious warning to travellers and amateurs from this country. The forgeries of terracottas nowadays are so clever as to defy everything but the most expert and intimate knowledge of the tricks by which they are produced, and there are, in any part of the world, few disinterested people to whom these tricks are familiar. So perfect is the imitation of all visual evidences of antiquity which has now been attained in this rascally craft, that we might almost say the appearance of an object is no indication whatever of its genuineness; and the Charon group, above alluded to, so skilfully reproduces the spirit and the manner of real Greek art that it was not only purchased by the Berlin Museum at a very large price, but described at length in the *Archäologische Zeitung* by one of the first of German archæologists.

We urge the warning thus strongly because the question is one of great importance to the future knowledge and appreciation of Greek art in this country. The museums which are springing up in all parts of the United States will probably sooner or later be made the receptacles of the countless works of art of all ages which now are pouring into the country year by year. It is well known among unscrupulous dealers that Americans, as a class, are the easiest people in the world to impose upon; and it is certain that a very large proportion of the spurious antiquities sold in Athens, Italy, Paris, London, and elsewhere, find their way to this country. Now if these remain in private hands, it is unfortunate—unfortunate for the possessor, and unfortunate for his friends who admire an object for what it is not. But when these objects appear in museums, as they are constantly doing by gift, loan, sale, or bequest, the misfortune becomes a public one. Unless the authorities of the institution have access to higher expert assistance than is yet obtainable in this country, they are themselves liable to deception; and the imposition, through no fault of theirs, affects the public whom the museum is intended to educate. For their own sakes, therefore, and in the interest of all lovers of ancient art, we cannot too strongly impress upon travellers who are tempted to purchase those charming relics of Greek life, the necessity of consulting some person of acknowledged authority before doing so, and of mistrusting any extraordinary circumstances attending the opportunity to purchase. One of the commonest tricks of the trade is to bury the forgeries in some obscure village in Greece or Italy which is likely to be passed through by travellers, and then excavate them in the presence of an enthusiastic "milord" or American, who is naturally not slow to buy what he has "seen dug up with his own eyes."

The second lesson enforced by this controversy is one which both students and those who make use of their knowledge would do well to take to heart, and that is that an archæologist and an expert are two entirely distinct beings. Their training is different, their knowledge is different, and the two are very rarely combined, in anything like perfection, in the same person. The knowledge of an archæologist is largely theoretic, his training academic. His ambition is to know, down to the minutest point, the characteristics of all the schools and epochs of the branch or branches of art to which he gives his attention. In the matter of terracottas it would be to recognize at a glance the locality and date in which a given figure originated, provided it were genuine, and the artist under whose influence it was created. If the figure displays anachronisms or other anomalies, his suspicion of its authenticity may be aroused, and then he displays one element of the expert; but this is one element of many, and the counterfeiters are no longer caught in this trap as often as they used to be.

On the other hand, the knowledge of the expert must be, first of all, practical. He need know nothing of schools and epochs, archaic

and Hellenistic, may be one and the same to him; but he must know what is really ancient and what is a lie. His training is experience in handling, finding, buying, and, more's the pity, often in forging on his own account. In short, his is the knowledge of the dealer, not the scholar—and the dealer up to all the tricks of his trade. An incident which occurred at Smyrna not many years since is strikingly illustrative of this point. The representative there of a large European museum was offered a fragment of a very beautiful bronze statue by a peasant from the interior of the country. The gentleman, who is an archæologist of great reputation, examined the fragment carefully, tested it by every device he knew and found it satisfactory. Fearing, however, that its remarkable beauty might have upset his judgment, he decided to refer it to the agent of another museum before buying. They went over it carefully together, and after much deliberation decided that there was no reason to doubt its genuineness. To make the matter sure, they determined to take it to an ally of theirs, an ignorant old Jew who kept a small shop in the bazaar, on whose honesty they had good reason to rely. The Jew took the fragment, scanned it critically a moment, rapped on it two or three times, and then handed it back with a reproach to them both for not knowing it for a forgery at first sight. Subsequent experiment showed that he was right.

A few of the great museums of Europe are fortunate in possessing men who are at the same time archæologists and experts of great skill, but they might almost be counted on both hands, and it is only in institutions like those, where the academic knowledge is required at the outset, and where the practical comes from the constant handling of the thousands of objects in the collections and offered to them, that both sides of the man can be developed. In this country, at least for the present, the archæological is the only side that we can hope to see carried to a high degree of perfection, and for this we have the most encouraging indications; but for the other—the expert—knowledge we must rely upon our friends across the ocean until our own collections shall be much larger and much richer in original antiquities.

SHERRYLAND AND CADIZ.

BARCELONA, June 26.

IN going from Seville to Cadiz, tourists have the choice between rail and river. A careless perusal of De Amicis's lively description of his journey down the Guadalquivir might induce one to try the steamboat; but on closer examination it becomes apparent that De Amicis derived less amusement from the river scenery than from a company of Italian comedians who happened to be aboard. Moreover, the well-posted Ford admits that an actual acquaintance with the far-famed Guadalquivir dispels any illusion which the native poets have conjured up: "This 'pellucid river' is in sober reality as dull and dirty as the Thames at Sheerness. The turbid stream slowly eats its way through an alluvial level given up to herds of cattle and aquatic fowls; nothing can be more dreary; white sails occasionally enliven the silent waters, but no villages cheer the desert steppes." At Seville itself nothing appears more uninviting than this narrow, dirty, yellow stream, which both Moors and gypsies united in calling "the great river"—a name which it might have better deserved in the Roman period, when Spain had more forests and this river was navigable as far as Cordova. Under these circumstances, I resolved to follow the implied advice of the practical Englishman rather than that of the imaginative Italian, and took the railway; nor did I regret it, for although there are neither forests nor mountains between Seville and Cadiz, there is more to see that is novel than between any other two Spanish cities.

The immediate surroundings of Seville are green with gardens and vineyards, and olive and orange orchards. But the higher vegetation soon disappears, and the ground becomes level and marshy. Here, then, are bred those huge mosquitoes which pester one so in Seville, and which would win the prize in a musical and knightly contest with their Jersey and Long Island cousins. Still, there is plenty of grass, and every ten minutes may be seen a flock of sheep, or herds of cattle and horses. Here the Andalusian bull grazes peacefully, without dreaming of molesting the poor horses not far away. He is, in fact, ordinarily a harmless enough animal, and often, indeed, has to be tormented with sharp sticks and acids before he gets up enough ferocity to go into the ring in becoming style. I could not help thinking that these animals must suffer from the fierce sun and the sultry evaporations from the marshy soils on summer afternoons. As far as the eye can reach there is not a tree, nor even a brush to afford any shade. I now began to understand why the peasants, in coming to Seville or resting anywhere, take no pains to put their donkeys in the shade, but leave them in the broiling sun. It seemed cruel, but those animals, bred in the treeless plains, obviously don't know what shade is, and might possibly shy at it the first time! Some of them, however, might have come near one of those wooden boxes, ten feet high and five or six in width, which are the homes of the solitary men placed along the line of the railway at intervals. No fences are to be seen anywhere, but a hedge of cactus follows the road on both sides, its object being apparently to prevent the cattle from getting on the track. These hedgerows of prickly pear, with their yellow flowers, make lovely fences, nor do they, like other fences, need any spikes and broken glass on the top to prevent small boys from climbing over them. They are quite able to take care of themselves.

For miles and miles these are the only scenic features, excepting an occasional straw hut, a pool of stagnant water, or a wheat field which would seem big to one who had never been in our Western States. When the train stopped at the first station, everybody rushed to the windows, attracted by an extraordinary chaos of vociferation. I thought an accident had happened, but the mystery was soon explained. Our train was filled with soldiers returning home, and at every stopping-place the relatives had assembled to receive them. To judge by the truly Southern warmth of the receptions, they must have been absent a long time, for the mothers actually shrieked with delight. Other nations may be equally affectionate, but certainly they give no such evidence of it in public as these Spanish villagers and peasants did. Fathers, mothers, sisters, cousins, aunts, and sweethearts fairly fought for the soldiers as soon as they had stepped off the cars, and almost tore their uniforms from their bodies in their eagerness to get the first kiss and the first embrace. Finally, as the train moved away, they were seen dragging their hero homeward, the father's arm round the neck, the mother's round the waist, and the younger women carrying off his baggage triumphantly. The same scenes were enacted at the other stations, and I thus had an opportunity of seeing these country people such as one ordinarily gets only at the religious festivals.

As we approached Jerez, the home of the wine whose name the English have corrupted into Sherry because that is easier to pronounce than *Häreth*, the landscape, by a curious coincidence, became somewhat rolling, as in England, though without England's chief ornament—a treeless England. The vineyards immediately about Jerez are, however, flat, and I was told that the vines need no irrigation. I stopped over between two trains in order to see one or two of the famous bodegas, which are the only remarkable sights in this city of almost 60,000 inhabitants, many of whom are English or semi-English. The extraordinary ignorance of the ordinary Spaniard may be inferred from the fact that I had to ask three persons before I succeeded in being directed to the largest of these wine-firms—the industry to which Jerez owes its name and prosperity! In this establishment 700 workmen are employed at some seasons, everything being made on the premises, including the barrels. The wood for these barrels, however, has to be imported from America. Spain has only a quarter as much forest as Prussia, and less than half as much as Italy or France, and this scarcity of wood has for a long time seriously injured the ordinary Spanish wine trade, for the smaller wine-growers, being unable to purchase expensive casks, have been obliged to keep their wine in pig-skins, which, with the pitch that is used to stop up cracks, gives it such a disagreeable flavor that although the wine is intrinsically good—especially the Val de Peñas—one can hardly drink it until one has become reconciled to that gastronomic dissonance.

The danger of writing on a subject concerning which one is ignorant is illustrated by the remark in Mr. E. E. Hale's 'Seven Spanish Cities,' that "the guide-books and other superficial critics say that if more care were taken, the rough Spanish *vin du pays* might be much better than it is. But for me, I take such criticisms with a good deal of caution. I think the people on the ground are apt to understand their own business better than travellers do." But the *fact* is that they do *not*, as a rule, understand their business, although lately some of the larger growers have followed the example of foreigners who came and made excellent wines in Spain, by excluding unripe and inferior berries and tabooing the pig-skins. The ordinary Spaniard does not object to the pitch flavor of his *vin ordinaire*, simply because his gastronomic taste is not educated. As the famous Spanish novelist Mateo Aleman remarked two centuries and a half ago, these people "eat everything, as it were, with a garlic-tooth. . . . There are but few of them in whom the senses arrive at any perfection. . . . They are like dogs that devour the meat without tasting; or like the ostrich, that can swallow a red-hot horse-shoe." It is the same with olive oil as with wine. An English merchant at Seville told me that Spanish olive oil would be the best in the world if they knew how to make it. As it is, it has, like the ordinary wine, such a disagreeable flavor that most of it is unfit to export, and at the best restaurants in Spain a bottle of French olive oil is kept ostentatiously on the table for fastidious customers. Obviously, education would be wealth to the Spaniards. But they lack not only knowledge but capital and enterprise, and the result is that foreigners are at present invading Spain *en masse*, and working the rich mines in the mountains and the olive groves and vineyards.

To return for a moment to sherry—*that* wine does not suffer from slovenly manufacture and pig-skin storage. It has another enemy, more serious even than ignorance, and that is adul-

teration. There has never been a better illustration of the fact that honesty is the best policy—in the long run—than the fate of the sherry industry. Everybody knows what fortunes have been made on sherry wine; but those times seem to be past. Mr. Ingraham, the American Consul at Cadiz, prints in one of his reports the translation of a letter written by the Mayor of Jerez to the Civil Governor of the province of Cadiz. The Mayor complains that the condition of the wine trade in Jerez could not be more deplorable than it is. Capital bears no interest, the vineyards have no value, and the town has become poor. Twenty years ago 80 to 90 francs were paid per hectolitre, now only 13 to 14. The key to the change thus deplored by the Mayor lies in the fact that some firms began to import German alcohol, and to manufacture a vile, cheap compound which has injured the popularity of the wine and limited the sale of genuine sherry, which cannot be sold at any such price. Good sherry is still to be had—I tasted some excellent samples—but there is little market for it. The extent to which the adulteration of Spanish wine is carried on may be inferred from the fact that *twelve million dollars'* worth of German alcohol (made of potatoes and beets) is imported into Spain annually, of which Cadiz alone (the port of Jerez) got $880,000 in 1886! Thus the change from honest sherry to the rank compound of villanous stuffs usually served up under that name has benefited no one but the German distillers. It would seem as if a remedy for this state of affairs might be found.

After leaving Jerez, with its (literally) miles of sherry barrels piled up in rows like cannon balls, the proximity of the seacoast soon makes itself evident in the saline marshes and the breezes redolent of salt water and seaweeds. At Seville one sees at almost every street corner a man or woman with a basket filled with moderately sized lobster-like claws, which are eaten with great avidity by the Spaniards of all classes. And no wonder, for they are excellent—much better than real lobsters, and almost as delicate in flavor as the "Oder Krebse" one gets in Berlin, or the Oregon crawfish. I often wondered what became of the bodies of these *cangrejos*, but could not find anything about them in the guide-books. But everything in its place! In speaking of the salt marshes, just referred to, Ford says: "In these marshes and along the coast breed innumerable small crabs, *cangrejos*, whose fore-claws are delicious and form titbits for the Andalusian ichthyophile. These *bocas de la Isla* are torn off from the living animal, who is then turned adrift that the claws may grow again." Here is another opening for a Spanish Henry Bergh. Still, it is a nice question of casuistry whether the *cangrejos* would rather be robbed of their claws only or be killed "outright." It would doubtless be a lingering death, involving more suffering than the tearing out of the claws, and with this sophistry the epicure may ease his conscience.

Presently, a most unique sight meets the eye of the tourist, which makes him imagine he has suddenly arrived in Egypt. As far as the eye can reach, the landscape is picturesquely studded with small, snow-white pyramids. Around each pyramid the ground is divided into square plots, like flower-beds, but dug out and filled with salt water, which is conducted thither by numerous narrow canals. That explains the mystery. The pyramids are solid salt, and the shallow beds are the pans in which the salt water evaporates. The salt crystallizes first along the edges of the pans, and looks very pretty—like a border of fresh-fallen snow. At Cadiz I was informed that ordinarily it takes ten or twelve days for one of these pans to evaporate, but when the African wind called the levanter blows, three or four days suffice. As the dry, blustering levanter is greatly disliked in Cadiz, we have here a literal confirmation of the saying that it is an ill wind that blows no one good. The importance and extent of this salt industry may be inferred from the fact that it supports a whole town of 27,000 souls, San Fernando, ten miles from Cadiz.

And now, on approaching "fair Cadiz, rising o'er the dark blue sea," it is absolutely incumbent on the tourist to take his eye away from the window and turn it inwards—to indulge in historical reminiscences and enjoy the thrills of archaic emotion. For is he not coming to a city which was founded by Hercules himself, eleven hundred years before Christ, and which is therefore half as old as the world itself, according to the Hebrew legends?—a city which supplied the ancient Roman epicures and amusement-seekers with salt-fish and dancing-girls; to which the ancient philosophers resorted to study the curious phenomenon of the tides, and which was long considered the end of the world.

It seems strange that it never occurred to any one—so far as I know—to call Cadiz the Spanish Venice. Like Venice, it lies at sea—seven miles at sea; and had the inhabitants of Cadiz wished it, they might easily have had canals instead of streets, for most of the streets begin and end at the ocean. Coming straight from the ultra-Moorish Seville, with its narrow, winding streets, one finds it strange that the neighboring Cadiz, which also belonged to the Moors more than five hundred years, should have so much wider and straighter streets, and few or no patios or other Moorish characteristics. The explanation lies in the fact that almost the whole town was newly built and laid out after the English bombardment in 1596. Cadiz, being practically on an island, is much cooler than Seville—indeed, many Seville families come here to spend the summer—so that Moorish patios are not essential for comfort, and one might say that their places are taken by the curious *miradores*, or turrets on the tops of the houses, whence the natives can enjoy the sea-breezes and a magnificent view at the same time. The blue of the sky and the sea is no deeper at Cadiz than at Malaga or at Marseilles, and the reason, therefore, why it is always so much emphasized in descriptions of Cadiz is because it obtrudes itself so much more vividly than elsewhere, owing to the entire absence of smoke in the air, and to the glaring white of the houses, which are constantly being whitewashed. It is difficult to understand the motive of this eternal, monotonous whitewashing in Spain. Religious fanaticism probably had something to do with it—the desire to hide and destroy the Moorish ornaments on the buildings. Or else the habit originated in the mistaken notion that because black absorbs the heat of the sun, white ought to afford a grateful relief. No doubt white is cool, but in large masses it is the most dazzling and intolerable of all hues. If snow ever fell in southern Spain, the inhabitants might be able to infer from the phenomenon of snow-blindness that the glare of white houses is very injurious to the eyes; or, if they were better educated, the same conclusion would be forced on them by the remarkable frequency of weakness or diseases of the eye. Foreigners, too, at Cadiz, are very apt to suffer from headache, which can be readily traced to the nerves of the eye. Why not "paint the town"—if not "red," at any rate a sombre blue or green? One never hears of such a thing as "grass-blindness." But perhaps yellow, the complementary color of the circumambient blue, would be the most poetic tint for Cadiz.

It is the custom of tourists to hurry through Cadiz, making it a mere station on their way to Gibraltar or Tangier. From the mere sight-seer's point of view this may be justifiable, for the cathedral is not a remarkable specimen of architecture, and of works of art there is only one that engages the attention of tourists—the last Murillo, in the former convent of San Francisco, in painting which the artist fell from the scaffolding and sustained fatal injuries. It must also be admitted that Cadiz is one of the noisiest cities in Spain at all hours of the day and night except between one and five A. M., the street-criers atoning by their abundance and loudness for the absence of the *sereno's* song, which has been suppressed, notwithstanding the opposition of the lower classes, who have no clocks to tell them the hour of the night. But, aside from these drawbacks, Cadiz is one of the pleasantest places in Spain to spend a week in. It is a very clean city, the beggar nuisance hardly exists, the society is the most cultivated in Spain outside of Madrid and Barcelona, the women the most graceful in Andalusia, and the Alameda, where everybody promenades in the evening, the coolest and the finest in Spain, commanding lovely views of the ocean, which is by no means always as blue as it is painted, but has its zones of dark green and purplish, according to the light. And in a walk along the sea-walls surrounding Cadiz, one meets with many unique sights, such as the large mercantile storehouses, sailors from all parts of the world, including a sprinkling of negroes and Moors, betokening the neighborhood of Africa, troops of soldiers always walking *prestissimo*, and, finally, the numerous fishermen sitting unprotected in the broiling sun, which would be insufferable were it not for the sea breeze. The fish they catch are of the most delicious flavor, especially when one gets them hot at the numerous small fish kitchens opening on the street, where they are fried in large kettles of olive oil. I tried these on the recommendation of the German Consul, who said that, however objectionable the original flavor of Spanish olive oil might be, this flavor entirely disappears after a few dozen fish have been fried in it. It then becomes as clear as water, and the fish fried in it are as crisp and as delicate in flavor as the best *chef* could make them. But that, the Consul added, was about the only thing fit to eat one could get in Cadiz, and as for himself, he chiefly lived on imported canned meats. Almost all the fresh meat is brought from Africa (Tangier), and is by no means of superior quality, while its price is so enhanced by the duty levied on all edibles at the city gates that only the wealthy can afford to eat meat—a chicken, for instance, costing 75 cents in the market.

This tax on the most necessary articles of food, which makes living so much more expensive to all classes (not only in Spain, but in some other European countries), has always seemed to me protectionism gone mad, and made me look upon smugglers as the only upholders of natural law and human rights against tyrannic and idiotic legislation. Sitting on a bench in front of the hotel one day, a man accosted me in a mysterious manner, and offered me a splendid lot of fine cigars at a ridiculous price. Of course he was a smuggler, and I was almost sorry that I don't smoke. The worst of these imposts is that neither the city nor the state derives any considerable benefit from them. Most of the money goes into the private pockets of the officials. Southern Spain is overrun with smugglers, whose trade is the safest one in the world, for they simply share their

plunder with the officials and go scot-free wherever they please. An incident illustrating their methods was told me on good authority. There is an old law according to which a foreign vessel that enters the harbor of Cadiz without having undergone certain formalities of registering at a certain place, can be seized and fined to the amount of ten times the duty that would be levied on the goods. One day a German vessel entered the harbor without having complied with these regulations, through no fault of the captain's, but because the official could not be found. Although the vessel was not bound for Cadiz, but simply stopped there to wait for telegraphic orders before proceeding on its course, it was seized, and the captain was informed that he would have to pay a fine running into the hundred thousand. He appealed to the consul, who immediately went to Madrid, where he found that the officials, from lowest to highest, had already figured out what would be their share of the plunder; and if he had not been backed up by the embassy of his country, and assumed a threatening attitude, his mission would have been a failure.

From time immemorial it has been the custom in Spain for every one, beginning with kings and ecclesiastics, to plunder and cheat subordinates, who in turn could hardly avoid following their example; and thus the thing has gone on from one end of the chain to the other. My own experiences having been entirely of an unofficial nature, my impressions of the Spaniards are almost all of a favorable nature, except in the matter of bull-fights and occasional instances of stupendous ignorance—which the present methods of education are hardly likely to modify; for I am told that even in Cadiz, cultivated by constant contact with foreigners, boys of six and of sixteen years are put into the same classes, studying the same lessons. Yet the kernel of the Spanish people is sound and sweet. I have travelled a good deal, but nowhere have I found well-dressed people so willing to go several blocks out of their way to direct you to a certain street. They constantly do it, however much you may protest. At the popular festivals, again, the most perfect order prevails, and one never sees so much as an angry look. The peasants are extremely polite and good-natured. When I left Seville, a score of peasants waited until a dozen foreigners had bought their tickets, although they were at the window first. I do not think such a thing would happen anywhere else, nor do I believe that, in the same class, one could witness in any other country a little idyllic scene such as I saw one day in Seville. I was sitting in the Alameda, and on the opposite side of the bench sat a nurse with a lovely black-eyed boy of seven years. Presently three ragged boys, a year or two older, came along, one of whom held a rose in his hand. Seeing the boy in the nurse's lap, he approached him, put the rose in his hand, and rejoined his companions, smiling, before the nurse had time to say, "Gracias." Such abundant instances of amiability and innate love of beauty could not be found in a nation which is corrupted in its core.

HENRY T. FINCK.

Correspondence.

POLITICAL COURAGE.

TO THE EDITOR OF THE NATION:

SIR: An editorial in *Puck* (a journal which has done the cause of reform yeoman service) justifying, while regretting, the President's civil-service reform course, seems to me to mark a departure from the Independent standpoint too decided to remain unnoticed. That the President's course in this matter has been unfortunate, if we entirely ignore his relations to his party, and look only to his full patriotic duty—and to this alone he should have looked—I presume that every Independent would admit; but, placing the matter upon the far lower ground of party expediency, it seems to me equally unfortunate and indefensible. I hold that the history of Mr. Cleveland's Presidency demonstrates beyond question that political courage is not only good statesmanship, but good "politics," in the vulgar sense of that word; and it is so proved, no less by his unequivocal record on the silver, tariff, and pension questions than by his doubtful record on the question of civil-service reform.

(1.) Very shortly after his election, and, I think, before his inauguration, the country was surprised, the Democratic party was dumbfounded, by a letter on the silver question advocating fearlessly views opposed to those held by the large majority of the party leaders. If my memory serves me, Mr. Henry Watterson, in a double-leaded editorial, characterized the step as a dangerous and reckless proceeding, and as calculated to disrupt the party. What has been the outcome? The silver question is fast taking its place with the Southern question and the Greenback question as a dead issue; it has given in the Senate but one spasmodic kick since, and the Great West, the home of the silver "idea," joined clamorously in the cry for the President's renomination.

(2.) A little later, the President is confronted by a pension bill, reported by a Democratic Committee and passed by a large majority in a Democratic House. Without a thought of political expediency, with a certainty of running counter to a large organized body of those directly interested, he vetoed the bill. Then followed the same kind of outcry he had heard before: he had imperilled his chances for renomination; he had imperilled his chances for reëlection. Undaunted, he applied the same unsparing veto to numerous bills for public buildings, etc., every one of which angered some community where votes will be needed in November. What has been the outcome of this? After a few months, his party has caught up with him, and, in National Convention assembled, sustains his action unanimously.

(3.) A third time he had and seized the opportunity to demonstrate a leader's powers. I dare say that, had he submitted his memorable tariff message to a party caucus, and asked an opinion as to the advisability of sending it, a decided majority would have requested him to retain it—at least until after the election. Upon several occasions the Speaker of the House had lost the golden opportunity of proving his statesmanship by rising to the same great occasion. Not so the President. The message was sent; Democratic protectionists and Democratic reformers with a decided predilection for party success alike deplored his rashness; it was the old story—party disruption, a sure election needlessly endangered, a tyro's bravado. And now, finally, what has been the outcome of this? With a bare working majority—a majority far less than that held in either of the two preceding Congresses in which even all consideration of a tariff bill had been defeated—a tariff bill more pronounced in its nature than any yet offered, though still a moderate measure, passes with ease and certainty.

The explanation for this is to be found in the fact that a great unorganized mass will quickly assume definite shape when once it becomes conscious of a purpose. Within large limits, it was the President's privilege and opportunity to develop his party's policy, and, except in one case, he has done his duty manfully. The great mass of his party, originally indifferent, have quickly recognized his leadership, and the so-called party leaders have had to follow. I firmly believe that the President's career shows conclusively that he has frittered away the opportunity to range his party at his back on the question of civil-service reform, as he has ranged it on other questions. I realize the difficulty of procuring competent and honest assistants; I realize that he has done the cause, as it is, substantial service; but I still believe that had his own practice been as emphatic and unmistakable as his utterance, had the early lapses been met with his native vigor, the reform sentiment would have spread with a rapidity exceeding all expectation.

When I say that his fragmentary reform is not only bad statesmanship, but bad "politics," I have in mind especially Indiana. I am told that the State is considered very doubtful. It is a serious thing, if true; and if true, it is due to two causes: first, the alienation of the Independent vote; second, dissatisfaction over the distribution of offices. In the very State where the most astute means were taken to make the result a foregone conclusion, the inevitable weakness of "politics" has been most thoroughly exposed.

Nevertheless, on a review of the entire field, with a full admission of the President's shortcomings and errors—and he has made other errors to which I have not alluded—I still cannot see how any Independent can hesitate as to his duty. The President's personality has been the most healthful influence our public life has felt for years. He has done a service which may be justly compared to that of the Supreme Bench in bringing back our minds to the fundamental principles of the Constitution. In homely rhetoric, but with irresistible clearness and force, he has opened to us paths that have long since been blocked and forgotten. The political atmosphere has been purified in a way that will make Blaine, paternal government, limitless extravagance, bloody shirt, absurd four years hence—if, indeed, the sudden change of base in the Senate on the tariff does not make them partly so already. And, whether the President be reëlected or not, the long run will conclusively prove that, throughout his career, political expediency has uniformly coincided with the highest demands of public duty, and that his strength is due as fully to his fearless attitude on the tariff, the silver, and the pension questions, as his weakness is due to his vacillation on the question of civil-service reform.

F.

LOUISVILLE, KY., August 14, 1888.

A MORAL CONTEST.

TO THE EDITOR OF THE NATION:

SIR: In the course of time political questions are decided by their moral weight. The foundation of national life is morality, and its vitality depends upon the strength of this foundation. Free institutions are of a higher value only for the reason that they allow a freer scope of development to all the nobler moral qualities of man. The greatest danger threatening such institutions springs from sins against the moral law. There is no amount of wealth in this world, there is no protection afforded by political powers, that could guard against ruin a nation whose life-blood was poisoned by corruption. The economic questions that at present

agitate our social and political life are not merely questions of dollars and cents. There is a moral side in them that makes them all-powerful enemies of existing wrongs; it is their moral weight that warrants victory to them and causes waste of life to those who venture futile struggles against them. It is through their moral side that they are intimately linked with the happiness of each individual, with everything that is most dear to us, with the welfare of this nation and all the grand possibilities of its future.

Expressions such as "A reduction of the tariff will ruin the people," really mean nothing. They are convenient bridges for those who cannot swim in the sea of argument. They are used by people who do not think, or else they would not dare to utter such a despicable opinion of the vitality of this nation. They are the greatest *testimonium paupertatis* for those who have the courage to utter them; they are an insult to the pride of the nation. A nation like the United States never will be ruined by the loss of a few dollars. The real issue of the present campaign is not a tariff reduction of either 4½ per cent. or 2 per cent., but it is the same issue to-day that it was yesterday and four years ago: it is the fight for or against corruption. Everything that relates to protection means corruption. The history of the tariff is a history of corruption; the system of taxation on which it is based is a system of corruption, beyond the control of the Government and the people; its result—the surplus—is a continual source of corruption; and its most conspicuous advocate is the very prototype of corruption. No industry, nay, no species of life whatever, can thrive under a protection that is a synonym of corruption.

The present campaign is not merely a contest for less taxation, it is a contest for the purity, the glory, and the liberties of the nation that shall not be thrown as a carrion to a few crows; it is a fight of law and justice against the anarchy of dishonesty; it is the fight of the patriot who would sacrifice everything, his life and his property, to the welfare of this country, against the friend of prostitution, who would sell for money the most precious possessions of humanity.

Who will be the victor? LOUIS KA.

BALTIMORE, August 13, 1888.

PARTY NAMES AND PARTY AIMS.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of the 9th inst. contained two articles of special interest, which made me wish they could be read and laid to heart by every man who has brains enough to do his own thinking, or who dares to say his soul is his own. I allude to those entitled "Laodicean Politics" and "Campaign Lying."

Every man who has any just conception of his duties and responsibilities as a citizen must be often tempted to lift up his voice against the endless devices of demagogues for influencing the popular vote. But while his indignation is excited by the thought that great masses of people can be swayed by the mere utterance of plausible lies, which would be transparent if men would but take the trouble to think for themselves, yet the obvious fact that they will not do so, but will greedily swallow any garbage their party leaders deal out to them, but refuse to taste of the most wholesome food without their sanction, makes him despair of effecting any good result by addressing them as reasonable beings. He feels, too, that any attempt he may make to set them right by a simple statement of obvious truths, will be attributed to precisely the same spirit of one-sided partisanship which he condemns in others, and he shrinks from the thought of thus demeaning himself.

The blind attachment to a mere party name, without investigation of the objects of its leaders, is productive of more real injury to the cause of just and wise government than any other source of evil. As long as a mere party name has weight in the popular mind, it will be made use of by knaves as a motive power for the accomplishment of their ends. A moment's thought should suffice to convince any one of the truth so ably set forth in the articles alluded to, that a "party" is only to be judged by its avowed policy. If its objects are changed, it is worse than folly to cling to the vehicle which new leaders are dragging to destruction, after working their way into the harness, like Munchausen's wolf, by devouring the horse. And yet there are tens of thousands of men clamoring to-day for measures which the original Republican leaders would abjure, but which those who have assumed their places are hoping to carry through by putting them forward as the policy of the Republican party.

A party is like a wave of the sea. Its power is as irresistible for evil as for good, but every individual drop of the human wave bears a weight of responsibility, born of the God-given power of judgment, which he is bound to exercise, instead of suffering himself to be blindly driven by the tempest of party spirit.

C.

MINNEAPOLIS, August 13, 1888.

MR. BLAINE "COACHING" THE VOTER.

TO THE EDITOR OF THE NATION:

SIR: Surely no more friendly wish was ever uttered in behalf of the workingmen of the United States than that of Mr. Blaine at the ovation given him in New York upon his return from England. "The campaign on which you are about to enter should be prefaced, if that were possible, by every voter in the United States seeing what I have seen," etc. Mr. Blaine saw one of the most beautiful of countries in the pleasantest of manners. What voter but could wish to pass by easy stages through the green lanes of England to the hills and lakes of Scotland? Then how merrily must the horn of the coachman have sounded as Mr. Blaine and his party wended their way through the Trosachs. The trip down the Caledonian canal, the Trosachs, and the Scottish lakes is, perhaps, the finest of its kind in the world. I would recommend it to the voter as being far finer than the trip up the Rhine. But it is probable that Mr. Blaine had in mind something else than the scenery of the country through which he lately coached with Mr. Carnegie, and that he referred to the industrial conditions of England. Mr. Blaine did not satisfy the curiosity of his hearers in this matter of what he saw, and so I beg leave to supply the want in the language of Thomas Erskine May:

"The fruits of free trade are to be seen in the marvellous development of British industry. England will ever hold in grateful remembrance the names of the foremost promoters of this new policy—of Huskisson, Poulett, Thomson, Hume, Villiers, and Labouchere—of Cobden and Bright—of Peel and Gladstone; but let her not forget that their fruitful statesmanship was quickened by the life of freedom."

That is what Mr. Blaine saw as the result of free trade. Had Mr. Blaine seen England before the advent of the policy of free trade, and while she was still shielded by walls of protection, this (I again prefer Sir Erskine's language) is the scene he would have pictured to his hearers:

"Our former commercial policy was founded on monopolies and artificial protections and encouragements—maintained for the benefit of the few, at the expense of the many. . . . Every produce and manufacture of England was protected, by high duties or prohibitions, against the competition of imported commodities of the like nature. Many exports were encouraged by bounties and drawbacks. Every one sought protection or encouragement for himself—utterly regardless of the welfare of others. The protected interests were favored by the State, while the whole community suffered from prices artificially raised and industry unnaturally disturbed. This selfish and illiberal policy found support in erroneous doctrines of political economy; but its foundation was narrow self-interest."

The policy here described is the one that Mr. Blaine is so anxious to champion. Certainly he is the best-fitted man in the country to set forth the merits of this defunct British policy. Is it a compliment to American workingmen to tell them that the one thing to save them from pauperism is to adopt the very policy that did make of English workingmen paupers? Even a sea voyage is not sufficient to make this policy healthy in America.

Mr. Blaine also said that the wages of the American workingman could not be reduced without his consent. And, pray, why not? If they cannot be reduced without his consent, how is it that the wages of American iron-workers are only about one-half as much in and around Pittsburgh as they are at Chicago? One of two things must follow from such a condition of things. Either the iron-workers of Pittsburgh are paupers or those of Chicago are aristocrats. A student of political economy would explain the difference of wages in Pittsburgh and Chicago by the natural law of supply and demand, but such a student would be reminded that the laws of nature find no place under a protective policy. There is something rotten in Denmark when such conditions arise under a protective tariff of 47 per cent. ad valorem.

Mr. Blaine reminded his hearers not to forget the true issue of this campaign. This is what he said, but in saying it he sought to raise a cry and not to meet an issue. Mr. Cleveland has done the country one of his greatest political services by making a true, live issue for both parties, and Mr. Blaine will also render the country a service if, in his campaigning, he will meet that issue fairly and squarely.

In conclusion I will say that if every voter, even after the campaign is over, can go and see what Mr. Blaine saw before it, he will find it most refreshing and pleasing, and perhaps learn that a protective tariff is not a cure-all.

Y.

CHEAP CLOTHING AGAIN.

TO THE EDITOR OF THE NATION:

SIR: Gen. Harrison's objection to cheap clothing (that it would reduce wages) seems to you hard of comprehension for the reason which you state in the *Nation* of August 9, in an editorial entitled "The New View of Cheapness." This reason, as I understand you, is that clothing has been very much reduced in price during the last twenty-five years and wages not reduced in the same time. But certainly Gen. Harrison would not object to such a reduction of price, for it is due to improved methods of transacting business and to the invention of labor-saving machinery, and does not involve a cheaper man or woman under the clothing.

But the reduction of price which you desire to procure by a reduction of the tariff, and to which Gen. Harrison objects, must be obtained, it seems to me, either by going to a foreign country for clothing, in which case some one

here is thrown out of employment, or by paying a less price here, which means that some one here receives less. In the latter case I should like to ask you who is to receive less if not the laborer? Do not all advocates of free trade for this country desire to purchase various articles (except sugar) for less than they can be produced by American labor as at present rewarded, and therefore do they not wish to either reduce wages or expel industries?

A. H.

BOSTON, August 11, 1888.

[No, kind friend to American industry. It does not follow at all that we should go to foreign countries for clothing, or even for cloth. In order to get cheaper clothing, it is only necessary to get cheaper wool. In point of fact, we import the cloth pretty liberally now. We imported of woollen goods last year (exclusive of carpets) $43,500,000 worth. We should like to see a larger proportion of these goods made at home, as manifestly they might be if the American manufacturer were not handicapped by duties averaging 36.08 per cent. on his raw material.—ED. NATION.]

WHO PAYS THE DUTIES.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call your attention to a paragraph on page 270 of Taswell-Langmead's 'English Constitutional History' (2d ed.), which may be recommended to those interested in the Mills bill. The passage is as follows:

"Four years later, in 1343 (17 Edward III.), the King, being much pressed for money, assembled, with the concurrence of the Lords, a council of merchants, and procured from them, without the assent of the Commons, a grant of forty shillings on every sack of wool that should be exported. It seems to have been contended that this duty did not fall upon the people, but upon the foreign purchaser; but the Commons, in their remonstrance, showed that they possessed some rudimentary knowledge of the principles of political economy, alleging that the tax actually fell on the seller, the foreign merchants refusing to give the accustomed price on account of the additional duty. . . . In 1363, however, upon the petition of the Commons, all grants of subsidies upon wool made by merchants without the consent of Parliament were declared void by statute."

Though this is about an export duty, it shows how many centuries ago it is that the refutation, in the minds of practical men, was made clear of that false argument that foreign merchants pay the taxes we may levy on foreign commerce. But in spite of this lesson to be learned from the Commoners of England in their fight against the unconstitutional action of their King, the same old fallacy is even now at times advanced in favor of those who wish to extend monopolies at the expense of our public. Very respectfully,

OSGOOD SMITH.

AUGUST 15, 1888.

H. H. RICHARDSON.

TO THE EDITOR OF THE NATION:

SIR: I have read your article on the late H. H. Richardson with much pleasure, and can, perhaps, add a little to it. In regard to the rebellion which was raised in the École des Beaux-Arts on the appointment of Viollet-le-Duc as lecturer, Mr. Richardson has often told me the circumstance which you mention, that the protest of the students was written in his room; with the additional one, that, although he took no part in the composition of the protest, he went with the other students who carried it to the Tuileries to lay it before the Emperor, and, while looking on at the demonstration, was arrested, with others, and taken to the police-station, where he remained till late at night, when Count Nieuwerkerke, then Minister of Fine Arts, made his appearance and ordered the release of the captives. Although he was for some time the only American in the School of Fine Arts, at least in the section of architecture, and was so completely a Frenchman in all his professional relations that, on leaving the School, he was offered a "marrying position" as one of the most promising of the young French architects, he never forgot his own country, and, during his seven years of student life, always declined to enter the *concours* for the medals and prizes which were open to him, preferring, as he said, to get as great a variety of work in design as possible, as a preparation for American practice, rather than spend six months on a single problem as a competitor for a prize.

As to his work in the School, it seems to be taken for granted by every one who has written about him that, after the first year or two in this country, he abandoned entirely what he had been taught, except, of course, the mental discipline that he had gained, and turned to a new style of design, which he had to evolve mainly out of his inner consciousness. There is a good deal of truth in this view, but it appears to me to be not entirely correct, and to do injustice to the influence of his patron, André, whose peculiarities of style, and even certain pet *motifs*, are frequently suggested in Richardson's work of all periods, although the rendering is very different from that which André would have employed, and the part which his old master had in his inspiration was probably unsuspected by Richardson himself. In fact, André's ideas were so congenial to Richardson's tastes that hardly any one else in Paris could have done so much to favor him. If there was any other man suited to be his teacher, it would have been Henri Labrouste, whose simplicity and originality were as dear to Richardson as the "bigness," the "stuff," the broad contrasts of light and shadow, and the largeness of detail which André impresses on all his best pupils. The cavernous triple portals, the all-embracing arches, the deep and richly decorated voussoirs, in everything, except the details, are André's as well as Richardson's, and belonged to certain Romanesque architects six or seven hundred years before their two modern disciples took pleasure in them.

It is, by the way, a little curious to recall the steps by which Richardson was attracted to the adoption of the Romanesque as a complete style. His first work in this country was classic, the Boston and Albany Railroad office at Springfield being as purely Italian Renaissance as possible. A little later came his commissions for the Medford church, and the two churches at Springfield, which were almost necessarily Gothic. About the same time he had some secular buildings to do, among them a market-house in New York. For this he made a design composed of huge round arches, which might have come direct from André, and the same fondness for the sweep and simplicity of the semicircular arch showed itself wherever he thought it admissible, even as a relieving arch. One day he said to me that he never could quite like pointed arches, even in a church. "They always had a pinched look," he thought, and his Brattle Square Church in Boston, for which he at first sometimes felt himself called upon to apologize, showed the sincerity of his aversion to them, which ripened into a profound and loving study of the Romanesque, and the adoption of it, not only for churches, but secular buildings. The delicacy of his feeling for breadth and silhouette, as well as proportion and color, was surprising in a man so impetuous and enthusiastic. "Don't stick shelves around it," was the common observation by which he quelled our inclination to exuberance in string-courses, and a "tormented" look was that which he disliked most about a building.

I have heard it said that he was very catholic in his tastes, and interested himself in a great variety of subjects. If so, it must have been in his later years. When I knew him, he thought and talked and dreamed nothing but architecture—and his family. Nearly everything was converted in his mind into a possible architectural suggestion. He was once asked to make a design for the organ-case for the Brattle Square Church, and deputed me to study the construction of organs as a source of ideas. The most conspicuous peculiarity about the instrument appeared to me to be the swell-box, which I duly described to Mr. Richardson. "Something that opens and shuts to vary the quantity of sound," he mused. "Why would it not be a good idea," he continued, "to put a gigantic head on the front of the organ-case, with its mouth to open and shut to form the swell?" He was more than half in earnest, and I think was only dissuaded from incorporating some such idea with his design by the consideration of the effect it would produce upon the children in the congregation.

T. M. CLARK.

178 DEVONSHIRE STREET, BOSTON, August 18.

"*SUPPOSITIOUS.*"

TO THE EDITOR OF THE NATION:

SIR: Old as is this word, and often as it has been used, it has not yet, I believe, found a place in any dictionary. Some notion of the frequency with which it occurs in literature may be formed from the ensuing quotations:

"The testimony produced is none of his: It is *suppositious* and a counterfeit." Bp. Richard Mountagu, *Invocation of Saints* (1624), p. 212.

"A *suppositious* fragment, taken out of the Constitutions of Clemens." Abp. John Williams (1636), *Holy Table* (1637), p. 168.

"Dionysius Areopagita, an Author, however, said to be *suppositious*," etc. William Sclater (1652), *Civil Magistracy by Divine Authority* (1653), p. 10.

"Their uselesse, *suppositious*, loose, and illegitimate Directory." Bp. John Gauden, *Considerations*, etc. (1661), p. 6.

"There is no great difficulty in discovering that these Letters were *suppositious*, and not written by Ung-can." Dr. Johnson, *Lobo's Voyage to Abyssinia*, etc. (1735), p. 243.

"If he had intention of adopting a *suppositious* child, he would have fixed upon a boy, rather than a girl." Goldsmith (1769), *History of Rome* (1786), Vol. I., p. 148.

"The vanity of the ancients . . . first led them to the invention of *suppositious* cases." John Lawrence (1797), in the *Monthly Magazine*, Vol. XLVI., p. 112 (1818).

"To come, however, to these *suppositious* epistles (which remind us of 'the genuine correspondence of the celebrated Dr. Solomon')," etc. *Quarterly Review*, Vol. XII., p. 74 (1818).

"A *suppositious* dialogue;" "*suppositious* proofs." Professor H. H. Wilson, *Select Specimens of the Theatre of the Hindus*, Vol. I., pp. 14, 65 (1827).

"They . . . almost always added to their improved editions some *suppositious* pieces which claimed to be written by the original author." "This *suppositious* chronicle forms a kind of philosophy of history," etc. William Taylor, of Norwich, *Historic Survey of German Poetry* (1830), Vol. II., pp. 119, 295. At p. 314 of the same volume, Taylor has *suppositi-tious*.

The word in question is often also found in

the pages of less known authors whom it seems unnecessary to mention.

Suppositítious we took from the Latin *suppositítius* or *suppositícius*, comparable with which are *adscripticius*, *adventicius*, *collaticius*, *collecticius*, *commenticius*, *conducticius*, etc., etc. Such an adjective is based on a supine; and its termination expresses manner of origin. It is singular, therefore, that scholars like Bp. Mountagu and Abp. Williams, for instance, should have elected, instead of *suppositítious*, *suppositious*, which, answering to the factitious *suppositiosus*, from the stem *suppositio[n]-+-osus*, should denote fulness or abundance of what is signified by *suppositio*. Actual adjectives similar to *suppositiosus* are seen in *ambitiosus*, *contentiosus*, *seditiosus*, and *superstitiosus*. This pedagoguery must be pardoned. It is risked in preference to possible obscurity.

Except to import "fraudulently substituted," as, for example, when qualifying *child*, *suppositítious* is hardly authorized by good usage. Mr. Dickens, in his 'Little Dorrit,' 'Great Expectations,' 'Our Mutual Friend,' and elsewhere, makes it equivalent to "supposed," but with dubious warrant, old or recent.

What may be called, for distinction, the Latinistic *to suppose*, akin, in sense, to *suppositítious* and the ineligible *suppositious*, is defined by Dr. Johnson, "to put one thing, by fraud, in the place of another," but is left unexemplified; and his editors, Archdeacon Todd and Dr. Latham, go no further. It is not very unusual, however; nor are the related *supposite* and *supposition* unknown. Proofs here follow:

"Finding his wife Hyperia, that, in like manner, was delivered, but of a dead child, he *supposed* this in the stead." "Your nephew dyed at Sea, and . . . I *supposed* my sonne in his place, who was receiv'd for him; and ever since he has beene bred as if he had beene the true Tygranes." Anon., *Ariana* (1636), pp. 77, 203.

"No *supposed*, false, subintroduced God or Gods." Bp. Richard Mountagu (died 1641), *Acts and Monuments*, etc. (1642), p. 11.

"The Philistines would not suffer the feet of men to tread upon that threshold upon which their but fictitious and *supposed* Deitie had fallen." Rev. William Jenkyn, *The Stil-Destroyer* (1645), p. 23.

"He was then in a place where they understood nothing better than *supposing* of false titles, and never remember any reasons but such as they know will please their Clients." Anon., *The Comical History of Francion* (1655), Books I.-III., p. 62.

"What he brings of the *supposite* and imaginary causes of Paul, Barnabas, and Peter, proves," etc. Rev. Dr. Robert Bailie (1653), *The Disswasive . . . vindicated* (1655), p. 21.

"I beleeve I am not blameable for making this *supposition*" (of my sonne). Anon., *Ariana* (1636), p. 203. See the second quotation from this work, *supra*.

Quotations are added for several more words, equally new to lexicography, derived from *supponere*:

"Hence there can be no difficulty in the meaning of the word *Suppositality*, which is the Abstract of the *Suppositum*." Rev. John Serjeant, *Solid Philosophy* (1697), p. 99. Dr. South, too, has *suppositality*. *Supposital*, which it presumes, I have not met with.

"Whether (in any art or science whatsoever) a bare Hypothesis, or sole *suppositary* argument, may not be gratis, and, with the same facility and authority, be denyed, as it is affirmed." Rev. John Gaule, *The Mag-astro-mancer, or the Magical Astrological Diviner posed and puzzled* (1652), p. 107.

"Witnesse, for instance sake, those queries, whither God be materia prima, and whither Christs divinitie might not *suppositate* a fly." Rev. John Doughty (1627), *A Discourse*, etc. (1628), p. 12.

"Passions, as Actions, are of Persons or *Suppositi*." Dr. Richard Burthogge (1674), *Causa Dei* (1675), p. 55.

Copious beyond the conception of all but very diligent readers was the experimental vocabulary of bygone times. Superficial observers are wont to credit our own age with extraordinary addiction to the misusage of new terms. Yet, as can have escaped no one accustomed to incursions into the dark corners of old libraries, scientific technicalities apart, the seventeenth century was no whit behind the nineteenth in opulence of verbal innovation.—Your obedient servant,

F. H.

MARLESFORD, ENGLAND, July 28, 1888.

Notes.

A NEW edition, the fourth, of that excellent English handbook, 'Descriptive Astronomy,' will be published next year; and its author, Mr. George F. Chambers of Eastbourne, Sussex, recognizing that a book of such character must necessarily have many general defects, as well as contain a certain number of errors, notifies the astronomical world that he is prepared to welcome suggestions and corrigenda from any and every quarter.

G. P. Putnam's Sons will publish immediately the President's Message in large type, small quarto, with sixteen full-page moral and graphic illustrations from original designs by Thomas Nast. The "Questions of the Day" edition of the President's Message, with annotations by R. R. Bowker, which has been delayed for some important additional material, will be ready about the same time.

G. S. Fellows & Co., New York, announce 'Protection Echoes from the Capitol,' "containing 1,200 aphorisms and leading principles of the protective policy," by Thos. H. McKee; and 'Memory Systems, New and Old,' by A. E. Middleton.

J. B. Lippincott Co. have in press 'An Elementary Treatise on Human Anatomy,' by Prof. Joseph Leidy; 'Inebriety: its Causes, its Results, its Remedy,' by Franklin D. Clum, M.D.; 'Tenure and Toil; or, Rights and Wrongs of Property and Labor,' by John Gibbons; 'Embroidery and Lace,' from the French of Ernest Lefebvre; 'Jesus in Modern Life,' by Algernon S. Logan; 'The Writer's Handbook'; 'A Marriage of Shadows, and Other Poems,' by Margaret Veley; 'Sinfire and Douglas Duane,' by Julian Hawthorne; 'The Owl's Nest,' from the German of E. Marlitt; 'Memoirs of a Royalist,' by M. de Falloux; 'Life of Henry M. Stanley,' by the Rev. H. W. Little; and 'With the Camel Corps up the Nile,' by Count Gleichen.

'The Pillars of Society, and Other Plays,' by Henrik Ibsen, edited by Havelock Ellis, will be the September volume in the "Camelot Series"; 'Poems by Southey,' edited by Sidney R. Thompson, in the "Canterbury Poets"; a 'Life of Bunyan,' by Canon Venables, in the "Great Writers." Thomas Whittaker is the American publisher of these series.

In the making of pretty books England has been rapidly advancing of late, without, however, in any way threatening the preëminence of France. It is as a pretty book that we are inclined to receive Mr. Alfred Pollard's new edition of Sir Philip Sidney's 'Astrophel and Stella' (London: David Stott). The type is well chosen and the page well shaped, albeit a thought too scant for the text; the paper is suitable; there is a frontispiece, and altogether the book reveals that its maker took thought and knew bookmaking to be an art. It is well made, also, in another sense, for the editor has done his work in scholarly fashion, supplying an adequate introduction, many various readings, and ample notes.

Quite in place in the Messrs. Putnam's "Nugget Series" is La Motte Fouqué's 'Undine,' with 'Sintram' contained between the same covers—the first prettily illustrated. The little volume is convenient for the pocket, yet ornamental for the library shelf or table.

The end of Pepys's Diary; Essays and Tales by Addison; Johnson's Lives of Addison, Savage, and Swift; and Plutarch's Lives of Pyrrhus, Camillus, etc., form the most recent additions to "Cassell's National Library."

Several years ago we reviewed Myers's 'Outlines of Ancient History,' commending the author especially for his success in making a readable book by "willingness to omit names and dates which are not essential." He has since published a 'Mediæval and Modern History' marked by the same qualities; and the earlier work is now transferred to the publishers of the later (Boston: Ginn & Co.), and republished in a revised form. In this revision President Myers has associated himself with Prof. W. F. Allen of the University of Wisconsin, who has undertaken the Roman portion, to be issued next year. In the present edition, therefore, the history of Rome appears in its original shape, as a temporary arrangement; this portion being without the maps and illustrations, which are abundantly provided for the revised work. As compared with the original, this revised edition of the Oriental and Greek histories is somewhat enlarged, and, on the whole, improved. The maps, as in the modern history, are mostly taken (by permission) from Freeman's Atlas. The illustrations are well selected, and are genuinely illustrative—a rare thing in American school histories. On the whole, we know no brief account of ancient history so well suited as this to be read by intelligent persons (not young children) who wish to acquire an accurate outline of events and to seize the spirit of the past.

Mr. John S. White's 'Recent Examination Papers for Admission to Harvard, Yale, Princeton, Sheffield Scientific School,' etc. (Boston: Ginn & Co.), speaks for itself as a work of practical utility for teachers of preparatory schools. It ought, however, either to be provided with a table of contents, or to have the several institutions designated by the headlines of the pages.

Prof. D'Ooge's 'Colloquia Latina' (Boston: D. C. Heath & Co.) is the result of his own experience in stimulating the interest of beginners in Latin by oral dialogue. The dialogues here devised (or partly borrowed from classic authors) have attractive subjects and a considerable variety, and are capable of being much extended by a skilful teacher. They are quite above the ordinary attempts in this direction, which are apt to be dreary enough.

Mr. W. J. Rolfe and his son, Mr. J. C. Rolfe, have edited with notes Macaulay's 'Lays of Ancient Rome' for parallel reading during the study of Latin (Harpers). A portrait of Macaulay is prefixed, and there are other illustrations, some of which, we venture to think, ought to be retired from general circulation in favor of more recent and authentic representations. The editors dispute Matthew Arnold's judgment of the Lays as poetry, and fortify themselves by reproducing two English and one American counter-judgments. However this may be decided, there can be no doubt that the Lays are good enough poetry for youth, and are capable of being made into an acceptable text-book. Their declamatory quality and easy memorizing insure them a long vogue among schoolboys.

The 'Lessons in English, adapted to the study

of American Classics,' by Sarah E. Husted Lockwood (Boston: Ginn & Co.), we commend to the attention of teachers of high schools and academies, without feeling sure how far the use of it will approve the scheme. It is at least not a dull or forbidding text-book.

We cannot praise highly Mr. William Williams's 'Composition and Rhetoric, by Practice' (Boston: D. C. Heath & Co.). Although a teacher might find handy the examples here amassed, the execution as a whole falls far short of being masterly.

Whitney's 'Compendious German Grammar' (Henry Holt & Co.) celebrates its twentieth year by appearing in a sixth edition. The typography is wholly new and greatly improved; and besides the general revision (which, by the way, has not disturbed the order of paragraphs and sections), a fresh set of exercises has been added of a very practical sort. While the new orthography has not been adopted, it has been bracketed throughout.

Some two or three years ago, Mr. H. S. Hall, Master of the Military and Engineering Side, Clifton College, and Mr. S. R. Knight, late Assistant Master at Marlborough College, England, published an 'Elementary Algebra for Schools.' It met with unusual success, a second edition having since appeared. They have now given us a 'Higher Algebra, a Sequel to Elementary Algebra' (Macmillan), which is worthy of a more extended notice than we have room for. It is an octavo of over 500 pages, embracing an unusual variety of topics, the table of contents alone covering nearly 14 pages. De Morgan used to say that some men were born algebraists, some geometricians; but great talents, even in one department, by no means necessarily implied equal gifts in the other. Messrs. Hall and Knight seem to be "born algebraists." It is true they give us no new discoveries of great importance—a book intended for practical use in the higher class of schools is, perhaps, not the place for the communication of new discoveries—but they certainly thresh the old straw with new and smoothly working flails. One of the most striking and even surprising things about the book is the collection of examples by which the abstract principles are illustrated. They are distributed through the work under the proper heads, and the answers to all of them are given at the end of the volume. Chapter 33 is intended to be an exposition of the elementary principles of determinants, and to serve as an introduction to larger treatises. It is by far the most unsatisfactory in the book.

Those who wish a short, neat, and clear exposition of the elements of determinants will find it in a recently published work of Prof. W. G. Peck, formerly Professor of Mathematics at West Point, and for many years and now occupying the same position in Columbia College (New York: A. S. Barnes & Co.). It covers only 47 pages, but Prof. Peck is extraordinarily felicitous in the composition of "small books on great subjects." The chapter of Messrs. Hall and Knight was evidently written out of other books. Prof. Peck's little work was quite as evidently written out of his own head. Not that there is anything original in it, but it is manifestly the result of reflection upon the materials furnished him by previous writers—of digestion and assimilation—and hence it has the symmetry and consistency which mark the product of a single mind.

The July number of the *English Historical Review* is unusually rich in the field of early English history. The first article, a very short one, by F. W. Maitland, "The Suitors of the County Court," undertakes to show that attendance upon the county courts was not, in the thirteenth century, the right of all freeholders, as is usually assumed, but was an obligation resting probably upon certain tenures. "The West Saxon Conquest of Surrey," by H. E. Malden, maintains that Surrey did not form integrally a part of the kingdom of Sussex, and narrates the contest for this territory of the West Saxons against Kent and Essex. Belonging to a later period is "The Early Life of Thomas Wolsey," by T. W. Cameron. "Hrotsvitha of Gandesheim," by W. H. Hudson, gives an account of the writings of the Nun of Gandesheim, holding that, while genuine, they "had very little influence upon the development of the drama in modern Europe," and James J. Breck Perkins shows that "The Great Condé" has enjoyed a higher reputation than he deserved—"as a soldier he yields to Turenne, and, except as a soldier, there was little in Condé to excite our approbation," witness "his turbulence when young," "his obsequiousness when old," and "his greediness, selfishness, and want of principle" all through life. The "Notes and Documents" are largely devoted to Cromwell, and contain two diaries of Waterloo.

The "plunder of the churches" at the establishment of the Reformation in England, is one of the most serious charges against the reformers. Cobbett's 'History of the Protestant Reformation' (§§ 207 and 208) speaks of "the value of the images, censers, and the like," as the motive of the plunderers, and says, "The robbers took away everything valuable, even down to the *vestments of the priests*." Very likely there was such pilfering, in the confusion of the change in some places. It is interesting, however, to compare the account in contemporary documents. The *East-Anglian* (Ipswich, England) has had for two or three years a series of records, entitled "Certificates of Church Goods in Suffolk, *temp.* Edward VI." Here we have, for the several parishes of Suffolk (and some of Essex), a certified statement of the church goods sold, and the disposition of the money received. We have looked these over with some care, and have found that the money was uniformly expended in objects of genuine public interest; the things sold were of course such as could be of no service in the reformed worship, usually pixes, etc. The following (for Wrentham, Nov. 4, 1547) gives a fair idea of the character of these transactions. Sold, May 1, plate to the value of £30 (at 4s. 3d. the ounce). "Imploymets wth thusen": Allowed to the buyers for waste, 13s. 4d.; "in setlynge furthe Solders to srue the Kynge," £10; "for makynge a greate Dyke for wywnynge of a comon to the commne wealthe of the poore in thsame Towne," £12; paling for the "Gylde halle" yard, 13s. 4d.; repairs of same house, 16s.; "one Surplysse wt slevys commanded to be bought by the Kings visitors," 10s.; cloth, etc., for seven new surplices, 24s.; "for iiij^{or} chaldez of lyme to deke the churche," etc., 32s.; "And so remayneth in the Towne boxe to thuse of thsame Towne" 50s. 8d. These calculations, by the way, do not quite balance. It is to be noticed that this sale, as well as some others, was in the reign of Henry VIII. Suffolk, it is well known, was a stronghold of Protestantism and Puritanism, and Wrentham was perhaps the headquarters of Puritanism in the county, being the home of the Brewsters.

An antiquarian correspondent asks how we shall designate the relationship of a man to his widow's son by a second marriage. Diagrammatically, the situation may be represented thus:

Richard[1]———Mary———Peter[2]
(son) John (son) Henry

Peter is John's stepfather. Richard is Henry's "step-back father," suggests our friend.

Quite the best among the examples of photogravure which make up the portfolio of *Sun and Shade*, No. 1, are two portraits of the rival Presidential candidates. We are much mistaken if the physiognomist would not read strength and weakness in them respectively. The other plates, to the number of eleven, show the process of the Photogravure Company of this city in divers employments, now copying a canvas by Le Rolle, now a lithograph, and again scenes from the theatre and from nature. This medley is hardly adapted for binding, and, indeed, is provided with a loose cover, which is all it needs. The office of the Company is at No. 853 Broadway.

We have received the third or August number of the *Scottish Art Review*, published at Glasgow by Kerr & Richardson. It is, without giving promise of being an authoritative expounder of art, a readable magazine, of varied and orderly contents. An etching and a phototype after Corot, and Romney's Lady Derby, are the plates of the number.

On the recommendation of the Minister of Public Instruction, King Humbert has issued a decree regulating the manner in which Italy proposes to celebrate the fourth centennial of the discovery of America by Christopher Columbus. This will consist mainly in the publication of the collected works of the great navigator, and of all the documents and charts which will throw any light upon his life and voyages. This will be accompanied by a bibliography of the works published in Italy upon Columbus and upon the discovery of America, from the earliest time down to the present. The head of the royal commission charged with the preparation of this edition is Cesare Correnti, President of the Italian Historical Institute, and among its members are Signors Amari, Cantù, Desimoni, and the Marquis Doria. An appropriation of 12,000 lire has been made to cover the expenses of this work, which is now, if we are not mistaken, about to be undertaken for the first time. Different editors have published portions of his writings, as Navarrete the account of his voyages, and Major his letters; but no one has yet collected all his writings into a single edition, though an index to them was published in 1864.

Following the example set by the Radicals of Rome, in their efforts to erect a statue to Giordano Bruno, the Liberals of Venice have voted a monument to Fra Paolo Sarpi, to be placed in the little square of Sta. Fosca, not far from the spot where he was stabbed in 1607. Opinions may differ as to the permanent political value of the services which Sarpi tried to render to Venice, but unquestionably he deserves some greater memorial than the tombstone at San Michele. Unfortunately, at the present time this monument not only is construed, but is intended, to be a demonstration against the Church. Designs for it are to be sent in for public competition to be opened in October and continued during November.

—In the August *Macmillan's*, Mr. Sidney Colvin gives a foretaste of the new material in his forthcoming edition of the letters of Keats to his family and friends. It has been previously known that Mr. Jeffrey of Louisville, who originally furnished the bulk of the most interesting letters for Lord Houghton's use in his life of the poet, tampered with the text, and the true readings and cancelled passages of a portion of the correspondence were restored in Speed's American edition a few years ago. Mr. Colvin has had the use of others of the original letters, and has found in them similar omitted parts

which he will publish, so that we are likely to have at last a final edition. There is apparently nothing of serious importance in the changes, but the originals afford a fuller and in some parts a more natural expression of Keats's mind. Among the items of interest is the mention of his friend Reynolds as the author of the satire on "Peter Bell," which appeared before the poem itself came out and gave offence to Lamb, who wished the author "whipt at the cart's tail" for it; and, following on this, inserted in the journal-letter, is a review of the skit by Keats which was afterwards printed in the *Examiner*. This piece of prose was hitherto unknown, but, trivial as it is, has some interest. The new passages are liberally quoted from in this article, and cover many subjects, as was the habit of Keats's pen. The best one is his description of meeting Coleridge, of which we already have Coleridge's own account. It is too long to be reproduced here, but it gives the list of topics spoken of by Coleridge in the two-miles walk "at his alderman-like after-dinner pace"—an endless list—and winds up with this brief but effective stroke of description: "I heard his voice as he came towards me—I heard it as he moved away—I had heard it all the interval—if it may be called so." This was the time that Coleridge felt "death in that hand," as Keats took leave of him. The first draft of "La Belle Dame sans Merci" is given, with some light jesting remarks upon its technique by the poet, and it appears from the paper that its date was April–May, 1819, the blossoming time of Keats's genius. It is matter for congratulation that these letters have at last fallen into the hands of a competent editor. The magazine contains also the first of a series of papers by Mr. Pater, upon Gaston de La Tour, in the style of his 'Imaginary Portraits.'

—Mr. James Knowles, the editor of the *Nineteenth Century*, has had the wit and skill to persuade some of the leading foreign diplomatists in London to contribute articles on topics relating to the government of their own countries which they are best qualified to treat. Mr. Phelps, our Minister, expounded the Constitution of the United States—but its letter and its spirit rather than its actual working—and he therefore said nothing particularly new or striking. The articles in the June and July numbers by M. Waddington, the French Ambassador, on local government and county councils in France, should be read by every thinking American. Not only is the subject one which is little known, and about which it is difficult to obtain accurate information, but the articles contain instructive lessons and useful hints on subjects of great importance to us. The statements made by a man who has a practical knowledge of his subject, are very different from all that can be learned by a mere theoretical study of the French Constitution and laws. The most interesting part is that explaining the machinery by which the French have built and kept up their splendid system of public roads—the best in the world—and the want of which is such a blot on our civilization. M. Waddington's remarks on the manner in which the taxes for keeping up the roads are imposed, and by which the men who use the roads most are taxed especially for their maintenance, contain suggestions that are useful to us not only in the country, but in our large cities. The paving taxes in New York, for instance, are assessed entirely on the real estate in the street to be paved or in its immediate vicinity, on the absurd supposition that the advantage of a good pavement accrues only to the owners of that property in giving it an increased value. The majority of house-owners in New York rarely use the street except for walking or riding in a horse-car. The brewers, the manufacturers, the shippers, the owners of drays and heavy carts, who use the streets most, and who succeed in destroying the best pavement very shortly after it has been laid, pay nothing for the paving; whereas in France they pay very highly on account of the damage which they do to the roads, and their assessments are regulated yearly after a discussion between them and the authorities.

—A very important contribution to our knowledge of the English laboring classes is to be found in Mr. Charles Booth's very suggestive paper on the "Condition and Occupations of the People of East London and Hackney, 1887," published in the Journal of the Royal Statistical Society. The aim of Mr. Booth, whose similar investigations in respect to the Tower Hamlets attracted wide attention last year, is "to show the relation which poverty, misery, and depravity bear to regular earnings and comparative comfort, and to describe the general conditions under which each class lives." He accordingly divides the population of the district under examination, numbering about a million souls, from information collected from house to house and family to family by the School Board visitors, into eight classes designated by the letters of the alphabet. The four classes A–D include the poor, using the term in its widest sense, A being the "loafers and semi-criminals," and D those who have "small regular earnings." Between these are the "poor," persons having a "sufficiently regular though bare income, such as 18s. to 21s. per week for a moderate family," and the "very poor," who fall below these meagre figures and live in a state of chronic want. In these four classes are to be found a little over thirty-five per cent of the population, the largest proportions being in the second, the "very poor," and the fourth classes; the "loafers" forming only a little over one per cent. Mr. Booth then proceeds to show the causes of this poverty. These he divides into three kinds, which he terms questions of employment—that is, irregular work, low pay, and small profits; questions of habit, as intemperance; and questions of circumstance, as illness or large family combined with irregular work, etc. Out of sixteen hundred families of the classes A and B, 4 per cent. were loafers, those who will not work; 55 per cent. were "very poor" because of irregular work, etc., 14 per cent. on account of drinking habits, and 27 per cent. because of illness or large family. The condition of twenty-four hundred families in classes C and D was due in 68 per cent. to irregular work, 13 per cent. to intemperance, and 19 per cent. to illness or large family. It appears, therefore, from these figures that irregular work and low wages are the principal causes of poverty. In this connection Mr. Booth insists strongly upon the fact that "the poverty of the poor is mainly the result of the competition of the very poor." To the rich "the very poor are a sentimental interest; to the poor they are a crushing load." And he adds, evidently confident of the feasibility of his remedy: "The entire removal of this class out of the daily struggle for existence I believe to be the only solution of the problem of poverty."

—Another important observation is upon the necessity of "organizing the enforced leisure" of the poor. He makes no suggestion as to the methods, beyond referring to Mr. Auberon Herbert's plan for educational classes, and inviting the workingmen's clubs to endeavor to supply some other place of rendezvous for the unemployed than the public house. There is one ray of light which breaks the gloom of this paper in the confident statement that "the hordes of barbarians of whom we have heard, who, coming forth from their slums, will one day overwhelm modern civilization, do not exist. The barbarians are a handful, a very small and decreasing percentage." Among the numerous tables which Mr. Booth has prepared as the result of his investigations are ten showing the occupations of the inhabitants of East London and Hackney. From these it appears that by far the largest proportion are engaged in the clothing and furniture trades and upon the docks. From another table we learn that one million, out of the four millions who live in London, are in the "classes in poverty sinking to want." At the close of his paper Mr. Booth stated that an inquiry similar to his was about to be undertaken in Central London and Manchester; also, that the results of his investigations were soon to be published in a book "of which he would be editor, and to which there would be several able contributors," and which would deal with many points referred to in his paper, and especially in the discussion which followed its reading before the Society.

—Vol. 4 of the Astor Library Catalogue carries on the alphabet from R to Z, and finishes this important work in 4,276 pages, as it has been determined to accompany this author-catalogue with no subject-catalogue or index—not even such as was printed with the earlier catalogue. A subject-catalogue is really much needed at the Astor Library, that which was furnished with the original catalogue having been only a fragment of what Dr. Cogswell intended; and, though it serves a purpose, it falls far below what the public has a right to expect from so large a library. But economical reasons, we believe, prevented the Library from completing the former work according to Dr. Cogswell's plan. The Library has a subject-catalogue on cards of the portion covered by these volumes, and also of the later accessions since 1880, or, at least, is supposed to have such a catalogue. But we know from experience that, so far as the volumes covered by this author-catalogue are concerned, the subject-catalogue is rather unsystematic and imperfect, so that it strangely leaves a large number of volumes, to say nothing of articles in periodicals, unrepresented. We hope that before long the Library will print such a subject-catalogue as it needs and the value of its contents deserves. The method and the merit of the present catalogue we have already discussed; but it may be interesting to note here, among its curiosities, that the largest number of pages is given to the letter B, 404, and S comes next with 357, then M with 322, and C with 300. A leads the vowels with 240 pages, and is followed by U with 109, and E with 104. The smallest number of pages falls to X, 1½. U also contains the longest entry under one main heading, viz., United States, which requires 76 pages, or, including the entries in which United States appears as a part of the title, 82. The public is very much indebted to the Trustees for so valuable a help in consulting the resources of the Astor Library.

—The convention for the creation of an International Union for the Protection of Literary and Artistic Works was signed at Berne, Switzerland, on September 9, 1886, by the representatives of ten countries: Germany, Belgium, Spain, France, Great Britain, Hayti, Italy, Liberia, Switzerland, and Tunis. The exchange of ratifications took place on September 5, 1887, also at Berne; but on that occasion Liberia was not represented, and, therefore, did not become one of the countries of the

Union. The treaty by which the Union was created, in accordance with its twentieth article, went into force three months after the day upon which the ratifications were exchanged, namely, December 5, 1887. Although only nine States, therefore, entered into this most important Union at the time of its formation, its promoters are hopeful that ultimately all civilized countries — including even the United States — will become members, and article eighteen of the convention provides that any country may accede to it in the future, provided the domestic laws of the country secure to authors and artists a protection for their works equal to that granted by the terms of the Union. Notification of such accession is to be sent in writing to the Swiss Government, and the latter, through the Bureau of the Union, is to communicate the fact to all the other countries. Accession implies a full adhesion to all the provisions of the convention and admission to all of its advantages. The first country to avail itself of the privilege of accession is the Grand Duchy of Luxembourg. A law to permit that State to enter the Union was passed by its Chamber of Deputies on April 25, agreed to by the Council of State on May 11, and approved by the Grand Duke, King William III. of Holland, on May 23 this year. This was followed, June 27, by a royal decree promulgating the accession, which is to date from June 20, 1888; and notice to that effect was promptly sent, on July 10, by the President of the Swiss Confederation, to the other countries of the Union. The Grand Duchy takes its place in the sixth class as regards its contribution to the expenses of the International Bureau, its present proportion being, therefore, about one fifty-fourth part of the entire expenditure.

—Every contribution to a better understanding of our modern literary English is welcome, all the more so when it betokens careful and systematic study. Such is Morsbach's 'Ueber den Ursprung der neuenglischen Schriftsprache,' a pamphlet of nearly 200 pp., published by Henninger Bros., Heilbronn, 1888. The author's general position is that the language embodied in the London documents (public and private) from 1384 to 1430 may be taken as the prototype of our modern literary English. It comes nearest to the language adopted and perpetuated by Caxton and his press in the latter half of the century. And from Caxton's speech to that of Shakspere and the King James Bible is but a short step, we add. Some opposition has already shown itself in England to Morsbach's view; but we suspect that this opposition rests, in the main, upon a misconception. As we understand the author, he does not assert that the actual *spoken* language of London—what we should call fifteenth-century Cockney—is the prototype of Caxton. He merely implies (his language is not so precise as we could wish) that there seems to have grown up in and around the public offices of London a conventional *modus loquendi et scribendi*, which had official currency throughout the greater part of England. If this be so, London document-English played in the fifteenth century a part analogous to the Saxon-Chancery German in Luther's time. At any rate, whether we accept or reject Morsbach's opinion, the bulk of his work is not to be assailed, for it consists of 150 pp. of analysis of the language of the documents from every point of view, phonology, declension, and conjugation. It is the most satisfactory grammatical discussion that one could wish. Only at one point do we feel called upon to raise the voice of protest. Morsbach, with many of his German colleagues, speaks continually of *Northern* speech, *Anglian* influences, and the like. To our mind Mercian would be the better term, especially since Sweet's edition of the Vespasian Psalter has enabled us to follow this great Midland speech from a very early date. "Northern" suggests too much the language of Northumbria. And "Anglian" should be restricted to the Peterborough region.

DOMESDAY STUDIES.

Domesday Studies: Being the papers read at the meetings of the Domesday Commemoration, 1886. With a bibliography of Domesday Book, and accounts of the MSS. and printed books exhibited at the Public Record Office and at the British Museum. Edited by P. Edward Dove, of Lincoln's Inn, Barrister-at-Law. Vol. I. Longmans, Green & Co. 1888. 4to, pp. 399.

In this age of centennial celebrations, it is right and fitting that so remarkable a centennial as the eight hundredth anniversary of the compilation of Domesday Book should not have passed without notice. The commemoration took place two years ago, but it is not surprising that so long a time has elapsed before the publication of proceedings so extensive, varied, and abounding in puzzling detail. The first volume consists entirely of papers read at the meeting; the second volume, "which will be published as soon as possible," will contain the rest of the papers, together with bibliography, index, etc.

The extreme importance of this unique document was only slowly realized, and for many centuries it was, to all intents and purposes, unknown. The full recognition of its value, and its systematic study, were only made possible by the development of the scientific methods of historical study in the last century. About a hundred years ago (1783) it was printed in two volumes. Shortly after, it was made the subject of careful analysis by Sir Henry Ellis, whose labors, embodied in a series of indices which make up the third volume (published in 1816), have formed the indispensable foundation for all subsequent study. This analysis has been made once for all, and will for ever be a monument of Sir Henry Ellis's well-directed industry. His discussion of the subject-matter of the survey, with definitions and classifications, had great value at the time, and formed the starting-point for further investigations; these later investigations have, however, corrected and superseded his conclusions in many particulars. In the same year (1816) a fourth volume was published, containing supplementary matter—the Exon Domesday, the Ely Inquest, etc.

Since the publication of Sir Henry Ellis's labors, a vast amount of work has been accomplished in detail, especially by the late Rev. R. W. Eyton, who, as Mr. Round says in the present volume (p. 191), "may, perhaps, fairly be described as the greatest of our Domesday scholars. He may be said to have saturated himself with the Record, and to have been virtually the only student who has really grappled with the Survey and explored its inmost recesses. . . . The great characteristic of his work was his marvellous and untiring industry." Mr. Round adds, however: "Whether his judgment or his critical acumen were equal to his devouring industry, I must be permitted to doubt." Mr. Eyton's most important publication upon the subject is his 'Key to Domesday,' based upon the survey for Dorsetshire. The Commemoration of 1886 will probably prove an important epoch in the study, by commencing a more systematic coöperation in the examination of the document, and laying the foundation for the coördination of the work of different students. A "Domesday Society" has been proposed, and the "Selden Society," devoted to the study of the history of English law, has been organized, and has commenced the publication of early documents bearing upon the subject.

The papers contained in the present volume are for the most part directed to the examination of certain fundamental technical expressions, upon the proper understanding of which must depend any fruitful study of the subject. The thing to be firmly fixed in the mind by the student is, that the document is named the *Exchequer* Domesday: that it was not drawn up for the purpose of taking a census in the modern sense, still less of enlightening posterity as to the social and economical history of England in the eleventh century, but solely to assist in the collection of the revenue. What is to us its principal value was not present in the minds of those who collected the statistics; consequently, the information we can derive upon the points most interesting to us must be purely incidental. The system of taxation being based upon the land, it follows that, for revenue purposes, the divisions of the land are the first thing to be considered; and consequently we find these territorial areas described with exactness in every part of the Survey, as the most important feature of it. The nomenclature is not uniform; the divisions are given as *hides* in most counties, as *carucates* in the northern counties, and as *solins* in Kent; but as these divisions, by whatever name, form the basis of taxation, obviously the first thing to be done is to ascertain their exact meaning. Upon this subject a great deal of labor has been employed, but perplexities, confusions, and apparent contradictions in the data have been so great as heretofore to baffle the most industrious researches. The key to the problem was discovered by Mr. Eyton, in the fact that the term *hide* and *carucate*, as used in Domesday, were "terms denoting fiscal value rather than areal quantity" (p. 192); the establishment of this true principle, "that the hide of Domesday (that is, the *hida ad geldum*) was not a measure of area, but a unit of geld assessment, led him to reject the conception of the hide as being ever a definite areal measure." Here, according to Mr. Round, is his mistake; in the double use of the term, as an areal measure (of one hundred and twenty acres), and as (in Domesday) a unit of assessment, is to be found the source of the confusions and contradictions alluded to.

The largest number of papers by any one person in this volume is the three by Canon Isaac Taylor, who contributes the interesting article on Domesday Survivals, printed in the *Contemporary Review* two or three years ago, a paper on "The Ploughland and the Plough," and one on "Wapentakes and Hundreds." The paper upon "The Ploughland and the Plough" brings out a very important fact—the coexistence of the three-field and the two-field systems, with the rule for testing them; his examples are taken from Yorkshire, the county of his residence. This same local association gives interest to the paper upon "Wapentakes and Hundreds," in which he establishes an equally important principle. It is generally assumed that Wapentake was the name given to the Hundred in the Danish counties. This he shows to be a mistake, saying that, "instead of the Wapentakes of the Danish shires 'answering,' as has been affirmed, to the Hundreds of the Saxon counties, it would appear that they were districts of three times the extent [containing three Hundreds each], probably constituted for

a different constitutional purpose, and for a time coexistent with the associated Hundreds of which they were composed" (p. 76).

The longest paper in the volume, occupying, with notes and appendix, one hundred and sixty pages, is by Mr. O. C. Pell—"a new view of the geldable unit of Doomsday." In this valuable and elaborate paper we have a complete survey of the monetary system and the systems of weights and measures of the different nationalities of early Britain, from the point of view of the two parallel methods of dividing the *libra* or pound: the Roman division into seventy-two *solidi* (from which is derived apothecaries' weight), and that of Charlemagne, which divided the pound into twenty *solidi* (shillings) and two hundred and forty *denarii* (pennies) (the same as in Troy weight). He also shows (p. 233) that there was a third pound, of 7,680 grains, divided into 256 pence, which he considers as pre-Anglo-Saxon, but calls "Mercian," because "for a long period it was the basis of the moneys of account of the Kingdom of Mercia": this is, however, of inferior importance. In this paper we find what is not uncommon with persons of mathematical and statistical turn of mind—a habit of ignoring the intellectual needs of those who are not gifted with similar powers, so that many steps in the argument are obscure or left out altogether. Mr. Pell's remarks in the discussion (p. 32) were quite unintelligible to us until we compared them with his paper; and even now there are several things we cannot understand. Where, for instance, does he get his authority (p. 229) for saying that the Roman shilling (*solidus*), 1-72 of a pound of gold, was divided into ninety-six grains? The Romans at no time had a weight called a *grain;* and certainly the Roman pound did not weigh 6,912 grains Troy. The gold *solidus* of the post-Diocletian period had a counterpart in a silver coin of precisely the same weight, 1-72 of a pound, known as the *miliarense*, and valued at 1-14 of the *solidus*. The *siliqua*, of half of this value, gives us again the *half-siliqua*, 1-288 of a pound; that is precisely the *scruple* of apothecaries' weight, the *penig* of the Anglo-Saxons; and it must be this with which he has somehow confounded his mythical grains of 1-96 of a *solidus*.

Another of Mr. Pell's theories we cannot accept—that "the words 'villanus' and 'servus' in Domesday Book do not necessarily imply a reference to *one person* only. They very often mean an estate of one or more villani, or servi, etc." "I have found," he says, "so many cases in the Hundred Rolls and other old MSS. where the number of virgates exactly tallies with the number of villani, servi, bordarii, sochemanni, and libere tenentes stated in Domesday." This is not surprising under any theory: but if his theory were correct, should we not expect this correspondence always to exist? But this certainly is not the case, and our impression is that the greatest irregularity exists in this respect. The mention of half-villani is, to be sure, a difficulty; but we should incline to explain it rather as half-*service* than as half-*tenure*. Neither can we agree with him that the *servus* of Domesday Book "was not a slave as we understand the word"; he is mistaken in the assertion that "in the Latin translation of the laws of Ina, made in the twelfth century, . . . the word 'gebur' is construed 'servus.'" In Ina's laws the word *gebur* occurs only in chap. 6, § 3, and the Latin translation uses the same word—*gebures* and *geburo;* so in the *Rectitudines*, chap. 4. On the other hand *servus* is regularly used in Ina's laws to represent *theow* (chaps. 3, 11, 23, etc.).

It is very proper that the systematic study of Domesday Book should begin, as is done in this volume, with the attempt to determine this fundamental point of the territorial areas. This once done—and the present discussion appears to have very nearly accomplished it—new questions of the highest interest, social, economical, and constitutional, will present themselves in abundance. It is probable that we are even yet far from realizing the wealth of information in these several lines of inquiry which remains to be derived from this incomparable record. In this connection it may be worth while to call attention to Mr. Birch's 'Domesday Book,' published by the Society for the Promotion of Christian Knowledge, as the most compendious introduction to the study of this book, and best suited to the wants of beginners.

TWO EDITIONS OF THUCYDIDES.

Thucydides Book I. Edited on the basis of Classen's Edition by Charles D. Morris, Professor in the Johns Hopkins University. Boston: Ginn & Co.

Thucydides Book VII. Edited on the basis of Classen's Edition by Charles Forster Smith, Professor of Greek in Vanderbilt University. Ginn & Co.

The Sixth and Seventh Books of Thucydides, with an Introductory Essay, Explanatory Notes, and Indexes. By W. A. Lamberton, A.M., Professor of Greek in the Lehigh University, Bethlehem, Pa. Harper & Bros.

If the ratio of the number of new text-books in any branch of study pursued in our high schools, academies, and colleges, to the whole number of students in those institutions is any indication of the extent to which that study is pursued, then the friends of classical literature, and especially of Greek literature, have no reason to complain. Two series of the ancient classic authors are now passing through the press in two of the great publishing houses of this country—"Harper's Classical Series," embracing both Greek and Latin authors, published under the editorial supervision of Professor Drisler of Columbia College, and the "College Series of Greek Authors," published by Ginn & Co. of Boston, under the supervision of Professor White of Harvard and Professor Seymour of Yale. Although these gentlemen have the general oversight of the editorial work, yet each volume is intrusted to a special editor, with entire freedom to carry out his own ideas of how the work should be done, so far as is consistent with the general plan. The lists of the names of special editors include a large portion of the most distinguished classical scholars in America. In this respect there is perhaps nothing to choose between the two series. The latest issues of both which we have received cover in part the same ground, and thus suggest comparison.

In their general appearance the books of the "College Series" are by far the handsomer. The "Harper's Series" look more like school-books, the "College Series" more like books for the library of a scholar. So far as legibility of the Greek text is concerned, both series deserve the highest praise; but the "College Series," by using a slightly broader type and a wider spacing, has secured for the Greek text a freer, more open, and handsomer appearance, which, though perhaps not necessary to legibility, is yet a commendable sacrifice of paper to taste. The larger page and broader margins also contribute to the same end.

The next great difference between the two series is in the arrangement of the matter. In "Harper's Series" the text is placed continuously in the fore part of the volume, the notes in the back part; in the "College Series" the notes are on the same page with the text—indisputably the better method for all the purposes of study—while extended discussions and textual criticism alone are relegated to the back of the book.

Coming now to the works, the titles of which we have given, it will be observed that the seventh book of Thucydides appears in both Series. Prof. Lamberton, in "Harper's Series," gives us an edition of both the sixth and seventh books. Prof. Smith, in the "College Series," gives us only the seventh, but Prof. White, in the prospectus of the series, promises us the sixth edited by himself. Even with this future publication in view, we think Prof. Smith would have done well to have prefixed to his edition of the seventh book a summary of the contents of the sixth. Certainly, without attaining in some way a knowledge of the events recorded in the previous book the seventh cannot be fully appreciated. In fact, the two together form a book within a book. Had all the rest of his history perished, and these two only come down to us, although the loss to mankind would have been irreparable, yet it would scarcely have lessened the fame of the historian. The two books would still have been regarded, as they always have been and probably always will be, as the great masterpiece of the human intellect in the department of descriptive historical literature. Thucydides considered the Peloponnesian war as the most important that had ever been carried on up to his time. The expedition against Sicily, which forms the subject of the sixth and seventh books, he regarded not only as the greatest event of that war, but as the greatest in all Greek history. Impressed with this opinion, or rather sentiment, he exerted all his powers to make his narrative worthy of its subject, and the unanimous verdict of posterity has been that he was completely successful.

When the Athenian people in their public assembly decided to undertake the expedition against Sicily, Athens was at the height of her power. Although the war with Sparta had been dragging on with varying fortune for fifteen years, yet it had hardly retarded her growth. The number of private citizens whom in our day we should call "millionaires" was, in proportion to her population, very great. The public treasury was full, revenues from all quarters were pouring into it, her only trouble was her "surplus." When the enormous cost of the expedition was dwelt upon by the few who opposed it, they were silenced by the popular cry, "Money is no object; stop talking and tell us how much you want." The two books in which Thucydides narrates the history of this expedition, the magnificence with which it set out and the annihilation in which it ended, form the two members of a mighty antithesis. It is wonderfully impressive to read the thirtieth and thirty-first chapters of the sixth book and then turn over and read the last two chapters of the seventh. In the former he tells us how, early in a midsummer morning, the whole population of Athens, citizens and strangers, flocked down to the Peiraeus to witness the departure of the fleet, and gazed in wonder and astonishment at the splendor and completeness of their own work; in the latter he seems in the compass of a few lines to have exhausted the resources of the Greek language in summing up the completeness of its ruin.

In the character of the notes the two editions are entirely different. Any two scholars editing independently the same author will each, of course, find some points that he thinks worthy of attention which the other will pass

by unnoticed. But, speaking with approximate accuracy, we may say that the edition in the "College Series" contains all that is in the edition in the "Harper's Series," and a great deal more. From a somewhat minute examination, and making due allowance for the difference in the size of the type, we find that the commentary in the "College Series" is more than three times as extensive as that of the Harper's. Prof. Lamberton seems to have aimed at the construction of a good and serviceable text-book for a young man who is learning Greek. We think he has been remarkably successful in accomplishing this purpose. But the editors of the volumes of the "College Series," while keeping this object in view, have aimed at much more. Both Prof. Morris and Prof. Smith have made the edition of the German scholar Classen the basis of their own, and have incorporated in their commentary the great bulk of his labors. But they have modified, altered, and added as they saw fit, and have assumed the responsibility of the whole. They have endeavored to give us an edition of Thucydides, not only for the use of pupils but of professors and special students, exhibiting all the essential results of modern scholarship, or, where this would lead to an inconvenient amount of discussion, pointing out the sources of more minute information. We had marked several notes on the same passage in the two editions for comparison, but omit them for want of space. But a very fair idea of the greater elaboration of the edition in the "College Series" may be obtained from a comparison of the summaries placed at the heads of the chapters. Taking the first chapter of the seventh book, Prof. Lamberton in the "Harper's Series" has:

"Chapter 1. Gylippus lands at Himera, Collects a force of Greeks and Sicels, and advances towards Syracuse."

Prof. Smith in the "College Series" has:

"1. After refitting his four ships, Gylippus leaves Tarentum, and, receiving at the Epizephyrian Locri more favorable news of the situation at Syracuse, proceeds undisturbed by Attic ships through the Strait to Himera. From this point he enters into communication with Selinus and Gela and various Sicel localities, and with seven hundred men of his own troops, and over two thousand who joined him from Himera and the allied places, begins his march through the interior towards Syracuse."

This is not more than an average specimen. In fact, the summaries of the chapters in the "College Series" edition, when read consecutively, form a more interesting and more detailed narrative of the ruin of the great expedition than will be found in many large histories of Greece.

In the "College Series" the first book of Thucydides bears upon its title-page the name of the late Prof. Morris as editor. But he left it in an incomplete condition. "Death prevented him." Out of the 146 chapters of which the book consists, he had completed the commentary on 124 and revised it in print. He had, however, left blanks, from chapter 88 on, for the subsequent insertion of the dates of the events recorded in that part of the book. The critical notes were also left in a very inchoate state. The chronology and the criticism are precisely the two points in regard to which scholars would have most liked to see a full statement of Prof. Morris's views. At the end of chapter 88, Thucydides pauses in his narrative of the events immediately preceding the Peloponnesian war, and, in one of the most interesting episodes of his work, proceeds in the next 30 chapters to sketch the history of the development of the Athenian power during the half century, the "penteconta-etia," or "fifty years," of the Greek grammarians, which had elapsed since the close of the Persian war. The date of nearly every event recorded in these chapters has been a matter of controversy. Prof. Morris had made the chronology of the whole period a special study, and although, from papers read by him before the Philological Association, from correspondence, from his memoranda, from MS. notes on the margins of the editions of Thucydides which he used, and from friends, Prof. White has probably succeeded in giving us the conclusions at which he arrived, yet the reasoning by which those conclusions were supported is irretrievably lost. The preparation of the commentary on the last 22 chapters of the book and the revision, and to a considerable extent the preparation of the critical notes on the whole book, have devolved upon Prof. White. In performing this task he has "endeavored to follow out with scrupulous care the lines which he [Prof. Morris] laid down." For practical purposes it is altogether probable that the book does not differ essentially from what it would have been had Prof. Morris lived to finish it.

The notes include a number—unequalled, we believe, in any edition of a classic author that ever appeared on this side of the Atlantic—of references to parallel passages of Thucydides, to other Greek authors, and to grammatical, philological, and historical works. Thus, on chapter 1, which consists of fourteen lines of text, we have ninety-three references, on chapter 2, consisting of twenty-eight lines, we have ninety-seven, on chapter 3, consisting of twenty-three lines, we have seventy-one, and so on through both the first and the seventh books. In very many of these cases reference to the original sources is rendered unnecessary, by quotation or by summary statements of the views of the authors referred to. There are, however, a great number of works which, from the language in which they are written, from their inaccessibility except in large libraries, or for other reasons, are of no use to the average pupil in Greek, but to the professor or specialist are of the highest value.

The Household Library of Ireland's Poets, with full and choice selections from the Irish-American Poets, and a complete department of authentic biographical notes. Collected and edited by Daniel Connolly. Published by the Editor, 28 Union Square, New York.

THIS sumptuous cyclopædia of Irish poetry, with its eight hundred closely filled pages, excites at first the sort of vague and remote curiosity with which the visitor at the Dublin University Library looks at the loaded shelves of untranslated Erse literature; but these contributions to poetic treasure have the advantage of the English tongue, and of being as a rule far easier reading. The collection is of the greatest variety, yet gives on the whole a creditable impression of that Irish harp which appears, laurelled with shamrock, on the wide green covers. In quantity Mr. Connolly exceeds all previous editors, yet so much of the interest of Irish poetry is retrospective that his arrangement, which is wholly topical, affords, after all, a less attractive volume than the smaller work of Alfred M. Williams, 'Poets and Poetry of Ireland' (Boston: Osgood, 1881), which preserves the historical form. Viewed historically, such a collection may almost be called fascinating in its interest; there is nothing in the Scottish ballad literature, before Burns, more thoroughly poetic than some of the songs of the Irish Bards and Hedge-Poets, as translated by Sir Samuel Ferguson and others. Mr. Connolly gives us a few of these, as, for instance, "Dark Rosaleen" (p. 404); but they are necessarily intermingled, by his arrangement, with what is modern and contemporary, thus losing their peculiar flavor. In Croker's 'Popular Songs of Ireland,' although we have less of this earlier matter, we at least have the works of each author brought together and elucidated; but Mr. Connolly's topical arrangement prevents even this, and though the book is thoroughly indexed, and there is an appendix of biographical sketches, yet we have, after all, an encyclopædia rather than a manual. Of this, however, there is no good reason to complain; it is simply a question of arrangement.

It is perhaps a just ground of complaint that out of 260 poets we have biographical sketches of only 167; although in many cases, where the career is unchronicled, the place and date of birth, and sometimes of death, are given. The ground of this limitation is not clear; there is, for instance, no memoir of Dion Boucicault, who is certainly well known without it; but neither is there any of Julia Crawford, whose tender lines "We parted in silence" found a place in many albums of the last generation, but of whom we are here only assured that she was "born in Ireland." Equally questionable is the too expanded range of the selection. There can be no fair objection to including those who are Irish through their parents or even through one parent only—thus comprising, for example, the Brontë sisters; but to include James Whitcomb Riley, on the ground that one of his four great-grandparents was Irish, and to print the "Bunker Hill Centennial Ode" of the late Mr. George Sennott without offering evidence that he had any claim to Irish origin at all, is to stretch the range almost as widely as when Ossian is placed on the rolls (p. 477), with the assertion that it is a vexed question whether he belonged to Scotland or Ireland. Mrs. Sarah Helen Whitman's insertion is explained on the ground that although her ancestors for four generations had lived in America, they (the Powers) were descended from the Norman family of Le Poer, one of whose ladies defended the castle of Don against Cromwell; and that Mrs. Whitman wrote a poem on this subject, which appears in this volume. So Thomas S. Collier is included, not merely because one of his ancestors left Ireland soon after the battle of the Boyne, but because his "Sunburst" is a warm and vigorous protest against English rule. Yet this is to make the book a campaign pamphlet, which it should not be, and which it is not really designed to be, since the editor inserts Charlotte Elizabeth's spirited verses on the siege of Derry, "The Maiden City," though omitting, strangely enough, to index her under her proper name of Tonna; and adds, also, though with some unnecessary apology, the Orange ballad, "Oliver's Advice," by William Blacker. Inasmuch as the editor rightly makes no distinction, among Irish-American poets, between the songsters of the Union and the Confederacy, there seems no reason why the far older Irish feuds should be commemorated even in foot-notes.

It is curious to notice how many of the best poems in this large volume are in that rolling ballad measure of which Moore knew nothing, but which is only too familiar to the ear, through the hand-organs, in "The Wearing of the Green," and is exemplified in literature by Sir Samuel Ferguson's "Forging of the Anchor" and Thomas Davis's "Fontenoy" and "The Sack of Baltimore." Mrs. Norton indicated her Irish blood by employing it in "Bingen"; and Boyle O'Reilly holds to it in "The Fishermen of Wexford." Mr. Connolly gives

the text of all his poems with much critical and typographical accuracy; and where he has a new text of his own he has doubtless reason for the substitution. Thus, in poor Callanan's fine verses beginning:

"There is a green island in lone Gougane Barra,"

he gives a version differing in some respects from that familiar to us in Croker's and in Williams's collections, and, on the whole, more effective; yet this affords no explanation of his spelling the name of the poem differently in different places. It is "Gougane" (the usual form) on pages 9 and 734 and "Gougaune" (twice) on page 184. In some cases we note omissions: Mr. Connolly leaves out Lady Wilde's strongest poem, "A Million a Decade"; and that best stroke of Charles G. Halpine's wit, his song in favor of the enlistment of black soldiers in the Union army, with its droll burden:

"Ivery day in the year, my boys,
And ivery hour in the day,
I'll let Sambo be murthered in place of meself,
And niver a word I'll say."

The exclusion of humorous songs has, we think, been carried rather too far; it may have been very well to draw the line this side of "The Night before Larry was Stretched," or even of "Bumpers, Squire Jones"; but we confess to a sigh at looking in vain for "The Gathering of the Mahonys." After all, Mr. Connolly is better than his word, and gives us "Groves of Blarney" and "The Widow Malone"; but it must be remembered that an Irishman without humor becomes a miserable being; if you doubt it, visit the essentially cheerful slums of Dublin, and then the grim haunts of the transplanted Irish in Glasgow. If we may believe one of our editor's best poets, this sense of fun extends fully among the priesthood; thus, in Arthur Graves's "Father O'Flynn," we read:

"And though quite avoiding all foolish frivolity,
Still, at all seasons of innocent jollity,
Where is the play-boy can claim an equality
At comicality, Father, with you?
Once the bishop looked grave at your jest,
Till this remark set him off with the rest:
'Is it lave gaiety
All to the laity?
Cannot the clargy be Irishmen too?'" (P. 536.)

Near and Far: An Angler's Sketches of Home Sport and Colonial Life. By William Senior, Angling Editor of the *Field*. London: Sampson Low. 1888.

Mr. Senior, to whom we owe several previous entertaining and well-written books on angling and pastoral life, has made this one in two divisions—the first entitled "Sketches of Home Sport," the second, "Sketches of Colonial Life." The chapters on home sport are a charming combination of narrative and divergence therefrom to the varied topics of rural life and economics suggested by the scenes and incidents presented to the reader, and seeming to come naturally and properly within the scope of the chapter headings. No fishing excursion is described in which there is not conveyed a pleasing and graphic idea of much more than the sport it yields—the peculiarity of the people of the district, interesting facts of the neighborhoods (and what country so full of them as England?), the trees and flowers, their seasons and changes, the animal life—all incidentally brought in, with scarcely anything left out that a lover of nature would observe.

All this, however, must yield in interest to the contents of the second division of the book. The "sketches of colonial life" are mostly from Queensland, a part of Australia not well known, in this country at least, and give descriptions of the life, manners, customs, and industries of that colony, from which the average reader will learn much more than he would get from a volume of statistics. A most interesting chapter is the third, on "Horse-hunting." It seems that in parts of Australia wild horses, there called "brombies," the descendants of animals which have escaped from their owners, have become such a nuisance that, besides being captured in large numbers for use, they are shot for their hides and hair. The extent to which this is done can be imagined from Mr. Senior's statement, p. 183, that one hunter whose acquaintance he made had shot, within two years, 3,000 horses. There are twenty pages of description of this novel sport, which certainly leave one to infer that Mr. Senior did not regret his own lack of success in killing the noble specimens of horseflesh he writes about. At any rate, the sympathies of the reader are altogether with the animals.
